ERRATA.

1,628,226, page 489, in the heading, assignment, line 2, for "administrator" read *executor*.

1,628,672, page 646, in the heading, after residence of inventors, insert *assignor, by mesne assignments, to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware.*

1,628,672, page 646, in the heading, assignment, name of assignee, for "Handy & Harmen" read *Handy & Harman.*

1,628,851, page 683, in the heading, assignment, for "one-fourth to William Mode Taylor" read *one-half to William Mode Taylor.*

Published Trade-Marks, Serial No. 244,965, page 297, line 2, in the heading, name of applicant, strike out "Burton R. Charles, doing business as Charles Radium Laboratories, Los Angeles, Calif. Filed Feb. 28, 1927," and insert *George J. Weinstein, doing business as George J. Weinstein Co., Cleveland, Ohio. Filed Feb. 26, 1927*

Patents Nos. 1,626,589 to 1,627,546.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 358—No. 1. TUESDAY, MAY 3, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(D. C. N. Y.) The Darnall patent, No. 1,007,647, for process of purifying water, claims 1, 2, and 4 *Held* valid and infringed. *Wallace & Tiernan Co.* v. *Village of Le Roy*, 17 F. (2d) 593.

(D. C. Minn.) The Klima patent, No. 50,624, for design for barn ventilator, *Held* invalid. *King Ventilating Co.* v. *St. James Ventilating Co.*, 17 F. (2d) 615.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,541,773, F. W. Stewart, Means for locking automobiles against theft, decided April 18, 1927, claims 16 and 20.

Pat. 1,556,130, O. Schriever, Circuit arrangement for wireless signaling, decided March 11, 1927, claims 1, 6, 7, and 8.

Pat. 1,567,035, H. C. Carr, Harrow tooth, decided April 15, 1927, claims 8, 9, and 10.

Final decision in interference has been rendered against the following trade-mark:

T. M. 195,466, Laundry net, Tingue, Brown & Co., New York, N. Y. Registered February 24, 1925. Decided March 24, 1927.

Interference Defined.

RULE 93. An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention. In order to ascertain whether any question of priority arises the Commissioner may call upon any junior applicant to state in writing the date when he conceived the invention under consideration. All statements filed in compliance with this rule will be returned to the parties filing them. In case the applicant makes no reply within the time specified, not less than ten days, the Commissioner will proceed upon the assumption that the said date is the date of the oath attached to the application. The fact that one of the parties has already obtained a patent will not prevent an interference, for, although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who proves to be the prior inventor.

TIME LIMITS FOR ACTIONS.

Completing applications ..... 6 mos.

Responding to official actions:

If dated prior to May 2, 1927 ..... 1 yr.

If dated on or after May 2, 1927 ..... 6 mos.

Renewal of applications:

If allowed prior to May 2, 1927 ..... 2 yrs.

If allowed on or after May 2, 1927 ..... 1 yr.

(See act of March 2, 1927, 357 O. G. 5.)

This act affects all applications pending before this Office, irrespective of their filing dates.

1550

Condition of Applications Under Examination at Close of Business April 22, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 50,077; Trade-Mark Division, 1,944. Oldest new case, Aug. 30, 1926; oldest amended, Aug. 31, 1926. The dates given are 1926 except where † indicates 1927.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

FEKETE AND ESSEX MOTORS *v.* ROBERTSON, COMMISSIONER OF PATENTS OF THE UNITED STATES.

No. 4,489. Decided January 5, 1927.

1. BILL IN EQUITY UNDER SECTION 4915, REVISED STATUTES—TO OBTAIN A PATENT ON AN APPLICATION WHICH HAS BECOME ABANDONED BY FAILURE TO APPEAL.

Where F.'s application stood finally rejected when W.'s application for the same invention was filed, and F. did not appeal but W.'s claim was allowed on appeal to the Examiners in Chief after F.'s application became abandoned, a bill in equity to obtain a patent under section 4915, Revised Statutes, filed by F. in the Supreme Court of the District of Columbia after the grant of W.'s patent, was properly dismissed.

2. SAME—APPLICANT MUST FIRST PROSECUTE AN APPEAL TO THE COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

When section 4915, Revised Statutes, was enacted, there was no appeal from the decisions of the Commissioner in interference proceedings, and therefore a defeated party might have remedy by bill in equity when a patent was refused him by the Commissioner; but under the act of 1893, creating the Court of Appeals of the District of Columbia, appeals were allowed from the decisions of the Commissioner in interference proceedings, and since then it has been incumbent upon an applicant for patent, before taking advantage of the provisions of section 4915, Revised Statutes, to prosecute an appeal to that court.

3. INTERFERENCE—ISSUE MUST HAVE BEEN DECIDED TO BE PATENTABLE BEFORE DECLARATION.

Before the declaration of an interference the invention which is to form the subject of the controversy must have been decided to be patentable.

Messrs. Macleod, Calver, Copeland, and *Dike* for Fekete (*Mr. George P. Dike* and *Mr. Elver J. Gray* of counsel).

Mr. R. F. Whitehead for the Commissioner of Patents.

Before MARTIN, Chief Justice, ROBB, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decree in the Supreme Court of the District of Columbia dismissing appellant's bill for a patent, filed under section 4915, Revised Statutes.

The material facts are as follows: On January 27, 1921, appellant filed his application in the Patent Office. The claims were rejected by the Examiner on April 8, 1921. An amendment was filed, resulting in a second rejection on June 12, 1922. The application therefore became abandoned one year from that date. A petition to revive was filed in the Patent Office on November 24, 1924, under section 4894, Revised Statutes, which requires a showing "to the satisfaction of the Commissioner of Patents that such delay (in the prosecution of the claim) was unavoidable."

[1] The basis for the application to revive was that before appellant's application became abandoned a man named Widman filed an application in the Patent Office for the same invention, and when that application finally was rejected by the Examiner on January 18, 1924, an appeal was taken to the Examiners in Chief, who overruled the Examiner. Thereupon a patent was issued to Widman on September 2, 1924, without notice to appellant of the allowance of Widman's application.

The Commissioner denied appellant's petition to revive and this bill was filed.

[2] Section 4915, Revised Statutes, provides that "whenever a patent on application is refused, either by the Commissioner of Patents or by the Supreme Court of the District of Columbia upon appeal from the Commissioner, the applicant may have remedy by bill in equity," etc. When this statute was enacted there was no appeal from the decisions of the Commissioner of Patents in interference proceedings, so that his decisions were final in that class of cases. Under the act of 1893, creating the Court of Appeals of the District of Columbia, an appeal was allowed from decisions of the Commissioner in interferences proceedings (27 Stat. 436). After the enactment of this legislation, it was incumbent upon an applicant for patent, before taking advantage of the provisions of section 4915, Revised Statutes, to prosecute an appeal to this court. *McKnight* v. *Metal Volatilization Co.*, 128 Fed. 51; *Allen* v. *Lowry*, 116 O. G. 2253; 26 App. D. C. 8, 26.

In this case no appeal was prosecuted, even to the Commissioner of Patents, but appellant seeks to excuse himself in this behalf because an interference was not declared by the Patent Office between his application and that of Widman. Section 4904 Revised Statutes provides that—

> whenever an application is made for a patent which, in the opinion of the Commissioner, would interfere with any pending application, or with any unexpired patent, he shall give notice thereof to the applicants, or applicant and patentee, as the case may be, and shall direct the Primary Examiner to proceed to determine the question of priority of invention.

The statute then authorizes the Commissioner to issue a patent to the party who is adjudged the prior inventor, unless the adverse party appeals from the decision. It is the contention of appellant that the statute requires the declaration of an interference, whether or not the Examiner is of the view that there are patentable claims.

We can not accept this view. In *Allen* v. *Lowry*, 1905 C. D. 643; 26 App. D. C. 8, 17, we said:

> We can not emphasize too strongly that, in our view, the statutes relating to interferences only provide that they shall be instituted for the sole purpose of determining priority of invention * * *.

This case was reviewed by the Supreme Court of the United States (203 U. S. 476), where it was said:

> The statute is explicit. It limits the declaration of interferences to the question of priority of invention.

[3] Until patentability has been determined by the Patent Office, the declaration of an interference would be an idle ceremony. Widman had sufficient confidence in his case to pursue the remedies the statute provided; appellant did not.

The decree is affirmed, with costs.

Affirmed.

1,590,982, E. B. Morris, Farrowing house, suit filed Sept. 18, 1926, D. C., S. D. Iowa (Des Moines), Doc. E 4342, *E. B. Morris et al* v. *Western Silo Co. et al.* Dismissed without prejudice Mar. 2, 1927.

1,600,323, L. E. Delson, Illustrated letterhead, suit filed Feb. 16, 1927, D. C., N. D. Ill. (E. Div.), Doc. 6851, *Central-Fold Letterhead Co.* v. *Hoppe Bond & Mortgage Co.*

Des. 50,624, L. Klima, Ventilator, suit filed June 2, 1926, D. C. Minn. (2d Div.), Doc. E 82, *King Ventilating Co.* v. *St. James Ventilating Co. et al.* Patent held invalid, bill dismissed, Mar. 15, 1927.

Re. 13,926, S. G. Wingquist, Ball bearing, suit filed Mar. 17, 1927, D. C., S. D. N. Y., Doc. E 41/33, *The Skayef Ball Bearing Co.* v. *S. F. Goodman.*

Re. 16,202, B. Briody, Roadway joint, suits filed Feb. 2, 1927, D. C., N. D. Ill. (E. Div.), Doc. 6840, *Truscon Steel Co.* v. *Sykes Co.* Doc. 6841, *Truscon Steel Co.* v. *Kalman Steel Co.*

Re. 16,360, F. C. Stephens, Needle and its method of use, suit filed Mar. 10, 1927, D. C., W. D. Mo. (W. Div.), Doc. 795, *The Stelos Co. of America, Inc.*, v. *E. Stark.*

Interference Notices.

U. S. PATENT OFFICE, *Washington, Apr. 14, 1927.*

The Wynne Paper Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Transo Envelope Company, 3512 North Kimball Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered August 10, 1920, No. 134,146, to The Wynne Paper Co., 318 West Thirty-ninth Street, New York, N. Y., and a notice of such declaration sent by registered mail to said The Wynne Paper Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless The Wynne Paper Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 15, 1927.*

Swan O. Peterson, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Edward G. Carr, 1329 Downer Avenue, Milwaukee, Wis., and patent granted March 21, 1922, No. 1,410,114, to Swan O. Peterson, 2511 Eleventh Street, Rock Island, Ill., and a notice of such declaration sent by registered mail to said Peterson at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Peterson, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 6, 1927.*

Austin O. Stanley, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Clifford M. Paxton, 1184 Pacific Street, Brooklyn, N. Y., and patent granted August 10, 1926, No. 1,596,888, to Austin O. Stanley, 205 High Street, Detroit, Mich., and a notice of such declaration sent by registered mail to said Stanley at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Stanley, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Disclaimer.

1,308,553.—*Winfred T. Powell*, Chicago, Ill. TELEPHONE-EXCHANGE SYSTEM. Patent dated July 1, 1919. Disclaimer filed April 15, 1927, by the assignee by mesne assignments, *Automatic Electric Inc.*

Hereby enters a disclaimer to claims 8, 9, 22, 25, 26, 36, 38, 40, and 47 in said specification, which are in the following words, to wit:

"8. In a telephone system, manual and automatic subscribers' lines, automatic switches at the exchange for connecting calling and called lines of either kind, means for extending any calling line to one of said switches, an operator's position, and means whereby the said calling line, if a manual line, is then automatically extended to the operator's position.

"9. In a telephone system, manual and automatic subscribers' lines, an operator's position, means for connecting a calling line with said operator's position, and controlling means for said connecting means, said controlling

means adapted to discriminate between manual and automatic calling lines, whereby the former only are so extended.

"22. In a telephone system, a trunk line having a normally open branch, circuits of different electrical character, means for connecting any circuit with said trunk line, and switching means dependent on the electrical characteristics of a connected circuit for closing said branch.

"25. In a telephone system subscribers' lines, a trunk line extending to an operator's position, means for connecting a calling line with said trunk line, means associated with certain of said lines for bringing about the operation of said connecting means, and means associated with certain other of said lines for preventing the operation of said connecting means.

"26. In a telephone system, subscribers' lines, a trunk line provided with directively controlled selecting mechanism and automatic selecting mechanism, either of said mechanisms being operable independent of the operation of the other, means for extending a calling line to said trunk, and means associated with the calling line for initiating the operation of said automatic selecting mechanism.

"36. In a telephone system, manual and automatic subscribers' lines, automatic switches at the exchange for connecting calling and called lines of either kind, subscriber controlled means for extending any calling line to one of said switches, an operator's position, and electromagnetic means whereby the said calling line, if a manual line, is then automatically extended to the operator's position.

"38. In a telephone system, manual and automatic subscribers' lines, an operator's position, automatic switching mechanism common to a plurality of said subscribers' lines for connecting a calling line with said operator's position, a relay for controlling said switching mechanism, said relay adapted to be operated when the calling line is a manual line, and inoperative when the calling line is an automatic line, whereby the former only are extended to said operator's position.

"40. In a telephone system, manual and automatic subscribers' lines, an operator's position, means for connecting one of said lines with said operator's position, and controlling means for said connecting means; said controlling means having a relay responsive to the manual line equipment, whereby said connecting means is operated to connect only manual lines to the operator's position.

"47. In a telephone system, a trunk line having a normally open branch, circuits of different electrical character, means for connecting any one of said circuits with said trunk line, and automatic switching means dependent on the electrical characteristics of a connected circuit for closing said branch."

Changes in Classification.

Order No. 3,006, April 12, 1927, directs:

In *class 60, Power Plants* (Division 18), establish the following subclasses and definitions, the patents contained in these subclasses having been taken for the most part from class 138, Hydraulic Motors, subclass 23, Miscellaneous, and from class 230, Air and Gas Pumps, abolished in this order:

Hydraulic type
Fluid transmission
54.5 Pulsator type
54.6 Pulsators,
Pneumatic type
Fluid transmission
62.5 Pulsator type
62.6 Pulsators.

54.5. HYDRAULIC TYPE, FLUID TRANSMISSION, PULSATOR TYPE. Directed to devices for transmitting energy or motion by means of the pulsations or reciprocations of a confined mass of liquid in which a unit mechanism consists of a pulse or pressure-producing mechanism, a pulse or pressure-responsive mechanism, and a single closed liquid-conducting member connecting the pulse producer and the pulse receiver or multiples of such devices.

Note.—The devices embraced may be designed to transmit pulsations of high frequency or to transmit a single pressure effect at infrequent intervals.

Note.—Devices in which the cycle of the transmitting fluid is wholly or in part a motion in one direction through an endless circuit, as through separate induction and eduction ports of a pump to a motor of the pulsator type or to a motor having separate admission and exhaust connections when not specifically provided for in existing classes, are classified in this class, subclass 57, and the subclasses indented thereunder or in subclass 62.

Note.—Pulsator transmission devices may be provided with valve or other means for controlling the pressure effect or the extent of the fluid pulsations or for filling, refilling, replenishing, or modifying the fluid content of the transmission system. In such systems the pulse-producing and the pulse-receiving members move synchronously with respect to each other, and there is not a production of successive increments of pressure or pressure effect, but of alternate pressure and release of pressure. Such devices are not provided with separate induction and eduction connections which adapt devices so provided to a unidirectional fluid flow.

Search Classes—
31—DAIRY, subclasses 61, Milkers, Suction and compression, Suction pulsator, and the subclasses indented thereunder, and 68, Milkers, Suction, Pulsators, and the subclasses indented thereunder.
100—PRESSES, subclasses 19, Baling, Articles and attachments, Boxes and frames, and 50, Expressing, Articles and attachments, Boxes and frames.
114—SHIPS, subclass 150, Steering mechanism, Fluid pressure.
125—STONE WORKING, subclass 31, Pulsator hammers, and the subclass indented thereunder.
137—WATER DISTRIBUTION, subclass 153, Valve actuation, Fluid-pressure control.
138—HYDRAULIC MOTORS, generally.
188—BRAKES, subclasses 152, Operators, Fluid pressure, Road vehicle, and 153, Operators, Fluid pressure, Rail vehicle.
200—ELECTRICITY, CIRCUIT MAKERS AND BREAKERS, subclass 81, Fluid pressure, and the subclasses indented thereunder.
254—PUSHING AND PULLING IMPLEMENTS, subclasses 2, Hoisting trucks, and 93, Fluid pressure.
255—EARTH BORING, subclass 38, Rock-drilling machines, Impact, Piston driven.
303—FLUID-PRESSURE BRAKE AND ANALOGOUS SYSTEMS, subclass 48, Direct, and the subclass indented thereunder.

54.6. HYDRAULIC TYPE, FLUID TRANSMISSION, PULSATOR TYPE, PULSATORS. This is an element class of pulsators, not specifically provided for in existing classes, embracing (1) devices designed to effect a pulsating or reciprocating motion to a confined mass of liquid and (2) devices designed to convert the energy of a pulsating or reciprocating liquid mass into mechanical work. In general the mechanism consists of a relatively movable container or cylinder member and an impelling or impelled member, as a piston or the equivalent, with means for actuating the impeller or means for transmitting the motion effect of the impelled member.

Search Classes—
74—MACHINE ELEMENTS, subclass 108, Cylinders and pistons, for cylinders and pistons per se.
137—WATER DISTRIBUTION, subclass 156, Pressure-responsive devices, and the subclass indented thereunder, for collapsible chamber pulsators per se, as siphons, bellows, bulbs, and diaphragms.

62.5. PNEUMATIC TYPE, FLUID TRANSMISSION, PULSATOR TYPE. Directed to devices as defined in subclass 54.5, limited in application by the description or claims to the use of air or like gaseous fluids as the transmitting medium.

62.6. PNEUMATIC TYPE, FLUID TRANSMISSION, PULSATOR TYPE, PULSATORS. Devices as defined in subclass 54.6, limited in application by the description or claims to use with air or like gaseous fluids.

In *class 192, Injectors and Ejectors* (Division 9), abolish the following subclasses, the patents formerly contained therein having been placed for the most part in class 230, Gas Pumps and Fans, subclass 96, Fluid displacement, Jet pumps, Elastic motive fluid, Flue, and the subclasses indented thereunder, established in this order:

4 Flue ejectors
5 With spark arresters
6 Variable
7 Variable
8 Jet.

In *class 230, Air and Gas Pumps* (Division 9), the title of the class has been changed to 230, Gas Pumps and Fans, and it has been reclassified with the subclasses indicated in the new loose leaf now being published for insertion in the Manual of Classification.

Lists of subclasses with definitions may be seen in the Classification Division, room 165.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 3, 1927.

[VOL. 358. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 159,528. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PENNSYLVANIA CHOCOLATE COMPANY, Pittsburgh, Pa. Filed Feb. 18, 1922.

PENN-TEK

Particular description of goods.—Cocoa.
Claims use since as early as Jan. 15, 1922.

Ser. No. 188,643. (CLASS 43. THREAD AND YARN.) SOIERIES COUDURIES, FRUCTUS & DESCHER DE NEW YORK, INC., New York, N. Y. Filed Nov. 21, 1923.

SAMOURAÏ

Particular description of goods.—Silk Thread.
Claims use since June 11, 1923.

Ser. No. 197,908. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RALPH H. SEIPEL, doing business as Seipel Food Products Company, Pittsburgh, Pa. Filed May 31, 1924.

SPIFFY

Particular description of goods.—Ice-Cream Confections and Confections Consisting of Pastry Shells Filled With Custard.
Claims use since Sept. 1, 1923.

Ser. No. 202,134. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) FRANK W. MORSE, doing business as Frank W. Morse Company, Boston, Mass. Filed Sept. 2, 1924.

"Morse Eureka SPRING GRIP"

The words "Trade-Mark" and "Spring Grip" as well as quotation marks are herein disclaimed, also the word "Morse" apart from the mark shown is disclaimed.
Particular description of goods.—Radio Equipment, Specifically Binding Posts and Spring Terminals.
Claims use since Mar. 1, 1914.

Ser. No. 206,052. (CLASS 39. CLOTHING.) HARRY BERGER, doing business as Harry Berger Shirt Company, New York, N. Y. Filed Dec. 1, 1924.

Peachskin

Particular description of goods.—Men's and Boys' Collars, Pyjamas, Night Robes, Underwear of Textile Fabric, and Shirts—Namely, Dress, Negligee, and Work Shirts.
Claims use since November, 1919.

Ser. No. 212,399. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE PIERCE-ARROW MOTOR CAR COMPANY, Buffalo, N. Y. Filed Apr. 8, 1925.

PIERCE

Particular description of goods.—Tire Covers.
Claims use since Mar. 7, 1925.

Ser. No. 219,328. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDWARD S. GOLDHILL, New York, N. Y. Filed Aug. 25, 1925.

"By their Shape You will know Them"

Particular description of goods.—Doughnuts.
Claims use since Aug. 12, 1925.

Ser. No. 227,650. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) K. C. IWATA, doing business as K. C. Iwata Co., Brawley, Calif. Filed Feb. 23, 1926.

SERENITY

Particular description of goods.—Fresh Cantaloupes, Tomatoes, Lettuce, Honey Dew Melons, and Peas in Their Natural State.
Claims use since Jan. 1, 1921.

Ser. No. 228,384. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LA SALLE PRODUCTS, INC., doing business as 'D'Ciny', St. Paul, Minn. Filed Mar. 9, 1926.

Blossom Time

Particular description of goods.—Perfumes, Toilet Waters, Talcum Powder, Face Creams, and Hair Tonic.
Claims use since Jan. 5, 1926.

Ser. No. 228,808. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE DEXTROSE CO. INC., New York, N. Y. Filed Mar. 18, 1926.

SUPERDEX

Particular description of goods.—Dextrose Particularly Adapted for Use as a Food.
Claims use since Jan. 2, 1926.

Ser. No. 228,846. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE CARBORUNDUM COMPANY, Niagara Falls, N. Y. Filed Mar. 19, 1926.

CARBOPLASTIC

Particular description of goods.—Apparatus for Spraying or Forcibly Ejecting Cementitious Compositions.
Claims use since Nov. 9, 1925.

Ser. No. 229,879. (CLASS 42. (KNITTED, NETTED, AND TEXTILE FABRICS.) SHULER & BENNINGHOFEN, Hamilton, Ohio. Filed Apr. 8, 1926.

MARIPOSA

Particular description of goods.—All-Wool Blankets.
Claims use since Mar. 13, 1908.

Ser. No. 231,204. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE NITE-EYE LIGHT CORPORATION, Denver, Colo. Filed May 6, 1926.

NITE-EYES

Particular description of goods.—Electric Headlights, Reflectors for Electric Headlights, Incandescent Electric Lamps, and Storage Batteries.
Claims use since Apr. 10, 1926.

Ser. No. 231,224. (CLASS 33. GLASSWARE.) WILLIAMSPORT MIRROR AND GLASS COMPANY, Williamsport, Pa. Filed May 6, 1926.

WILLIAMSPORT MIRROR AND GLASS COMPANY — WILLIAMSPORT PENNSYLVANIA — OK GLASS

The words "Williamsport, Pennsylvania, Glass" appearing on the drawing are disclaimed apart from the mark shown.
Particular description of goods.—All Kinds of Flat Glass Silvered and Unsilvered.
Claims use since Mar. 22, 1926.

Ser. No. 231,341. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) THE WILLIAM PRYM COMPANY, LIMITED, Stolberg, Germany. Filed May 8, 1926. Under 10-year proviso.

Applicant owns registration No. 95,148.
Particular description of goods.—Pins (Not Made of Precious Metal), Buckles (Not Made of Precious Metal), and Shoe Hooks and Eyes.

"MIDGET"

Particular description of goods.—Pencil Sharpeners.
Claims use since Aug. 5, 1926.

Ser. No. 245,798. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MINNESOTA VALLEY CANNING COMPANY, Lesueur, Minn. Filed Mar. 15, 1927.

No claim is made to the words "Great Big Tender Peas" and the pictorial representation of a pea pod except in connection with the mark as shown.
Particular description of goods.—Canned Peas.
Claims use since on or about Jan. 1, 1926.

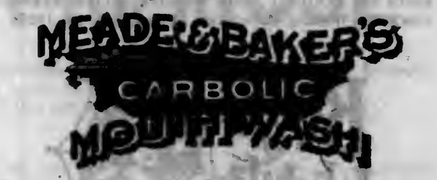
Ser. No. 245,811. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SOCIETE DU LOUVRE (SOCIETE ANONYME), Paris, France. Filed Mar. 15, 1927.

STUDIA

Particular description of goods.—Perfume, Toilet Water, Face Powder, Sachet, Rouge, Talcum Powder, Lip Sticks, Face Creams, Brilliantine, Bath Salts, Lotion for the Skin and Hair and Dentifrices.
Claims use since Nov. 12, 1923.

Ser. No. 245,868. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE STANLEY WORKS, New Britain, Conn. Filed Mar. 16, 1927.

110



Particular description of goods.—Hand Planes.
Claims use since 1875.

Ser. No. 245,878. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WORTHINGTON PUMP AND MACHINERY CORPORATION, New York, N. Y. Filed Mar. 16, 1927.

DUOPLEX

Particular description of goods.—Pumping Machinery, Pumps, Engines, Pumping Engines, and Pumps.
Claims use since Nov. 18, 1926.

Ser. No. 245,906. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GRAVES & MEADE & BAKER COMPANY, New York, N. Y. Filed Mar. 17, 1927. Under 10-year proviso.

Particular description of goods.—Dentifrice.
Claims use since about Jan. 1, 1867.

Ser. No. 245,955. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BUIGAS, SANTOS & CO., San Antonio, Tex. Filed Mar. 18, 1927.

TUPINAMBA

Particular description of goods.—Coffee.
Claims use since October, 1926.

Ser. No. 245,956. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) CENTRAL SCIENTIFIC COMPANY, Chicago, Ill. Filed Mar. 18, 1927.

MEGAVAC

"Megavac."
Particular description of goods.—Vacuum Pumps.
Claims use since Feb. 24, 1927.

Ser. No. 245,982. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) EWALD HARWIX, doing business as Harwix Optische Anstalt, Berlin, Germany, assignor to Mirakel Optical Co., Mount Vernon, N. Y., a Copartnership consisting of Robert J. Reichert and Elsa Reichert. Filed Mar. 18, 1927.

Mirakel

Particular description of goods.—Field Glasses and Opera Glasses.
Claims use since 1920.

Ser. No. 245,983. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HERMAN BERR & COMPANY, INCORPORATED, Brooklyn, N. Y. Filed Mar. 18, 1927.

AMALGITE

Particular description of goods.—Abrasive Papers and Cloths.
Claims use since Mar. 2, 1927.

Ser. No. 245,997. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE MOHAWK RUBBER COMPANY, Akron, Ohio. Filed Mar. 18, 1927.

MORCO

Particular description of goods.—Resilient Vehicle Tires of Rubber, Rubber Composition, or Rubber and Fabric, and Inner Tubes Composed of Rubber for Resilient Vehicle Tires.
Claims use since Mar. 2, 1927.

Ser. No. 246,035. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) CLARENCE H. LOW, doing business as Flents Products Company, New York, N. Y. Filed Mar. 19, 1927.

FLENTS

Particular description of goods.—Device adapted to be Inserted in the Auditory Canal of the Ear to Occlude Extraneous Noises and Induce Sleep.
Claims use since Jan. 19, 1927.

Ser. No. 246,039. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE MATHIESON ALKALI WORKS, INC., New York, N. Y. Filed Mar. 19, 1927.

CROMIDE

Particular description of goods.—Tanning Compound.
Claims use since Feb. 8, 1927.

Ser. No. 246,048. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARIS MEDICINE CO., St. Louis, Mo. Filed Mar. 19, 1927.

Particular description of goods.—Antiseptic Healing Oil.
Claims use since Jan. 15, 1905.

Ser. No. 246,049. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARIS MEDICINE CO., St. Louis, Mo. Filed Mar. 19, 1927.

Particular description of goods.—Antiseptic Healing Oil.
Claims use since Jan. 15, 1905.

Ser. No. 246,054. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAN FRANCISCO GROCERY CO., San Francisco, Calif. Filed Mar. 19, 1927.

CHLOR-SOL

Particular description of goods.—Bleaching Fluid and Disinfectant.
Claims use since Sept. 1, 1926.

Ser. No. 246,061. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WICHITA MILL & ELEVATOR COMPANY, Wichita Falls, Tex. Filed Mar. 19, 1927.

Particular description of goods.—Wheat Flour.
Claims use since about Jan. 1, 1902.

Ser. No. 246,074. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CHANDLER AND RUDD COMPANY, Cleveland, Ohio. Filed Mar. 21, 1927.

Choc-Co-Ruffles

Particular description of goods.—Candy.
Claims use since Nov. 8, 1926.

Ser. No. 246,082. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CRYSTAL CHEMICAL COMPANY, INC., New York, N. Y. Filed Mar. 21, 1927.

OL-E-OL

Particular description of goods.—Mineral Oil for Internal Use, Flavored and Colored.
Claims use since June 22, 1912.

Ser. No. 246,089. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE ENTERPRISE MANUFACTURING COMPANY, Akron, Ohio. Filed Mar. 21, 1927.

SUMMIT

Particular description of goods.—Fishing Reels.
Claims use since about 1904.

Ser. No. 246,119. (CLASS 15. OILS AND GREASES.) PRIMROSE PETROLEUM COMPANY, Dallas, Tex. Filed Mar. 21, 1927.

PRIMROSE

Particular description of goods.—Gasoline, Kerosene, and Lubricating Oils.
Claims use since about Sept. 15, 1916.

Ser. No. 246,120. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE PRISCILLA COMPANY, Boston, Mass. Filed Mar. 21, 1927.

PATRICIAN

"Patrician."
Particular description of goods.—Sewing Machines.
Claims use since Feb. 25, 1927.

Ser. No. 246,129. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) R. & H. SIMON COMPANY, Union City, N. J. Filed Mar. 21, 1927.

REGATTA
RUFSTUF

Particular description of goods.—Silk Piece Goods.
Claims use since Mar. 4, 1927.

Ser. No. 246,154. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FAISCHILD BROS. & FOSTER, New York, N. Y. Filed Mar. 22, 1927.

ANTIAC

"Antiac."
Particular description of goods.—Preparation of Alkaline Salts Designed for Internal Administration for the Relief of Hyperacidity, Flatulence, and Similar Disorders.
Claims use since Jan. 2, 1927.

Ser. No. 246,163. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) ALBERT H. KERSTING, doing business as The Acme Spring Sash Balance Co., Los Angeles, Calif. Filed Mar. 22, 1927.

ACME

Particular description of goods.—Spring-Sash Balances.
Claims use since Dec. 1, 1926.

Ser. No. 246,175. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Mar. 22, 1927.

METATONE

"Metatone."
Particular description of goods.—General Tonic.
Claims use since Oct. 20, 1926.

Ser. No. 246,197. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) COLUMBIA METAL PRODUCTS COMPANY, Chicago, Ill. Filed Mar. 23, 1927.

DELITE

Particular description of goods.—Can Openers.
Claims use since Mar. 9, 1927.

Ser. No. 246,230. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HERMAN SABROWSKE, Oberlin, Ohio. Filed Mar. 23, 1927.

UP-N-ON

Particular description of goods.—Derailers.
Claims use since about April, 1924.

Ser. No. 246,236. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) L. & H. STERN, INC., Brooklyn, N. Y. Filed Mar. 23, 1927.

MARWYN

Particular description of goods.—Pipes.
Claims use since Oct. 1, 1924.

Ser. No. 246,257. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) THE A. & J. MANUFACTURING CO., Binghamton, N. Y. Filed Mar. 24, 1927.

"GRATOP"

Trade-mark consists of the legend "Gratop."
Particular description of goods.—Kitchen and Household Tools or Utensils—To Wit, Vegetable Brushes, Sink Brushes, Scouring Brushes, and Griddle Greasers.
Claims use since Oct. 21, 1925.

Ser. No. 246,258. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE A. & J. MANUFACTURING CO., Binghamton, N. Y. Filed Mar. 24, 1927.

"GRATOP"

"Gratop."
Particular description of goods.—Kitchen and Household Tools or Utensils—To Wit, Measuring Spoons.
Claims use since Oct. 21, 1925.

Ser. No. 246,264. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BIEDERMAN BROS. PRODUCE CO., St. Louis, Mo. Filed Mar. 24, 1927.

Particular description of goods.—Fresh Tomatoes.
Claims use since January, 1926.

Ser. No. 246,265. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BOURJOIS, INC., New York, N. Y. Filed Mar. 24, 1927.

Fleur persane

Particular description of goods.—Perfume, Toilet Water, Face Powder, and Sachet.
Claims use since Apr. 1, 1925.

Ser. No. 246,267. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CITRUS CHEMICAL CORPORATION, Elkton, Md. Filed Mar. 24, 1927.

ORO-LAX

Particular description of goods.—Laxative Drinks.
Claims use since Mar. 15, 1927.

Ser. No. 246,269. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) W. R. DARLINGTON, doing business as Darlox Manufacturing Company, Kansas City, Mo. Filed Mar. 24, 1927.

DARLOX

Particular description of goods.—Compound from Which a Treatment is Made, Intended to Darken and Restore Faded, Streaked, and Gray Hair to Its Otherwise Natural Color.
Claims use since Jan. 17, 1927.

Ser. No. 246,279. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HEATHER COMPANY, New York, N. Y. Filed Mar. 24, 1927.

LIGHT GLOW

Particular description of goods.—Face Powders, Face Creams, Face Packs, Toilet Waters, Rouges, Lip Sticks, Eyebrow Pencils, Perfumes, Hair Tonics, Hair Oils, Dentifrices, Shampoos, Dry Shampoos, Hair Whitener, Hair Dye, Tooth Powders, Bath Salts, Smelling Salts, Incense, Talcum Powders, Sachets, and Solid Perfumes
Claims use since November, 1926.

Ser. No. 246,280. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HEATHER COMPANY, New York, N. Y. Filed Mar. 24 1927.

MIDNIGHT FROLIC

Particular description of goods.—Face Powder, Face Creams, Face Packs, Toilet Waters, Rouges, Lip Sticks, Eyebrow Pencils, Perfumes, Hair Tonics, Hair Oils, Dentifrices, Shampoos, Dry Shampoos, Hair Whitener, Hair Dye, Tooth Powders, Bath Salts, Smelling Salts, Incense, Talcum Powders, Sachets, and Solid Perfumes.
Claims use since March, 1925.

Ser. No. 246,284. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALFRED J. HOCKINGS, Crystal Falls, Mich. Filed Mar. 24, 1927.

EZ to U's

Particular description of goods.—Silver Nitrate in Specially-Prepared Form.
Claims use since Feb. 1, 1927.

Ser. No. 246,292. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SAMUEL KNIGHTON & SONS, INC., New York, N. Y. Filed Mar. 24, 1927.

Particular description of goods.—Wheat Flour.
Claims use since Jan. 2, 1927.

Ser. No. 246,293. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SAMUEL KNIGHTON & SONS, INC., New York, N. Y. Filed Mar. 24, 1927.

Particular description of goods.—Wheat Flour.
Claims use since Jan. 2, 1927.

Ser. No. 246,329. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAURICE L. BERNSTEIN, doing business as Marjo Drug Co., Washington, D. C. Filed Mar. 25, 1927.

SEC

Trade-mark consists merely in the word "Sec."
Particular description of goods.—Insecticides.
Claims use since December, 1925.

Ser. No. 246,344. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PERCY GRAHAM, doing business as Gervaise Graham Company, Chicago, Ill. Filed Mar. 25, 1927. Under 10-year proviso.

BATH OF ISIS

Particular description of goods.—Hand Lotion.
Claims use since Nov. 8, 1890.

Ser. No. 246,418. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH BURNETT COMPANY, Boston, Mass. Filed Mar. 26, 1927.

COCOAINE.

"Cocoaine."
Particular description of goods.—Hairdressing.
Claims use since 1847.

Ser. No. 246,451. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Mar. 26, 1927.

Formohydrion

Particular description of goods.—Medicinal Preparations for the Treatment of Genito-Urinary Disorders.
Claims use since Sept. 24, 1921.

Ser. No. 246,500. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WYLIE R. POWELL, doing business as Fenole Chemical Company, Jacksonville, Fla. Filed Mar. 28, 1927.

FLYLAK

Particular description of goods.—Insecticides.
Claims use since on or about Mar. 18, 1927.

Ser. No. 246,565. (CLASS 43. THREAD AND YARN.) J. C. PENNEY COMPANY, Wilmington, Del., and New York, N. Y. Filed Mar. 29, 1927.

PENIMAID

Particular description of goods.—Yarns.
Claims use since Jan. 20, 1927.

Ser. No. 246,579. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) VICTOR MONAGHAN COMPANY, Greenville, S. C. Filed Mar. 29, 1927.

FABRICS

No claim is made to the word "Fabrics" apart from the mark shown in the drawing.
Particular description of goods.—Cotton Piece Goods.
Claims use since Mar. 1, 1927.

Ser. No. 246,591. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y. Filed Mar. 30, 1927.

Pauplad

Particular description of goods.—Pile Fabrics in the Piece.
Claims use since Mar. 8, 1927.

Ser. No. 246,636. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FREDERICK A. SCHWANNECKE, doing business as F. A. Schwannecke Co., New Rochelle, N. Y. Filed Mar. 30, 1927.

HANDIPAK

Particular description of goods.—Face Powders, Talcum Powders, Tooth Powders, Dusting Powders, Nail Powders, Foot Powders, and Deodorant Powders.
Claims use since Mar. 22, 1927.

TRADE-MARK REGISTRATIONS GRANTED

[ACT OF FEBRUARY 20, 1905.]

MAY 3, 1927.

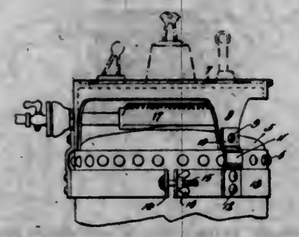
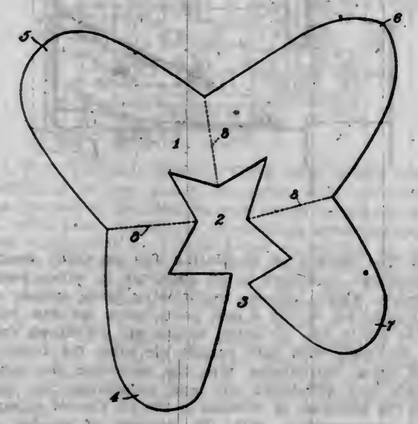
9,814.—*Title:* UNOVESELL MALT AND HOPS. For Malt and Hops. UNOVESELL MALT CO., Fall River, Mass. Published January 1, 1927.

REISSUES



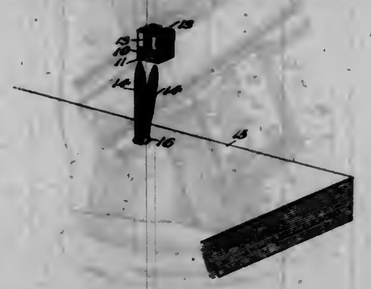
MAY 3, 1927.

16,607. OIL OR GAS WELL. ERD V. CROWELL, Los Angeles, Calif., assignor of one-half to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed June 28, 1926. Serial No. 119,262. Original No. 1,472,555, dated Oct. 30, 1923, Serial No. 492,056, filed Aug. 13, 1921. 17 Claims. (Cl. 166—14.)



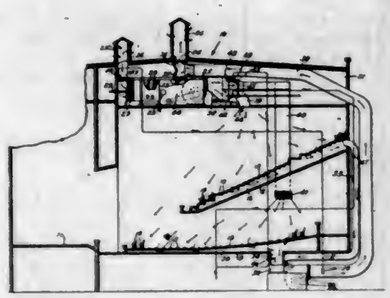
1. In a device of the character described, a bowl comprising sections, means for releasably securing the sections of the bowl together in assembly, a top for said bowl comprising sections, means for releasably securing the sections of the top together in assembly, slideways carried by the sections of the bowl, lugs carried by the sections of the top and operatively engaged in said slideways, a packing rubber in said bowl including an adjustable section operating in each of the sections of said bowl, a cage for the packing rubber having a section for each of the sections of said packing rubber, and operating mechanism for the packing rubber sections including an operating screw journaled in each bowl section, a swiveled connection between each operating screw and the adjacent cage section of its bowl section, and a handle for each operating screw.

16,608. IRON-SUPPORTING PLATE FOR HOT-WATER BOILERS. SPIROS C. MARKATOS, New York, N. Y. Filed Dec. 15, 1925. Serial No. 75,659. Original No. 1,497,730, dated June 17, 1924, Serial No. 645,475, filed June 14, 1923. 5 Claims. (Cl. 126—230.)



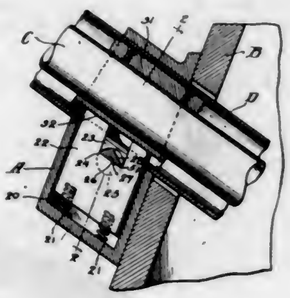
5. In combination, a vertical steam boiler, a hot plate, means attaching said plate to the boiler in vertical spaced parallel relation with the top of the boiler, and a burner arranged in the space between the hot plate and the boiler.

16,609. GLOVE. FRANK X. STURM, Alexandria, Ind., assignor to The Glove Corporation, Alexandria, Ind., a Corporation of Indiana. Filed Nov. 12, 1926. Serial No. 148,079. Original No. 1,540,713, dated June 2, 1925, Serial No. 678,555, filed Dec. 5, 1923. 8 Claims. (Cl. 2—169.)



1. A glove blank for the backs of the fingers of a glove, comprising a substantially star shaped blank, the points of the star forming the finger backs and the center of the blank being slotted at the base of each point to permit the spreading of the material when the blank is folded and secured to the front of the glove.

16,610. PAPER FASTENER. JUSTIN A. ELIAS, Philadelphia, Pa., assignor to Fred J. Kline, Long Island City, N. Y. Filed Mar. 3, 1927. Serial No. 172,528. Original application filed Nov. 16, 1923, Serial No. 675,048. Renewed Dec. 19, 1925. Original No. 1,572,192, dated Feb. 9, 1926. 18 Claims. (Cl. 24—153.)

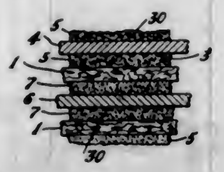


1. A fastener for a material-binding element having projecting prongs, comprising a body portion having angular projections, and means on said projections for receiving the prongs of the element, said projections being adapted to be flattened with prongs.

16,611. METHOD OF AND APPARATUS FOR COOLING AND VENTILATING. LEO L. LEWIS, Plainfield, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Feb. 12, 1927. Serial No. 167,854. Original No. 1,583,060, dated May 4, 1926, Serial No. 757,389, filed Dec. 22, 1924. 17 Claims. (Cl. 236—44.)

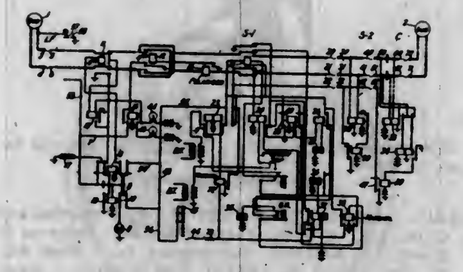
13. The method of ventilating and providing desired atmospheric conditions in an enclosure in which people assemble, which includes conditioning fresh outside air to provide air having a dew point below the dew point of the air in the enclosure, mixing air withdrawn from the enclosure with said outside air after the latter is conditioned, introducing into the enclosure the mixed outside and withdrawn air, and permitting the relief from the enclosure of volumes of the air thereof substantially corresponding with the volumes of outside air which are conditioned and introduced into the enclosure.

16,612. AUTOMOBILE LOCK. ORVILLE S. HERSHEY, Chicago, Ill., assignor to Hershey Manufacturing Company, Chicago, Ill., a Corporation of Colorado. Filed Dec. 27, 1926. Serial No. 157,390. Original No. 1,442,765, dated Jan. 16, 1923, Serial No. 434,455, filed Jan. 3, 1921. 12 Claims. (Cl. 70—127.)



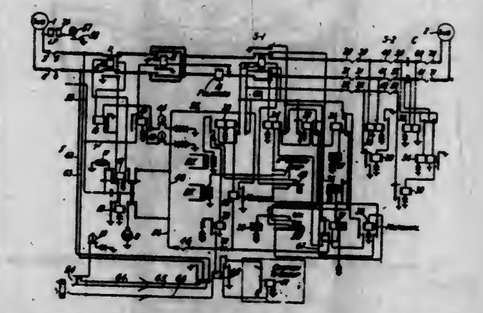
4. In a device of the kind described, a steering lock, an ignition switch, and a single control means working through successively acting slip connections adapted to operate either the latter alone or both together, substantially as described.

16,613. SAFETY HOOK. JOSEPH F. MOODY and VIRGIL L. DU BOIS, Tulsa, Okla., assignors, by direct and mesne assignments, to Albert H. Neilson, Tulsa, Okla. Filed Nov. 6, 1926. Serial No. 146,834. Original No. 1,541,991, dated June 16, 1925, Serial No. 722,071, filed June 24, 1924. 12 Claims. (Cl. 24—241.)



12. A safety hook comprising a body having its major portion hollowed and provided with a pair of bills, the end portions of which are provided with ears, a latch pivoted between said bills and having a branch arranged between the bills, a trigger pivoted at its upper portion within said hollowed body and having its lower portion provided with a shoulder adapted to engage said branch to hold the latch in a set position, and a coil spring connected to said latch below the pivot point of the same and to the lower portion of said trigger to urge the trigger into engagement with said branch and to urge the latch outwardly upon being released, said latch provided with oppositely arranged shoulders riding over and engaging said ears, said trigger being housed within and protected by said body.

16,614. STORAGE BATTERY. THOMAS A. EDISON, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Feb. 3, 1926. Serial No. 85,806. Original No. 1,526,326, dated Feb. 17, 1925, Serial No. 698,633, filed Mar. 12, 1924. 14 Claims. (Cl. 136—159.)

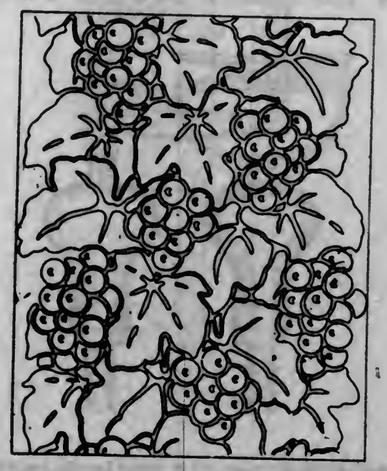


1. In a storage battery cell, a conductive member, an insulating member and active material held under pressure between said members and having only spaced sections of that surface thereof adjacent the conductive member, in close, intimate contact with such conductive member thereby providing passageways to facilitate the circulation of the electrolyte through the active material, substantially as described.

16,615. AUTOMATIC TELEPHONE SYSTEM. HENRY HOVLAND, Flushing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1927. Serial No. 177,777. Original No. 1,614,959, dated Jan. 18, 1927, Serial No. 758,592, filed Dec. 29, 1924. 15 Claims. (Cl. 179—6.3.)

1. In a telephone system, calling lines, each operable to establish various circuit conditions thereon, called lines, classified as charge lines, other called lines classified as free lines, switching mechanism including a selector switch controllable by a calling line to build up a connection to any desired called line, means for preventing said selector switch from functioning in accordance with its normal mode of operation to build up a connection, and means in said selector switch responsive to a particular circuit condition established at the calling station for nullifying the effect of said first means to permit said selector switch to function in accordance with its normal mode of operation to build up a connection to a charge line.

16,616. AUTOMATIC COIN-SERVICE TELEPHONE SYSTEM. HENRY HOVLAND, Flushing, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1927. Serial No. 177,778. Original No. 1,605,952, dated Nov. 9, 1926, Serial No. 27,169, filed May 1, 1925. 7 Claims. (Cl. 179—6.3.)



1. In a telephone system, calling lines having switch-controlling devices, means associated with each calling line operable to establish various circuit conditions thereon, called lines classified as charge lines, switching mechanism controllable by a calling line controlling device to build up a connection to any desired called line, an operator's position, means under the control of said first means for preventing said switching mechanism from functioning in accordance with its normal mode of operation to build up a connection, and means for completing a connection from one of said calling lines to said operator's position should the switching mechanism be prevented from functioning in accordance with its normal mode of operation.

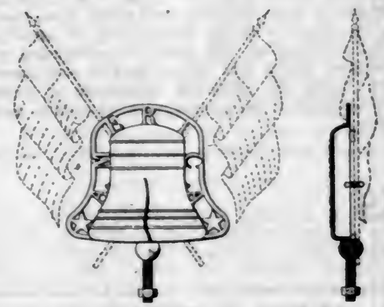
DESIGNS

MAY 3, 1927.

72,539. PRINTED FABRIC. WILLIAM H. ADAMS, Kenyon, R. I., assignor to Eastern Finishing Works, Inc., Kenyon, R. I., a Corporation of Rhode Island. Filed Feb. 3, 1927. Serial No. 20,594. Term of patent 7 years.

The ornamental design for a printed fabric, as shown.

72,540. ASH TRAY OR ARTICLE OF SIMILAR NATURE. VITAL ALLALOUF, New York, N. Y. Filed Mar. 8, 1927. Serial No. 21,063. Term of patent 7 years



The ornamental design for an ash tray or article of similar nature, as shown.

72,541. POT OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, Oneida, N. Y. Filed Dec. 24, 1926. Serial No. 20,137. Term of patent 14 years.

The ornamental design for a pot or similar article as shown.

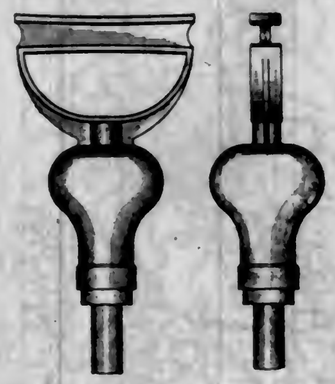
72,542. FLAG HOLDER FOR AUTOMOBILE RADIATORS. ROBERT G. ARCHER, Sr., and ROBERT G. ARCHER, Jr., Fort Washington, Pa. Filed Nov. 17, 1925. Serial No. 15,442. Term of patent 3½ years.

The ornamental design for a flag holder for automobile radiators substantially as shown.

72,543. COMBINATION BATHROOM FIXTURE. JOHN H. BALMER, Maplewood, N. J. Filed Jan. 19, 1927. Serial No. 20,427. Term of patent 14 years.

The ornamental design for a combination bathroom fixture as shown.

72,544. COMBINATION BATHROOM FIXTURE. JOHN H. BALMER, Maplewood, N. J. Filed Jan. 19, 1927. Serial No. 20,428. Term of patent 14 years.

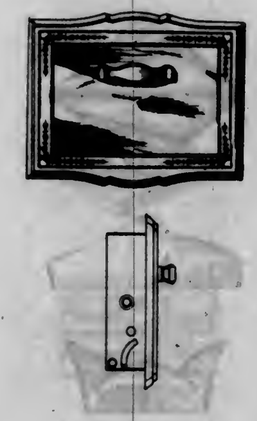


The ornamental design for a combination bathroom fixture as shown.

72,545. AUTOMOBILE RADIATOR. PAUL BASTIEN and CHARLES S. CRAWFORD, Indianapolis, Ind., assignors to Frederic E. Moskovics, Indianapolis, Ind. Filed Feb. 13, 1926. Serial No. 16,519. Term of patent 7 years.

The ornamental design for an automobile radiator, as shown.

72,546. PUMP HANDLE FOR FIRE EXTINGUISHERS OR SIMILAR ARTICLES. COLIN BROWN, Rochester, N. Y., assignor to The E. C. Brown Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 26, 1926. Serial No. 17,056. Term of patent 14 years.

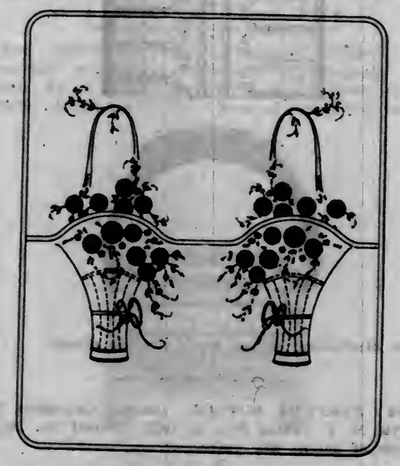


The ornamental design for a pump handle for fire extinguishers or similar articles as shown.

72,547. BUTTON. JAMES L. CLARK, Coxs Creek, Ky. Filed Sept. 29, 1926. Serial No. 19,199. Term of patent 7 years.

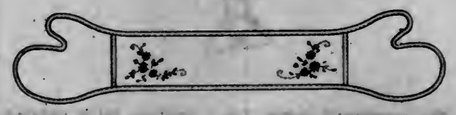
The ornamental design for a button, as shown.

72,548. WALL POCKET OR SIMILAR ARTICLE. RUDOLPH DE BOER, Grand Rapids, Mich. Filed Feb. 10, 1927. Serial No. 20,674. Term of patent 7 years.



The ornamental design for a wall pocket or similar article substantially as shown.

72,549. TABLE SCARF. JOSEPH DERK, Philadelphia, Pa., assignor to The Derk Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 3, 1927. Serial No. 20,948. Term of patent 3½ years.

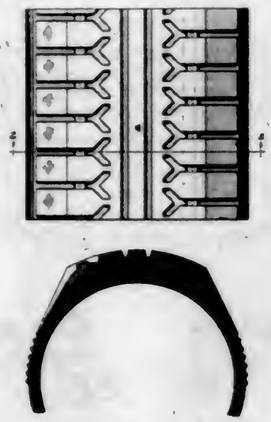


The ornamental design for a table scarf as shown and described.

72,550. FOOTWEAR CASE. KATHERINE L. DRUMMOND, Chicago, Ill., assignor to T. Buettner & Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Mar. 27, 1926. Serial No. 17,084. Term of patent 3½ years.

The ornamental design for a footwear case as shown.

72,551. UTENSIL MITT. KATHERINE L. DRUMMOND, Chicago, Ill., assignor to T. Buettner & Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1926. Serial No. 17,206. Term of patent 3½ years.

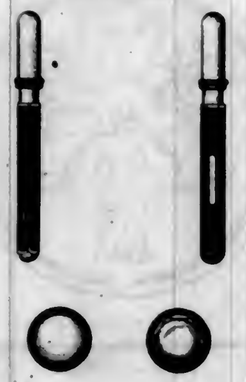


The ornamental design for a utensil mitt as shown.

72,552. PAPER SALT SHAKER. DAVID O. FORD, Lynchburg, Va. Filed Mar. 7, 1927. Serial No. 20,998. Term of patent 14 years.

The ornamental design for a paper salt shaker, as shown.

72,553. TIRE. WADE S. GALVIN, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 13, 1925. Serial No. 15,409. Term of patent 14 years.

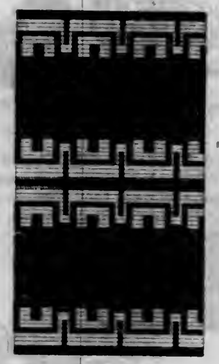


The ornamental design for a tire, as shown.

72,554. PERFUME BOTTLE. GEORGE GRUNBERG, New York, N. Y. Filed Feb. 2, 1927. Serial No. 20,586 Term of patent 3½ years.

The ornamental design for a perfume bottle substantially as shown.

72,555. THERMOMETER CASE. ISAAC Q. GURNER, Butler, and ALBERT A. SMITH, Riverdale, N. J., assignors to Superior Hard Rubber Company, Butler, N. J., a Corporation of New Jersey. Filed Feb. 15, 1927. Serial No. 20,777. Term of patent 14 years.



The ornamental design for a thermometer case, as shown.

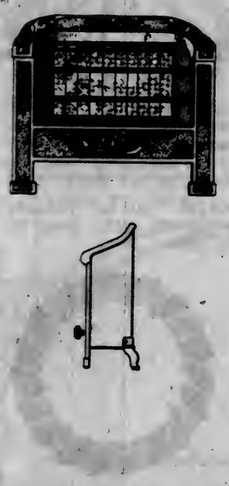
72,556. RADIATOR CAP. ALBERT OWEN HOLTOM, Rochester, N. Y., assignor to Herman Edward Zimmerman, New York, N. Y. Filed Jan. 10, 1927. Serial No. 20,325. Term of patent 7 years.

The ornamental design for a radiator cap, as shown.

72,557. TEXTILE FABRIC. KARL JÄGER, Werden-Ruhr, Germany. Filed Dec. 23, 1926, Serial No. 20,126, and in Germany Aug. 28, 1926. Term of patent 3½ years.

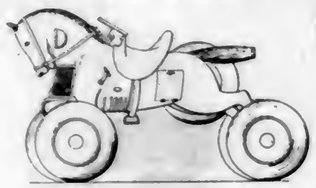
The ornamental design for a textile fabric as shown.

72,558. PEN DESK STAND OR SIMILAR ARTICLE. SAMUEL KANNER, New York, N. Y. Filed Feb. 5, 1927. Serial No. 20,632. Term of patent 7 years.

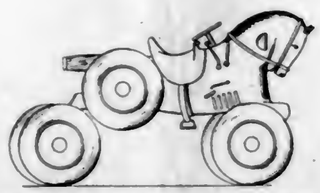


The ornamental design for a pen desk stand or similar article, as shown.

72,559. LOUD SPEAKER. JOHN W. MACDOW, Newark, N. J. Filed Feb. 15, 1927. Serial No. 20,775. Term of patent 14 years.

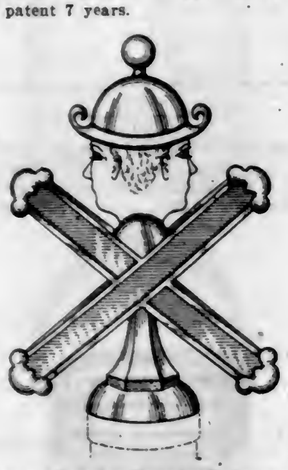


The ornamental design for a loud speaker, as shown.



72,560. HEATER. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 10,751. Term of patent 3½ years.

The ornamental design for a heater, as shown.



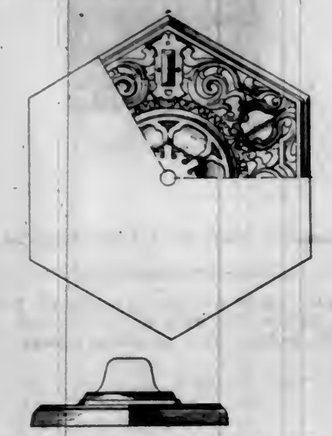
72,561. AUTOMOBILE BODY. DORA S. MILLER, Los Angeles, Calif. Filed Nov. 1, 1926. Serial No. 19,555. Term of patent 14 years.

The ornamental design for an automobile body, as shown.

72,562. RADIATOR CAP. JUDIE PARDEE MITCHELL, Denver, Colo. Filed Feb. 1, 1927. Serial No. 20,570. Term of patent 7 years.

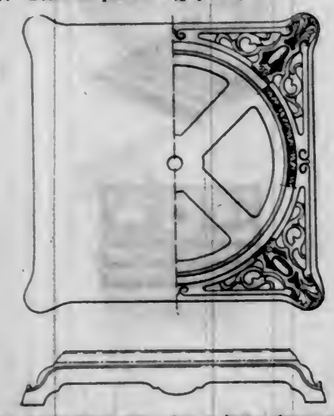
The ornamental design for a radiator cap, as shown.

72,563. WREATH. MALVA NADOLLECK, New York, N. Y. Filed Aug. 21, 1925. Serial No. 14,546. Term of patent 3½ years.



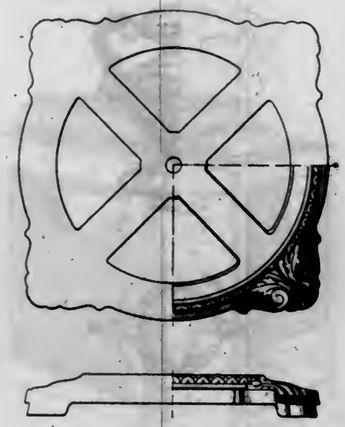
The ornamental design for a wreath, as shown.

72,564. BOTTLE. CHARLES J. OPPENHEIM, Jr., New York, N. Y. Filed Feb. 25, 1927. Serial No. 20,903. Term of patent 7 years.



The ornamental design for a bottle as shown.

72,565. LAMP BASE OR SIMILAR ARTICLE. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,856. Term of patent 3½ years.

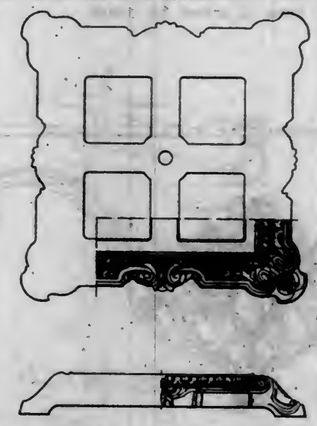


The ornamental design for a lamp base, or similar article, as shown.

72,566. LAMP BASE OR SIMILAR ARTICLE. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,857. Term of patent 3½ years.

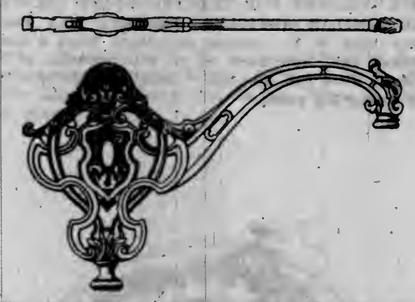
The ornamental design for a lamp base, or similar article, as shown.

72,567. LAMP BASE OR SIMILAR ARTICLE. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,858. Term of patent 3½ years.



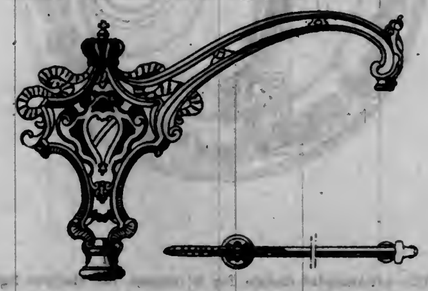
The ornamental design for a lamp base, or similar article, as shown.

72,568. LAMP BASE OR SIMILAR ARTICLE. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,859. Term of patent 3½ years.



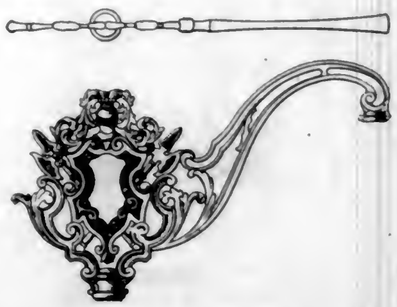
The ornamental design for a lamp base or similar article, as shown.

72,569. LAMP BASE OR SIMILAR ARTICLE. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,860. Term of patent 3½ years.



The ornamental design for a lamp base or similar article, as shown.

72,570. BRIDGE ARM FOR ELECTRIC-LIGHT FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,861. Term of patent 3½ years.



The ornamental design for a bridge arm for electric light fixtures or similar articles, as shown.

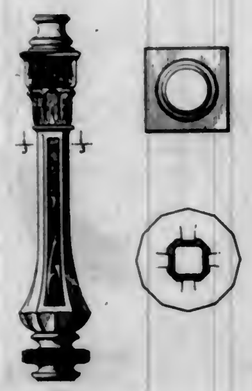
72,571. BRIDGE ARM FOR ELECTRIC-LIGHT FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,862. Term of patent 3½ years.

The ornamental design for a bridge arm for electric light fixtures or similar articles, as shown.

72,572. BRIDGE ARM FOR ELECTRIC-LIGHT FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,863. Term of patent 3½ years.

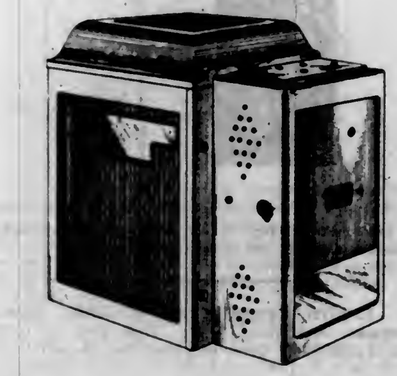
The ornamental design for a bridge arm for electric light fixtures or similar articles, as shown.

72,573. COLUMN FOR ELECTRIC-LIGHT FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,864. Term of patent 3½ years.

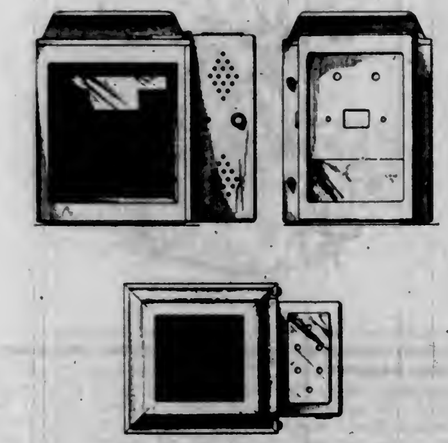


The ornamental design for a column for electric light fixtures or similar articles, as shown and described.

72,574. COLUMN FOR ELECTRIC-LIGHT FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,865. Term of patent 3½ years.

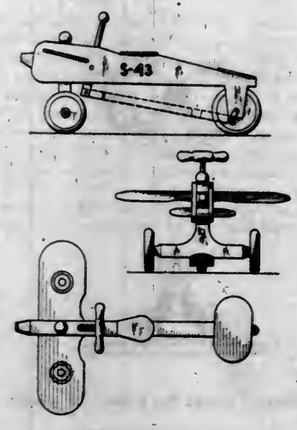


The ornamental design for a column for electric light fixtures or similar articles, as shown and described.



72,575. COLUMN FOR ELECTRIC-LIGHT FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX PORITZ, New York, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,866. Term of patent 3½ years.

The ornamental design for a column for electric light fixtures or similar articles, as shown.



72,576. CASING FOR COMBINED BATTERY AND BATTERY CHARGER FOR RADIO APPARATUS. JOHN L. RUPP, Wilkinsburg, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1926. Serial No. 19,541. Term of patent 14 years.

The ornamental design for a casing for combined battery and battery charger for radio apparatus, as shown.

72,577. TOY VEHICLE. DORMAN SCHAEFFER, Helena, Mont. Filed July 2, 1926. Serial No. 18,225. Term of patent 14 years.

The ornamental design for a toy vehicle as shown

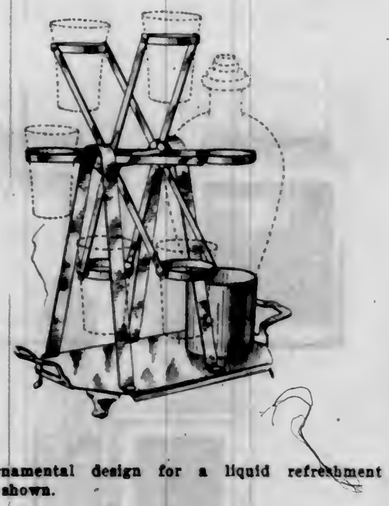
72,578. PLATE. EMIL L. SCHNEPF, Trenton, N. J., assignor to Scammell China Co., Trenton, N. J. Filed Dec. 22, 1926. Serial No. 20,112. Term of patent 14 years.

The ornamental design for a plate, as shown.

72,579. BASE FOR A LAMP. PHILIP SHEINER, Brooklyn, N. Y., assignor to Metropolitan Lamp Co. Inc., New York, N. Y., a Corporation of New York. Filed May 12, 1926. Serial No. 17,663. Term of patent 7 years.

The ornamental design for a base for a lamp as shown.

72,580. PLAYING CARD. FRANCIS G. SMYTH, Jr., Red Bank, N. J. Filed Mar. 4, 1926. Serial No. 16,773. Term of patent 3½ years.

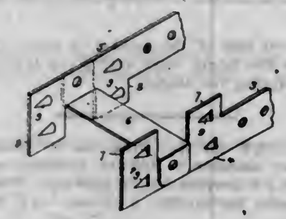


The ornamental design for a playing card, as shown.

72,581. COVER CASING FOR MATCH PACKAGES. CECELIA H. STEWART, Pittsburgh, Pa. Filed July 31, 1925. Serial No. 14,285. Term of patent 3½ years

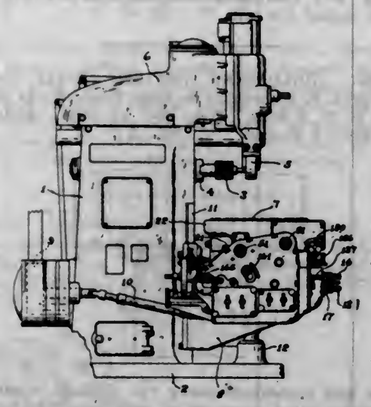
The ornamental design for a cover casing for match packages substantially as shown and described.

72,582. LIQUID-REFRESHMENT HOLDER. HYMAN WANERMAN, New York, N. Y. Filed Feb. 16, 1927. Serial No. 20,785. Term of patent 3½ years.



The ornamental design for a liquid refreshment holder, as shown.

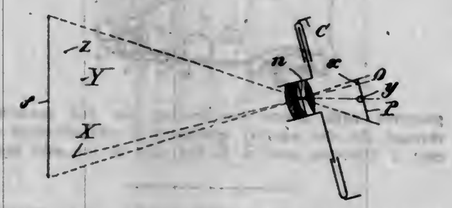
PATENTS



GRANTED MAY 3, 1927.

1,626,589. HOLLOW-TILE-PARTITION TIE PIECE. WALTER L. ALBER, Chicago, Ill. Filed Aug. 28, 1926. Serial No. 132,077. 2 Claims. (Cl. 72—101.)

1. A tie piece of the type described, comprising in combination a pair of side webs having upstanding end portions, a connecting web arranged at the mid-height and mid-length of said side webs, and an extension at one end of a side plate for attachment to a door post, the side webs having inwardly projecting anchor prongs near their respective ends.



1,626,590. MILLING MACHINE. FREDERICK C. ALLEN, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 7, 1922. Serial No. 580,196. 14 Claims. (Cl. 90—20.)

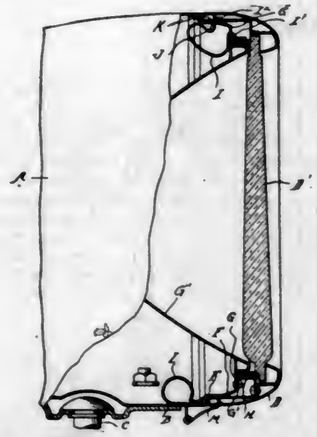
1. A combined linear and rotary milling machine comprising the combination of a cutter spindle, a work table adapted to be reciprocated bodily past the spindle in a linear path or to be continuously rotated past the spindle at cutting speed, a screw for reciprocating the table, mechanism for rotating the table, a power shaft beneath the table, clutches for individually operating either the said screw or mechanism from the shaft, and separate means including a controlling element common to the screw and mechanism for automatically controlling both said table movements.

1,626,591. PHOTOGRAPH AND METHOD OF MAKING THE SAME. ADELBERT AMES, Jr., Tewksbury, Mass. Filed Mar. 14, 1921. Serial No. 452,274. 5 Claims. (Cl. 88—16.)

1. The art of photography comprising forming an image of a certain object-field having angular dimensions and position in space by means capable of forming an image having good definition throughout an angular magnitude less than one of said dimensions, directing the optical axis of the image forming means to the center of interest in the object-field, placing a light-sensitive surface perpendicular to said axis, with the margins of a picture space thereon subtending the angular dimensions of the image of the object-field, and thereafter maintaining these relations during successive exposures while shifting the said axis to new positions of the center of interest, the sensitive surface subtending substantially the same angle but being kept perpendicular to the said axis.

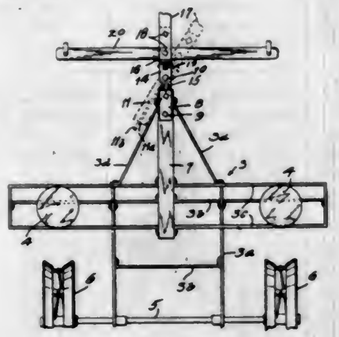
4. A series of successive photographs of the images of a lens having better definition in the region of its optical axis, successive photographs of said series representing the same angular dimensions of the object field having the axial region of the image in different parts of the respective photographs.

1,626,592. CYLINDER FOR PRINTING PRESSES. NIELS C. ANDERSEN, Chicago, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1926. Serial No. 84,740. 9 Claims. (Cl. 270—50.)



1. A collecting cylinder having a portion of its periphery depressed, the depressed portion being arranged to receive the rear end of the web, and adjustable means mounted on said cylinder for filling out a portion of said depression to accommodate the cylinder to various thicknesses of web.

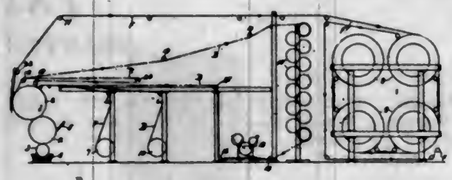
1,626,593. LAMP CATCH. FRANK L. BAMFORD, Detroit, Mich., assignor to C. M. Hall Lamp Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 30, 1925. Serial No. 59,659. 5 Claims. (Cl. 240—41.)



1. In a lamp, the combination with a casing having a slot and a lens ring engageable with the casing, of means for yieldably retaining said lens ring in position on the casing, said means including a loop spring having

one end detachably anchored to the casing and its other end extending through the slot in the casing for engagement with the said lens ring, said loop spring being

provided with means for bracing the end extending through the slot against movement in any direction except a direction parallel to the axis of the said lamp.

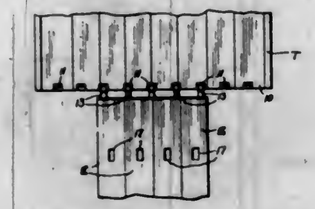


1,626,594. CORN PLANTER WITH ONE WHEEL SUPPORT. JAKE M. BROZ, New Effington, S. Dak. Filed July 24, 1926. Serial No. 124,715. 2 Claims. (Cl. 280—82.)

1. The combination with a corn planter having a rigid frame supported on two axially alined wheels and having a member projecting forwardly and centrally therefrom, a rod journaled in said member about a vertical axis and extending downwardly therefrom, said rod being bent horizontally at its lower end to form an axle, a flanged wheel journaled on said axle adapted to support said frame, a coupling member secured to said rod above said first mentioned member and a tongue member pivotally connected to said coupling member to swing about a horizontal axis and means for adjusting the height of said coupling member on said rod.

1,626,595. BLANKET-PRINTING PROCESS AND MACHINE. WILLIAM E. CAFFREY, Nashua, N. H., assignor to Nashua Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire. Filed July 25, 1925. Serial No. 46,035. 9 Claims. (Cl. 101—152.)

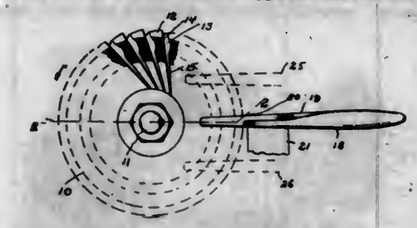
1. That improvement in the process of manufacturing blankets which consists in printing a design on one side of a blanket fabric, pressing the printing ink into the fabric mechanically, subsequently applying air pressure



to the printed side of the blanket to force the printing ink through the fabric, later drying the fabric, and subsequently napping the fabric.

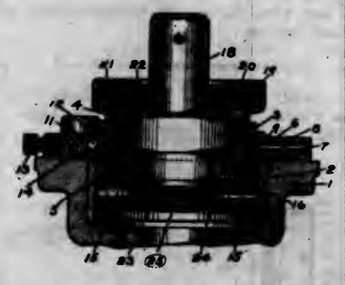
1,626,596. NUT LOCK. STERLING H. CAMPBELL, St. Louis, Mo., assignor to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 1. 1926. Serial No. 91,298. 2 Claims. (Cl. 151—31.)

1. In a device of the class described, the combination with a threaded bolt, of a cooperating nut, said bolt having a slot formed in its end, said slot having a lateral opening with converging sides for the insertion of a tool to expand the bolt.



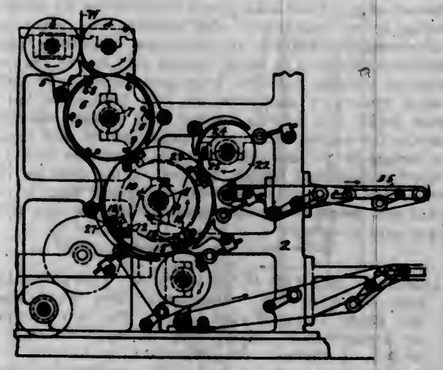
1,626,597. UNLOADING DEVICE. RUBAN CANTOR, Brooklyn, N. Y., assignor to Royal Glass Works, Brooklyn, N. Y., a Firm. Filed Nov. 15, 1926. Serial No. 148,428. 2 Claims. (Cl. 193—5.)

2. A skid element including two adjacent boards, the said boards being connected to each other by an intermediate metal connecting member, the said connecting member and the said boards having common openings, the said boards having three hook members connected to the ends thereof, the two outside hook members being respectively connected to each of said boards, and the intermediate hook member having its shank connected to both of said boards.



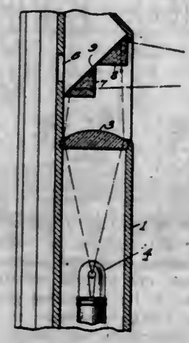
1,626,598. CUTTER, MILL, OR THE LIKE. FREDERICK O. CARLSON, Hopewell, Va., assignor to Mayhew Steel Products Company, Incorporated, Shelburne Falls, Mass., a Corporation of Delaware. Filed Dec. 3, 1925. Serial No. 73,028. 2 Claims. (Cl. 29—103.)

1. A circular cutter having a plurality of series of cutting teeth on each side face thereof, which teeth are concentric and spaced by grooves extending from the center of the cutter toward the periphery thereof, the grooves on one side face of the cutter being staggered relative to the grooves on the opposite side face of the



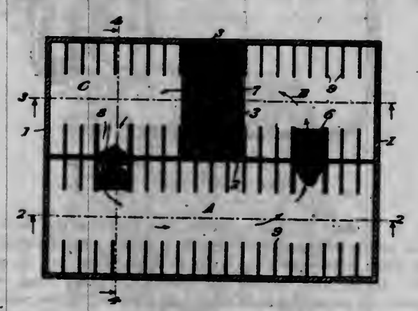
cutter whereby to cause alternative cutting and consequent relief in pressure upon the cutter as well as upon the work.

1,626,599. TEST GAUGE. JOHN W. CARTHEW, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 18, 1925. Serial No. 50,001. 3 Claims. (Cl. 33—178.)



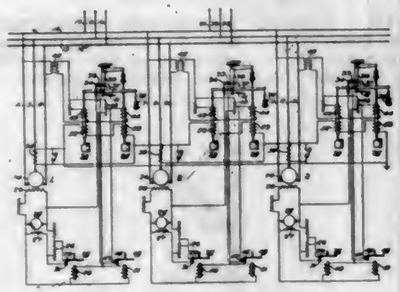
1. A cylinder gauge comprising a sleeve having a screw thread, radially movable pins mounted in said sleeve, a plug having screw-threaded engagement in said sleeve and having a tapered portion engaging said pins, and a collar within which said sleeve is mounted and having means for engaging the screw-thread on said sleeve to permit axial adjustment of said sleeve.

1,626,600. FOLDING DELIVERY. HERMAN P. CLAUSEN, Hasbrouck Heights, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 25, 1925. Serial No. 45,969. 12 Claims. (Cl. 271—80.)



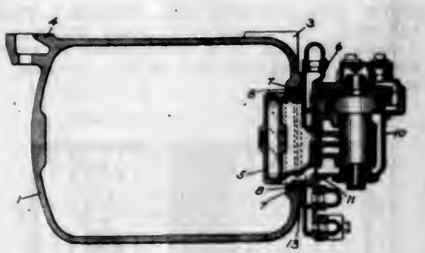
1. In a delivery, the combination of a rotary carrier provided with nipping jaws, a cooperating carrier to which the product is delivered provided with sheet taking grippers, means for freeing the product from the nipping jaws and causing it to lie in a line substantially that of the surface of the nipping jaw carrier when released by the jaws, and means for limiting the movement of the freeing means.

1,626,601. OPTICAL DIAGNOSTIC INSTRUMENT. HANS CLEMENT, New York, N. Y., assignor to General Optical Co., Inc., a Corporation of New York. Filed July 15, 1925. Serial No. 43,727. 9 Claims. (Cl. 88—20.)



1. In an optical diagnostic instrument, in combination with a light source and a lens, a reflector for the light comprising two reflecting prisms with the hypotenli oblique to the axis of the lens and cooperative to form a plane reflecting surface, the prism nearer the lens having a slot for a sight opening in the solid angle farthest from the lens.

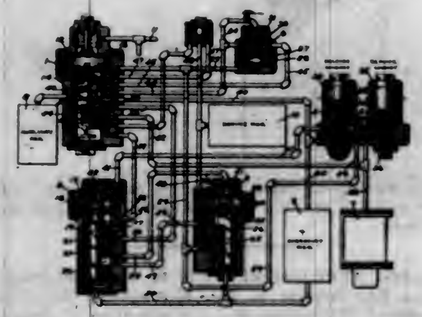
1,626,602. STORAGE BUILDING. FERNAND E. D'HUMY, Englewood, N. J., assignor to Ramp Buildings Corporation, New York, N. Y., a Corporation of Delaware. Filed July 8, 1925. Serial No. 42,207. 5 Claims. (Cl 20—1.18.)



1. A building structure comprising outer walls, a plurality of groups of superposed floors within said outer walls each group overlying a part of the ground area within the outer walls, the floors of a plurality of groups being arranged in horizontal planes lying between the horizontal planes of the floors of another group, vertical dividing walls separating the floors of one group from the floors of the adjoining group, and inclined ramps or driveways connecting the floors of each group to the floors of the next higher group, said ramps extending through the said dividing walls.

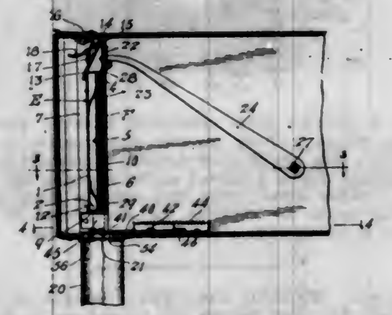
1,626,603. REGULATOR SYSTEM. WILLIAM W. EDSON, Newtonville, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1925. Serial No. 39,060. 10 Claims. (Cl. 171—119.)

1. In a regulator system, a plurality of generators connected in parallel relation, a voltage regulator for each generator having a control electromagnet provided with two windings, one of said windings being responsive to the voltage of its associated generator, the other of said windings being responsive to the current flow from all of said generators, and means for compensating said regulator in accordance with the reactive component of line current from all of said generators.



1,626,604. RESERVOIR DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 1, 1925. Serial No. 40,801. 2 Claims. (Cl. 303—90.)

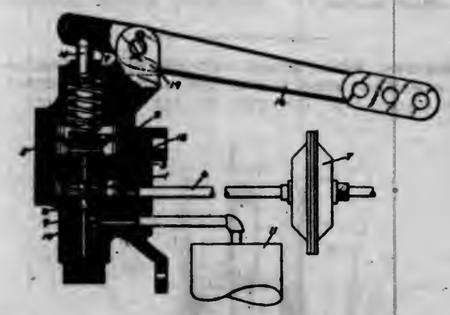
1. In a fluid pressure brake, the combination with a brake controlling valve device, of a filling piece secured to said valve device and having a passage connected to said valve device and having an annular seating ring, and a reservoir engaging said ring and adapted to be rotated to different positions thereon and having communication with said passage.



1,626,605. ELECTROPNEUMATIC BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 5, 1926. Serial No. 113,914. 5 Claims. (Cl. 303—15.)

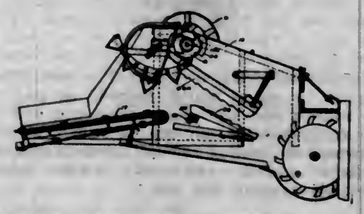
1. In an electro-pneumatic brake, the combination with reservoirs one, two, and three, normally charged with fluid under pressure and a brake cylinder, of electrically controlled means operating in applying the brakes to connect reservoir one to the brake cylinder and to connect reservoir two to reservoir one and in releasing the brakes to connect reservoir three to reservoir one and upon

substantial equalization of reservoir three into reservoirs one and two, to cut off communication between reservoirs one and two.



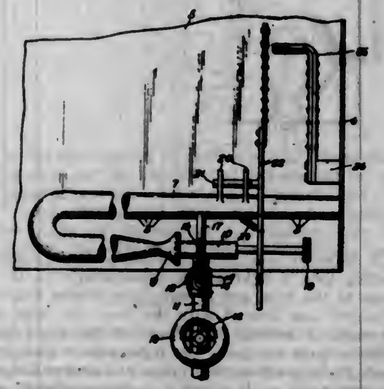
1,626,606. CARD CAMERA. WILLIAM LAFAYETTE FISH, Pompton Plains, N. J. Filed Sept. 19, 1925. Serial No. 57,352. 10 Claims. (Cl. 95—13.)

1. In a camera, the combination with a casing having a lens, of a frame within said casing comprising a pair of spaced and parallel side pieces each having an inturned flange at its longitudinal edge adjacent said lens and a transverse bar, a holder for releasably supporting a light sensitive card, film or plate opposite said lens so that said card is movable edgewise from said holder, said holder being removably supported on said transverse bar of said frame and bearing against said flanges, releasable means for holding said card holder against said flanges, a receptacle for developing liquid to receive said card directly from said holder, and an ejector operable from the exterior of said casing to engage one edge of said card film or plate and slide it edgewise from said holder into said receptacle.



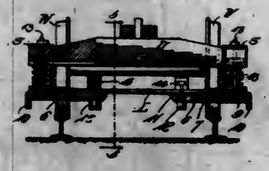
1,626,607. BRAKE-VALVE DEVICE. LESTER A. FOWLER, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1925. Serial No. 48,441. 2 Claims. (Cl. 303—54.)

1. In a fluid pressure brake, the combination with a brake chamber, of a brake valve device comprising a casing, a piston in said casing having the chamber at one side connected to the brake chamber and the chamber at the opposite side connected to the atmosphere and having an exhaust passage, a supply valve for controlling the supply of fluid under pressure to said brake



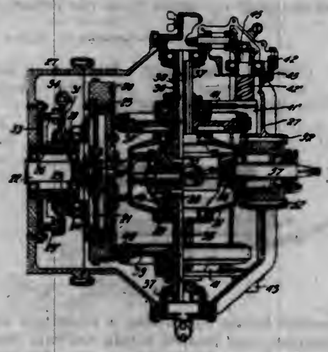
chamber, and a ball-shaped exhaust valve associated with said supply valve and controlling communication through said exhaust passage.

1,626,608. GRAIN-FEEDING DEVICE. ARTHUR J. HARTLEY, Peoria, Ill. Filed Oct. 3, 1925. Serial No. 60,146. 5 Claims. (Cl. 130—1.)



1. A grain feeding device, comprising a conveyor, band-cutting and feeding mechanism, a governor controlling the operation of said devices, and clutch mechanism for said band cutting and feeding mechanism controlled by the governor, said clutch mechanism acting to increase the clutching action therein in direct proportion to the increased load upon the feeding devices.

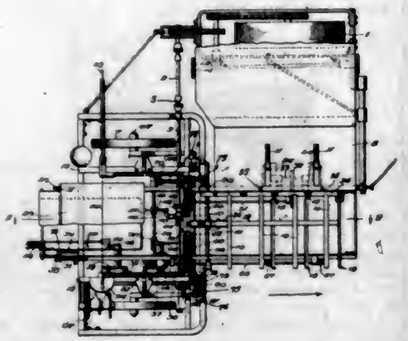
1,626,609. COMPENSATING GAS CUT-OFF. LOUIS HILL, Akron, Ohio. Filed Feb. 14, 1925. Serial No. 9,186. 7 Claims. (Cl. 67—116.)



1. In a gas stove the combination of a gas burner, a gas pipe leading to said burner, a valve connected with said pipe for controlling the flow of gas through said pipe to said burner, a pair of thermostatic bars controllable by heat of the stove, one of said bars being more quickly responsive than the other to changes of temperature, said thermostatic bars being so positioned that they move into engagement with each other when subjected to uniformly high temperature, and move out of engagement with each other when the temperature of both bars is reduced, and mechanism connected with said valve and with one of said bars, and controllable by one of said bars after its disengagement from the other bar, for the purpose of closing said valve.

1,626,610. SAFETY SHOE FOR RAILWAY TRUCKS. FRANK HORNQUIST, Mount Jewett, Pa. Continuation of application Serial No. 36,697, filed June 12, 1925. This application filed May 13, 1926. Serial No. 108,920. 4 Claims. (Cl. 105—216.)

1. In combination with a railway truck having a transverse bolster between two sets of wheels; a shoe rigidly mounted at the lower side of the truck at an end of said bolster, said shoe being elongated transversely of the truck, projecting both inwardly and outwardly from the plane of the wheels and having beveled front and rear surfaces, an auxiliary shoe projecting downwardly from the outer end of the first named shoe and disposed at the outer side of said wheel plane, and an additional auxiliary shoe projecting downwardly from the inner end of the first named shoe and disposed at the inner side of the wheel plane, the main and auxiliary shoes being normally supported above the lowermost plane of the truck wheels.

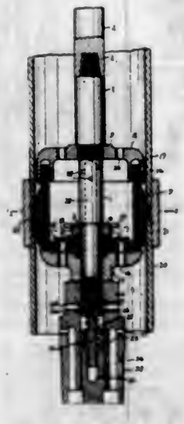


1,626,611. VARIABLE-TRANSMISSION GEARING. KEITH DUDLEY JAMES, Hobart, Tasmania, Australia. Filed Oct. 12, 1925, Serial No. 61,985, and in Australia Apr. 24, 1925. 8 Claims. (Cl. 74—34.)

1. A variable power transmission gear comprising a casing, a driving shaft having one end revolvably supported within the casing, a driving disc, a flexible coupling connecting the driving disc to the driving shaft, a self-aligning thrust bearing located between the casing and the driving discs, means for exerting an end thrust

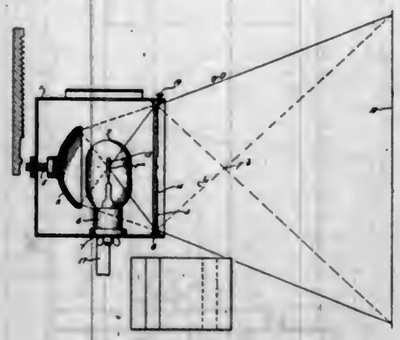
on the self-aligning bearing, a pair of oppositely disposed bevel gear wheels having elongated bosses projecting from the outer faces thereof, bearings mounted in the casing and rotatably supporting the elongated bosses, a pair of friction discs slidably and non-rotatively mounted on the elongated bosses, said friction discs bearing on opposite sides of the centre of the driving disc, epicyclic gear wheels meshing with the opposed bevel gear wheels, and a driven shaft adapted to receive its motion from the rotation of the epicyclic gearing about the axis of the elongated bosses.

1,626,612. GRAIN SHOCKER. CARLTON C. KELLOGG, Moline, Ill. Filed May 8, 1919. Serial No. 295,730. 46 Claims. (Cl. 56—407.)



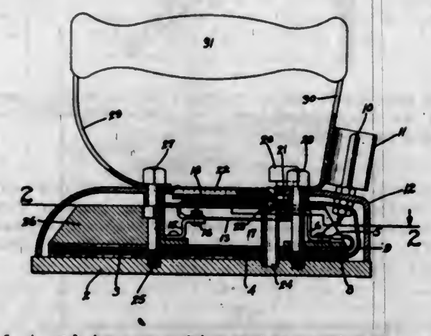
1. The combination with the binder deck of a harvester provided with mechanism for discharging bundles of grain therefrom; of a shocker having a deck for receiving the bundles from the binder deck; a pronged structure for engaging bundles upon said receiving deck and located out of the range of the movement of bundles passing to said receiving deck; mechanism for moving said pronged structure toward said receiving deck to engage said pronged structure with the bundles thereon and moving said pronged structure and receiving deck together to an inverted position thereof to discharge the bundles therefrom; a receptacle for receiving the bundles discharged from said receiving deck; mechanism for tying the bundles in said receptacle into a shock; and mechanism for discharging the shock from the receptacle.

1,626,613. COMPACT HOLDER. WILLIAM G. KENDALL, Newark, N. J. Filed July 20, 1926. Serial No. 123,614. 7 Claims. (Cl. 132—83.)



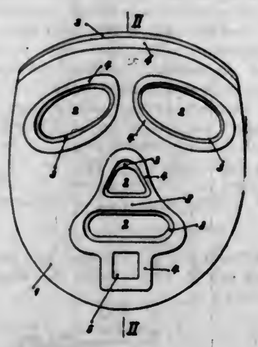
4. A compact holder comprising a receptacle having a cover, a compact tray located within the said receptacle, an ejector member located underneath said tray, said ejector member being adapted to move said tray upwardly upon actuation thereof, and a ring made of resilient metal and surrounding the said compact tray, a portion of said ring being cut out and shaped to provide a spring member closely adjacent to and adapted to contact with and actuate the ejector upon inner movement of said spring member, another portion of said ring being cut out and shaped to provide a spring member which is located at the top of the tray and adapted to releasably hold the cover of the receptacle in closed position.

1,626,614. WELL SWAB. EUGENE KIBELE, San Antonio, Tex. Filed Aug. 2, 1926. Serial No. 126,441. 7 Claims. (Cl. 103—225.)



1. A swab comprising a mandrel, a saucer-shaped plate thereon, a cup of flexible material on said plate, the side walls of said cup being parallel with said mandrel, a guard plate above said cup, said guard plate having a downwardly opening annular groove including the upper edge of said cup, and means to allow liquid to pass upwardly through said cup.

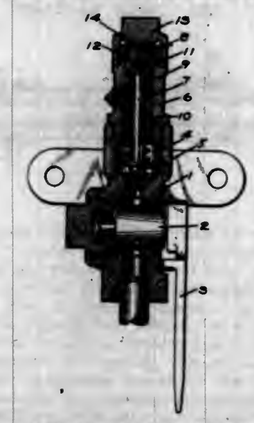
1,626,615. ILLUMINATING MEANS. GUSTAVUS T. KIRBY, New York, and HARRY I. DAY, Forest Hills, N. Y., assignors, by mesne assignments, to Kirby Incorporated, a Corporation of New York. Filed Jan. 16, 1926. Serial No. 81,738. 4 Claims. (Cl. 240—41.)



1. A projector comprising in combination a convergent projecting lens, a light source substantially on the optical axis of the lens, and a converging mirror behind the light source and coaxial with the lens, the light source being situated between the lens and its focus so that the direct radiation from the light source afer passing through the convergent lens forms a divergent beam, and the mirror being so focused as to throw a beam on the lens, which, after passing therethrough converges at a steeper angle than the divergent beam from the direct radiation and after passing through a converging point or plane, diverges at a steeper angle than the divergent beam and coincides therewith in a plane at a finite distance from the lens, producing therein a field of substantially uniform illumination.

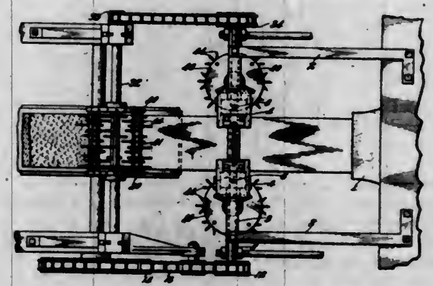
1,626,616. SADIRON. WILLIAM H. LANAK, Minneapolis, Minn. Filed Jan. 20, 1926. Serial No. 82,523. 6 Claims. (Cl. 219—25.)

1. A sad iron comprising a base section having a heating element thereon, a cover for the iron, having mounted therein a thermometer and a tube extending through the heating element, the bulb of said thermometer removably engaging within said tube at the top.



1,626,617. ELECTRODE TO BE APPLIED TO THE HUMAN BODY AND PROCESS OF MAKING THE SAME. ERWIN LAST, Vienna, Austria. Filed Dec. 18, 1925, Serial No. 76,165, and in Austria Nov. 14, 1925. 3 Claims. (Cl. 174—89.)

1. In an electrode to be applied to the human face the combination of an electrically non-conductive carrier consisting of a forehead strip a nose strip and a chin strip closely fitting the face and an electrically conductive lining on the side of such carrier next to the said part of the body and means for electrically connecting such lining with a source of electric current.

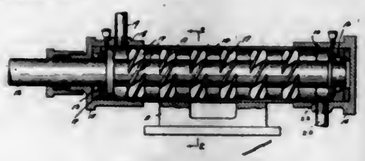


1,626,618. RETAINING-VALVE DEVICE. FREMONT P. LIVINGSTON, Denver, Colo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 17, 1926. Serial No. 123,087. 3 Claims. (Cl. 303—79.)

1. In a pressure retaining valve device, the combination with a valve body having a valve seat, of a barrel adapted to be secured to said body, a valve for engaging said seat, a stem carried by said valve and positioned in

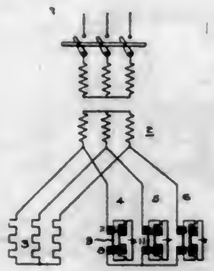
said barrel, a spring mounted in said barrel and acting on said valve, and means for holding said stem in said barrel.

1,626,619. BRICK MACHINE. HERBERT R. MCCUNE, Decatur, Ill., assignor to Decatur Brick Mfg. Co., Decatur, Ill., a Corporation of Illinois. Filed Aug. 5, 1926. Serial No. 127,234. 11 Claims. (Cl. 25—1.)



1. An ornamenting attachment for brick machines, including supporting means, a rotatable picker device, means to mount the pickers for rotary movement independent of movement of the device, and means to positively rotate the device.

1,626,620. AUTOMATIC RACE-TRACK TIMING DEVICE. CLAUDE E. MENTZER, Des Moines, Iowa, assignor of one-half to Arthur R. Corey, Des Moines, Iowa. Filed May 24, 1926. Serial No. 111,253. 6 Claims. (Cl. 161—18.)

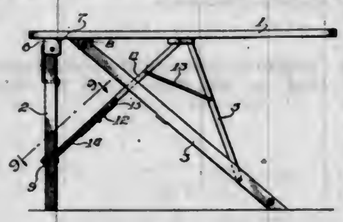


1. In a device of the class described, a housing, a stop watch mounted in said housing, a member slidably mounted in said housing and capable of striking the control pin of said watch, a spring capable of actuating said member, a catch member for preventing said spring from actuating said slidably mounted member, and a means for releasing said catch member.

1,626,621. COMPRESSOR FOR REFRIGERATORS OR THE LIKE. GEORGE MIDDENDORF, Newark, N. J. Filed Aug. 28, 1925. Serial No. 53,038. 1 Claim. (Cl. 230—11.)

A compressor for gaseous fluids or the like, consisting of a cylinder tightly closed at both ends and having an inlet and outlet near its ends, a rotary shaft extending centrally and longitudinally through said cylinder and a plurality of spaced members fixed on said shaft and snugly fitting in said cylinder, each member being formed with a set of comparatively long and narrow screw curved passages whereby during the rotation of said shaft the fluid will be drawn alternately through said passages and the spaces between said members and become gradually compressed without causing overheating.

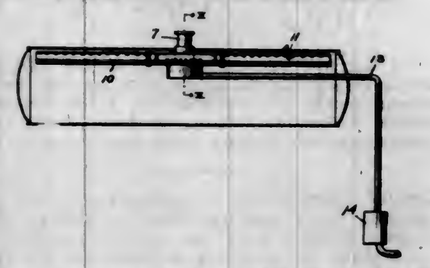
1,626,622. INDUCTION MOTOR. HEINRICH MOELLER, Cologne Bayenthal, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 1, 1925, Serial No. 33,896, and in Germany June 7, 1924. 3 Claims. (Cl. 172—274.)



1. In an induction motor, the combination with a secondary winding, of a speed-responsive reactance device for close-circuiting said winding, said device comprising a plurality of windings connected to oppose each other and speed-responsive means for causing the flux induced by said windings to develop independently at starting and to oppose each other when running.

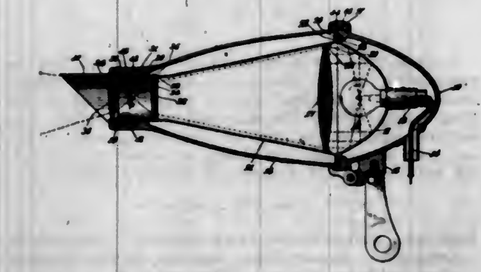
1,626,623. PROCESS OF REMOVING DETERRENT SALTS FROM PICKLING LIQUORS. GEORGE S. MORGAN, Toledo, Ohio. Filed June 30, 1926. Serial No. 119,747. 1 Claim. (Cl. 23—126.)

The process of removing deterrent salts from pickling solutions for iron which consists in precipitating the iron sulphate by adding sulphuric acid to the solution until the acid content amounts to about 35% to 50% of the solution, drawing off the liquor and dissolving the precipitate in hot exhausted pickling liquor, cooling the solution to form copperas.



1,626,624. IRONING BOARD. ROBERT A. MORRISON, and FRANKLIN L. OSWALD, Portland, Oreg. Filed Aug. 16, 1926. Serial No. 129,450. 3 Claims. (Cl. 68—10.)

1. In a folding stand, a top, a pair of legs hinged to the top, a toggle linkage between the lower ends of the legs and pivotally connected thereto, a collapsible brace hinged to the top and operatively connected to said linkage, and a connection between said collapsible brace



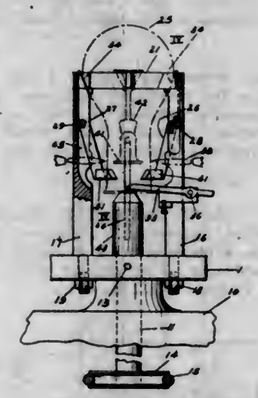
and each of said legs for stiffening the legs and for drawing the legs upwardly when the brace is collapsed and folded against the top.

1,626,625. STEAM-SEPARATING APPARATUS FOR STEAM GENERATORS. THOMAS A. PEEBLES, Pittsburgh, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed May 8, 1926. Serial No. 107,640. 3 Claims. (Cl. 122—491.)

1. In combination with a steam generator, means located in the uppermost portion of the steam generator receiving steam from the uppermost portion of the steam space of the generator and delivering it in a substantially horizontal direction toward the steam delivery port of the generator, an annular chamber intervening between said means and the steam delivery port of the generator, a separating chamber between said annular chamber and said port, and an annular series of inclined substantially uniformly spaced vanes intervening between said annular chamber and said separating chamber for imparting a whirling velocity to the steam and for delivering it in the form of a whirling stream to said separating chamber.

1,626,626. HEADLIGHT. GEORGE RAWAK, New York, N. Y. Filed Feb. 2, 1926. Serial No. 85,437. 1 Claim. (Cl. 240—48.4.)

In a headlight, a lamp casing, a hood extending forwardly from said casing, the sides of said hood curving forwardly to a cylindrical outlet, said hood and said casing forming an enclosing shell, a light tube within said



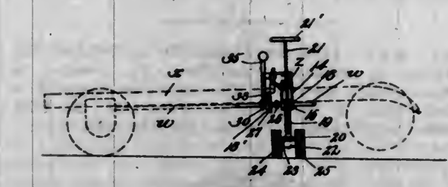
shell, said tube being conical throughout the greater portion of its length with the forward end thereof bent outward to cylindrical formation, said tube being supported at its ends by said shell, lenses within and adjacent each extremity of said tube but inset from the supported ends thereof, the portion of said tube between said lenses being spaced from said outer casing a substantial distance to permit heat expansion and distortion of said shell without affecting said tube.

1,626,627. HIGHWAY SAFETY DEVICE. THOMPS ROBINS RICHEY, Atlanta, Tex. Filed May 4, 1925. Serial No. 27,811. 12 Claims. (Cl. 238—3.)

1. The combination with a highway crossing, of a highway provided with a protruding element on each side of the crossing and extending transversely of the entire highway, at a sufficient distance from the crossing to cause an approaching vehicle-driver to slow down before the crossing is reached.

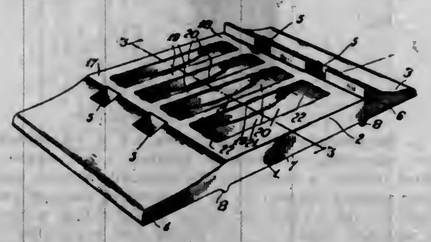
1,626,628. SEALING-IN HEAD FOR INCANDESCENT ELECTRIC LAMPS. WALTER S. ROTHERHAM, Little Falls, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed May 22, 1926. Serial No. 110,903. 10 Claims. (Cl. 176—3.)

1. A lamp-making machine comprising a plurality of contact members for engaging a lamp bulb, a seat for a bulb, and means for actuating said members to grip the bulb upon a movement thereof to said seat.



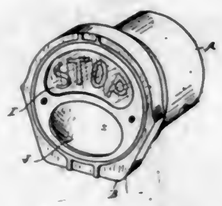
1,626,629. WINDSHIELD WIPER. GORDON B. SAYER, Syracuse, N. Y., assignor to Owen-Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Filed Nov. 9, 1925. Serial No. 67,800. 7 Claims. (Cl. 15—255.)

1. A windshield wiper comprising a driving shaft, a wiping element, a wiper rod connected with said element, a bracket fast on the shaft and to which said wiper rod is pivotally connected, and spring means secured to said



shaft and engaging said wiper rod to normally urge the wiping element against said windshield.

1,626,630. SHIFTING JACK FOR MOTOR VEHICLES. ABRAHAM SCHNITZLER, Chelsea, Mass. Filed Mar. 4, 1926. Serial No. 92,172. 7 Claims. (Cl. 180—1.)

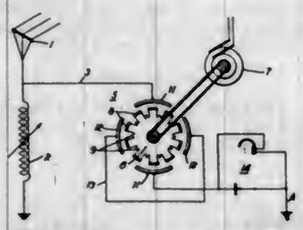


1. A lifting and shifting jack for motor vehicles, said jack having a ground-bearing wheel, means for lowering and raising said wheel, means for positively rotating said wheel, and means for turning the wheel to any point in a complete circular substantially horizontal plane to enable it to effect shifting of the vehicle in any direction.

1,626,631. TIE PLATE. RICHARD T. SCHOLES, Hinsdale, Ill. Filed May 6, 1926. Serial No. 107,059. 8 Claims. (Cl. 238—304.)

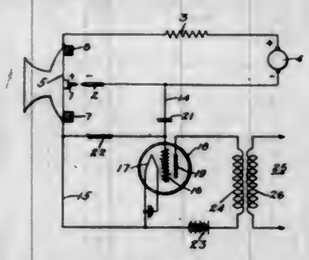
1. A tie-plate of cantilever construction, the plate having a substantially flat lower tie-engaging surface, and a pair of parallel longitudinally extending rail-supporting ribs on its upper portion, the plate decreasing progressively in thickness from each rib toward the side edges of the plate, and also from each rib toward the center of the plate, and a series of spaced transverse ribs bridging the thinner central portion, and forming additional rail base supporting means.

1,626,632. COMBINED TAIL LIGHT AND STOP SIGNAL. ERNEST O. SEITZ, Detroit, Mich., assignor to C. M. Hall Lamp Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1923. Serial No. 627,909. 4 Claims. (Cl. 177—329.)



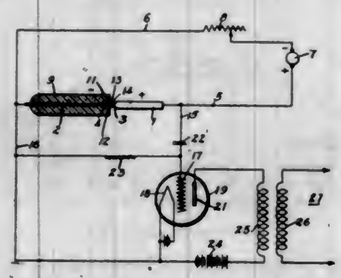
2. In a vehicle lamp, the combination with an outer casing, of an insulator block detachably secured adjacent to the rear wall of said casing, a plurality of lamp sockets for separate lamp bulbs mounted on said insulator block, a lining plate having a countersunk portion, a connector socket having a flange engaging said countersunk portion and projecting outward through an aperture in said casing, insulated spring contact members within said connector socket which project forwardly through apertures in said insulator block, means for connecting said lamp sockets with said spring contacts including a conductor strip leading into one of said lamp sockets and engaging an insulated contact member adapted to be on the bulb for said socket.

1,626,633. TEMPERATURE-INDICATING DEVICE. HARVEY P. SLEEPER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1920. Serial No. 376,046. 3 Claims. (Cl. 73—118.)



1. A temperature-indicating device for a translating device, comprising a bimetallic member, a rod member actuated thereby, a casing for the bimetallic member and the rod member adapted to be immersed in the medium surrounding the translating device, an indicating mechanism disposed outside of the casing and comprising a dial member, a pointer, gears connecting said pointer to the rod member, said pointer indicating the instantaneous temperature of the translating device, a maximum pointer actuated by the temperature-indicating pointer to indicate maximum temperatures attained, a recurrence pointer actuated upon the occurence of a predetermined temperature in the translating device, and means adjustably mounted upon the rod and comprising a pawl and ratchet device, for actuating the recurrence pointer at predetermined temperatures.

1,626,634. ELECTROSTATIC RADIOTUNER. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1921. Serial No. 489,550. 18 Claims. (Cl. 250—40.)



1. A tuner mechanism comprising means rotating synchronously with and offering slight resistance to currents of desired frequency and high impedance at other frequencies.

1,626,635. TRANSMITTER. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 28, 1922. Serial No. 597,561. 4 Claims. (Cl. 179—121.)

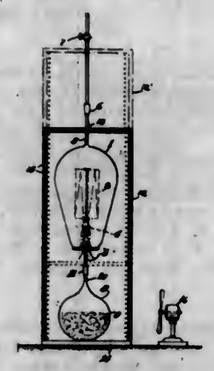
3. In a sound translating system, a pair of spaced electrodes, means for creating a difference of potential across said electrodes sufficient of itself to render the space therebetween conducting, and sound controlled means for varying the distance between said electrodes

1,626,636. GLOW-DISCHARGE TRANSMITTER. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 28, 1922. Serial No. 597,562. 12 Claims. (Cl. 179—121.)

11. The method of detecting movements in a fluid nonconducting medium which consists in maintaining an electric glow-discharge therein and detecting the changes in a characteristic of the discharge resulting from said fluid movements.

1,626,637. GETTER FOR CONTROLLING CRYSTAL GROWTH. WILLIAM CHARLES SPROESSER, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 6, 1922. Serial No. 605,284. 6 Claims. (Cl. 176—16.)

1. A getter for application to a thoriated tungsten filament for an incandescent electric lamp comprising thoria for increasing the lift and bump-test strength of said filament.

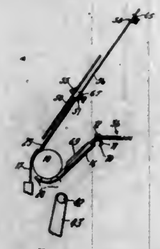


1,626,638. INTRODUCTION OF CLEAN-UP AGENTS INTO EVACUATED VESSELS. WILLIAM CHARLES SPROESSER, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed May 5, 1923. Serial No. 637,033. 16 Claims. (Cl. 176—2.)

1. The method of introducing a clean-up material into an evacuated vessel comprising forming a moisture-free substance containing the material in a reducible form, mixing a reducing agent with the substance, introducing the mixture into the vessel and initally heating the same to cause a liberation of the desired clean-up material.

1,626,639. APPLICATION OF GETTERS TO ELECTRIC INCANDESCENT LAMPS AND THE LIKE. WILLIAM CHARLES SPROESSER, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Aug. 21, 1923. Serial No. 658,538. 4 Claims. (Cl. 176—16.)

1. The method of gettering incandescent electric lamps and the like comprising vaporizing a candle-power maintenance material on the inner surface of the bulb thereof, prior to sealing a regular mount therein and subsequently sealing therein an illuminating body having its surface free from said candle power maintenance material.

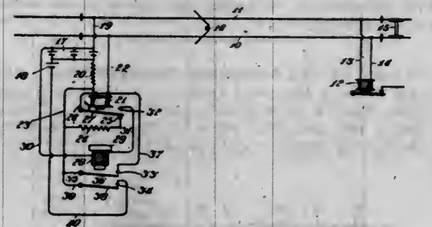


1,626,640. EVACUATION OF BULBS AND THE LIKE. WILLIAM CHARLES SPROESSER, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Sept. 7, 1923. Serial No. 661,382. 4 Claims. (Cl. 176—2.)

1. A material for the evacuation of a gas-tight enclosure, by displacement of the air therein comprising a vaporizable halide salt having no appreciable vapor pressure at room temperature and capable on condensation of leaving a first class vacuum in said enclosure.

1,626,641. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Rutherford, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1924. Serial No. 745,281. 33 Claims. (Cl. 197—126.)

1. In a typewriting machine, the combination of a rotatable platen, a letter-feeding carriage therefor, and a support at the introductory side of the platen for supporting the rear end of a composite loop of multiple-ply work-web and carbons, the front end of the loop being



connected with the platen, said loop-support being stationary during the travel of the carriage and being movable rearwardly of the web to straighten out the loop.

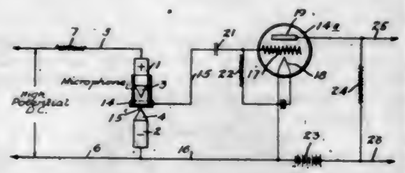
1,626,642. SAFETY HOOK. HAROLD E. STOCKSTAD, Duluth, Minn. Filed Mar. 15, 1926. Serial No. 94,682. 1 Claim. (Cl. 24—242.)

In combination, a hook having an eye in one end thereof, a relatively thin sister hook pivotally mounted adjacent the eye upon either side of the hook, and integrally formed spacing means uniting the sister hooks for the purpose described.

1,626,643. DIRECT-CURRENT TRACK-CIRCUIT FOR RAILWAY SIGNALS. SAMUEL S. STOLP, Chicago, Ill., assignor to Charles B. Gillson, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,613. 31 Claims. (Cl. 246—41.)

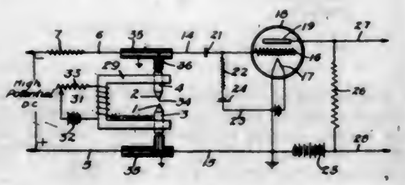
30. The method of operating a closed track circuit having a battery limiting resistance which consists in increasing the battery limiting resistance when the train shunt is applied and momentarily decreasing the battery limiting resistance upon removal of the train shunt.

1,626,644. APPARATUS FOR HANDLING BRICKS. GEORGE H. STOVER, New York, N. Y. Filed July 27, 1925. Serial No. 46,217. 7 Claims. (Cl. 214—40.)



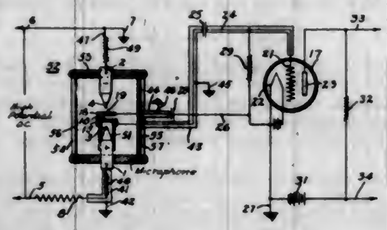
1. Apparatus for handling bricks comprising a platform to receive bricks in stacked relation, tracks for con-

ducting said platform from place to place, hoisting mechanism including a substantially L-shaped frame one arm of which may be inserted beneath said platform, and



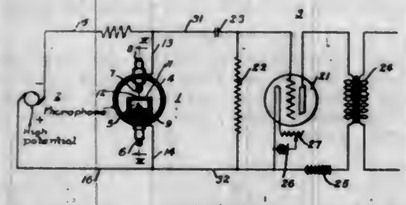
means connected to the other arm of said frame for elevating the frame to raise said platform from or place it upon said tracks.

1,626,645. GLOW-DISCHARGE TRANSMITTER. PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,822. 18 Claims. (Cl. 179—171.)



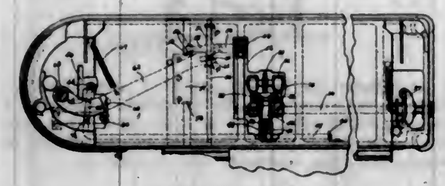
1. In combination, a pair of spaced electrodes, means for maintaining between said electrodes a discharge of the character which has a dark space and a glowing space means for shielding a predetermined portion only of said discharge from pressure variations in the vicinity of said discharge.

1,626,646. GLOW-DISCHARGE TRANSMITTER. PHILLIPS THOMAS, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,823. 4 Claims. (Cl. 179—171.)



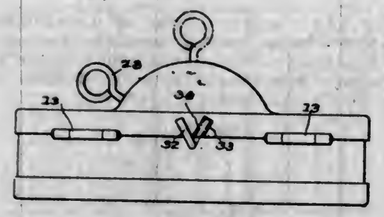
1. An amplifying device comprising a pair of spaced copper discharge electrodes, the space between said electrodes being open to the atmosphere, means for establishing and maintaining a glow discharge therebetween, and means for establishing a magnetic field in the space intermediate said spaced electrodes.

1,626,647. GLOW-DISCHARGE APPARATUS AND METHOD OF OPERATING THE SAME. PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,824. 16 Claims. (Cl. 179—171.)



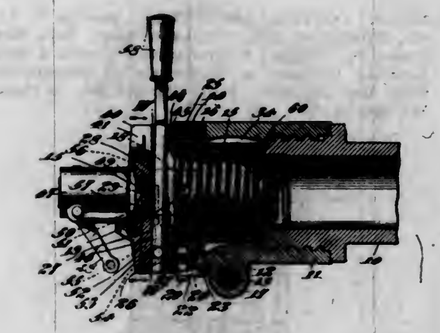
1. In combination, a pair of spaced electrodes, means for establishing a glow discharge therebetween, said discharge including a Faraday dark space and other portions, and means responsive to variations of an electrical characteristic of said dark space only for delivering corresponding electric currents.

1,626,648. GLOW-DISCHARGE MICROPHONE. PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1924. Serial No. 688,379. 14 Claims. (Cl. 179—121.)



1. In combination, a pair of spaced electrodes, respectively positive and negative exposed to atmospheric pressure, means for establishing a glow discharge therebetween, and means for enclosing said positive electrode.

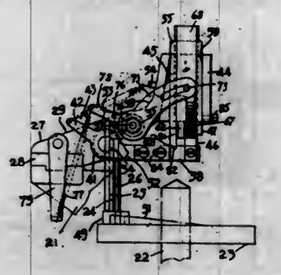
1,626,649. WORK-EJECTING MECHANISM FOR PRINTING APPARATUS. CHARLES G. TIEFEL, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,619. 7 Claims. (Cl. 271—84.)



1. The combination with a printing apparatus comprising driving means therefor and manually operable control means for controlling the printed work, of work ejecting mechanism comprising an actuating connection with said driving means and also a connection with said control means for releasing said mechanism in a predetermined position of said control means.

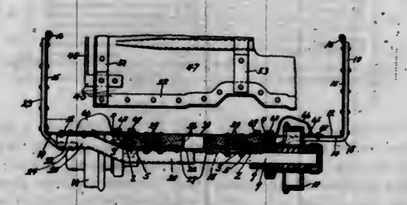
1,626,650. SWITCH MECHANISM. EMIL H. W. ULLRICH, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1921. Serial No. 489,430. 5 Claims. (Cl. 200—50.)

1. Switch mechanism comprising a housing, a cover hinged to the housing, a switch and a switch-operating lever having a portion thereof projecting from the housing and extending across the path of movement of the cover when the switch is closed for preventing opening movement of the cover so long as the switch is in closed position, a portion of said cover being cut away to receive the projecting portion of the operating lever when the switch is in its full-open position.



1,626,651. BREECH MECHANISM. PIETER DANIEL VAN ESSEN, The Hague, Netherlands, and CLARENCE HERVY FROELICH, Bethlehem, Pa. Filed July 18, 1924. Serial No. 726,659. 36 Claims. (Cl. 89—20.)

1. In a gun, the combination of a member having a propellent powder chamber therein, said chamber being of substantially smaller diameter than the bore of the gun, whereby an annular clearance may be provided between the chamber and the gun when the former is within the confines of the latter, and a pivotal connection between the tube and the member.

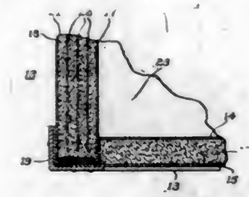


1,626,652. HOOK-FORMING MACHINE. JAMES BRYANT WHITMORE and JOHN EBLING FERGUSON, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 12, 1921. Serial No. 484,086. 28 Claims. (Cl. 140—102.)

3. A device for forming a hook at the end of a wire, comprising a fixed member, a movable member for bending a wire about said fixed member, a common carrier for said members, and means for moving said carrier through an arcuate path to position a wire for bending by said members.

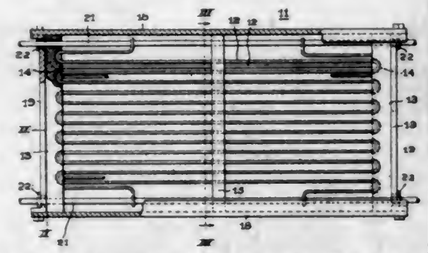
26. In a machine of the character described, a pair of cutting jaws, means for rocking said jaws toward and from each other to sever a wire, and means movable with one of said jaws for engaging the wire after severance to automatically form the same into a hook.

1,626,653. MINE CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 15, 1925. Serial No. 30,540. 21 Claims. (Cl. 105—364.)



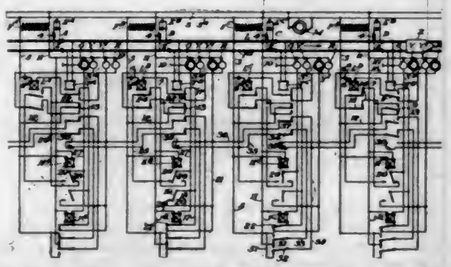
1. In a mine car, flanged side sills, side floor portions secured to flanges of said side sills and having upwardly bent portions forming the car sides, a U-shape member having outwardly projecting flanges connected to flanges of said side sills and said side floor portions and reenforcing members for said car sides connected to the web of said U-shape member.

1,626,654. MINE CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 15, 1925. Serial No. 37,250. 33 Claims. (Cl. 105—364.)



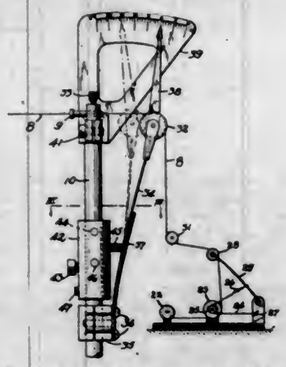
1. In a mine car, metal side floor portions having their inner edges bent to form flanged sills, wheel housings secured to said floor portions and journal boxes secured to the flanges of said sills.

1,626,655. HEAT-INSULATING WALL. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 30, 1923. Serial No. 660,083. 7 Claims. (Cl. 72—16.)



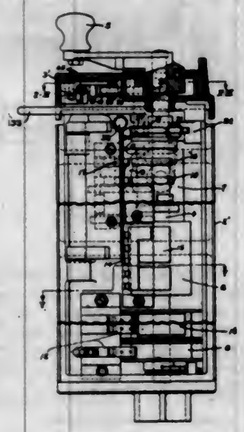
1. A heat insulating wall comprising means having alternate layers of metallic and heat-insulating materials for obtaining a uniform variation of temperature throughout the thickness of the wall.

1,626,656. ELECTRIC-FURNACE HEATING UNIT. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1923. Serial No. 679,064. 4 Claims. (Cl. 201—63.)



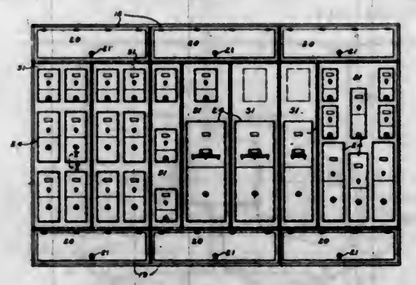
4. In an electric heating unit, in combination, a metal frame, refractory members at each end of said frame, each having a spaced plurality of sets of alined and spaced pockets in the inner face thereof and the pockets in the respective sets being staggered relatively to each other, a plurality of resistor members, each comprising a plurality of return bent convolutions lying in one plane, the return bent end portions being located in said pockets and serving to maintain said refractory members in proper spaced relation in said frame, and a pair of spaced terminal members for said resistors supported by said refractory members and extending therebeyond at each end of the frame.

1,626,657. RAILWAY SIGNALING APPARATUS. HENRY S. YOUNG, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1923. Serial No. 666,948. 8 Claims. (Cl. 246—34.)



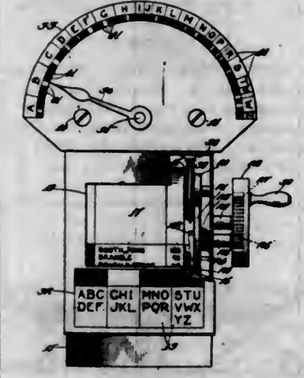
1. In combination, a section of railway track, a track relay for said section, a line relay for said section responsive to traffic conditions in advance, a signal comprising two light units, means controlled by said track relay and said line relay for energizing one of said units, controlling means in circuit with such unit, and means controlled by said means and said track relay for energizing the second said unit.

1,626,658. MANUFACTURE OF INCANDESCENT LAMPS. HOMER GEORGE ANDERSON, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Apr. 29, 1922. Serial No. 557,371. 11 Claims. (Cl. 176—4.)



1. In a filament-bending machine, a filament-threading arm, a scale attached thereto, a resilient plate attached to said arm, said plate carrying means for guiding the filament and a pointer movable along the scale to indicate the tension on the filament.

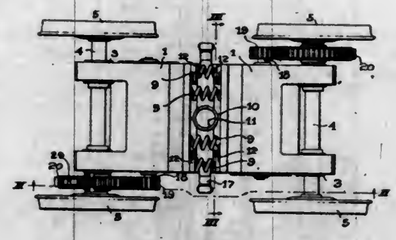
1,626,659. CONTROL APPARATUS. BASCUM O. AUSTIN, Wilkinsburg, and WILLIAM G. HORN, Bryn Mawr Farms, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,190. 6 Claims. (Cl. 200—7.)



1. In a controller, in combination, a switch-operating drum, means adapted to retain said drum in different positions, a main switch, means for actuating said main switch and means operated by said actuating means cooperative to limit the movement of said drum when the main switch is closed, said drum-retaining means being adapted, when in a predetermined position, to lock the main switch against operation.

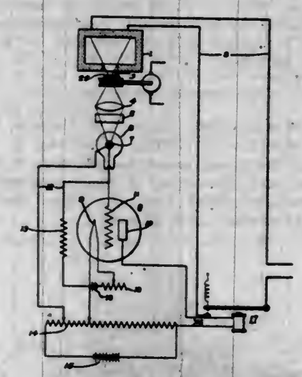
1,626,660. SWITCHBOARD. WILMER G. RALPH, East Orange, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 26, 1921. Serial No. 448,106. 6 Claims. (Cl. 175—369.)

1. A switch board comprising a supporting structure, bus bars supported thereon and spaced therefrom, a plate covering the structure for precluding access to the bus bars from the front of the board and having an insert opening therein, and a box for enclosing fixtures and inserted within, and substantially closing, the opening and having a bottom disposed between the bus bars and the said plate.



1,626,661. FILING AND INDEXING APPARATUS. IVAN BECKETT, New York, N. Y. Filed Mar. 21, 1923. Serial No. 626,526. 17 Claims. (Cl. 129—15.)

1. In a data-indexing apparatus, in combination, an index strip comprising a plurality of sections each identified by a characteristic marking, means for operating said strip to display any one of a plurality of items thereon at a single given point, and a table comprising the several letters of the alphabet arranged in a plurality of groups, the several groups being identified by characteristic markings corresponding respectively to the several markings on said strip.

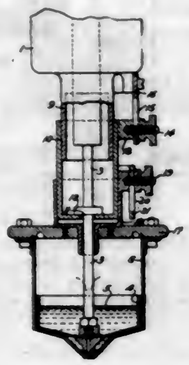


6. In a data-filing and indexing apparatus, the combination with a file comprising a series of data-bearing elements consecutively numbered in numerical order and each bearing the name of the subject to which its data relates, of an index of which said names are arranged in an alphabetical order accompanied respectively by the numbers of the corresponding data-bearing elements.

1,626,662. TRUCK-MOTOR-FRAME SUSPENSION. CLAUDE BETHEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1923. Serial No. 661,555. 21 Claims. (Cl. 105—133.)

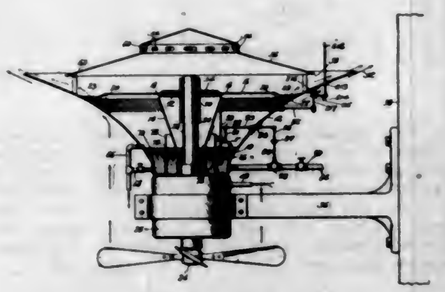
1. A railway vehicle truck comprising a plurality of motors journalled on supporting wheel axles, means for pivotally connecting said motors to the vehicle frame, and means providing pivotal movement of the motors relative to their respective supporting axle and each other.

1,626,663. TEMPERATURE-CONTROLLING SYSTEM. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 8, 1923. Serial No. 617,766. 3 Claims. (Cl. 236—78.)



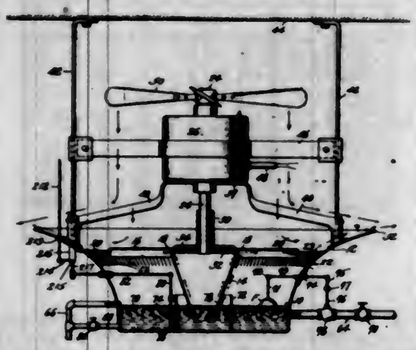
1. In a thermal control system, the combination with a source of radiant energy to be controlled, a photo-electrical cell energized by said source of radiant energy, an electron-discharge device controlled by said photo-electrical cell, and means for preventing heat rays from said source affecting said cell, of means for varying the amount of radiant energy affecting said cell in a predetermined time cycle.

1,626,664. PROCESS OF PURIFYING ILLUMINATING GAS. EDWARD J. BRADY, Philadelphia, Pa., assignor to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 26, 1921. Serial No. 495,520. 2 Claims. (Cl. 23—3.)



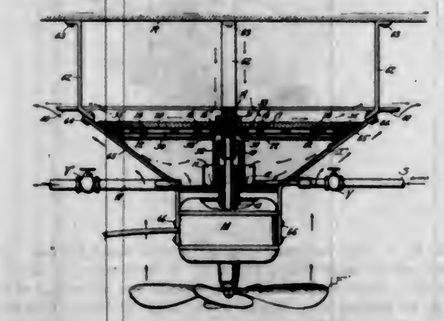
2. The improvement in the process of purifying gas with subdivided hydrated iron oxide which consists in establishing a stream of gas ascending with decreasing velocity and allowing the finely divided iron oxide to fall by gravity and in coaxial counterflow relation with and through and out at the bottom of said stream, and leading off the purified gas.

1,626,665. RELAY. ROBERT BROOKS, Ashton-on-Mersey, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1920, Serial No. 372,406, and in Great Britain Apr. 11, 1919. 3 Claims. (Cl. 200—97.)



2. A time-element relay comprising a solenoid, a core member actuated thereby, a fluid-containing receptacle actuated thereby, a reservoir containing the fluid-containing receptacle and adapted to receive the fluid upon its issue from the receptacle, and means for adjusting the relations between the core member and the solenoid and between the receptacle and the reservoir to vary the operation of the relay.

1,626,666. HUMIDIFIER. STUART W. CRAMER, Cramerton, and WILLIAM B. HODGE, Charlotte, N. C., assignors, by direct and mesne assignments, to Wm. B. Hodge Company, Charlotte, N. C., a Corporation of North Carolina. Filed Dec. 17, 1924. Serial No. 756,421. 12 Claims. (Cl. 261—91.)

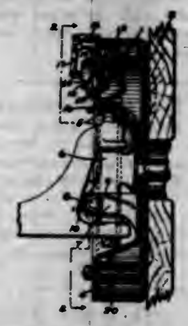


1. Apparatus of the type described which comprises, a liquid container having an outwardly flaring side wall, means for creating a blast of air against the outer surface of said container and deflecting it outwardly past the edge of said container, and means for projecting liquid from said container centrifugally outwardly against the inner surface of said outwardly flaring wall and out of the path of said blast of air, the wall of said container preventing passage of any of said blast of air into contact with said liquid within said container.

1,626,667. HUMIDIFIER. STUART W. CRAMER, Cramerton, and WILLIAM B. HODGE, Charlotte, N. C., assignors, by direct and mesne assignments, to Wm. B. Hodge Company, Charlotte, N. C., a Corporation of North Carolina. Original application filed Dec. 17, 1924, Serial No. 756,421. Divided and this application filed Oct. 27, 1925. Serial No. 65,102. 6 Claims. (Cl. 261—91.)

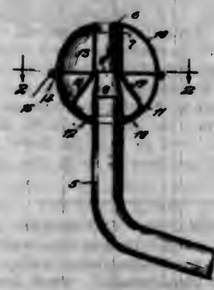
1. Apparatus of the type described which comprises a water container having a side wall flaring outwardly at its upper end, a rotatable horizontal plate mounted within the upper periphery of said flaring wall, rotatable means for drawing water from said container to the under surface of said plate and projecting it therefrom to the inner surface of said flaring wall, and means for directing a draft of air downwardly towards the upper surface of said plate and outwardly over the edge of said container in a path independent of that of said projected water, permitting only finely divided particles thrown from said projected water to reach said draft of air, the courses of said remaining water and said draft of air diverging after leaving the edge of said disk.

1,626,668. HUMIDIFIER. STUART W. CRAMER, Cramerton, and WILLIAM B. HODGE, Charlotte, N. C., assignors, by direct and mesne assignments, to Wm. B. Hodge Company, Charlotte, N. C., a Corporation of North Carolina. Filed Nov. 13, 1925. Serial No. 68,904. 11 Claims. (Cl. 261—91.)



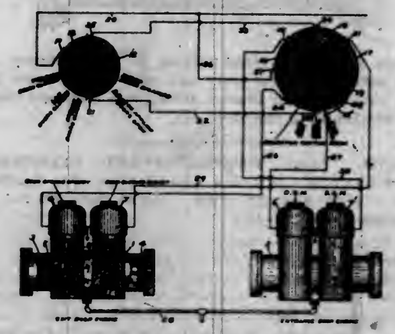
1. Apparatus of the type described which comprises a lower horizontal rotating disk, a tube depending from said disk and having an opening to the upper surface of said disk concentric with the axis of rotation of said disk, means for supplying water to said tube an upper disk mounted slightly above said rotating disk and having the edge turned downwardly at an angle and extending below the plane of said lower disk, whereby water thrown from the edge of said lower disk will strike the down-turned edge of the upper disk at an angle and be deflected outwardly therefrom in a thin film.

1,626,669. TRIAL-LENS MOUNTING FOR OCULISTS AND OPTICIANS. GEORGE S. CRAMPTON, Philadelphia, Pa. Filed June 3, 1922. Serial No. 565,616. 6 Claims. (Cl. 88—20.)



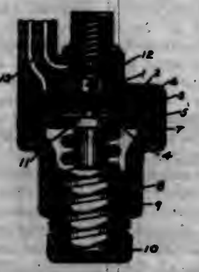
1. A mounting or cell for a cylindrical trial lens comprising a centrally apertured disk having on one face a laterally projecting annular hub provided with axis marking and having on the rim of the hub a marginal projecting flange providing a finger grip.

1,626,670. MOTOR-VEHICLE BRAKE DEVICE. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 9, 1923. Serial No. 618,162. 4 Claims. (Cl. 188—152.)



3. In an automotive brake, the combination with a brake drum associated with the front wheel of a motor vehicle, brake members mounted in said drum and means for spreading said members, of a cover plate for said drum, a brake chamber formed in part in the cover plate and in part by a cap section and having its axis parallel with the axis of the drum, and an operative connection between the brake chamber and said means.

1,626,671. TOOL HANDLE. STONE R. ENBERG, Worcester, Mass., assignor to Walden-Worcester, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1924. Serial No. 748,034. 4 Claims. (Cl. 145—66.)

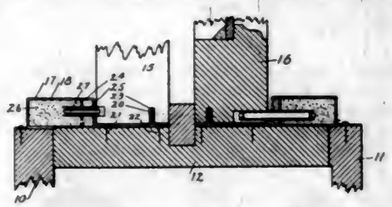


1. A swivel handle for tools comprising a pair of shell like sections, a perforation in each of said sections adapted to receive a tool shank, flanges integral respectively with said shell sections surrounding said perforations and adapted to form bearing surfaces which rotatably support said handle on said tool shank, and means within said sections for non-removably grasping said shank when said shank is inserted in the openings in said sections.

1,626,672. CAR-DOOR-CONTROLLING DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1922. Serial No. 546,527. 4 Claims. (Cl. 105—341.)

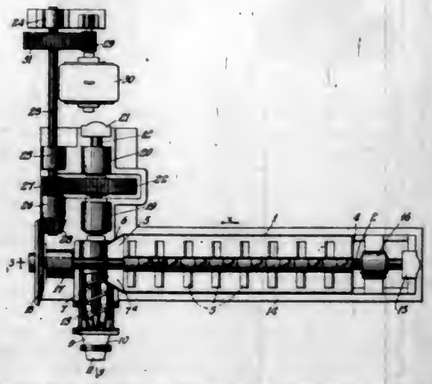
1. In a car door controlling mechanism, the combination with two door engines for controlling separate car doors, electric means for operating said door engines to effect the opening and closing of the car doors, and a controlling switch device for controlling the electric circuits for operating said electric means, of a selector switch having a position for completing the circuit through which one door engine is controlled by said controlling switch while the other door engine is operated to hold the corresponding door closed.

1,626,673. FLEXIBLE DIAPHRAGM DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 17, 1924. Serial No. 744,178. 3 Claims. (Cl. 137—157.)



1. The combination with a flexible diaphragm, of a follower engaging said diaphragm and provided with an annular groove and a stop ring in said groove and adapted to limit the movement of said follower and thereby the movement by said follower of said diaphragm in either direction.

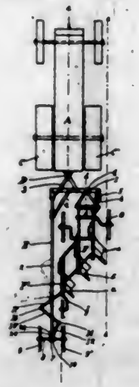
1,626,674. COMBINED WINDOW STOP AND WEATHER STRIP. WILLIAM FRIEDMAN, Princeville, Ill. Filed Apr. 9, 1923. Serial No. 630,695. 1 Claim. (Cl. 20—11.)



The combination with a window frame and sash member of window stop mechanism, a sheet metal portion adapted for ready attachment to the window jamb, said sheet metal portion including at one end a container for

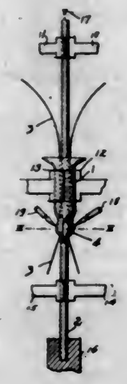
the sash balance mechanism, said container having a flange portion extending the entire width of the sash, said flange portion limiting the position of the container with relation to the parting strip, the pulley of said sash

balance mechanism being pivoted in the container and lying parallel with the jamb, and said flange portion having a raised member thereon acting as a combined runner and weather strip therefor.



1,626,675. CLAY TEMPERING AND EXPRESSING APPARATUS. WILLIAM LEE HANLEY, Jr., Bradford, Pa. Filed Feb. 26, 1924. Serial No. 695,223. 3 Claims. (Cl. 25—14.)

1. In a machine of the character described, the combination of a horizontally disposed clay tempering cylinder, and a horizontally disposed expressing cylinder located adjacent to the discharge end of the tempering cylinder and substantially perpendicularly thereto, rotary tempering and feeding devices located in said tempering cylinder, and constructed to effect a feed of the material from the delivery end of the tempering cylinder to the discharge end thereof, said tempering cylinder being of such length as to reduce clay and water admitted to its outer end to proper plastic condition during its travel to the discharge end thereof, said tempering cylinder having a discharge aperture, the lower edge of which is substantially coincident with the bottom of said cylinder, communicating directly with a corresponding aperture in the side of the expressing cylinder, and located slightly above the bottom of the expressing cylinder, an expressing auger located in the expressing cylinder, and common driving means for said auger and for the clay tempering devices located closely adjacent to the intersection of said cylinders.



1,626,676. ANTI-SIDE-DRAFT PLOW HITCH. PAUL HANSMANN and HERMAN STRACK, Long Prairie, Minn., assignors, by mesne assignments, to the said Hansmann. Filed Feb. 15, 1924. Serial No. 693,110. 4 Claims. (Cl. 97—180.)

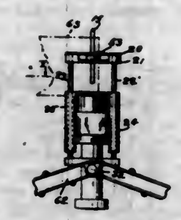
1. In a tractor operated plow, a tongue member having a rearward extending longitudinal member and a transverse bar at its forward end, a pair of flanged truck wheels supporting the rearward end of the tongue member, a connection between the draw bar of the tractor and a point intermediate the ends of the transverse bar, a caster wheel supporting the free end of the transverse bar, and a plow unit pivotally connected at its forward end to the transverse bar in an offset position between

the points of connection of the transverse bar with the tractor draw bar and with the caster wheel, the weight of the wheel supported tongue member serving to balance the plow in its offset position.

1,626,677. STEM FOR INCANDESCENT LAMPS AND METHOD OF MAKING. JOHN JOSEPH HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 25, 1922. Serial No. 546,679. 8 Claims. (Cl. 176—7.)

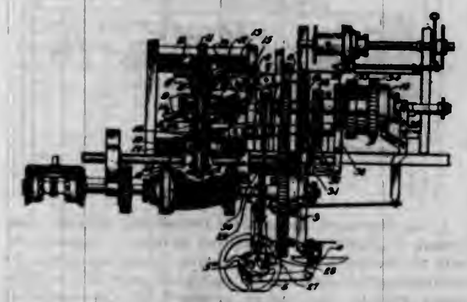
1. The method of making incandescent electric lamp stems composed of a relatively small diameter and a relatively large diameter glass tube which comprises supporting the tubes initially spaced apart and substantially in concentric relation, heating to fuse an end of the outer tube to contract the same about the inner tube and supplying sufficient heat to fuse the inner tube and expanding the fused portions of both the tubes to intimately unite them.

1,626,678. COMBINATION INSERTING AND WELDING MACHINE. JOHN JOSEPH HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 31, 1923. Serial No. 683,574. 22 Claims. (Cl. 176—3.)



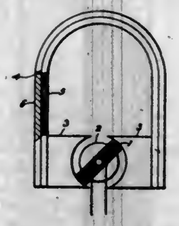
10. A lamp making machine comprising a wire inserting mechanism, a lamp part positioned to receive a wire from

said inserting mechanism, means for compressing the free end of an inserted wire, means for welding another wire to the compressed portion of said inserted wire,



loop-forming mechanism operable to form a loop at the free end of the last mentioned wire, and means for transferring said lamp part from said inserting mechanism into operative relation with said respective means.

1,626,679. LAMP-MAKING MACHINE. HARRY DANIEL KELLY, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 12, 1923. Serial No. 668,050. 16 Claims. (Cl. 176—2.)

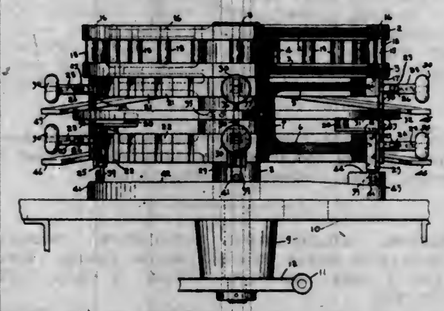


8. An exhausting machine for incandescent electric lamps comprising a conveyor having exhaust-tube-receiving apertures, means for gripping exhaust tubes disposed in said apertures and means for causing the gripping means to lift said exhaust tubes from said apertures.

1,626,680. DRIVE MECHANISM FOR TRACTORS. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor, by mesne assignments, to Kochring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 2, 1921. Serial No. 448,996. 4 Claims. (Cl. 180—17.)

1. Drive mechanism of the class described, comprising a propeller shaft, a propeller sleeve on said shaft, a combined clutch and brake member keyed to the shaft, a combined clutch and brake member keyed to the sleeve, a clutch member cooperative with the clutch elements of said combined clutch and brake members and comprising a double faced device formed with a gear, a driving gear meshing with the aforesaid gear, shoes with which the brake elements of the combined clutch and brake members are adapted to engage, means for shifting either of the combined clutch and brake members from engagement with said double faced clutch member, and to cause engagement of the brake element thereof with its brake shoe.

1,626,681. MAGNET. PAUL MACGAHAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 8, 1924. Serial No. 684,977. 5 Claims. (Cl. 175—21.)

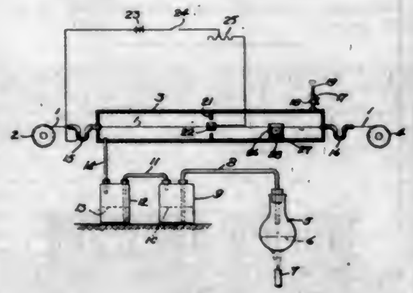


1. In combination, two elements disposed in side-by-side relation and having different thermal coefficients of expansion for effecting lateral movement thereof in response to temperature changes, one of said elements being a magnet element having adjacent poles which are moved relatively by such movement.

1,626,682. GETTER AND METHOD OF APPLYING THE SAME. DUNCAN MACRAE, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed May 18, 1921. Serial No. 470,672. 10 Claims. (Cl. 176—16.)

4. The method of affixing a getter free from a binder to a filamentary material, which consists in coating the filamentary material with a getter and heating said getter to a temperature sufficient to fuse the same to the filamentary material and allowing the getter to solidify thereon.

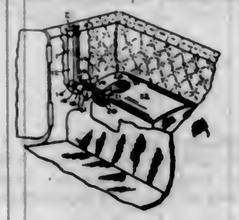
1,626,683. MACHINE FOR DEFORMING GLASS ARTICLES. HARRY D. MADDEN, Newark, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,623. 19 Claims. (Cl. 49—7.)



1. A glass-working machine comprising means for producing a restricted heat zone, means for continuously moving a tubular body through said heat zone whereby heat is applied to a portion of the said tubular body, means for varying the length of the heated portion to alter the calibre of the said heated portion and means for discharging the altered tubular body from the machine.

1,626,684. CONDENSER. RALPH E. MARBURY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 1, 1923. Serial No. 665,835. 15 Claims. (Cl. 175—41.)

1. An electrical condenser having a dielectric comprising substantially pure asbestos.

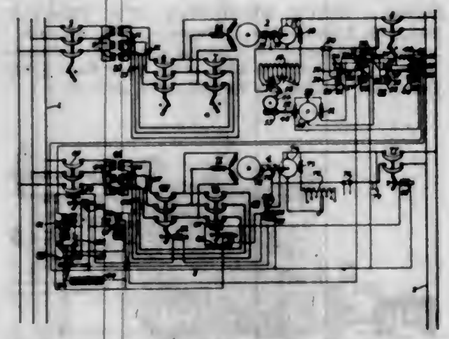


1,626,685. ACTIVATION BY MEANS OF HYDROGEN-FREE, CARBON-BEARING GAS. JOHN WESLEY MARDEN, East Orange, and THOMAS PHILIP THOMAS and JOHN EDWARD CONLEY, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Apr. 10, 1923. Serial No. 631,090. 8 Claims. (Cl. 250—27.5.)

2. The method of activating thoriated metal wire comprising heating and passing it continuously through a gaseous carbon compound, free from hydrogen.

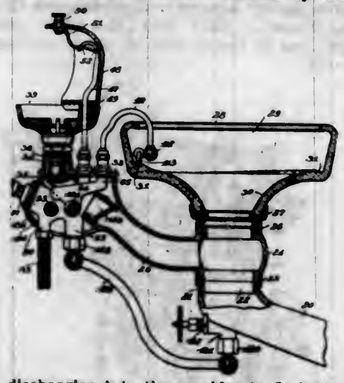
1,626,686. LIQUID-LEVEL INDICATOR. WILLIAM ALEXANDER MCRAE, Brechin, Ontario, Canada. Filed Dec. 1, 1924. Serial No. 753,065. 1 Claim. (Cl. 73—82.)

A liquid level indicator comprising an arm having guide brackets on one face thereof, a bracket adapted for fastening said arm to a receptacle, a rod pivotally mounted in one end of said arm and having a crank end adjacent to said arm, a float secured to the outermost end of said rod, a loop slidably mounted in said guide brackets and a link connecting one end of said loop to the crank end of said rod, said loop having a cross member intermediate its ends, a spindle pivotally mounted at one end at a point adjacent to said loop and having a fork-shaped portion at right angles thereto engaging said cross member of said loop, an indicator secured at the other end of said spindle, and a dial secured adjacent to said indicator.



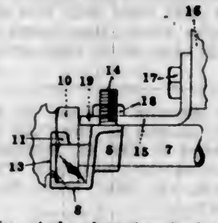
1,626,687. X-RAY-TUBE RADIATOR. MONTFORD MORRISON, New York, N. Y. Filed Mar. 4, 1922. Serial No. 541,160. 7 Claims. (Cl. 250—35.)

1. In an X-ray tube, a radiator comprising a plurality of plates spaced apart, said plates being disposed in planes substantially parallel to the axis of the tube and with respect to each other so that air currents may pass through the space between said plates.



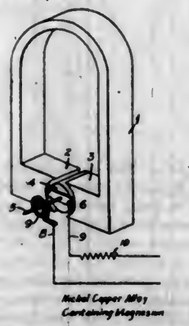
1,626,688. AUTOMATIC STATION. WILLIAM L. NEWMEYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1924. Serial No. 693,574. 15 Claims. (Cl. 171—312.)

1. An automatic electrical translating station comprising a plurality of translating devices, a common circuit for receiving energy therefrom, regulating means for automatically regulating the voltage of each of the translating devices, and means actuated by the regulating means of one device for determining the periods of operation of another device.



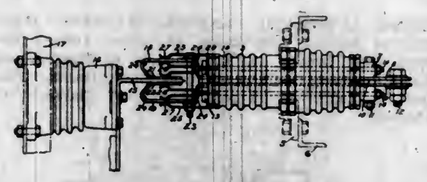
1,626,689. DENTAL APPARATUS. ALPHONSE F. PIERRE, Rochester, N. Y. Filed Sept. 20, 1923. Serial No. 663,892. 27 Claims. (Cl. 4—263.)

1. In a dental cuspidor fixture, the combination of a hollow support forming a waste conduit, a cuspidor discharging into said support, an arm on said support carrying a housing, a valve head enclosed and detachably secured in said housing, water supply means for the valve head, saliva ejector means controlled by the valve



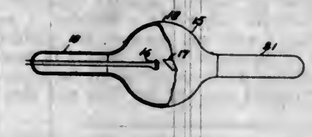
head and discharging into the cuspidor to flush the same, and water discharge means connected with the valve head for flushing the cuspidor.

1,626,690. ANGLE-COCK HOLDER. FRANK H. PIETZSCH, St. Louis, Mo., assignor to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 22, 1923. Serial No. 626,751. 3 Claims. (Cl. 248—31.)



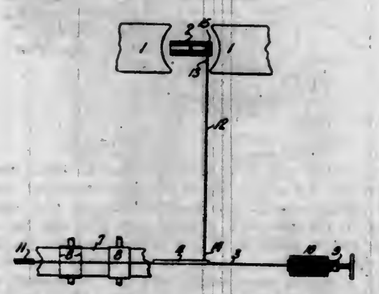
1. In a device of the class described, a casing forming a pocket for the head of an angle cock, said pocket having an opening for the lateral insertion of the head therein, an extension under which the head may be moved to prevent its escape by relative transverse movement, and means for securing said casing to a car, said means being adapted to retain the head under the extension.

1,626,691. RESISTOR ALLOY. NORMAN B. PILLING, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1922. Serial No. 585,855. 3 Claims. (Cl. 75—1.)



2. A resistance alloy consisting of 35 to 55 parts of nickel, 65 to 45 parts of copper and magnesium in amount from a trace to .1%, said alloy having a negative temperature coefficient of resistance.

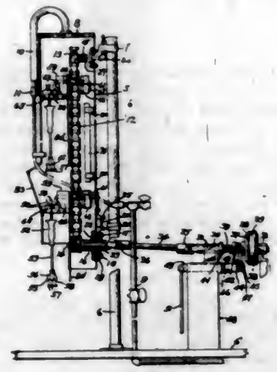
1,626,692. SWITCH CONTACT. ARTHUR RAWLING, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1923. Serial No. 672,808. 1 Claim. (Cl. 173—332.)



A contact jaw member comprising a support member, a pair of contact jaw members movably mounted upon the support member and having a reentrant contact portion overlapping the main portion for engaging and receiving a switch blade member therebetween, means for limiting separation of the jaw members and spring members disposed between the said contact portion and main portion of the jaw members and retained in operative position by the said means for yieldingly pressing the contact portions into engagement with the said switch blade member.

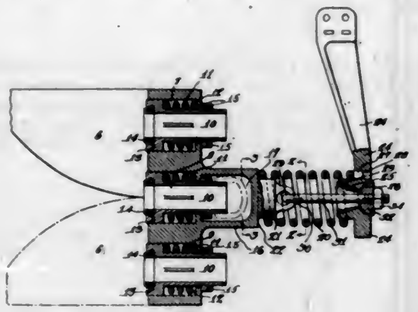
1,626,693. HIGH-VOLTAGE ELECTRON DEVICE. HARVEY CLAYTON RENTSCHLER, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Nov. 29, 1922. Serial No. 603,912. 4 Claims. (Cl. 250—35.)

1. An electron device for high potential comprising an evacuated sealed insulating envelope, an electron-emitting cathode and an anode therein, that portion of said envelope adjacent said electron-emitting cathode including material of greater conductivity than the remaining portions of said envelope whereby severe dielectric stresses therein are obviated.



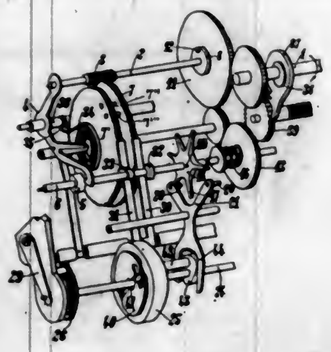
1,626,694. GALVANOMETER AND LIKE RECORDING INSTRUMENT. JOHN RIDDLE, London, England, assignor to Telegraph Construction and Maintenance Company, Limited, London, England. Filed Nov. 21, 1924, Serial No. 751,291, and in Great Britain Aug. 16, 1924. 8 Claims. (Cl. 178—91.)

1. In a micro-galvanometer and like recording instrument suitable for receiving signals of minute power, the



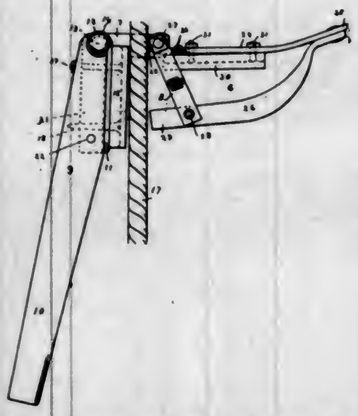
combination of means for producing a magnetic field, a coil immersed therein and capable of turning about an axis, a flexible strip, a recorder mounted on said strip, and a tube of glass connecting the coil to the recorder.

1,626,695. AUTOMATIC FLASHING MACHINE. HARRY MILTON ROBINS, Glen Ridge, and JOHN JOSEPH HIGGINS, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 22, 1923. Serial No. 669,913. 7 Claims. (Cl. 176—3.)



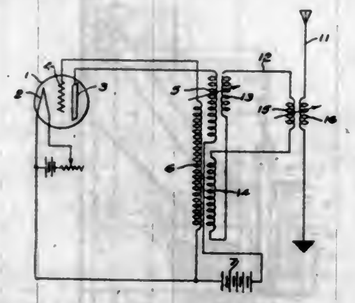
1. A machine for flashing mounted incandescent electric lamp filaments comprising a chamber, a conveyor, means associated with said conveyor for engaging leading-in wires of the stems of said mounts to support the same in depending positions and means for automatically moving said mounts into and out from said chamber.

1,626,696. CONNECTER-HEAD SUPPORT. EDWARD A. ROBINSON, Montreal, Quebec, Canada, assignor of one-half to himself and one-half to Ellison E. Workman, Montreal, Canada. Filed May 17, 1922. Serial No. 561,708. 2 Claims. (Cl. 285—24.)



1. In a train pipe connecter, a connecter head having a rearwardly extending hollow support apertured at the side, a spring pressed pipe terminal within the support adapted to connect with a train pipe through the side opening and to move back and forward within the body of the head and the support, an eye at the rear of the support, a spring surrounding the eye, a bracket with which the rear of the spring engages and a hook rod engageable with the bracket and eye and maintaining the spring in compression.

1,626,697. CONSTRUCTION OF SPEED INDICATORS. CHARLES HILAIRE HENRI RODANET, Paris, France, assignor to Société Anonyme: Etablissements Ed. Jaeger, Paris, France. Filed July 18, 1924, Serial No. 726,892, and in France Aug. 11, 1923. 1 Claim. (Cl. 235—104.)

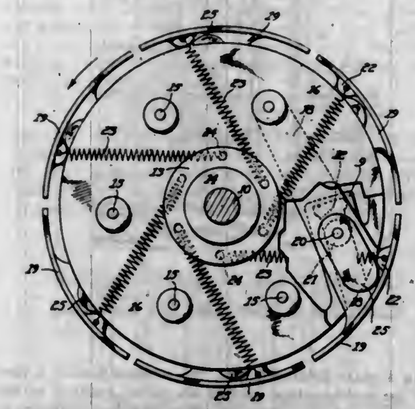


In a speed periodical indicator having a toothed wheel which is periodically driven by the shaft the speed of which is being measured and a co-axial toothed wheel actuated by clockwork, spring blades secured, at one of their ends, on the support of the indicator and directly engaging, through their other ends, with the respective teeth of the co-axial wheels, these spring blades being directly engaged by cams of the shaft connected to the clockwork.

1,626,698. FIRE ESCAPE. GEORGE M. ROUSE, Westmoreland, N. Y., assignor, by direct and mesne assignments, of one-third to Earl W. Bellinger, Westmoreland, N. Y., and one-third to Guy M. Thomas, Utica, N. Y. Filed Oct. 22, 1924. Serial No. 745,141. 2 Claims. (Cl. 227—25.)

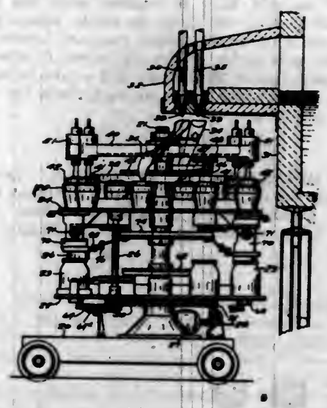
1. In a fire escape the combination of two handled members having oppositely disposed friction faces adapted to engage a rope, a cross bar rigidly projecting from one member and permanently and pivotally connected to the other handled member adjacent said friction faces and to one side thereof, a headed lug projecting from the opposite side of said first handled member and a second cross bar fixedly projecting from the second member past the other side of said friction faces and having a hook adapted to be brought into positive interlocking engagement with said headed lug when the members are closed, but leaving that side of the friction faces clear for the entrance of the rope when the members are separated.

1,626,699. RADIO TRANSMISSION SYSTEM. HEINRICH SCHIENSTEIN, Charlottenburg, near Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 31, 1921, Serial No. 511,774, and in Germany Jan. 26, 1921. 1 Claim. (Cl. 250—17.)



In a radio sending device, an oscillation generator, including a feed-back coupling, a radiating circuit, a link circuit, transformers coupling said link circuit to said oscillation generator and said radiating circuit respectively, one of said transformers including members which are also a part of said feed-back coupling.

1,626,700. BASING CEMENT. EDWARD ROBERT SCHMID, Verona, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 27, 1922. Serial No. 539,755. 5 Claims. (Cl. 87—17.)

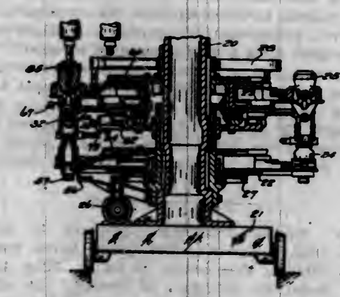


2. A cement consisting of shellac and bakelite in equal proportions, an inorganic inert filler, alcohol for dissolving said shellac and bakelite and rosin for hastening a film on the surface of the cement to prevent relatively rapid hardening of the major portion thereof.

1,626,701. EXPANSION PULLEY. FRANK HENRY SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 14, 1925, Serial No. 2,447. Renewed Jan. 26, 1927. 3 Claims. (Cl. 64—8.)

3. An automatically expansible and contractible pulley, comprising a disc fast on the shaft and provided with cam slots, a second disc loose on the shaft, a plurality of rim segments, each having a stem pivoted to said loose disc, a roller on each of said stems engaging one of said slots, and resilient means to resist radial movement of said segments.

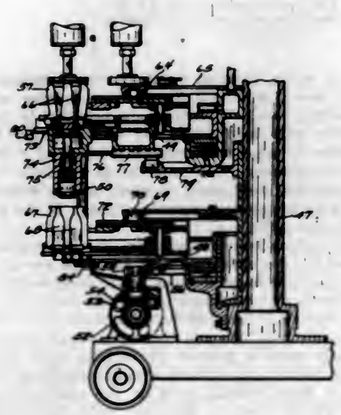
1,626,702. APPARATUS FOR FORMING GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 11, 1920. Serial No. 416,022. 25 Claims. (Cl. 49—5.)



2. In a glass forming machine, the combination of separate molds arranged to receive charges of glass simultaneously, and separate means provided in duplicate cooperating with said molds for concomitantly forming the charges of glass into finished articles by a series of operations, whereby the formation of the articles is effected simultaneously, each of said forming means being brought into cooperative relation to each of the separate molds in succession.

17. In a glass forming machine, the combination of a blank mold and a finishing mold arranged one above the other, a transfer head, a plurality of neck molds carried by said head, and automatic means for imparting a step by step rotation to said head always in the same direction about a horizontal axis and thereby move each neck mold periodically from a position in register with the blank mold to a position in register with the finishing mold.

18. In a glass forming machine, the combination of an inverted blank mold, a finishing mold therebeneath, a transfer head, a neck mold carried by said head, a reciprocating rack, a pinion in mesh therewith, and a one way driving connection between said pinion and said transfer head.

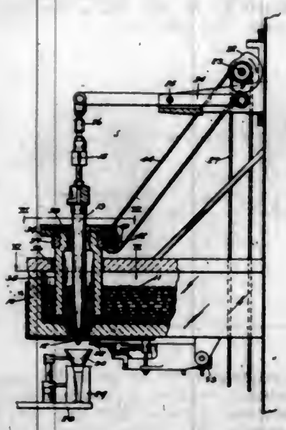


1,626,703. GLASS-FORMING MACHINE. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 15, 1920, Serial No. 424,197. Renewed Mar. 23, 1926. 24 Claims. (Cl. 49—9.)

13. In a glass forming machine, the combination of a rotary mold carriage, a group of molds thereon comprising blank molds arranged one in advance of the other in,

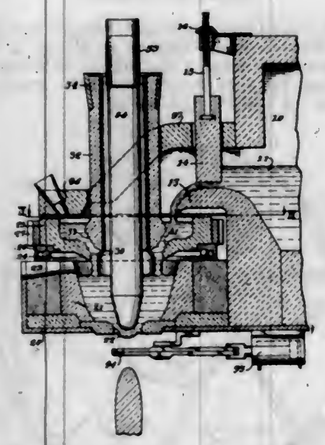
the direction of their travel and finishing molds arranged below the blank molds and one in advance of the other in their direction of travel, the faces of all the molds in the group, when closed being in the same plane, a transfer head between the blank molds and the finishing molds, neck molds on said head in register with the blank molds, means to open and close the molds, means to rotate said head and thereby carry the bare blanks supported in the neck molds downward, means to close the finishing molds around the blanks, and means to successively open the finishing molds as they reach the same discharging position.

1,626,704. GLASS-FORMING APPARATUS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 15, 1920. Serial No. 424,198. 7 Claims. (Cl. 49—5.)



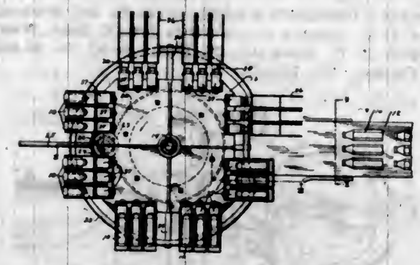
4. In a glass forming machine, the combination with a rotary mold carriage, of mold bottoms arranged radially at different distances from the axis of the carriage, and automatic means for separately tilting said mold bottoms in succession.

11. In a glass forming machine, the combination with means for simultaneously delivering a multiple of gobs of molten glass from a molten mass, of a support traveling in a closed path, a series of groups of molds thereon, each group comprising a multiple of blank molds adapted to receive the gobs of glass and form them into blanks, a complementary multiple of finishing molds, and means for transferring the blanks from the blank molds to the finishing molds and blowing the blanks to finish form therein.



1,626,705. GLASS FEEDER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 28, 1923. Serial No. 635,212. 28 Claims. (Cl. 49—55.)

1. In a glass feeder, the combination of a container for molten glass having an outlet opening in the bottom thereof through which the glass issues, means for forming the issuing glass into mold charges comprising a regulator projecting over said opening and means for actuating said regulator periodically at regular intervals,

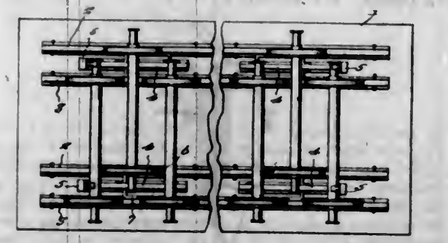


a stirring device projecting into the glass at one side of the regulator, and means to cause said stirring device to move in a path surrounding said regulator.

1,626,706. GLASS FEEDER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 17, 1923. Serial No. 675,261. 22 Claims. (Cl. 49—55.)

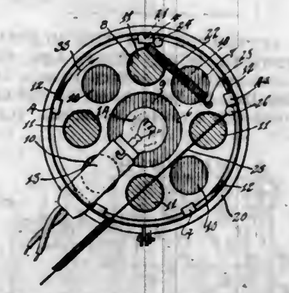
2. In a glass feeding device, the combination of a container for molten glass, having an outlet opening in the bottom thereof, a vertically reciprocating plunger in alignment with said opening, means providing a flowing stream of glass, an auxiliary container having an outlet opening above and in alignment with said first mentioned container, and means forming with the outlet opening of the auxiliary container an annular passageway through which the glass issues to said first mentioned container.

1,626,707. APPARATUS FOR TRANSFERRING GLASS ARTICLES. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,048. 5 Claims. (Cl. 214—91.)



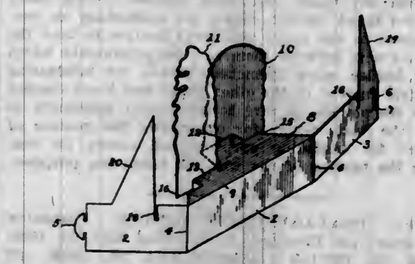
1. The combination of a carriage mounted for rotation about a stationary axis, a plurality of carriers mounted on said carriage and each comprising a plurality of individual compartments for receiving articles, said carriers being normally held in an article supporting position on the carriage and brought in succession to an article receiving position by the rotation of the carriage, automatic means for successively shifting the carriers relative to the carriage to an article discharging position, and automatic means for depositing articles in all the compartments of a carrier while the carrier is at said receiving position.

1,626,708. PROCESS OF MAKING PERFUMED OR MEDICATED TRANSPARENT SOAPS. PAUL VILLAIN, London, England. Filed Oct. 31, 1924, Serial No. 747,113, and in Great Britain Nov. 7, 1923. 4 Claims. (Cl. 87—16.)



1. A process of making transparent soap and providing the same homogeneously with a protective film when dry, comprising the steps of adding to a hot transparent soap mixture a large quantity of non-crystallizable odorous fluid products and methylated spirit in equal parts and a small quantity of a film-forming soluble cellulose derivative; heating the resultant mixture to about 80° C.; partially cooling said mixture to about 72° C.; running the partially-cooled mixture into frames to form tablets; and leaving it to cool slowly in air, whereby the soluble film-forming cellulose derivative will appear as a thin coating over the soap tablets to retain the odorous products therein until liberated by washing with water, whereafter the coating is reformed by drying in air.

1,626,709. MEANS FOR TRANSPORTATION OF ROLLING STOCK. CLARENCE H. WALTHALL, Montgomery, W. Va., assignor of two-fifths to Robert A. Withrow, Montgomery, W. Va. Filed Apr. 19, 1926. Serial No. 102,942. 6 Claims. (Cl. 105—367.)



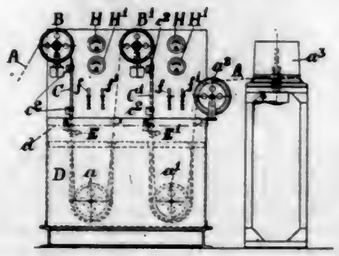
2. In combination, a car bed, two pairs of supporting rails thereon in straddling relation, and rolling stock retaining means secured between corresponding rails of said pairs.

1,626,710. SIGNAL LIGHT. JOSEPH E. WOOD, Chicago, Ill., assignor of one-fourth to Charles A. Terrel and one-eighth to Alice M. Wagner, Chicago, Ill. Filed Feb. 19, 1926. Serial No. 89,348. 5 Claims. (Cl. 116—45.)

1. A device of the type described comprising a casing having a source of light disposed therein, a disc, clear signals disposed in said disc, warning signals disposed between said clear signals in said disc, a cover plate disposed adjacent to said disc normally allowing the rays of light to project clear signals therethrough and to hide the warning signal, and means for automatically moving said disc, whereby the clear signals will be hidden by said cover plate, thus allowing the rays of light to project warning signals therethrough.

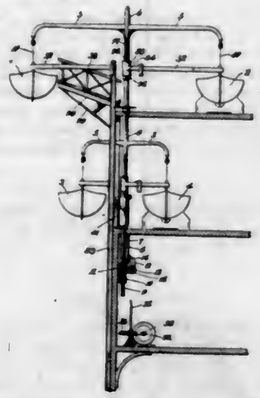
1,626,711. DISPLAY STAND. HERBERT ACKERET, Massillon, Ohio, assignor to The Massillon-Cleveland-Akron Sign Company, Massillon, Ohio, a Corporation. Filed Feb. 9, 1924. Serial No. 691,567. 8 Claims. (Cl. 40—126.)

1. A display stand including a front panel, end wings extending rearwardly therefrom to provide a supporting base, a substantially horizontal top wing extending rearwardly from the front panel, and a plurality of display leaves hingedly connected to the top wing at different distances from the front panel and provided with means for interengagement with the end wings, said end wings being provided with cooperating engaging means at different distances from their connection to the front panel to independently support the display leaves in operative position.



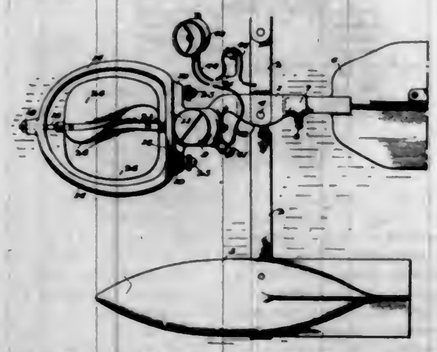
1,626,712. VINE LIFTER. GEORGE S. AGEE, Longview, Wash. Filed Oct. 30, 1924. Serial No. 746,842. 3 Claims. (Cl. 56—249.)

1. A vine lifting attachment of the class described comprising a wheel rim protecting strip merging at its



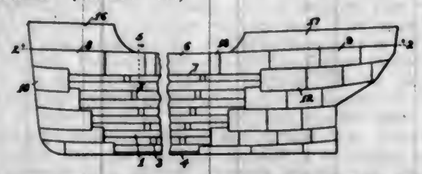
front end into a forwardly extending nose and having a stud extending from one side edge thereof and equipped at its lower edge with a laterally and outwardly extending flange, said attachment having means for detachably connecting it to a wheel supported implement.

1,626,713. APPARATUS FOR THE ELECTRIC-HEAT TREATMENT OF WIRE, STRIP, AND THE LIKE. HERBERT ALEXANDER and ARTHUR IMBERY, Leeds, England. Filed Dec. 29, 1924, Serial No. 758,618, and in Great Britain Oct. 3, 1924. 3 Claims. (Cl. 266—3.)



1. In apparatus for hardening and tempering travelling steel wire, strip and the like, a vessel for holding a quenching medium for cooling the wire, a pair of electrical contacts situated above the vessel, a pair of stationary electrical contacts submerged in the quenching medium for making frictional contact with the travelling wire, the said contacts being arranged to allow the wire to maintain an approximately vertical position in relation to the quenching medium, means for guiding the wire from one upper and lower contact to the other upper and lower contact, means for conducting an electric current to one upper and lower contact to heat the portion of wire between them to a temperature at which it will harden when quenched, means for conducting an electric current to the other upper and lower contact to heat the portion of wire between them sufficiently to temper the wire, means for controlling the heating of the wire for hardening purposes and means for controlling the heating of the wire for tempering purposes.

1,626,714. BOAT-LAUNCHING DEVICE. FREDERICK A. ANTONCICH, Brooklyn, N. Y. Filed Mar. 23, 1923. Serial No. 627,163. Renewed Sept. 25, 1926. 22 Claims. (Cl. 9—22.)

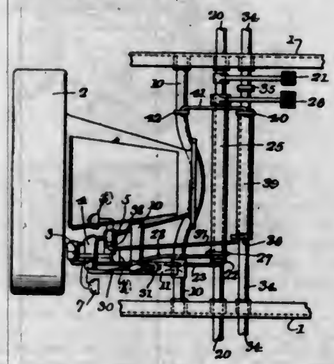


1. In a boat launching device, a davit, a support for said davit, means for raising and lowering said davit, and means for moving said davit, means for guiding the boat to control its position while being lowered with relation to the side of a vessel from which it is being lowered and means within the boat being lowered for detaching said guiding means.

1,626,715. CURRENT METER. CARL H. AU, Washington, D. C., assignor of one-half to John C. Hoyt, Washington, D. C. Filed Oct. 28, 1925. Serial No. 65,451. 8 Claims. (Cl. 73—37.)

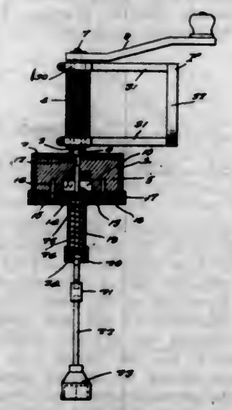
3. In an axial flow meter, the combination of a horizontal stem, a yoke removably secured to the forward end thereof, a contact-chamber mounted on said stem, a bearing in said chamber, an adjustable bearing in the forward part of said yoke, and a current-driven horizontal spindle turning on said bearings, whereby said yoke and spindle may be readily disassembled.

1,626,716. CHANNEL AND PLATE CONSTRUCTION FOR VESSELS. WILFORD G. BARTENFELD, Lorain, Ohio. Filed May 19, 1926. Serial No. 110,125. 4 Claims. (Cl. 114—79.)



1. In a hull for vessels, the combination of channels, forming the sides of the hull intermediate the ends thereof, and plates connected to said channels forming the ends of the hull.

1,626,717. PLUMB BOB. ALFRED E. BOSSERDET, Detroit, Mich., assignor of one-half to Edward Hunter, Detroit, Mich. Filed Apr. 7, 1926. Serial No. 100,242. 3 Claims. (Cl. 33—217.)

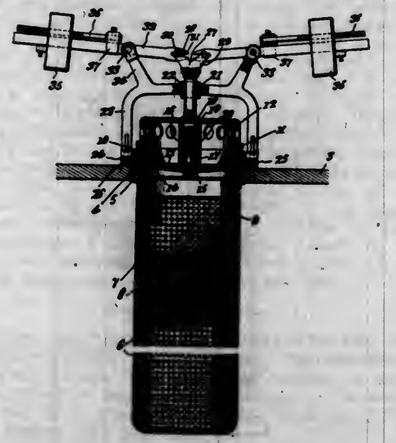


1. A plumb bob hollowed out to provide a well, a reel mounted within such well extending transversely thereof and having a bearing at each end in the side wall of the bob, said reel extending at each end beyond said bearings and having a thumb piece at each end, an expansion spring around the reel between one thumb piece and the adjacent side wall of the bob, there being opposed recesses in the opposite side wall of the bob adjacent the reel bearing, and opposed lugs upon the adjacent thumb piece adapted to be engaged in said recesses to hold the reel against rotation.

1,626,718. TRANSMISSION CONTROL. JAY H. BUTLER, Newark, Ohio. Filed Sept. 14, 1925. Serial No. 56,322. 4 Claims. (Cl. 74—39.)

1. In a device of the class described, a transmission mechanism having reverse and clutch shafts at one side of said mechanism, second shafts journaled one upon the other, and link connections between the second shafts and the clutch and reverse shafts, and means for operating said shafts, said means being located on the opposite side of the transmission mechanism.

1,626,719. SPEED WRENCH. CLAUD CALLISON, Loyal, Okla. Filed Mar. 10, 1925. Serial No. 14,565. 1 Claim. (Cl. 81—57.)

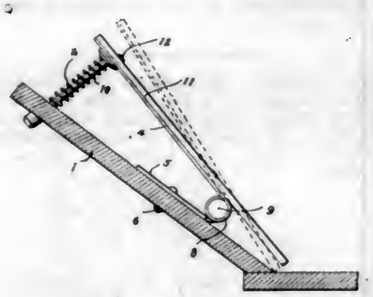


In a reversible wrench, a casing, a sleeve extending upwardly from one end of the casing, a block rotatably mounted in the casing and provided with a recess having an internal gear section formed therein, an elongated shank extending upwardly from the block through the sleeve, an annular rack carried by the casing, radially disposed pinions rotatably carried by the block and meshing with the annular rack, a tubular extension on the opposite end of the casing, a shaft slidably extending through the tubular extension and into the recess of the block, a pinion fixed to the shaft and meshable with the radially disposed pinions, a spring seated in the tubular extension and adapted to normally retain the pinion in mesh with said radially disposed pinions, a crank, and a socket member, said crank and said socket member being interchangeable on the free ends of the shank and shaft respectively.

1,626,720. METHOD OF MAKING DENTAL ATTACHMENTS. HERMAN E. S. CHAYES, New York, N. Y., assignor to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1925. Serial No. 10,782. 5 Claims. (Cl. 29—160.6.)

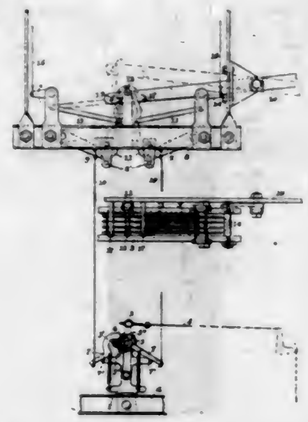
1. That process for making dental anchoring devices which consists in subjecting an elongated piece of metal to a forming operation to produce therein a T-shaped cross-section in which the flange on one side of the stem has a greater width than the flange on the other side, in folding the flange on itself, and in dividing the formed and folded member thus produced transversely into sections to provide the finished articles.

1,626,721. SAFETY ATTACHMENT FOR TANKS. JACOB COHN, New York, N. Y., assignor, by mesne assignments, to Nonexplosive Corporation of America (New Corporation), a Corporation of Delaware. Filed July 26, 1924. Serial No. 728,337. 1 Claim. (Cl. 27—45.)



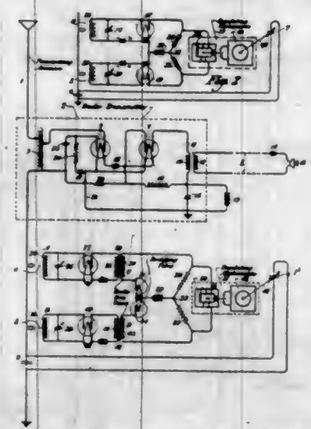
In combination with a receptacle, a relief valve, an air valve carried by said relief valve, a yoke member having horns detachably affixed to said receptacle, a rigid stud attached to the top of said relief valve and adapted to reciprocate in said yoke upon the movement of said relief valve, a cross head with divergent arms detachably affixed to the top of said stud above the yoke, weighted levers fulcrumed at a point intermediate their ends to the horns of said yoke and having the near ends thereof provided with slots opening through such ends, pins carried by said divergent arms slidably and detachably engaged in said slots.

1,626,722. ACCELERATOR PEDAL. LEON J. COLE, Greenville, Pa. Filed Oct. 26, 1926. Serial No. 144,344. 3 Claims. (Cl. 74—81.)



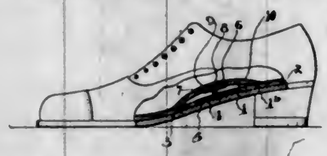
1. A pedal of the character described comprising an attaching leaf, an actuating leaf hinged to said attach-

ing leaf and extending over said attaching leaf, said actuating leaf being of greater length than said attaching leaf, and a covering of yieldable material secured



upon the upper face of said actuating leaf and projecting from the hinge end thereof and adapted to limit swinging of the actuating leaf away from the attaching leaf.

1,626,723. BOX-OPERATING MECHANISM FOR LOOMS. WILLIAM CRUTCHLOW, Paterson, N. J., assignor, by mesne assignments, to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 21, 1922. Serial No. 608,147. 4 Claims. (Cl. 139—180.)

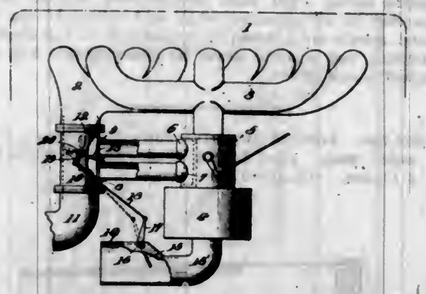


1. In a drop box loom, a plurality of drop boxes, drop box actuating mechanism including a pair of cylinder gears, a plurality of vibrator gears and a plurality of vibrator levers supporting said vibrator gears, a drop box indicator effective to selectively position said vibrator levers in raised or lowered positions and to retain said levers in such selected positions until said indicator is again operated, a regularly driven actuator for said drop box indicator, a plurality of coupling members each normally maintained in withdrawn inoperative position but each movable at any time to position for engagement by said actuator and movable thereby to render said drop box indicator operative to shift a selected vibrator lever, a jacquard mechanism and pattern controlled connections from said jacquard mechanism to said coupling members, whereby any one of said coupling members may be selectively moved at any time into position for engagement by said actuator.

1,626,724. FREQUENCY-CONTROLLING SYSTEM. CHARLES S. DEMAREST, Ridgewood, N. J., and MILTON L. ALMQUIST, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,747. 5 Claims. (Cl. 250—17.)

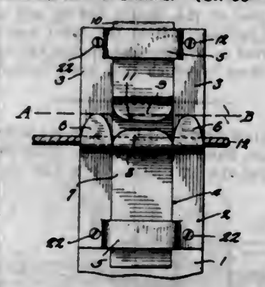
4. In a radio signaling system, the combination with an antenna tuned for a particular frequency, of tuned circuits connected therewith, one of said circuits being resonant above the said particular frequency and the other resonant below the particular frequency, a balanced rectifier circuit having rectifying means individual to the said tuned circuits to rectify the voltages set up in the said tuned circuits, a current responsive device connected differentially with said rectifying means, means controlled by the said responsive means to restore the tuning of the said antenna to its normal frequency.

1,626,725. INSTEP-ARCH SUPPORTER. WILLIAM S. DUFFIELD, Hamilton, Ontario, Canada. Filed Dec. 4, 1925. Serial No. 73,203. 3 Claims. (Cl. 36—71.)



1. An instep arch supporter comprising an insole; a wearing plate carried on the upper surface of the insole; a leather flexible arch member secured at one end to the insole and convexly curved longitudinally and concavely curved tranversely at its middle portion; a nut carried on the underside of the said member; and a screw threaded through the nut and adapted to engage the wearing plate to flex the leather arch member, the said arch member having an opening therethrough for the passage of the screw, the opening being of sufficient diameter to permit adjustment of the latter by a tool.

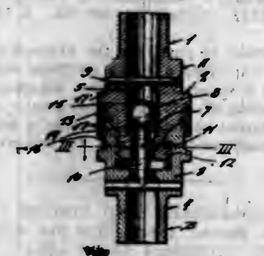
1,626,726. WEAR-RESISTING ALLOY. BURNHAM E. FIELD, Douglaston, and RUSSELL FRANKS, Elmhurst, N. Y., assignors to Haynes Stellite Company, a Corporation of Indiana. Filed Dec. 24, 1925. Serial No. 77,575. 4 Claims. (Cl. 75—1.)



1. A ferrous alloy suitable for making articles subject to abrasion, containing tungsten 1 to 12 per cent; chromium 25 to 35 per cent; boron 0.10 to 1.0 per cent; and carbon 1 to 3.5 per cent.

1,626,727. HEAT CONTROL FOR INTERNAL-COMBUSTION ENGINES. JACOB RICHARD FRANCIS, Flint, Mich. Filed Nov. 18, 1920. Serial No. 424,915. 4 Claims. (Cl. 123—122.)

1. An internal combustion engine having an exhaust pipe, intake manifold and charge forming device connected thereto, a heater arranged to heat the charge in its passage from the charge forming device to the engine in communication with said exhaust pipe through unclosable passages, said charge forming device being provided with an air inlet, a vane mounted to swing within said air inlet, a valve arranged in the exhaust line pipe for controlling the passage of exhaust gases to said heater and an adjustable connection between said vane and said valve controlling the passage of exhaust gases to said heater by the velocity of air entering said charge forming device.

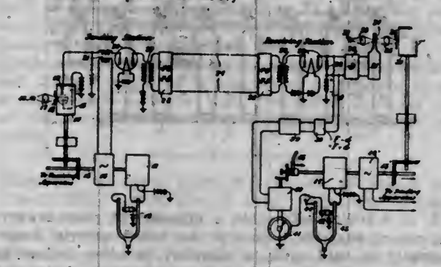


1,626,728. SELF-LOCKING CLOTHESLINE RECEIVER. JERRY S. GREEN, Le Claire, Iowa. Filed Dec. 15, 1926. Serial No. 154,993. 3 Claims. (Cl. 68—12.)

1. In a device of the class described, a prop, a plate, means for mounting the plate slidably for upward and downward movements on the prop, means for limiting the downward movement of the plate, the plate having an upstanding seat and a depending retainer cooperating with the seat to form a line-receiving slot, and there being an upstanding finger carried by the prop and located at one end of the seat when the plate is in its operative position.

1,626,729. HOSE COUPLING. ALEXANDER H. HANDLAN, Jr., St. Louis, Mo. Filed June 23, 1920. Serial No. 390,988. 1 Claim. (Cl. 283—146.)

A coupling comprising a pair of hollow sections having threaded portions whereby they are coupled together, each of said sections also having an exteriorly threaded portion the threads of which wind spirally in the same direction as those of the first mentioned threaded portions, and a jamb nut screwed onto the exteriorly threaded portions of both sections to lock said sections after they have been coupled together, the pitch of the exteriorly threaded portions being uniform with each other but different from the pitch of the first mentioned threaded portions, one of said sections being provided with an abutment engaged by said jamb nut when the latter is screwed onto both of said sections, and said sections being provided with mating smooth beveled seats

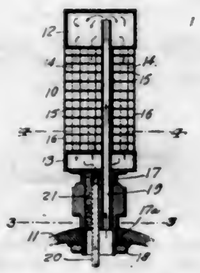


which are forced into engagement with each other in response to a rotary motion of one of the first mentioned threaded portions.

1,626,730. SOCKET WRENCH. HOBART F. HAYNES, Syracuse, N. Y. Filed Feb. 10, 1926. Serial No. 87,386. 1 Claim. (Cl. 81—185.)

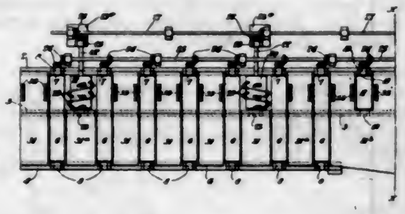
A socket wrench comprising a handle having its forward end portion reduced to provide an abutment shoulder and the forward end of the reduced portion further reduced and non-circular in cross section, a tubular socket member fitted upon the non-circular end of said handle and conforming to the contour thereof in cross section, said socket member projecting forwardly from the handle for engagement with a nut to be turned, a pin passed transversely through the socket member and handle and having one end portion projecting from the socket member, and a sleeve slidable longitudinally upon said socket member and the reduced portion of said handle and having its bore conforming to the contour of said socket member and snugly receiving the same, a longitudinally extending slot being formed in said sleeve and receiving the projected end portion of said pin to limit longitudinal sliding of the sleeve.

1,626,731. METHOD OF AND APPARATUS FOR SYNCHRONIZATION IN PICTURE TRANSMISSION. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 30, 1923. Serial No. 677,839. 11 Claims. (Cl. 178—53.)



1. The method of synchronizing apparatus at two places between which transmission is effected by modulated carrier current, which consists in determining the speed of the apparatus at both places in accordance with the carrier frequency.

1,626,732. METHOD OF VAPORIZING A GETTER IN AN EVACUATED VESSEL. WILLIAM HENRY TOWNE HOLDEN, New York, N. Y., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 23, 1922. Serial No. 546,203. 3 Claims. (Cl. 176—2.)

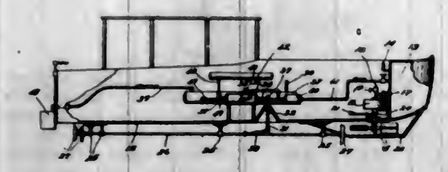


1. The method of purifying the atmosphere in a discharge tube employing a single electrode which consists in depositing a vaporizable chemical substance upon said electrode, sealing-off said tube, disposing a supplemental electrode adjacent thereto and passing a high-frequency current through said electrodes to vaporize said substance.

1,626,733. CONDENSER AND COOLER. HARVEY F. HOLLISTER, Spencer, Iowa. Filed Feb. 4, 1924. Serial No. 690,465. 2 Claims. (Cl. 257—25.)

1. A condenser for radiators, comprising a radiator cap provided with an opening, a casing having an upper and lower chamber, a tubular portion secured to the lower end of the casing and adapted to pass through said opening in the cap, condensing means interposed between said chambers and communicating therewith, a tube for each of said chambers extending downwardly through said tubular portion and packing within the tubular portion and surrounding said tubes.

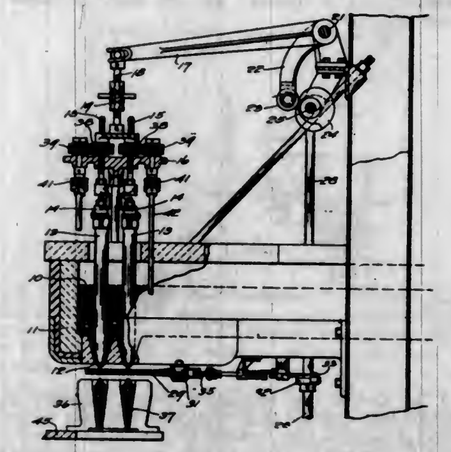
1,626,734. ROLLING-MILL TABLE. LEONARD E. HUNT, Duquesne, Pa. Filed May 15, 1926. Serial No. 109,311. 8 Claims. (Cl. 80—48.)



5. In a rolling mill table, a plurality of plain conveying rollers adapted to convey the rolled material longitudinally of said table, a plurality of other rollers at spaced intervals along said table, a plurality of elevated rests at spaced intervals along said table, a pair of spiral flanges on each of said last named rollers and extending partly around said rollers, said spiral flanges being overlapped, and one of said flanges being adapted to engage and move the rolled material transversely onto said rests and the other of said flanges being adapted to engage and move the rolled material from said rests, some of said second named rollers having right hand spirals and the other of said rollers having left hand spirals, and said rollers having right hand spirals being adapted to be revolved in one direction while said rollers having left hand spirals are adapted to be revolved in the opposite direction, and separate means for revolving said first and second named rollers.

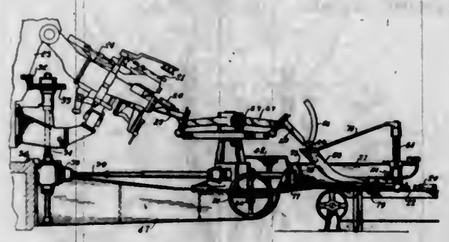
1,626,735. POSTER BOARD. JOHN T. JACKSON, Coldwater, Mich. Filed June 8, 1926. Serial No. 114,500. 3 Claims. (Cl. 40—125.)

1. A poster board comprising a frame including battens, metal sheets having edge portions bent at a right angle to form flanges which are disposed to abut and engage the side of a batten to which the abutting flanges are attached, one of the flanges having end portions cut and extended outwardly from the sheet substantially in the plane thereof to overlap and engage the outer side of the adjacent sheet to which they are attached.



1,626,736. BOAT-PROPELLING MECHANISM. GEORGE W. JOHNSTON, Sand Springs, Okla. Filed Sept. 9, 1926. Serial No. 134,414. 7 Claims. (Cl. 115—31.)

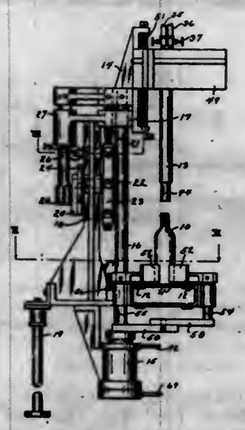
1. Boat propelling means comprising reciprocating propeller members, duplex air motors for actuating said propeller members, a compressed air tank for maintaining a compressed air supply for said motors, an air pump or compressor connected with said tank, and current actuated means for operating said air pump or compressor.



1,626,737. MEANS FOR FORMING CHARGES OF MOLTEN GLASS. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 30, 1921. Serial No. 504,278. 14 Claims. (Cl. 49—5.)

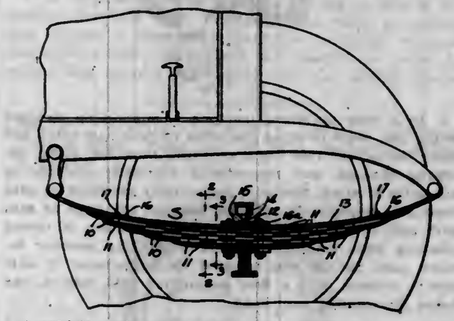
8. The combination of a container for molten glass, having a plurality of outlet openings through which the glass issues simultaneously to form a plurality of charges, regulating means by which the issuance of glass through each outlet opening is independently controlled, whereby

the relative sizes of the charges of glass issuing from the respective outlets may vary, and means below the outlets to sever the plurality of charges of glass.



1,626,738. CONVEYING APPARATUS. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 22, 1924. Serial No. 708,171. Renewed Feb. 7, 1927. 10 Claims. (Cl. 49—1.)

3. The combination of a machine for forming glass articles comprising a mold carriage, molds thereon operable to discharge articles during the travel of the molds, transfer mechanism comprising a carrier, automatic means to move said carrier and cause it to travel in register with the molds during the discharge of said articles and then move away from the mold carriage, and mechanism to actuate said carrier to discharge the articles therefrom.

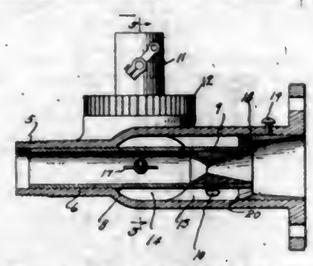


1,626,739. METHOD AND APPARATUS FOR FIRE-FINISHING GLASS ARTICLES. JOHN MURL LENTS and FRANK R. MILLER, Evansville, Ind., assignors to Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Mar. 26, 1924. Serial No. 701,953. 35 Claims. (Cl. 49—57.)

1. In fire finishing apparatus, the combination of a burner constructed to project an annular flame, means for bringing glass articles having circular open ends successively into operative relation to the burner and causing the annular flame to be projected against said open

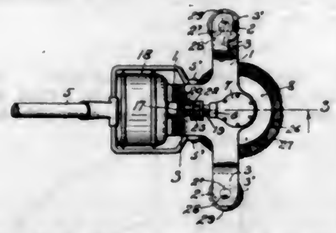
ends, and a pair of gripping jaws periodically operable to grip the articles while said flame is being projected against the open ends.

1,626,740. SELF-LUBRICATING SPRING. JOSEPH BLAIR LEIGHTON, Los Angeles, Calif. Filed Feb. 4, 1925. Serial No. 6,801. 1 Claim. (Cl. 267—50.)



A vehicle spring comprising a plurality of superimposed leaves, each of the intermediate leaves of which is provided with a plurality of spaced apart and longitudinally alined slots extending substantially the entire length of and through the thickness of the leaves, the slots of one leaf being arranged in staggered relation to the slots of adjacent leaves and of such length that the ends of the slots of adjacent leaves overlap so as to provide communicating pockets throughout substantially the entire length of the leaves, and an oil inlet in one of the exterior leaves communicating with one of said pockets and through which oil is adapted to be supplied to all of the pockets whereby when the spring is flexed the oil will be distributed to the coacting surfaces of the leaves.

1,626,741. MIXING DEVICE. MYRON B. LLOYD, Detroit, Mich. Filed Feb. 9, 1924. Serial No. 691,697. 5 Claims. (Cl. 48—180.)

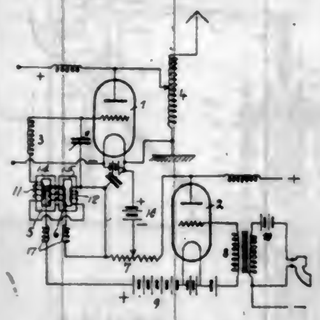


1. A mixing device for the purposes described comprising a casing having a fuel inlet tube therein through which an over rich mixture of gasoline and air is adapted to be drawn, a venturi adjustably mounted in the discharge end of the tube, the casing being formed to provide a chamber about the discharge end of the tube, an air inlet tube opening into the chamber, a venturi adjustably mounted in the chamber about the discharge end

of the fuel inlet tube and providing an annular space between the fuel inlet tube and the air inlet tube, a rotatable shaft extending through the fuel inlet and air inlet

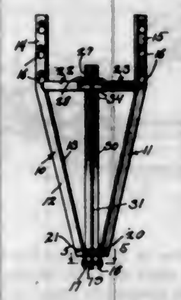
tubes, a butterfly valve within each tube secured to the shaft, an arm for turning the shaft to open or close both tubes simultaneously, and a separate manually operated butterfly valve in the air inlet tube.

1,626,742. FLOOR-POLISHING MACHINE. EDNA EARL LOCKWOOD, Kansas City, Mo. Filed Jan. 18, 1926. Serial No. 82,016. 2 Claims. (Cl. 15—98.)



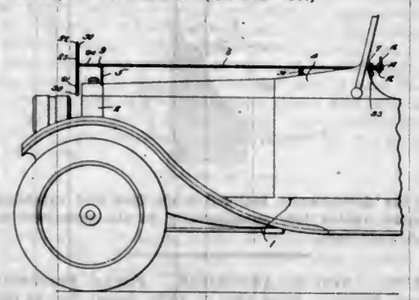
1. In a floor polishing machine, a supporting member having two pairs of arms, the arms of each pair being one above the other, two casters having threaded stems extending through and respectively vertically slidable in said pairs of arms, two nuts respectively mounted on said stems and respectively mounted between the arms of said pairs and supporting said supporting member, a rotary polishing head mounted on said supporting member between said casters and adapted by adjustment of said nuts to contact with a floor supporting said casters, and means for rotating said head.

1,626,743. CONE LOUD-SPEAKER DIAPHRAGM. WILLIAM H. MARTIN, Chappaqua, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 21, 1925. Serial No. 10,928. 6 Claims. (Cl. 181—32.)



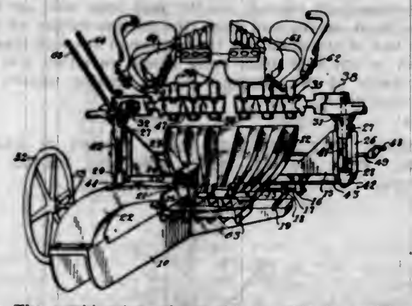
1. A loud speaking telephone receiver diaphragm comprising a substantially conical portion and a divided frusto-conical portion, said two portions being integrally formed.

1,626,744. VACUUM-TUBE RADIOTRANSMITTER. GERHARD MESSTORFF, Spandau, near Berlin, Germany, assignor to the Firm: Dr. Erich F. Huth G m. b. H., Berlin, Germany. Filed Nov. 23, 1923, Serial No. 676,582, and in Germany Apr. 26, 1923. 4 Claims. (Cl. 179—171.)



1. An electron tube transmitter circuit comprising an electron tube arranged to generate high frequency oscillations, an electron tube arranged to modulate the oscillations thus generated, grid, filament and plate electrodes for each of said tubes, input and output circuits interconnecting said electrodes, an iron cored inductively coupled system interlinking the output circuit of said second mentioned electron tube with the input circuit of said first mentioned electron tube and means in circuit with said second mentioned electron tube for controlling the operating potential of the grid electrode of said first mentioned tube simultaneously with a change in condition of said iron cored inductively coupled system.

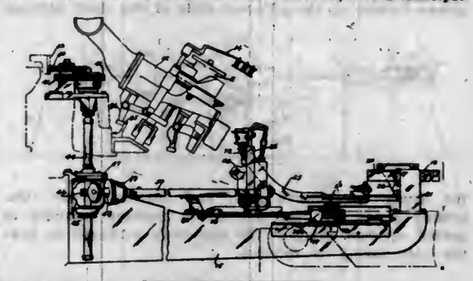
1,626,745. SCAFFOLD BRACKET. ALEXANDER E. METZ, Teaneck, N. J. Filed July 16, 1926. Serial No. 123,001. 2 Claims. (Cl. 304—33.)



2. A scaffold structure of the character described, comprising a hanger element, a pair of forwardly extending and converging scaffold supporting arms each pivotally secured at one end to said hanger element, each of said arms having an inwardly directed flange extending throughout the length of the same, a bridge plate pivotally connecting the convergent forward ends of said arms, a brace leg pivotally secured at one end adjacent the lower portion of said hanger element and projecting upwardly between said arms with the upper end thereof in overlying relation to said bridge plate, a pin member projecting laterally from each side of said brace leg adjacent the upper end thereof and a sleeve surrounding each end of said pin and engaging beneath the flange of an adjacent scaffold supporting arm.

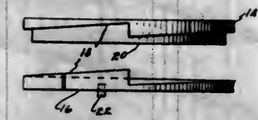
1,626,746. ATTACHMENT FOR AUTOS. ERWIN HARRIS OAKMAN, Atlanta, Ga. Filed Nov. 17, 1925. Serial No. 69,639. 9 Claims. (Cl. 116—47.)

1. In an automobile direction signal: a vehicle including a front wall, a rigid tubular guard mounted horizontally on the vehicle and extending through the wall, a shaft supported for rotation in the guard and a handle on the rear end of the shaft by which it is rotated, a tubular indicator carrying a light, the intermediate portion of the indicator having a rectangular tubular extension connecting with the end of the guard to form a conduit for wires, the extension being secured to the shaft to turn with the shaft and a keeper attached to the rear end of the guard, the handle cooperating with the keeper when desired to hold the indicator in adjusted positions.



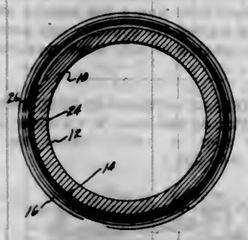
1,626,747. APPARATUS FOR GUIDING AND CONVEYING HOT GLASSWARE. MICHAEL J. OWENS, deceased, Toledo, Ohio, by John H. McNerney, James C. Blair, and Hazel O. Beesch, administrators, Toledo, Ohio, assignors to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 22, 1924. Serial No. 701,056. 17 Claims. (Cl. 198—30.)

6. The combination of a mold, a guide in position to receive and guide an article discharged from the mold, and manually operated means for inverting said guide to dislodge an article therefrom.



1,626,748. BOTTLE-TRANSFER MECHANISM. MICHAEL J. OWENS, deceased, Toledo, Ohio, by Hazel O. Beesch, James C. Blair, and John H. McNerney, administrators, Toledo, Ohio, assignors to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 20, 1924. Serial No. 738,777. 13 Claims. (Cl. 49—14.)

13. The combination with a glass forming machine comprising a continuously rotating mold carriage, groups of molds thereon each constructed to deliver a group of articles at a discharging station in a plurality of successive steps while the mold group is passing said station, of article receiving apparatus comprising a plurality of stationary holders individual to the articles of said group and arranged to receive the articles as they are delivered from the machine, means for simultaneously releasing all the articles from said holders, and a multiple

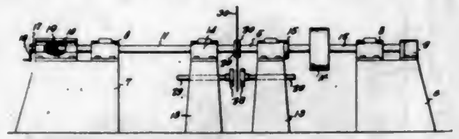


chute to receive the articles from the holders comprising means to keep the articles separated in their passage along the chute.

1,626,749. PISTON PACKING. JOHN F. PANYARD, Detroit, Mich. Filed Aug. 28, 1925. Serial No. 53,018. 9 Claims. (Cl. 74—109.)

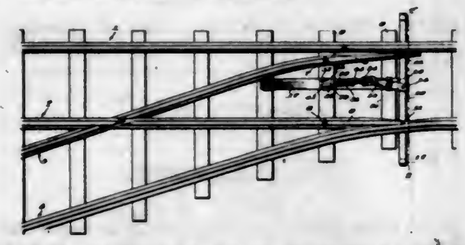
1. In piston packing, a piston having a groove for packing provided with a helical side wall, a packing ring having a meeting helical face rotatably mounted therein and held under rotatable pressure to wedge its helical face against the helical side wall of the groove.

1,626,750. PISTON PACKING. JOHN F. PANYARD, Detroit, Mich. Filed Aug. 28, 1925. Serial No. 53,019. 8 Claims. (Cl. 74—109.)



1. In a piston packing, a piston having a groove for packing, a split expansible ring section approximately the width of the groove seated in the bottom thereof, a second ring section of approximately the width of the groove seated therein superimposing the first ring section, said sections having helical meeting faces whereby rotation of one section in a given direction wedges the combined packing axially against the side walls of the groove, means engaging one of said sections to exert rotatable pressure thereon to wedge the sections axially within the groove, said other section so mounted within said groove as to resist rotation therein.

1,626,751. MACHINE FOR STRAIGHTENING SAWS. LOUIS PAES, Vancouver, British Columbia, Canada. Filed Apr. 10, 1925. Serial No. 22,163. 3 Claims. (Cl. 76—25.)



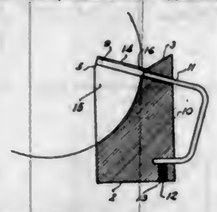
1. A device of the character described comprising a shaft formed of two complementary sections, means for rotatably supporting the sections in alignment, a saw

engaging member movably mounted in one of the shaft sections engageable with a recess formed in the adjacent sections so as to prevent displacement of a saw, means formed on the adjacent ends of the shaft sections

for firmly engaging a saw, and heating means comprising a pair of heat generating members mounted in spaced relation adjacent the saw body arranged to heat the body during its rotation.

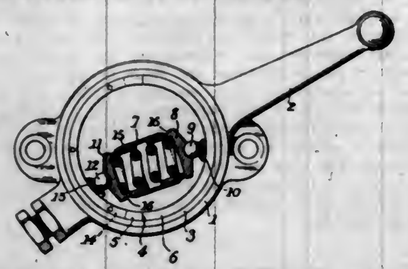
1,626,752. RAILROAD SWITCH. BENJAMIN H. PATRICK, Mount Gay, W. Va. Filed Oct 19, 1926. Serial No. 142,681. 5 Claims. (Cl. 246—318.)

3. The combination with a pair of horizontally swingable pivoted switch points, of a cross bar connected with the free end portions of said switch points, a lever fulcrumed intermediate its ends and swingable horizontally between said switch points and pivotally connected at one end with said cross bar, a fixed supporting member having an upturned arm provided with a horisontal opening, and a spring pressed lever actuating member comprising a section pivotally connected with the second end portion of said lever and a rod secured at one end to said section and having its opposite end portion slidably disposed in the opening of said fixed supporting member.



1,626,753. MUSICAL STRING-INSTRUMENT TUNER. RUDOLPH F. PECINA and ERIC V. CARLSON, Los Angeles, Calif. Filed Sept. 8, 1925. Serial No. 55,090. 9 Claims. (Cl. 84—297.)

1. In combination with a stringed musical instrument, a tuning device including means for engaging and holding the strings of the instrument in tuned tension, and a push rod independent of said engaging and holding means adapted for relaxing said engaging and holding means.



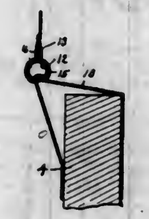
1,626,754. DENTIST'S ANVIL. JOSEPH S. PECKER, Philadelphia, Pa., assignor, by mesne assignments, to Dixie Dental Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1924. Serial No. 698,179. 3 Claims. (Cl. 113—39.)

1. An anvil having a downwardly inclined work face, an upwardly inclined work face at the inner end of the first mentioned work face, and a downwardly inclined drilled face at the outer end of the first mentioned work face and disposed at right angles thereto, there being a pin hole drilled at right angles to said drilled face through the anvil with its axis parallel with the first mentioned work face, and a slot connecting the pin hole

with the downwardly inclined work face and extending from the drilled face substantially to the upwardly inclined work face.

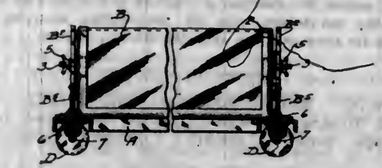
1,626,755. SHOCK ABSORBER. PIERRE PESTOURIE, Paris, France. Filed Dec. 7, 1925, Serial No. 73,795, and in France Dec. 17, 1924. 5 Claims. (Cl. 267—9.)

1. In a shock absorber for vehicle suspensions, the combination of a hub, a drum adapted to revolve on the said hub, the said two organs being adapted to be respectively connected to the vehicle frame and to one of the suspension parts of the vehicle, a shoe disposed within the said drum and adapted to rub on the inner wall of the latter, an elastic organ disposed within the said drum and bearing, on the said shoe and, on the other hand, on the said drum, the friction surface of the shoe and of the drum and the bearing of the said elastic organ on the said drum being placed on either side of the center of the curvature of the friction surface of the said drum.



1,626,756. TOY TRUNDLE. ROCCO RECATTI, St. Louis, Mo. Filed Jan. 31, 1927. Serial No. 164,702. 3 Claims. (Cl. 46—45.)

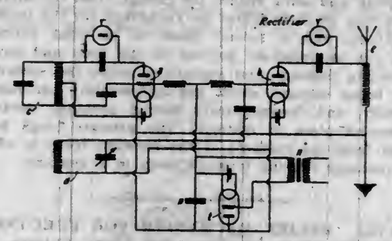
2. The combination, with a frame, a ground engaging wheel journaled in the frame, oppositely disposed



cranks mounted on said wheel, and a jointed figure comprising movable thighs and legs mounted on the frame and having said legs pivoted to said cranks, of said figure having a recess medially its upper part, a shaft journaled transversely in said figure and adapted to extend through said recess, a head portion positioned in said recess and adapted to rotate with said shaft, an arm journaled on said shaft on one side of said figure, an arm mounted on and adapted to rotate with said shaft on the other side of the figure, and arcuate links pivoted to said arms and to said thighs, for the purpose as described.

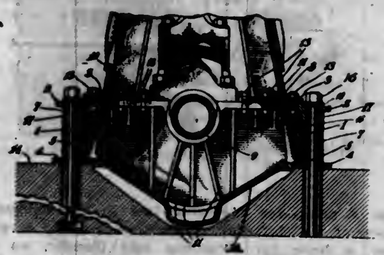
1,626,757. DOOR AND CURTAIN. FREDERICK D. RITTER, Corunna, Mich., assignor to Weatherproof Body Corporation, Corunna, Mich., a Corporation of Michigan. Filed Nov. 9, 1925. Serial No. 67,839. 2 Claims. (Cl. 296—140.)

1. In a door construction, vertical sides of a door casing having upright grooves, a flexible curtain slidable in said grooves, and a door hinged in the casing below the curtain and having its upper edge sloping downwardly outwardly and positioned so that the curtain may rest thereon, the lower edge of said curtain being formed with a weatherstrip of material so yieldable as to permit the door to pass below the curtain without injuring the weatherstrip when the curtain is in its lowest position.



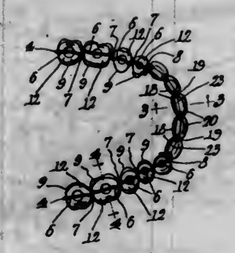
1,626,758. WINDSHIELD. EDWARD W. SAUNDERS, St. Louis, Mo. Filed Dec. 15, 1924. Serial No. 755,977. 7 Claims. (Cl. 296—86.)

5. A wind shield, comprising a supporting structure, a protecting member pivotally mounted on said supporting structure, a spring housing on said supporting structure, a piston in said spring housing, a flexible element connected to said piston and to said protecting member, a guide on the supporting structure over which said flexible device passes, a spring that acts on said piston and exerts pressure on said protecting member in a direction tending to swing it rearwardly, and an adjustable stop for determining the position of said protecting member.



1,626,759. ARRANGEMENT FOR CONTROLLING TUBE SENDERS. ALFRED SEMM and WALTER SCHAFFER, Berlin, Germany, assignors to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany, and Radio Corporation of America, a Corporation of Delaware. Filed Feb. 16, 1925, Serial No. 9,549, and in Germany Dec. 5, 1923. 5 Claims. (Cl. 179—171.)

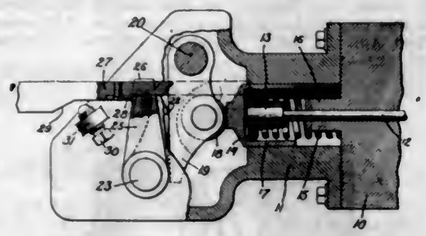
1. An arrangement for wireless telegraphy and telephony comprising a self-excited controlling tube and a separately excited controlled tube for transmitting, a modulating means adapted to simultaneously control the grid circuit of each tube, a branch circuit common to the grid circuit of each of said tubes, said modulating



means being contained in said branch circuit, and means in the grid circuit of each tube for blocking the grids against one another with respect to high frequency currents.

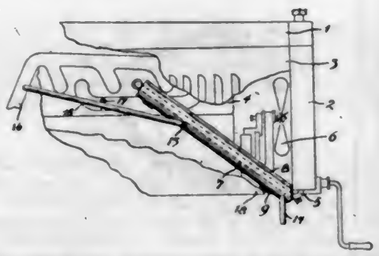
1,626,760. ENGINE BEDPLATE. RUDOLPH SCHNEIDER, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Co., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 19, 1921. Serial No. 462,754. 1 Claim. (Cl. 121—194.)

A double function bed plate for vertical internal combustion engines comprising longitudinal and transverse cross-girder members and bolt sockets, closed at their tops, connecting upper and lower flanges of each longitudinal girder member, whereby the bed plate may be adapted to structural steel foundations by forming holes in the lower flanges of the longitudinal girder members or may be adapted to masonry foundations by opening the closed tops of said bolt sockets.



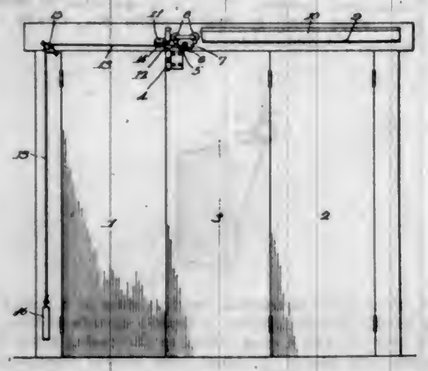
1,626,761. DENTURE. BAXTER CLAUDIUS SCOTT, Pickens, Miss. Filed Nov. 9, 1926. Serial No. 147,350. 4 Claims. (Cl. 32—4.)

1. In a device of the class described, an anchor embodying a single piece of material formed into a curved body comprising side members and an intermediate portion, the side members being reversely extended to form forwardly prolonged portions, the forwardly prolonged portions being fashioned into alternating main and auxiliary



loops the auxiliary loops being engaged about the side members, rear teeth having openings through which the side members pass, the main loops extending about the rear teeth and being spaced far enough from the surfaces of the rear teeth to afford an anchorage for the teeth in a denture, and a second piece of material extended along the intermediate portion of the body and having alternating primary and secondary loops, the secondary loops being engaged about the intermediate portions of the body, and forward teeth having openings receiving the second piece of material, the primary loops being spaced from the surfaces of the forward teeth to afford an anchorage for the forward teeth in a denture.

1,626,762. RELIEF MECHANISM FOR FUEL-INJECTION SYSTEMS. PHILIP LANE SCOTT, Chicago, Ill., assignor to Super-Diesel Tractor Corporation, La Porte, Ind., a Corporation of New York. Continuation of application Serial No. 240,706, filed Jan. 18, 1918. This application filed Aug. 15, 1921. Serial No. 492,596. 5 Claims. (Cl. 123—140.)



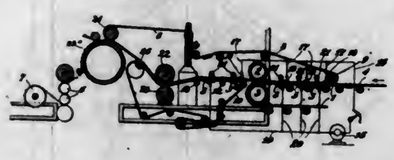
1. In a pump for supplying fuel to the combustion chamber of an internal combustion engine, a pump plunger, a lever for actuating said plunger, an arm engaging said lever, a second arm associated with the first arm, a reciprocating rod actuated by the moving parts of the engine and normally engaging said second arm to rotate the arm and through the first arm and lever actuate the pump plunger, means for disengaging said rod from said second arm as the pump plunger approaches the end of its working stroke and a spring for quickly withdrawing said plunger to relieve the injection pressure when said rod is disengaged from said second arm.

1,626,763. ANTIFREEZING DEVICE. JAMES F. STRUBLE, Hutchinson, Kans. Filed Feb. 28, 1924. Serial No. 695,704. 1 Claim. (Cl. 123—174.)

An anti-freezing device for the return pipe of the water circulation system of an internal combustion engine, comprising a casing of a cross section and length to enclose and jacket the full length of the return pipe from the radiator to the engine, said casing composed of separable sections, and means to secure the sections together about the pipe to be wholly supported thereby, said casing having an inlet and an outlet pipe for connection with the exhaust manifold of the engine and the atmosphere respectively, and a valve in connection with one of the pipes.

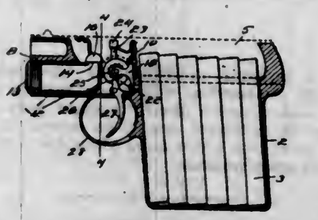
1,626,764. FOLDING DOOR. LAWRENCE C. THORNE, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed Apr. 8, 1925. Serial No. 21,455. 7 Claims. (Cl. 20—20.)

1. The combination of door sections hinged together to fold back at one side of the doorway, one section being hinged at the said one side of the doorway, a double swivel hanger to support another section of the folding door thus provided, a flexible connection extending to said hanger, having one end attached thereto, and adapted to control said double swivel, to close the folding door, and means for exerting a pull on the other end of said flexible connection, whereby the folding door is pulled from its open position into its closed position.



1,626,765. ROLLER-BEARING CAR WHEEL. JAMES M. TOOMBS, Jr., Webster Groves, Mo. Filed July 31, 1924. Serial No. 729,375. 2 Claims. (Cl. 308—180.)

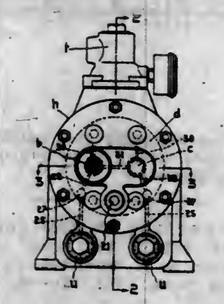
1. In a device of the class described the combination of an axle, a wheel body, anti-friction bearing means supporting the wheel body on the axle including an adjustable part at the outer side of the wheel body portion slidable along the axle whereby to take up wear on bearing surfaces, a sectional "mock" journal box, means for clamping the sections of the "mock" journal box to the axle outwardly of the wheel body and against the adjustable part of said anti-friction bearing means, and



a nut adjustable on the outer end of said axle and operable against the sections of said "mock" journal box to cause movement of the latter along the axle to move the adjustable bearing part above mentioned.

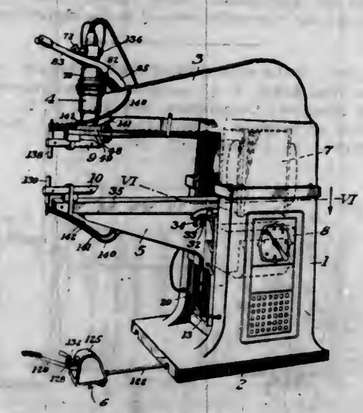
1,626,766. METHOD AND APPARATUS FOR TREATING FIBROUS MATERIALS. JOHN D. TOMPKINS, Valatie, N. Y. Filed Mar. 6, 1926. Serial No. 92,676. 13 Claims. (Cl. 34—48.)

1. The process of treating fibrous sheet material which comprises subjecting the same to the combined action of an electric current and a current of air passing through said material.



1,626,767. COMBINED CIGARETTE HOLDER AND LIGHTER. GERVASIO B. VILLANUEVA, Tondo, Manila, P. I. Filed Dec. 19, 1924. Serial No. 756,951. 1 Claim. (Cl. 67—7.1.)

A device of the class described, comprising a casing open at its top, a tank removably supported therein, said tank having an opening in the top thereof, an inflammable member disposed in the tank and having a portion thereof extending through the opening, means for igniting the inflammable member comprising a shaft extending transversely through the casing, a striker wheel carried by the intermediate portion of the shaft, a pyrophoric member supported in the casing and adapted for engagement with the striker wheel, a ratchet wheel on said shaft on one side of the striker wheel, a manually actuated trigger pivotally supported in the casing and having one end thereof extending outwardly of the casing, a pawl associated with the other end of the trigger for engagement with the ratchet wheel to rotate the shaft and the striker wheel, a coil spring associated with the shaft on the opposite side of the striker wheel, a winding key on the outer end of said shaft, a cover for the open top of the casing, and an auxiliary cover carried thereby adapted to extend over the portion of the inflammable member protruding from the opening in the tank when the first mentioned cover is positioned over the top of the casing.

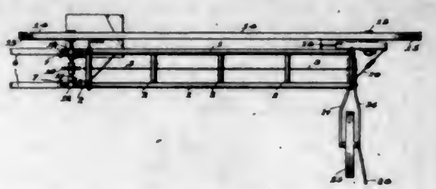


1,626,768. ROTARY COMPRESSOR. CARL W. VOLLMANN, Montreal, Quebec, Canada. Filed Mar. 8, 1926. Serial No. 93,184. 3 Claims. (Cl. 230—30.)

1. A rotary gas compressor comprising a cylinder having an inlet for the gas to be compressed, a cylindrical oil chamber within the cylinder and containing rotary gas compressing members; a shallow horizontal oil chamber between the bottom of the cylindrical oil chamber and the base of the cylinder; and a vertical gas and oil passage between the inner end of the cylindrical oil chamber and the corresponding end of the cylinder; the oil chamber in the base having an oil intake, the top of the passage having a gas discharge fitting, and the inner wall of the cylindrical oil chamber having a gas discharge port and a port effecting communication between the oil

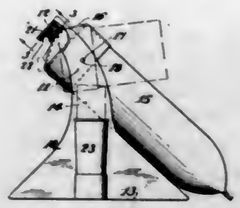
chambers and constituting therewith a closed circuit within the cylinder and including the said oil chamber and all friction surfaces, a duplex initial oil connection between the oil chamber in the base and the oil containing spaces within the compressor.

1,626,769. ELECTRICAL WELDING APPARATUS. EDMUND J. VON HENKE, Chicago, Ill., assignor to American Electric Fusion Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1922. Serial No. 560,743. 18 Claims. (Cl. 219—4.)



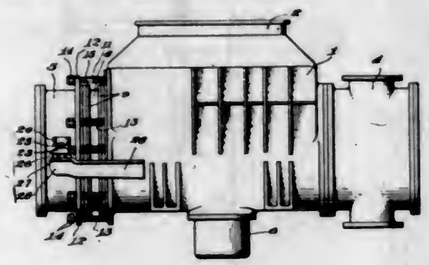
1. In a welding machine, the combination of a horn, a head carried thereby, a reciprocable member in said head, an electrode carried by said head, a spring between said member and electrode through which the electrode is operable by said member, and means for rotating said reciprocable member to render said spring operatively ineffective, substantially as described.

1,626,770. BUTT-CUTTING MACHINE. HOMER F. WALKER, Beaumont, Tex. Filed Dec. 18, 1925. Serial No. 76,291. 1 Claim. (Cl. 146—88.)

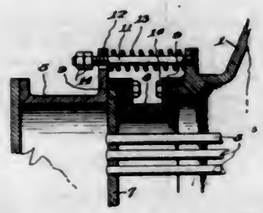


In a butt cutting machine, a driving pulley and follower, an endless cutting blade mounted on the pulley and follower, and means for securing horizontal and

lateral adjustment for the cutting blade, consisting of an adjustable bearing on the follower, and an adjustment

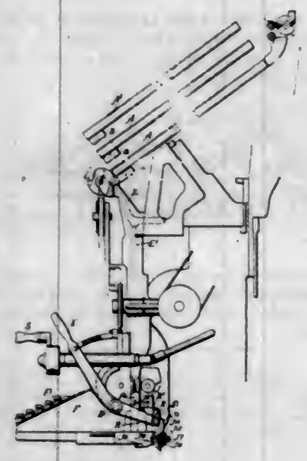


rod extending from the pulley to a suitable element on the machine, whereby the driving pulley and follower may be brought into alignment.



1,626,771. HOLDER FOR SHAVING-CREAM TUBES, TOOTH-PASTE TUBES, AND THE LIKE. FRANK WOLF, New York, N. Y. Filed Feb. 20, 1925. Serial No. 10,450. 4 Claims. (Cl. 221—60.)

1. In a holder for collapsible tubes, a supporting stand, a tube retaining cap member pivotally mounted thereon, a threaded socket in said member adapted to receive the tube outlet screw threads, and a closure means for the tube outlet secured to the supporting stand.

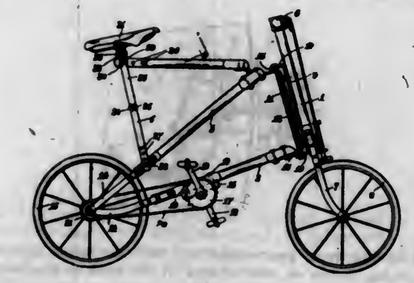


1,626,772. SURFACE CONDENSER. EUCLID P. WORDEN, Glen Ridge, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 3, 1926. Serial No. 126,790. 21 Claims. (Cl. 257—43.)

1. In a surface condenser, a shell, a water box, a tube head carried thereby, a flexible connection between the water box and shell, and atmospheric pressure sustaining means between said water box and shell.

1,626,773. TYPOGRAPHICAL MACHINE. WILLIAM ACKERMAN, Towners, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Sept. 5, 1925. Serial No. 54,670. 17 Claims. (Cl. 199—18.)

1. In a keyboard mechanism for typographical machines, the combination of a finger key, an actuating member, and a device directly engaged with both the finger key and actuating member for operatively connecting said parts, said device being adjustable to break such connection when required.



1,626,774. METHOD OF WELDING AND PRODUCT THEREOF. WILLIAM G. ALLAN, Toronto, Ontario, Canada, assignor, by mesne assignments, to Farley G. Clark. Filed Feb. 3, 1920, Serial No. 355,988. Renewed Feb. 8, 1927. 36 Claims. (Cl. 219—10.)

1. The method of providing sheet-like foraminous metal with stiffening means which comprises fusing a marginal portion of said material, said fused portion forming a stiffening border.

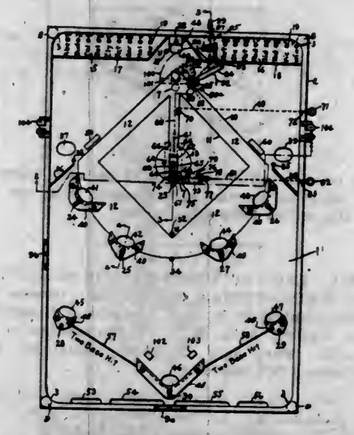
1,626,775. FRAME FOR BICYCLES. HENRI GERARD APPELIAN and JULES JOSEPH VANHOREN, London, England, assignors of one-half to Robert James Walker, Leicester, England. Filed Nov. 28, 1925. Serial No. 71,997, and in Great Britain Dec. 3, 1924. 6 Claims. (Cl. 208—113.)

1. A bicycle comprising wheels, a saddle, steering means and a supporting frame, said frame embodying a main frame member, auxiliary frame members beneath said main member adapted together with said main member to support the wheels and the steering means, a pair of saddle supporting frame members above said main frame member, said saddle supporting members being interconnected and also each separately connected with the main member, the connections between said saddle supporting members and between said saddle supporting members and the main member being adjustable in con-

junction with one another to vary the position of the saddle with regard to the handle bars and with regard to the ground.

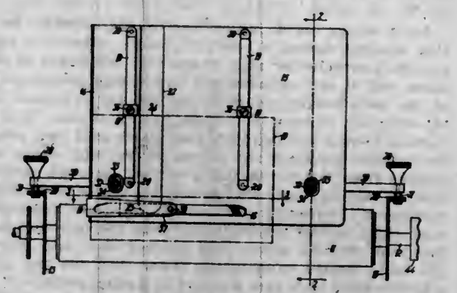
1,626,776. ELECTRICAL CONDUCTOR WITH REENFORCING CORE. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 25, 1924. Serial No. 722,203. 6 Claims. (Cl. 173—13.)

1. In combination a conductor comprising separate longitudinally extending portions for providing high strength and high electrical conductivity respectively, and a detached openwork layer of protective material interposing between said portions to minimize electrolytic action between the material of said portions and to space said portions apart.



1,626,777. HIGH-POTENTIAL CONDUCTOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 26, 1924. Serial No. 722,440. 6 Claims. (Cl. 173—13.)

1. In an electrical transmission line for high potentials a current carrying conductor having portions disposed along the length thereof and projecting beyond the main contour of said conductor, said projecting portions being electrically connected with the main body of said conductor and covered with dielectric material to reduce corona loss in said conductor.



1,626,778. MECHANICAL TOY BASEBALL. LEONARD CHARLES BARKER, Edgewater, N. J. Filed Oct. 5, 1926. Serial No. 139,699. 6 Claims. (Cl. 273—89.)

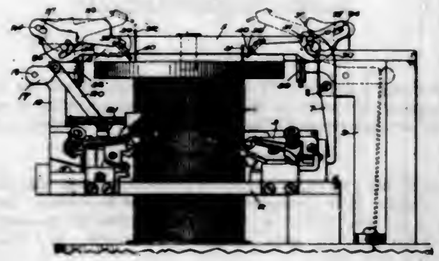
1. In a base ball apparatus of the character described, the combination with a playing field surrounded by a wall or fence, of a multiple of oval pockets in spaced relation with each other representative of players positions and other pockets for fouls and three base hits, each of the said pockets representing players positions having a guiding beveled framework directing the ball into said pockets, mechanically operable means controlling the speed of and

directing a ball to roll at speeds variable at will by the operator, towards the batter and spring operable, manually set and releasable means for batting the rolling ball.

1,626,779. TYPEWRITING MACHINE. FRED BECKER, Buffalo, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1924. Serial No. 755,629. 8 Claims. (Cl. 197—135.)

1. In a typewriting machine, the combination with a platen-frame and a platen, of an upright table mounted on the delivery side of said platen, work-piece-holding means on said table, two vertical guide-strips mounted on said table and spaced a short distance forwardly therefrom, gage blocks having slots for movable engaging about said guide-strips, and means for adjustably holding said gage-blocks on said guide-strips, said slots being arranged for disposing a portion of said blocks below said strips, whereby a work-piece abutted against said blocks cannot slip between them and said guide-strips.

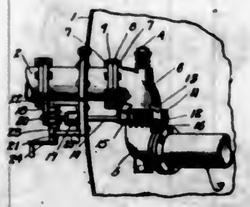
1,626,780. ROOFING CLIP. WILLIAM G. BICKELL, Pittsburgh, Pa., assignor of one-half to George A. Belding, Pittsburgh, Pa. Filed Mar. 23, 1925. Serial No. 17,540. 3 Claims. (Cl. 108—33.)



3. A reversible shingle securing means comprising an unbroken sheet metal body having portions thereof offset from each other and located in different planes to form

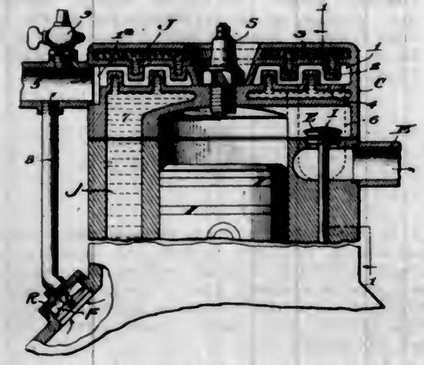
a similar pair of shingle receiving recesses defined by unbroken side walls, the side walls of each recess merging into each other and being disposed angularly with

respect to each other, and each of the side walls of one recess being in substantial alignment with one of the side walls of the remaining recess.



1,626,781. YARN OR THREAD FEEDING MECHANISM FOR SPRING-NEEDLE MACHINES. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed July 28, 1922. Serial No. 578,103. 10 Claims. (Cl. 66—43.)

10. A spring beard, independent needle, circular, knitting machine having a rotatable needle cylinder, a substantially semicircular ring transversely positioned at the upper end of said cylinder and terminating substantially at the yarn feeding points in opposed vertical faces for the reception of yarn guides and having at each of said vertical faces a movable yarn guide, each said yarn guide having near its outer end a longitudinal slot, a pin extending from the corresponding vertical face and passing through said slot, each said yarn guide having an inclined transversely extending slot between its inner and outer ends and a second pin extending from the corresponding face and received within said inclined slot, said second pin being located substantially lower than the first pin, whereby when each yarn guide is in feeding position, it is supported in a downwardly inclined position with said second pin at the upper end of the inclined slot, and the pivotal pin at the outer end of the first mentioned slot, and whereby, when each yarn guide is lifted into inoperative position, the upper end of said inclined slot remains below the level of the said pivotal pin, thereby limiting the upward movement of each yarn guide.



1,626,782. SWING-PIPE MECHANISM. STEPHEN H. BROOKS, Cleveland, Ohio, assignor to The Oil Conservation Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 10, 1924. Serial No. 712,489. 2 Claims. (Cl. 285—104.)

1. In combination with a tank, a substantially horizontal line pipe extending to the interior of the tank near the bottom thereof and having a laterally directed right angle turn at its inner end provided with a seat portion, an elongated swing pipe within the tank having a laterally directed right angle turn at its lower end provided with a seat portion, the other end of said elongated pipe being free, means yieldingly retaining said seat portions in co-operative relation to support said elongated pipe at its lower end, a shaft extending through the tank

and having worm gear connection with the swing pipe and operating means on the exterior of the tank having worm gear connection with the shaft to rotate the swing pipe.

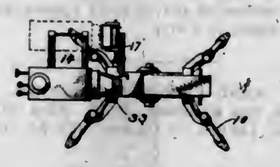
1,626,783. THERMAL GASIFYING MOTOR CONSTRUCTION. GEORGE J. BURNS, Youngstown, Ohio. Filed Jan. 30, 1922. Serial No. 532,923. 1 Claim. (Cl. 123—122.)

A removable vaporizing head for internal combustion engines having inlet and outlet openings at opposite sides thereof, and the said head consisting of an intermediate tortuous hollow wall portion establishing communication between said openings, and said tortuous wall portion being surrounded with water receiving spaces whereby when the head is fitted to the motor bloc water from the water jacket thereof will circulate about said tortuous wall.

1,626,784. RUBBER-DETERIORATION RETARDER AND PROCESS OF MAKING. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, a Corporation of Connecticut. Filed Sept. 23, 1924. Serial No. 739,348. 32 Claims. (Cl. 260—130.)

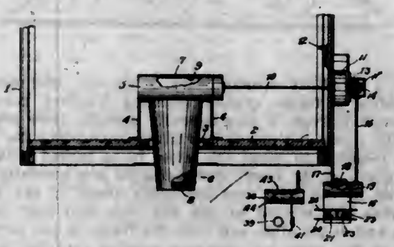
1. The process of making a deterioration retarder for rubber, which comprises combining acetaldehyde and an aromatic amine in a hydrochloric acid solution.

1,626,785. OIL BURNER. MITCHELL CARTER, Salt Lake City, Utah, assignor to Thermic Generating Company, a Corporation of Utah. Filed Feb. 16, 1926. Serial No. 88,526. 2 Claims. (Cl. 158—53.)



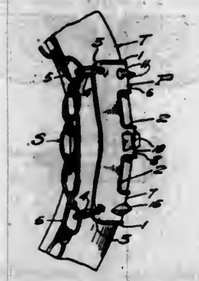
1. An oil burner comprising two frusto-conically shaped members spaced apart and one within the other with the ends sealed; an expansion joint in one end thereof; said expansion joint consisting of a flange on the inner frusto-conically shaped member at right angles thereto, a flange on the outer frusto-conically shaped

member at an angle thereto to contact with the right angled flange on the inner member, with the edges of said flanges sealed together; an oil pipe entering the



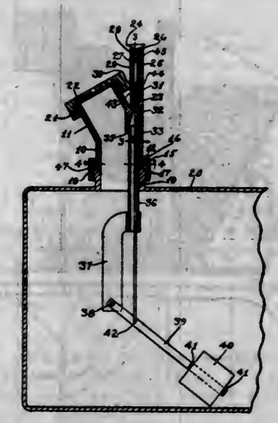
space between said members at one end thereof; a gas pipe connected with said space near the other end of said space; a nozzle having an exit port in its end wall; and means for preheating said generator.

1,626,786. FILM ATTACHMENT FOR MOTION-PICTURE PROJECTORS. WILLIAM J. CITRON, San Francisco, Calif., assignor, by direct and mesne assignments, to The Trailograf Company, Inc., San Francisco, Calif., a Corporation of California. Filed June 25, 1925. Serial No. 39,426. 5 Claims. (Cl. 88—24.)



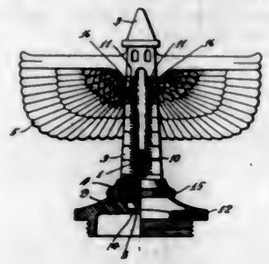
3. In combination with a stand carrying a kinetoscope and a lamp house, an attachment therefor comprising a bracket secured to the stand at one side thereof, a frame adjustably supported in said bracket, a relatively tall and shallow water cell carried by the frame, an apertured film support on the frame in front of the cell, and means for moving an inflammable film across the aperture so as to permit the projection of images thereon with a still or slowly moving effect, said lamp house being movable transversely of the stand, so as to direct its rays through the water cell and associated film.

1,626,787. METHOD AND APPARATUS FOR EFFECTING OPTICAL PROJECTIONS. EDWIN H. CORLETT, East Cleveland, Ohio. Filed Apr. 17, 1920. Ser. No. 374,539. 67 Claims. (Cl. 88—16.)



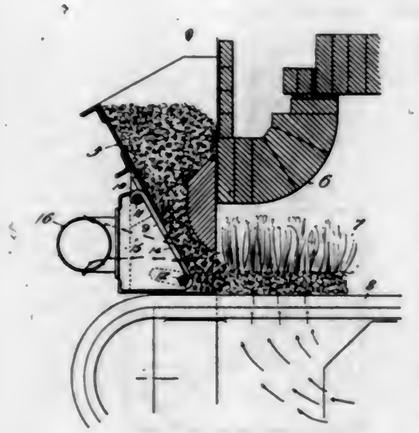
1. The combination intended for mounting in fixed relation on an unstable support and in an elevated position comprising a camera, another laterally directed camera adapted to comprehend the horizon in its field of view, the focal plane of said cameras having a known relation to each other, and means for simultaneously operating said cameras whereby to provide data for comparison of their pictures and permit computation of the spatial position of said first mentioned camera with reference to the horizon plane.

1,626,788. TRACTIVE DEVICE. GUS J. CRAWFORD, Baker, Mont. Filed Feb. 16, 1926. Serial No. 88,671. 1 Claim. (Cl. 152—14.)



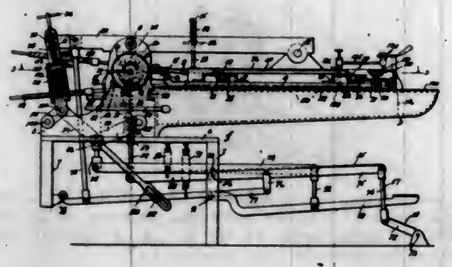
A tractive device, comprising a flexible plate curved transversely and longitudinally to engage the tread of a tire, the side and end marginal portions of the plate being rolled inwardly and upwardly, the corners of said plate being raised and formed with openings, the body portion of said plate being formed with relatively large openings adjacent each end thereof to provide end and intermediate cross strips, each having threaded openings and surface engaging calks formed with lugs adapted to be removably fitted into said openings and positioned upon the exterior surface of the end and intermediate strips.

1,626,789. FILLING ATTACHMENT FOR GASOLINE TANKS OF AUTOMOBILES. OLIVER CREED, Cincinnati, Ohio. Filed Nov. 9, 1925. Serial No. 67,783. 6 Claims. (Cl. 220—86.)



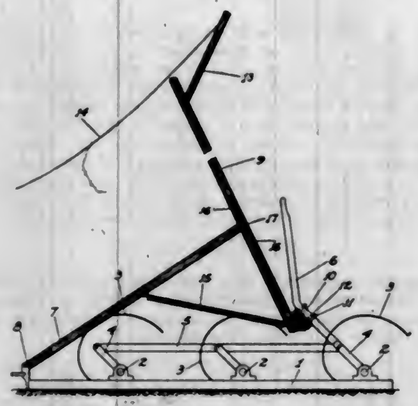
5. A filling attachment for gasoline tanks embodying a filling nozzle having a supporting means for supporting and displaying an indicator to the rear and above the mouth of the nozzle and a guide opening for guiding an indicator-rod in front of said supporting means and closely adjacent to the rear inner face of the nozzle, and a guarding means also located closely adjacent to said rear inner face and spaced therefrom to permit passage of the indicator-rod and to guard said rod from injury by contact of a filling device inserted in the mouth of the nozzle.

1,626,790. AUTOMOBILE RADIATOR THERMOMETER. EDWARD T. CURRAN, Detroit, Mich. Filed Mar. 30, 1921. Serial No. 456,916. 8 Claims. (Cl. 73—52.)



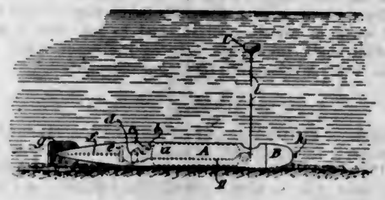
8. Means for indicating the temperature of water in an automobile radiator embodying a radiator cap provided with a chamber partitioned off from the interior of the cap, a thermometer holder mounted on the cap and supported thereby, and a thermometer supported by the holder and having a tubular shank provided with a bulb housed within the closed chamber of the cap, whereby the bulb is partitioned off from the interior of the upper part of the associated radiator and is dependent for its operation upon the conductivity of the metal parts of the cap.

1,626,791. STOKER. CHARLES L. DAVIDSON, New York, N. Y. Filed July 21, 1923. Serial No. 652,879. 2 Claims. (Cl. 110—40.)



2. In a stoker, a furnace chamber, a traveling grate, and a fuel hopper mounted at the front of the furnace chamber and delivering thereinto onto said grate at its point of entry, a supporting rod arranged to extend transversely across the front wall of said hopper, bars supported on said rod and spaced apart at their edges to form a portion of said front wall with spaces therebetween, a closed chamber exteriorly enclosing said bars, and an exhaust pipe connection to said closed chamber.

1,626,792. PRESSING MACHINE. JACOB DENEMARK, Trenton, N. J. Filed May 8, 1926. Serial No. 107,559. 9 Claims. (Cl. 68—9.)



1. A pressing machine comprising a hollow table, a steam inlet, a steam outlet for the said table, an iron adapted to normally rest on the table, an arm pivotally connected to said iron, means for raising the iron from the table, a feeder on each side of the iron operating above said table, means for operating said feeders in a vertical and longitudinal direction to feed the goods through the machine and means for raising the feeders above the surface of the material pressed when the machine is brought to a stop.

1,626,793. HAND LIFT FOR HARROWS. RONALD M. DE ROSA, San Francisco, Calif. Filed June 28, 1926. Serial No. 119,004. 3 Claims. (Cl. 55—104.)

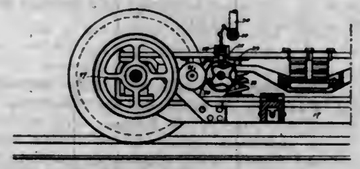
1. A hand-lift structure for a harrow, said harrow including a frame, ground engaging members turnably mounted thereon, a longitudinally movable lever pivoted on the frame and means operatively connecting the lever and members to cause the latter to be turned with the movement of the lever; comprising an arm pivotally connected to the lever and extending ahead of the same, another arm pivoted at one end onto said first named arm and at its other end onto the frame at the forward end of the same, an operating member attached to the outer end of the first named arm, said arms when the teeth are out of the ground projecting upwardly at an angle to each other and when the teeth are in the ground moving down past dead center with respect to the pivotal connections at the ends of the arms, and spring means applied to the arms to maintain the same in either of the above named positions.

1,626,794. AUTOMOBILE TORPEDO AND CONTACT MINE. WILLIAM DIETER, Newark, N. J. Filed Nov. 28, 1922. Serial No. 603,858. 11 Claims. (Cl. 102—3.)

1. The combination with an automobile torpedo carrying an explosive charge, of a float independent of such charge, means for releasing such float at the end of the run of the torpedo, impact means on said float and a connection therefrom to the explosive charge adapted, on the displacement of the float by collision therewith, to determine the explosion of such charge.

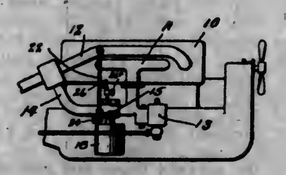
1,626,795. VISUAL ANNUNCIATOR. WILLIAM T. DIPPEL, New York, N. Y., assignor to Harrison S. Martin, Brooklyn, N. Y. Filed Mar. 18, 1922. Serial No. 544,728. 9 Claims. (Cl. 177—339.)

1. In an annunciator, a plurality of auxiliary display vanes arranged side by side and hinged for independent rotation upon a common axis, a main display vane also hinged for rotation about said axis, releasable means normally holding all of said vanes together and at one side of the axis and operable to release the vanes one at a time to permit them to rotate to a display position, said vanes having on their display faces suitable display information, the display matter of each auxiliary vane being substantially identical in character and location with the portion upon the main display vane which is covered thereby and also having other display symbols, whereby when the main vane is released a symbol will be displayed and when one or more of the auxiliary vanes is released the same symbol will be displayed and in addition another symbol may be displayed for each released auxiliary vane.



1,626,796. PARACHUTE ESCAPE FOR AIRSHIPS. GLENN H. DRABENSTOTT, Wooster, Ohio. Filed Oct. 6, 1926. Serial No. 139,909. 3 Claims. (Cl. 244—21.)

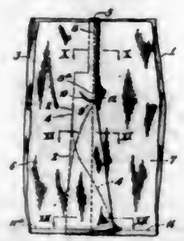
1. In a device of the character described, the combination with the body of an airship; a basket seat in said body; a parachute basket fitted to rest removable in said seat, means for detachably securing said basket in said seat, a frame above said basket, a perforated disk on said frame, a removable cover arched over said disk,



a parachute folded within said cover, and attached to said disk by a cable, and means for opening said cover to release the parachute, substantially as set forth.

1,626,797. AUTOMATIC SIGNAL. PETER C. ENNS, Herbert, Saskatchewan, Canada. Filed Nov. 8, 1923, Serial No. 673,498, and in Canada Mar. 31, 1923. 2 Claims. (Cl. 246—192.)

1. An automatic signal controlling mechanism, including a main shaft, a clutch comprising male and female members; the former of which is keyed to said shaft while the latter rides free thereon, said female member having an interiorly notched flange, a spring-tensioned lever eccentrically pivoted to said male member, said lever having a laterally projecting stud at its outer end, adapted to engage the notches of said flange to establish connection between the male and female members, a driving gear adapted to rotate said female member, a second shaft disposed adjacent said main shaft having a trigger at one end, a crank formed in said second shaft adapted to engage and normally hold said lever in an inoperative position, a trip for actuating said trigger, a cam keyed on said main shaft, and signal operating means actuated by said cam.

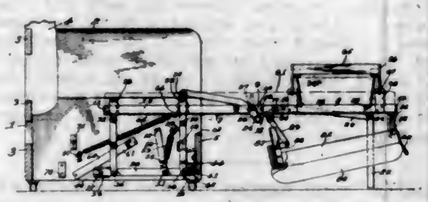


1,626,798. FUEL-MIXING DEVICE FOR INTERNAL-COMBUSTION ENGINES. JOHN L. FAY, St. Louis, Mo. Filed Sept. 14, 1922. Serial No. 588,220. 8 Claims. (Cl. 123—25.)

1. A fuel mixing device for internal combustion engines comprising a coiled pipe adapted to be placed in the

intake of an engine and connected to the exhaust thereof for conveying to said intake under pressure a portion of the spent gas, absorbent material in said intake adjacent to said coil pipe and means for supplying moisture to said absorbent material.

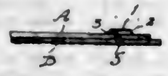
1,626,799. VENT FOR FULL-LINED GARMENTS AND METHOD OF MAKING IT. RICHARD A. FEISS, Cleveland, Ohio, assignor to The Joseph & Feiss Co., Cleveland, Ohio. Filed Jan. 22, 1923. Serial No. 614,078. 9 Claims. (Cl. 2—93.)



8. A garment comprising a pair of half backs sewn together for a given distance to leave a lower portion of their conforming edges free, the free edge of one of said half backs being provided with a flap, a lining piece sewn to one of said half backs and provided with an incision a short distance below the upper end of said flap, a portion of said lining bordering said incision being turned and so sewn to said flap.

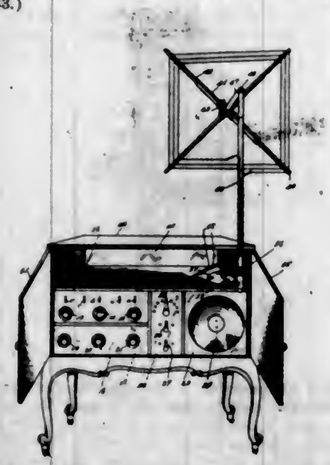
1,626,800. PROCESS OF RECLAIMING RUBBER. MARCUS J. FESSLER, Syracuse, N. Y. Filed Jan. 29, 1927. Serial No. 164,654. 8 Claims. (Cl. 18—52.)

8. The herein described process of reclaiming rubber from old or used rubber stock, comprising the reduction of the stock to a finely divided or comminuted state, and subjecting the comminuted mass to the treatment of tetrahydronaphthalene.



1,626,801. FOLDING BED OR COUCH. OSCAR FICHTENBAUM, Brooklyn, N. Y. Filed Aug. 18, 1924. Serial No. 732,642. 6 Claims. (Cl. 5—31.)

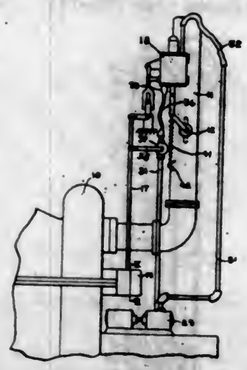
1. A folding bed or couch comprising a couch structure, an inner mattress frame, parallel levers connecting the mattress frame at each end to the couch structure, main springs connected between the couch structure and the mattress frame to exert an inward pull, auxiliary springs and levers controlled thereby and arranged to engage certain of the parallel levers during a part of the mattress frame movement and to resist inward or aid outward movement of the frame, and at least one other mattress frame structure having an articulated connection to the mattress frame first mentioned.



4. A folding bed or couch comprising a couch structure including end boards, back connections and a front board, foldable inner and outer frame sections, an intermediate section connecting the inner and outer sections, springs connected between the couch structure and points on the folding structure, a seat structure movably connected to the outer section, and members projecting therefrom to co-operate with the inner face of the front board when in folded position, and to act with a leverage effect upon the upper edge of the front board during the first part of the opening movement.

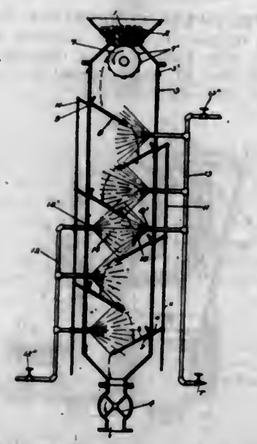
1,626,802. ROOFING ATTACHMENT. ALBERT C. FISCHER, Chicago, Ill. Original application filed June 3, 1920, Serial No. 386,260. Divided and this application filed Apr. 8, 1926. Serial No. 100,554. 4 Claims. (Cl. 108—33.)

1. In a roofing attachment, a sheet metal base having a portion thereof folded upon itself to provide an underlap, an anchoring spur projecting from said underlap and protected by the overlying portions of the base.



1,626,803. SELF-CONTAINED RADIO RECEIVING UNIT. JOHN S. FISHBACK, Indianapolis, Ind. Filed Mar. 27, 1922. Serial No. 546,961. 2 Claims. (Cl. 250—33.)

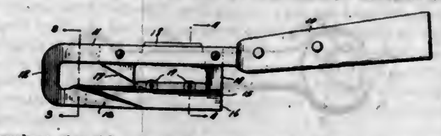
2. A radio-receiving unit, comprising in combination with a portable cabinet having a radio-signal receiving unit, complete in itself, mounted therein, of a collapsible antenna permanently connected into the receiving unit and independent of all external connection, a standard on said cabinet and said antenna, said antenna and standard being collapsible into or projectible from the cabinet without disturbing its circuit connections.



1,626,804. AUTOMATIC STOP VALVE. WARREN B. FLANDERS, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 2, 1925. Serial No. 60,132. 6 Claims. (Cl. 137—140.)

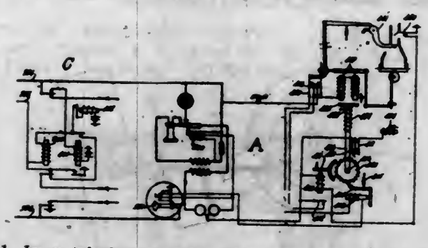
1. The combination with a prime mover having an emergency valve, of a cylinder, a piston in said cylinder operatively connected with the valve, means for applying fluid pressure to said piston to retain the valve in open position during normal operation of the prime mover,

and means utilizing the weight of the piston and cylinder for closing the valve upon abnormal operation of the prime mover.



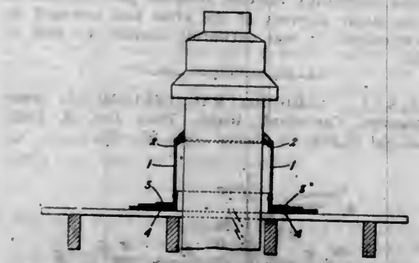
1,626,805. APPARATUS FOR PROCESSING BERRIES ESPECIALLY THOMPSON SEEDLESS RAISINS. THOMAS W. W. FORREST, Fresno, Calif., assignor to Sun-Maid Raisin Growers of California, Fresno, Calif. Filed July 13, 1926. Serial No. 122,082. 3 Claims. (Cl. 99—2.)

1. Apparatus of the character described comprising a casing, means for delivering a controlled stream of berries to the upper end thereof for falling therethrough, means within the casing interrupting the fall of said berries, and confronting nozzles arranged and adapted for ejecting opposing blasts of gas and vapor at the berries whilst falling.



1,626,806. IMPLEMENT FOR CUTTING AND OPENING PASTEBOARD BOXES. ARCHIE D. FORRY, Clarksville, Iowa. Filed Feb. 18, 1926. Serial No. 89,181. 5 Claims. (Cl. 30—3.)

1. An implement for cutting open pasteboard boxes comprising a handle, a shank extending therefrom, the shank being returned upon itself and formed with a knife blade having its back extending parallel to the shank and having an upwardly facing, upwardly and rearwardly inclined knife edge, and a straight longitudinally extending box engaging guide attached to the shank and extending parallel thereto, the guide being angular in cross section to provide a portion adapted to rest upon the top of a box and a portion adapted to rest

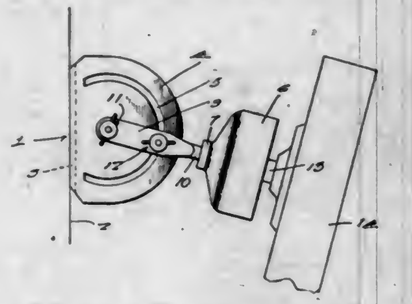


against the side of the box, the first named portion being disposed below and intersecting the inner upper end of the knife edge.

1,626,807. AUTOMATIC TELEPHONE SYSTEM. JOHN E. GARDNER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 23, 1922, Serial No. 570,494. Renewed Sept. 24, 1926. 22 Claims. (Cl. 179—6.3.)

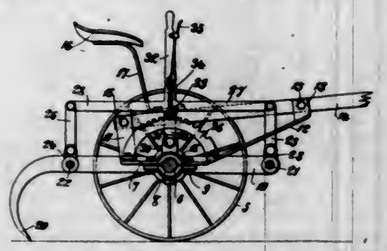
1. In a telephone system, telephone lines, means for establishing a connection between said lines, paystation mechanism on one line, and mechanism at the station of said line operative after the connection is completed to visually indicate to the subscriber thereat of the charge to be placed in said paystation mechanism to pay for the connection.

1,626,808. CHIMNEY. WILLIAM R. GIBSON, Forest Hills, N. Y. Filed Dec. 22, 1924. Serial No. 757,365. 1 Claim. (Cl. 108—26.)



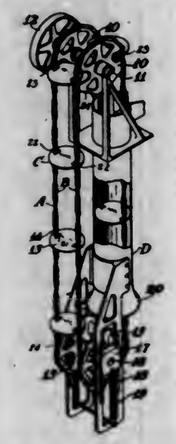
In a flashing structure for chimneys, a hollow sheet metal casing adapted to occupy an enclosing relation to a chimney but substantially spaced away from the walls thereof to provide an insulating air chamber separating the casing from the outer wall surfaces of the chimney, an inwardly directed flange member at the upper end of the casing arranged to provide a support for a plaster seal between the chimney and the upper end of the casing, an outwardly directed circumscribing flange member formed on the lower end of the casing, and another flange member having an upwardly directed portion attached to the inner surface of the lower portion of the casing and an outwardly directed circumscribing flange portion arranged beneath and spaced from the flange formed on the lower end of the casing, the space between the flanges being adapted to receive edge portions of roofing material.

1,626,809. OPEN-END WRENCH. BENJAMIN B. GILLETT, Kansas City, Mo. Filed Dec. 21, 1925. Serial No. 76,694. 2 Claims. (Cl. 81—119.)



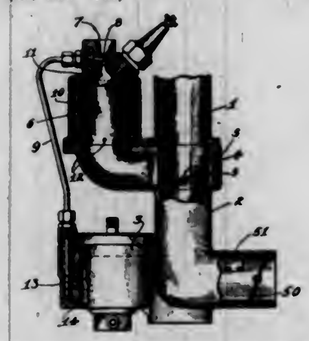
1. In an open end wrench, a head comprising a socket having parallel side walls extending through the head to the outer edge thereof to form a throat, said walls having opposite V-shaped notches, and an end wall substantially perpendicular to the walls of said throat, said end wall having a V-shaped notch therein.

1,626,810. DOOR HOLDER. LOUIS J. GINGRAS and AZARIAS ST. ONGE, Webesterville, Vt. Filed Apr. 18, 1925. Serial No. 24,136. 1 Claim. (Cl. 292—17.)



A door knob holding and stop device consisting essentially of a cup of a size and depth to receive and hide a knob, means for supporting said cup, and means in the cup for yieldingly holding the knob therein; the said means for yieldingly holding a knob in the cup including pairs of opposite spring arms entirely within the cup, said arms having forward bight or bowed portions and outer rearwardly directed terminal portions, spaced from the major portions of the arms and arranged at their extremities to bear outwardly against the wall of the cup.

1,626,811. AGRICULTURAL IMPLEMENT. FRED GLAESSNER, Castleford, Idaho. Filed Oct. 9, 1925. Serial No. 61,388. 2 Claims. (Cl. 97—233.)

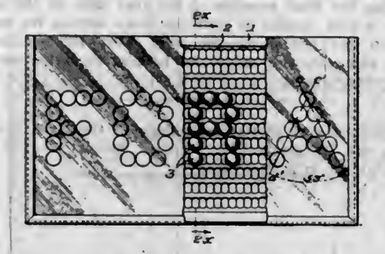


1. An agricultural implement comprising an axle having wheels at its ends, a frame directly mounted on said axle, a draw beam supported by said frame, a notched segment fixed on the frame, a lever pivoted on the axle, said lever having a part adapted for hand operation, a detent on said lever engageable with said notched segment, arms on said lever extending laterally in opposite directions, shovel elements pivoted on said axle, and links connecting the shovel elements with said arms.

1,626,812. ENDLESS-CHAIN PUMP. WILLIAM F. GODFREY, Kearney, Nebr. Filed Nov. 22, 1926. Serial No. 149,902. 6 Claims. (Cl. 103—73.)

1. The combination, in a chain pump having a driven endless connection and a series of water lifting buckets, of a plurality of said endless connections attached to and diametrically inset into said buckets substantially so as to form a plurality of supports for said buckets.

1,626,813. LIQUID-FUEL COMBUSTION APPARATUS. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed June 21, 1920. Serial No. 390,354. 22 Claims. (Cl. 158—28.)



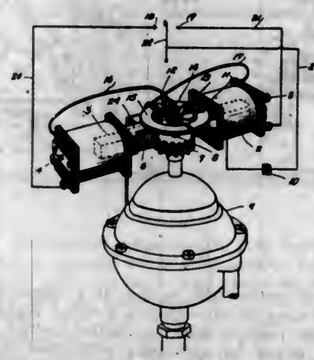
1. The method of non-explosively burning liquid fuel which consists in causing a pressure difference between the entrance and outlet passages of a combustion space to produce a flow of liquid fuel and air in predetermined measured proportions, directing and guiding said flow so that it forms itself into flows of relatively rich and relatively lean mixtures of fuel and air, igniting the rich flow by an igniter intercepting the same, and combustibly combining said mixtures in said space.

1,626,814. SKIN CREAM. FRED E. GOODALL, Chicago, Ill., assignor, by mesne assignments, to Van Ess Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 9, 1925. Serial No. 67,759. 4 Claims. (Cl. 167—9.)

2. A skin cream containing cottonseed oil which has been previously treated with ultra-violet rays.

4. A preparation for use as a skin cream comprising a waxy substance, a mineral oil and a vegetable oil that has been treated with ultra-violet rays.

1,626,815. SIGN-COMPOSING DEVICE. LOUIS A. GRAHAM, Evanston, and CHARLES L. LOW, Chicago, Ill. Filed Sept. 15, 1926. Serial No. 135,520. 6 Claims. (Cl. 40—125.)

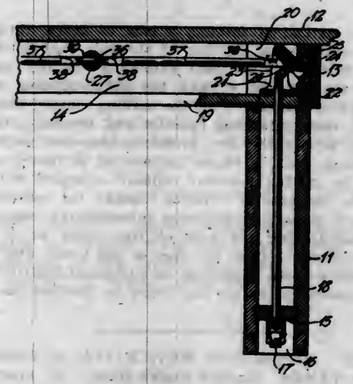


1. A sign composing device comprising individual composing elements and a composition field having distributed over its area a plurality of rows of individual positioning means constructed to receive said composing elements, the positioning means in each row being spaced apart at distance less than the overall dimension of said composing elements and aligned in the direction transverse to said rows with the positioning means in the other rows.

1,626,816. BRUSH. CARL GRETHER, Todtnau, Germany. Filed Mar. 11, 1926, Serial No. 93,936, and in Germany Mar. 20, 1925. 2 Claims. (Cl. 15—195.)

1. A brush, comprising a bristle supporting back having a plurality of bristle receiving apertures, folded tufts of bristles in said apertures, each tuft having a looped wire encircling its bight, said wire having its ends tangential to the loop and engaging the rear portion of the back to prevent outward displacement of said bristle tuft, and a binding wire running over the upper surface of the back and successively passing through said looped wires.

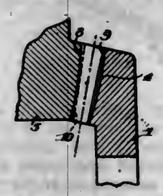
1,626,817. ELECTRICALLY-OPERATED VALVE MECHANISM. ELBERT A. HAMMETT, Kansas City, Mo. Filed Apr. 21, 1924. Serial No. 707,926. 1 Claim. (Cl. 236—75.)



The combination with a thermostatically controlled switch of a pair of solenoid windings, having aligning openings therein, a guide member connecting said windings having an opening aligning with the openings in said windings, and having a second opening in one of its sides, a solenoid core slidable longitudinally in the guide member and into the openings in said solenoid windings, gear teeth on the core member, a shaft extending at right angles to the core member, a pinion fixed on said shaft and engaging the teeth on said core member, and a switch arm secured to the end of said shaft for alternately breaking the circuit to the respective energized solenoid windings.

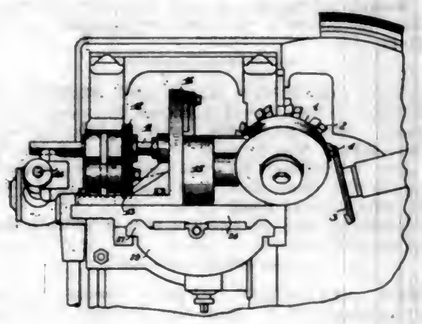
1,626,818. CONDENSED MILK AND METHOD OF MAKING SAME. JAMES ROBINSON HATMAKER, Paris, France. Filed Apr. 6, 1926, Serial No. 100,110, and in Great Britain Nov. 5, 1925. 9 Claims. (Cl. 99—5.)

1. The hereinbefore described method of producing condensed milk which consists in incorporating dry milk solids with natural liquid milk.



6. Condensed milk, an essential part of which is milk in its natural state.

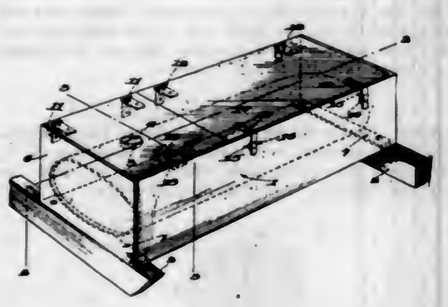
1,626,819. RETRACTING CASTER. MERRITT W. HAZLETT, Franklin, N. Y. Filed Nov. 22, 1926. Serial No. 149,901. 2 Claims. (Cl. 16—33.)



1. A table, supporting legs therefor, caster supports mounted for vertical movement in each of the legs; actuating mechanism for moving the supports vertically in the legs and including a self-locking toggle joint pivotably mounted on the upper end of the said supports; and means for releasably bringing the said self-locking toggle joint into its locking position.

1,626,820. PAIR OF GEARS. ERNEST C. HEAD, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Sept. 12, 1923. Serial No. 662,273. 7 Claims. (Cl. 74—41.)

1. A gear provided with tooth spaces having curved bottoms and with longitudinally curved teeth, said teeth having side faces which are curved from end to end about points lying on opposite sides of the teeth.

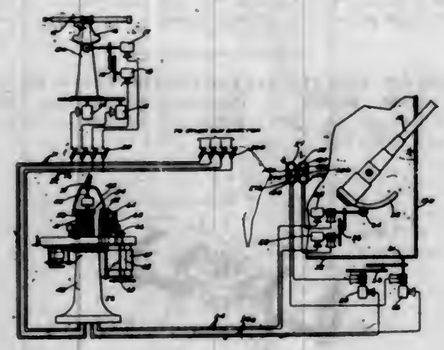


1,626,821. METHOD AND MACHINE FOR CUTTING GEARS. ERNEST C. HEAD, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Sept. 12, 1923. Serial No. 662,274. 16 Claims. (Cl. 90—5.)

1. The method of forming a pair of gears which consists in cutting one member of the pair with a circular milling cutter having tools extending radially and exteriorly thereof and cutting the other member of the pair with a circular ring-like milling cutter having a series of tools extending radially and interiorly thereof.

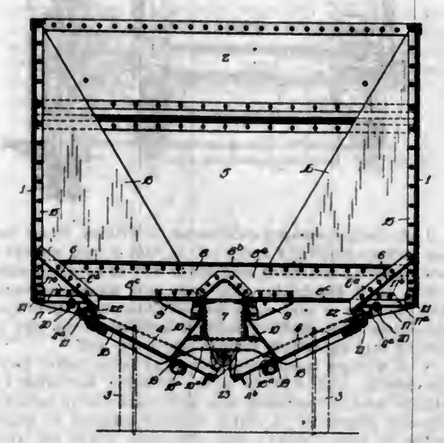
16. In a machine for producing tapered gears, the combination with a blank carrier, of a rotary cutter, having its cutting portions radially arranged with reference to its axis of rotation, means for rotating the cutter and blank in continuous intermeshing engagement while maintaining the axis of the cutter at a predetermined distance from the apex of the blank, and means for simultaneously imparting an additional relative movement between the cutter and blank to generate the tooth profiles.

1,626,822. PROTECTIVE DEVICE FOR AUTOMOBILE FUEL TANKS. GEORGE GLENN HEARN, St. Petersburg, Fla. Filed May 20, 1925. Serial No. 31,729. 1 Claim. (Cl. 280—5.)



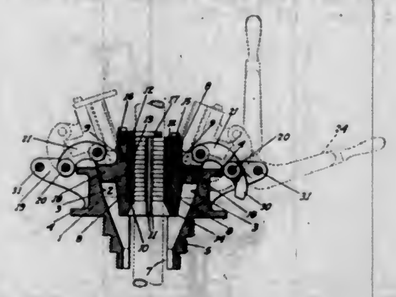
A protective device for fuel tanks of an automobile comprising a hollow body open at its upper and lower ends and adapted to fit over the fuel tank and to rest at its lower end on fixed supporting means of the automobile, said body having inturned attaching members at its lower end resting upon said supporting means and adapted to be secured thereto, a cover for closing the upper end of said body, said cover presenting a pair of complementary sections, hinges attaching said sections of the cover to said body, said hinges being located within the body when the cover sections are closed, one of said cover sections overlying the filler opening of the fuel tank of the automobile, a lock carried by said one cover section for securing said one section to the body when the section is closed, and releasable means for holding the other section of the cover closed.

1,626,823. JOIST FORM. WILLIAM F. HEDBERG, Kansas City, Mo. Filed Nov. 22, 1926. Serial No. 149,054. 14 Claims. (Cl. 25—131.5.)



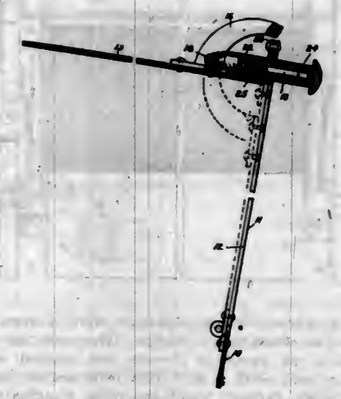
4. In a concrete form, a pair of substantially vertically extending members, braces extending between said members, a pair of spaced members, engaging said vertically extending members, and a filler member bridging the space between said spaced members.

1,626,824. SYSTEM OF AND APPARATUS FOR GUN-FIRE CONTROL. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Apr. 9, 1924. Serial No. 705,350. 34 Claims. (Cl. 89—41.)



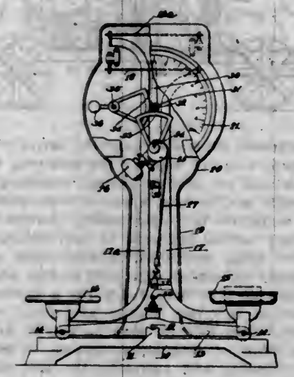
1. The combination with a gun, of a mount therefor on which the gun is adjustable in a set of planes varying in angular position with the angular position of said mount, and means for generating corrections with reference to said planes in their various positions, said corrections being applied to said means with reference to a set of fixed planes.

1,626,825. RAILWAY DUMP CAR. DAVID HINDAHL, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 27, 1926. Serial No. 131,871. 22 Claims. (Cl. 105—251.)



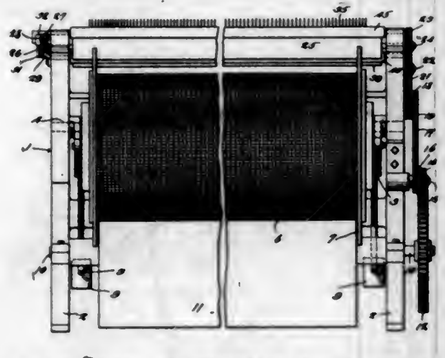
1. In a hopper bottom car, a transverse bottom frame member having a vertical web, a dump door, and a pintle bearing casting for mounting said dump door in controlling relation to the hopper bottom; said casting being formed with an upwardly presented seating face and a vertical flange overlapping and attached to the web of the frame member.

1,626,826. PIPE AND ROD SPIDER. BENJAMIN F. HINIKER, Taft, Calif. Filed Apr. 3, 1925. Serial No. 20,392. 7 Claims. (Cl. 24—263.)



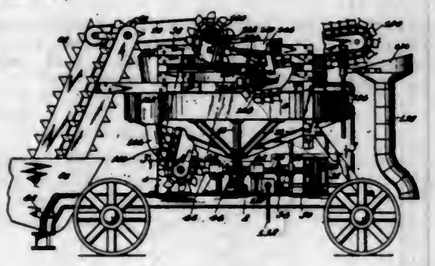
2. A pipe spider comprising a base having a cavity from top to bottom and a side opening communicating with said cavity, opposed slips mounted in connection with the base and adapted to seat in the cavity in close relationship with each other to engage a pipe, means for spreading the slips to enable a pipe to be moved into the cavity through the side opening, and means attached to one of the slips for engaging the pipe as the slips are moved together and causing said pipe to be centralized relative to the slips.

1,626,827. SHUTTER LATCH FOR SHIELDS. HARRY HOISINGTON, Davenport, Iowa. Filed Nov. 22, 1924. Serial No. 751,718. 6 Claims. (Cl. 89—36.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



6. In combination with a shield for guns, said shield formed with an aperture, a swinging shutter for said aperture, means for holding the shutter in open or closed position, said means automatically disengaged on movement of the shutter.

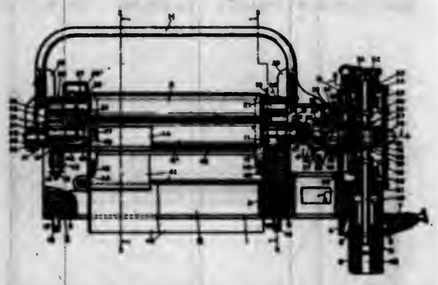
1,626,828. SCALE. JOSEPH HOPKINSON, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Sept. 4, 1924. Serial No. 735,732. 2 Claims. (Cl. 268—62.)



1. A weighing scale including in combination with a base lever system of the even balance type, a pendulum load counterbalancing means connected therewith, a pivotal indicator, a pinion therefor, a sector shaped rack operatively connected so as to be movable in unison with said pendulum, counterbalancing means for driving said pinion and a supplementary rack meshing with said pinion and having provisions for causing said pinion to maintain constant enmeshment with one side of the teeth of said aforementioned sector shaped rack.

1,626,829. WARPER ATTACHMENT. WILLIAM P. HOANBUCKLE and ROBERT F. CRAIG, Stanley, N. C. Filed Sept. 9, 1924. Serial No. 736,764. 3 Claims. (Cl. 28—35.)

1. In a warper, the combination with a drum which actuates a receiving-beam through surface contact, a roller with which the yarns or threads are engaged on their way to the said beam, a gear-train intermediate the drum and the roller, through which the roller is actuated from the drum, a traverse-comb adjacent the roller, and connections intermediate the roller and the comb through which traverse movements are imparted to the comb.



1,626,830. CONTINUOUS AUTOMATIC CONCRETE MIXER. MILTON F. HORST, Los Angeles, Calif. Filed Aug. 4, 1926. Serial No. 127,009. 28 Claims. (Cl. 83—73.)

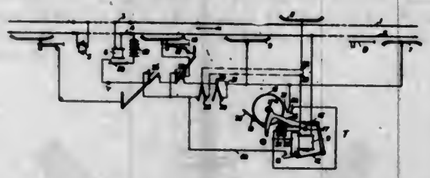
1. A continuous automatic concrete mixer comprising in combination, a set of hoppers for receiving the materials to be mixed, an annular casing, a mixing chamber associated with said casing, a set of conveyers for elevating said materials into said mixing chamber, stationary and rotary mixing elements in said casing, said rotary elements being positioned between said stationary elements, means associated with said casing whereby the mixed concrete may be moved dry for a portion of the circumference of a circle, means associated with said casing whereby said mixture may be moved wet for the remaining portion of said circumference, a set of conveyers for receiving and elevating the wet mixed concrete to the point of discharges and means associated with said mixer for operating the movable parts in timed relation.

1,626,831. POWER-OPERATED WRINGER FOR WASHING MACHINES. WINTHROP KEITH HOWE, Rochester, N. Y., assignor, by mesne assignments, to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 25, 1921. Serial No. 495,349. 29 Claims. (Cl. 68—32.)

1. In a wringer, the combination of a lower roll driven by a direct connection, means for resiliently forcing said roll upward against an upper roll, and means separate from said upper roll for limiting the upward movement of said lower roll.

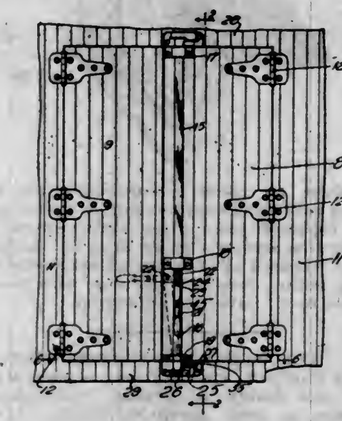
4. A clothes wringer comprising, a wringer frame having pockets therein, a lower roll in said frame, springs in said pockets for forcing said lower roll upward, an upper roll, a shaft for driving said rolls, and means concentric with the axis of said shaft for simultaneously operatively connecting said shaft to suitable driving means and for forcing said upper roll against said lower roll.

8. A wringer comprising upper and lower rolls; means for driving said rolls in either direction including two pinions having a common axis and connected to rotate in opposite directions; a clutch member adapted to engage either of said pinions; and operating means for yieldingly moving said clutch member toward either of said pinions and for unyieldingly forcing said clutch member out of engagement with either of said pinions, said operating member also being controllable to permit separation of said rolls.



18. In a wringer, the combination with a spring-pressed lower roll, a movable upper roll, a shiftable handle, recessed cam means carried by the handle for forcing the rolls together only in certain operative positions of the handle, the cams being arranged for one position of the handle to present the recessed portion wholly release pressure on the rolls and permit unrestrained movement of one roll away from the other.

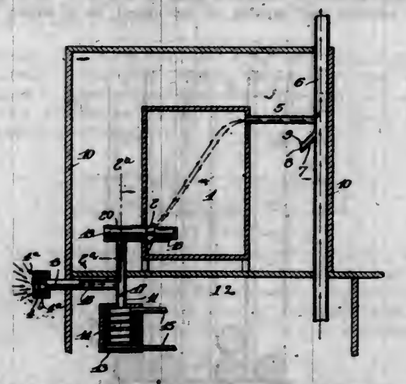
1,626,832. LUNCH-COUNTER STOOL. JOHN F. HUCKEL, Kansas City, Mo., assignor to Fred Harvey, Kansas City, Mo. Filed Sept. 13, 1926. Serial No. 135,102. 2 Claims. (Cl. 155—95.)



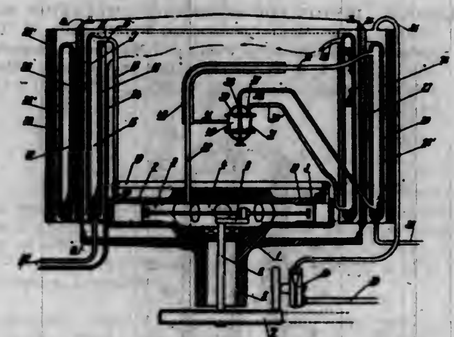
1. A stool of the character described, comprising a tubular pedestal having an interior flange and a shouldered seat at its upper end, a bushing within the pedestal seated upon the interior flange and having a rim flange located in said shouldered seat, a seat member rotatably mounted on the pedestal and having a pintle journalled in said bushing, and a wear member interposed between said member and the pedestal about the pintle.

1,626,833. TRAIN-CONTROL SYSTEM. ALFRED ERNEST HUDD, Liverpool, and ARTHUR FRANK BOUND, Timperley, England, assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Filed Oct. 29, 1921, Serial No. 511,322, and in Great Britain Nov. 18, 1920. 33 Claims. (Cl. 246—49.)

1. A train control system comprising a track, a time element device located at the side of the track, apparatus controlled by said time element device for effecting the application of the brakes of a passing train, means controlled by a passing train for setting the said time element device in operation to control said apparatus to prevent the application of the brakes if the speed of the train is below a certain value and manually operated signalling means operable to control said apparatus to prevent the application of the brakes if the track is clear.



1,626,834. CAR-DOOR-LATCHING DEVICE. GEORGE A. HULL, Chicago, Ill., assignor to Equipment Specialties Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1924. Serial No. 755,204. 10 Claims. (Cl. 292—5.)

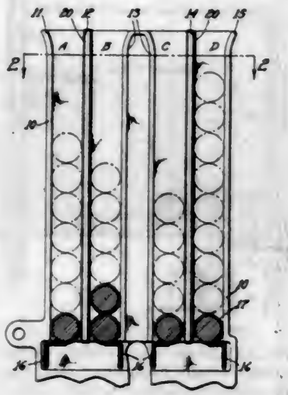


1. In a closure latching device, in combination, fixed camming means on the receptacle to be closed, and latching means co-operating with said first named means, rotatable to commence the latching operation and reciprocable to complete the same.

1,626,835. REFRIGERATING APPARATUS. EDWIN F. JAMES, Cleveland, Ohio. Filed July 26, 1920, Serial No. 398,925. Renewed Mar. 14, 1927. 4 Claims. (Cl. 62—129.)

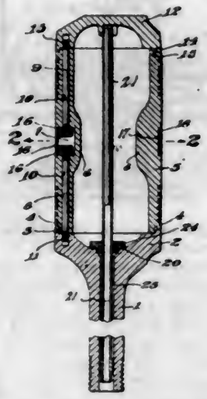
1. In a refrigerating apparatus, the combination with a building having a natural draft flue and a refrigerating chamber therein, of conduit means connecting said flue with the upper portion of said chamber, connections between the lower portion of said chamber with the atmosphere inside and outside said building, respectively, valve means for differentially controlling said connections, and thermostatic means for operating said valve means.

1,626,836. REFRIGERATING APPARATUS. PIERRE MAURICE JAUVERT, Toulon, France. Filed Mar. 31, 1924. Serial No. 703,243, and in France Mar. 31, 1923. 1 Claim. (Cl. 62—8.)



In a refrigerating apparatus comprising a compressor, a condenser, an evaporator, connected to form a closed system, valve mechanism controlling the flow of refrigerant from the condenser to the evaporator, said valve mechanism comprising a chamber, a diaphragm dividing said chamber, a needle directly secured to said diaphragm and acting on one side of said diaphragm to control the flow of refrigerant to the evaporator, a closed tubular container surrounding the suction pipe leading to the compressor, and connected to said chamber on the other side of said diaphragm, said container, connection, and chamber on the other side of said diaphragm being filled with water adapted to change from liquid to solid state and reversely by the change in temperature of the refrigerant fluid passing to said compressor thru the suction pipe and thus to operate the needle thru the action of the diaphragm.

1,626,837. DEVICE TO PREVENT ROTATION OF BOBBINS. VICTOR H. JENNINGS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 28, 1925. Serial No. 65,418. 7 Claims. (Cl. 139—245.)



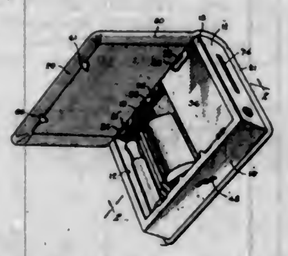
1. In a weft replenishing loom, a frame, flanges extending therefrom and defining bobbin compartments, and resilient means carried by one of the flanges and common

to two adjacent compartments, said means presenting a surface having a relatively high coefficient of friction to the bobbins and capable of movement as a whole in a

direction parallel to the compartment to assume a plurality of relative positions with respect to the flange to vary the width of the compartments.

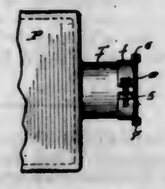
1,626,838. PISTON FOR INTERNAL-COMBUSTION ENGINES. OLAV ESKIL JORGENSEN, Forest Hills, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Feb. 18, 1926. Serial No. 89,081. 5 Claims. (Cl. 74—108.)

1. A piston including a piston body forming the entire side wall of the piston, a piston rod having one end upset to the full diameter of the piston body to form one end only of the piston, and means connecting the body and the upset end of the piston rod.



1,626,839. CATHETER. ERNST KALLMEYER, Burgbernheim, Germany, assignor to Henry W. Reese, New York, N. Y. Filed Apr. 24, 1922. Serial No. 556,352, and in Germany Apr. 28, 1921. 1 Claim. (Cl. 128—239.)

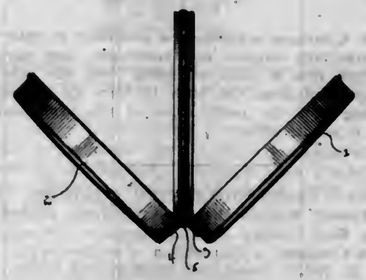
An irrigating catheter comprising a tubular body terminating at one of its ends in a conically formed distending head of greater diameter at its base than said body and having an axial fluid receiving passage opening through the apex of the head and communicating with the bore of said tube, the surface of said head being provided with alternate ribs and grooves extending longitudinally thereof from the base of said head and merging into the peripheral surface thereof at a point spaced from



the apex of the head, and said head being additionally provided with a series of transverse apertures opening at their outer ends into each of said grooves and communicating with the axial fluid passage in said head.

1,626,840. CONTAINER. JOSEPH KAUFMAN, New York, N. Y., assignor to American Safety Razor Corporation, New York, N. Y., a Corporation of Virginia. Filed July 5, 1924. Serial No. 724,229. 8 Claims. (Cl. 206—16.)

1. A device for effectively advertising the slogan "Shave and Save", said device comprising a container for a shaving implement and a money container fixedly associated therewith, whereby a person using the shaving implement so contained will have his attention centered on the saving feature, thus most effectively advertising the "Shave and Save" feature of self-shaving.



1,626,841. COLOR-CHANGING ATTACHMENT FOR MOTION-PICTURE PROJECTORS. JAMES MAURICE KELLEY and JOSEPH A. HUEBER, Philadelphia, Pa. Filed Sept. 23, 1926. Serial No. 137,198. 1 Claim. (Cl. 88—24.)

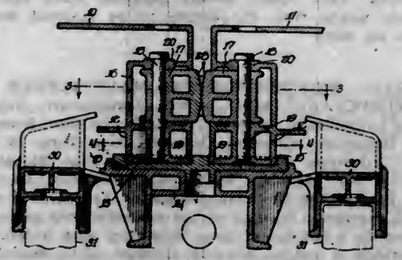
A device of the class described comprising a collar formed of a strip of sheet metal having its ends turned outwardly to form relatively spaced ears, said strip being provided at spaced points with integral enlargements

located at diametrically opposite points on the collar and shaped to form approximately U-shaped lugs having opposite grooves forming a channel, a screw extending through the ears and operative to contract the collar to enable the same to be clamped on the end of the lens tube of a motion picture projector, and a color screen comprising a sheet metal frame and a plurality of transparent panes of different colors adapted when the frame is seated in said channel to be respectively brought into registry with the lens tube by sliding the frame in said grooves transversely of the tube.

1,626,842. COMPACT HOLDER. WILLIAM G. KENDALL, Newark, N. J., assignor to Parfumerie Rigaud, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 16, 1925. Serial No. 2,959. 1 Claim. (Cl. 220—32.)

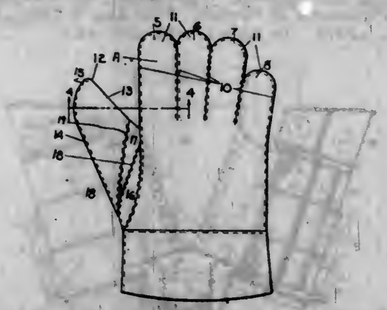
A vanity case comprising two body portions and an intermediate ring all mounted upon the same hinge pintle; said ring having a groove in the wall thereof, the width of said groove being less than the width of said wall, a partition member held in a split ring held in said groove, a portion of one side of the lateral periphery of said ring being bent out transversely and curved to form a loop for said hinge pintle.

1,626,843. FISHING TOOL. GROVER NEGLEY KING, Kerrville, Tex. Filed Mar. 13, 1926. Serial No. 94,486. 1 Claim. (Cl. 294—102.)



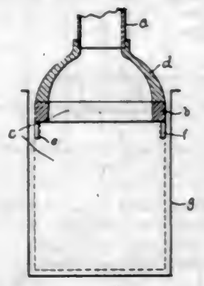
A fishing tool of the class described including a hollow grab head having a pair of longitudinally disposed slots, a slit member slidable in the grab head and comprising a cylindrical portion, and a pair of arms of spring material rising from the upper edge thereof, means for limiting the movement of the slit member in the grab head, and holding the cylinder so that the arms are in a position to move through the slots, a pair of dogs one on the upper terminal of each arm, the inner faces of said dogs being provided with teeth, and the lower edges both at their inner and outer faces being curved upwardly and outwardly.

1,626,844. FINGER GUARD FOR FOLDABLE BUS DOORS. CLINTON J. KUHN, Vanderburgh, Ind., assignor to Graham Brothers, Evansville, Ind., a Corporation of Indiana. Filed Sept. 8, 1925. Serial No. 55,103. 2 Claims. (Cl. 20—16.)



1. The combination with two relatively movable sections, of a shield having reinforced pockets secured to said sections, and a flexible connection between said pockets, one of said pockets being of sufficient width to overlap both sections when disposed in a predetermined position.

1,626,845. ARTICULATED CAR CONSTRUCTION. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 10, 1925. Serial No. 55,419. 17 Claims. (Cl. 105—4.)

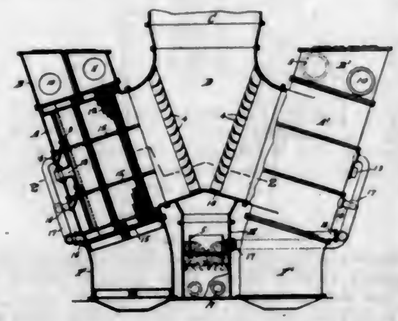


1. In an articulated car construction, the combination of two car body units, a center bearing member on each unit, a truck bolster, and a center plate pivotally mounted on said bolster and pivotally arranged with respect to each of said center bearing members to form a flexible operating arrangement.

1,626,846. GLOVE. PETER LAMPROS, Iron Mountain, Mich. Filed June 5, 1925. Serial No. 35,116. 2 Claims. (Cl. 2—169.)

1. A glove of the character described, comprising similar opposite sections having finger portions, gussets between the sections and coextensive with the finger portions to provide stalls for the index, middle, third and little fingers of a hand, a thumb stall having a longitudinal seam only at its outer edge, whereby the quirk area of said stall is unbroken, and tapered gussets between the inner end of the thumb stall and said sections and connected thereto, the gussets being reversed to have their wider portions on opposite sides of the thumb stall.

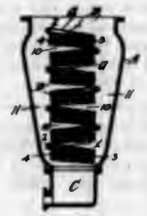
1,626,847. APPARATUS FOR THE MANUFACTURE OF HOLLOW BODIES FROM FIBROUS PULP. ROBERT LECHTHALER, Berlin-Charlottenburg, Germany, assignor to Baumgärtner, Dr. Katz & Co., G. m. b. H., Spandau-Elswerder, Germany, a Corporation of Germany. Filed Feb. 12, 1925, Serial No. 8,839, and in Germany Feb. 12, 1924. 4 Claims. (Cl. 92—54.)



1. An apparatus for the production of hollow bodies from fibrous pulp by means of a heated gaseous medium under pressure, comprising a stationary mould capable of being taken apart, having pervious walls and of greater height than the article to be moulded therein as set forth.

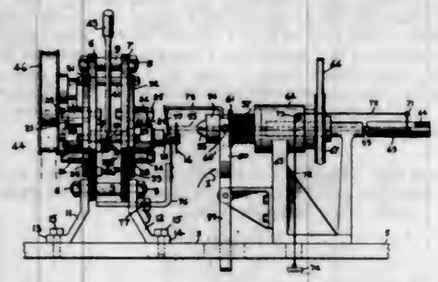
1,626,848. PROCESS FOR THE MANUFACTURE OF HYDROCYANIC ACID. OTTO LIEBKNECHT, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed June 24, 1924. Serial No. 721,994. 9 Claims. (Cl. 23—151.)

1. Process for the manufacture of hydrocyanic acid which consists in reacting carbon monoxide with ammonia by passing a mixture of these in contact with a catalyst comprising a porous non-acid charcoal while maintaining a reaction temperature between 400° C and 800° C.



8. Catalyst for the reaction of carbon monoxide with ammonia to form hydrocyanic acid comprising a carbonized body formed by carbonizing carbonaceous material in the presence of carbon monoxide and ammonia.

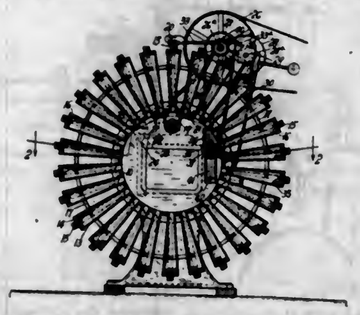
1,626,849. CONDENSING APPARATUS. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 3, 1925. Serial No. 47,674. 10 Claims. (Cl. 257—24.)



1. The combination with two vertical surface condensers, of a common exhaust chamber between said condensers, and guide vanes at opposite sides of the steam chamber for distributing the steam over the condensing surfaces.

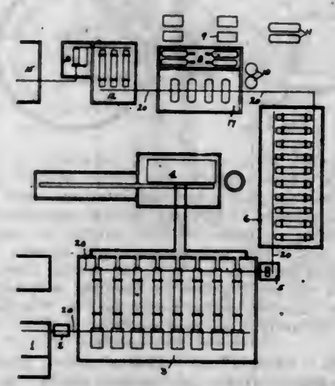
1,626,850. CONDENSING APPARATUS. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 5, 1925. Serial No. 48,240. 12 Claims. (Cl. 257—43.)

1. In a surface condenser, a plurality of tube banks of substantially uniform flow resistance, each having on the outlet face a plate extending over the tube bank and separated from the bank to form an air chamber extending over the outlet face of the bank and connected to an air offtake.



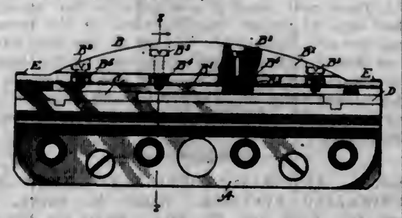
1,626,851. GLASS-ROD-CUTTING MACHINE. HARRY DE FOREST MADDEN, Newark, and JOHN JOSEPH HIGGINS, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Jan. 2, 1922. Serial No. 526,452. 14 Claims. (Cl. 51—89.)

1. A machine for severing glass rods comprising a rotary abrasion member, a holder for rotatably supporting a rod and means for bringing said member and said rod in frictional contact to produce a peripheral groove upon the rod to partially sever the same, said means being operable to effect a gradually increasing frictional engagement between the member and rod to generate heat at the base of the groove and cause a severing operation.



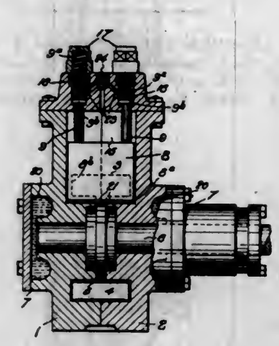
1,626,852. DUST COLLECTOR. ABERHAM FRANKLIN MANGOLD, Akron, Ohio. Filed Oct. 7, 1926. Serial No. 140,008. 14 Claims. (Cl. 183—59.)

1. A dust collector comprising an intermittently rotatable drum, tubes or pockets of dust collecting fabric radiating from the drum, a number of freely movable pellets comprising rubber balls in the drum adapted to find their ways into the tubes or pockets and to frictionally engage the dust collecting surfaces of the fabric to loosen the dust therefrom, a conveyor for receiving the dust from the tubes or pockets, means for jarring the dust from the tubes or pockets into the conveyor, a duct adapted to deliver duct laden air into one end of the drum, a duct for receiving the dust from the dust conveyor through the other end of the drum, a screen in the dust receiving duct, said duct having a hand hole therein adjacent the screen, a hopper for receiving the pellets falling out of tubes or pockets at said other end of the drum, a conveyor for delivering the pellets from said hopper to the first end of the drum, a receptacle for receiving the pellets from the



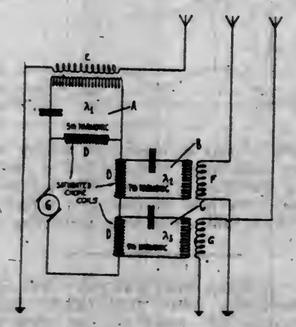
pellet-delivering conveyor, said receptacle having a bottom closure, and means for opening or shutting said closure.

1,626,853. METHOD OF GARBAGE REDUCTION. ROBERT D. MACLAURIN, Lakewood, and CHARLES C. SMITH, Cleveland, Ohio. Filed Mar. 3, 1926. Serial No. 91,960. 7 Claims. (Cl. 71—6.)



1. In a garbage reduction process, the steps of preliminary dehydration of the green garbage through the non-critical moisture zone by direct heat, then further dehydration through the critical moisture zone by indirect heat, extraction of fats, and the redrying of the tankage by indirect heat.

1,626,854. MOLD FOR SLUG-CASTING MACHINES. RICHARD RUSSELL MEAD, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Nov. 17, 1926. Serial No. 148,811. 8 Claims. (Cl. 199—55.)



1. A slug casting mold presenting a side wall made up of an inner hardened steel base portion provided with a raised part or projection, and an outer unhardened steel reinforcing portion formed with a corresponding recess to accommodate said raised part or projection, and means engaging the raised part or projection for clamping the two portions together.

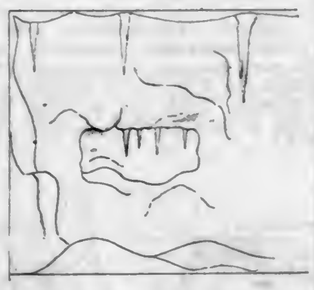
1,626,855. ROTARY PUMP. GEORGE SIDNEY MEPSTEAD, London, England. Filed Oct. 9, 1926, Serial No. 140,576, and in Great Britain Nov. 30, 1925. 8 Claims. (Cl. 103—123.)

1. A rotary pump comprising a cylindrical casing, concentric internally projecting bosses on the ends of the casing forming a broad and comparatively shallow annular space between the periphery of the bosses and the periphery of the casing, a rotatable disc fitting between the bosses, a cam shaped piston mounted on the disc and fitting the annular space, a slidable wall member engaging in grooves in the casing, resilient means to normally urge the wall member toward the periphery of the rotary disc, inlet ports in the casing on one side of the movable wall member and outlet ports in the casing on the other side of the said movable wall member.

1,626,856. CIRCUIT ARRANGEMENT FOR MULTIPLEX COMMUNICATION. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Feb. 24, 1923, Serial No. 620,899, and in Germany Mar. 23, 1922. 7 Claims. (Cl. 250—9.)

3. In combination, a plurality of frequency changers, a source of alternating energy, said frequency changers and said source being coupled all in series with each other and a plurality of individual work circuits coupled to said frequency changers.

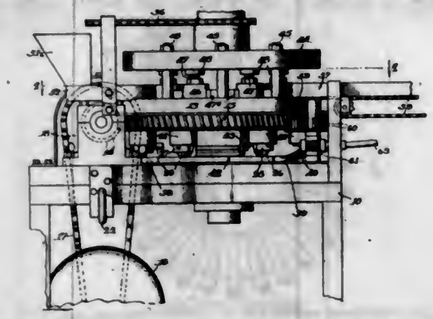
1,626,857. PROCESS OF MANUFACTURING LACTOSE. SHERMAN C. MEREDITH, Burlingame, and NIELS N. T. NYBORG, Modesto, Calif. Filed Dec. 12, 1922. Serial No. 606,532. 4 Claims. (Cl. 127—46.)



3. In the process of extracting lactose from whey the steps which consist in adding an alkali in excess of that required to neutralize the acid content of the whey, heating the whey and gradually increasing the temperature to coagulate and precipitate the albumen content, and gradually decreasing the alkali content as the temperature increases.

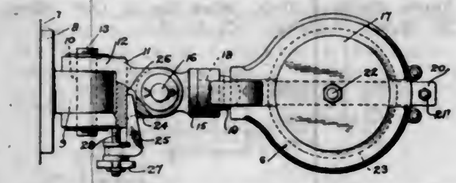
1,626,858. VACUUM TUBE. HERBERT E. METCALF, San Leandro, Calif., assignor to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed Feb. 28, 1924. Serial No. 695,681. 4 Claims. (Cl. 250—27.5.)

1. A three-electrode tube having a plate on one side of the filament and a linear grid on the opposite side, in the form of a thin strip with its edge close to and following substantially the course of the filament and disposed towards the plate.



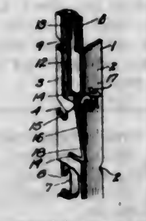
1,626,859. PLASTIC COMPOSITION. WILLIAM C. MORGAN, Everett, Wash. Filed Aug. 6, 1924. Serial No. 730,392. 1 Claim. (Cl. 41—10.)

The method of making decorative designs which consists of, first, applying to a flexible base a plastic coating consisting of a mixture of cement, sand, salt and glucose, second draping the base material over supports to produce the desired design and then permitting it to dry.



1,626,860. MACHINE FOR MAKING COMPACTS, TABLETS, WAFERS, AND THE LIKE. GARRETT W. MUDD, Chicago, Ill. Filed Aug. 30, 1924. Serial No. 735,090. Renewed Sept. 22, 1926. 26 Claims. (Cl. 25—70.)

3. A machine of the character described including a support having a pocket for receiving the material to be compressed, a plunger movable in the pocket, an abutment movable across the end of the pocket in directions transverse to the direction of movement of the plunger, means for thus moving the abutment, said abutment co-

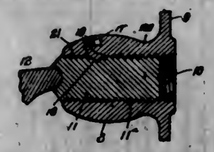


operating with the plunger to compress the material therebetween, and means for causing the plunger to impart a plurality of impacts to the material in the pocket.

1,626,861. ADJUSTABLE PULLEY-BLOCK HANGER. HARRY MURRAY, Ross, Calif. Filed Mar. 13, 1926. Serial No. 94,435. 5 Claims. (Cl. 254—195.)

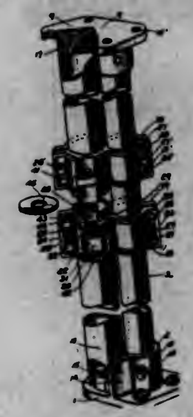
1. A pulley block and hanger, comprising in combination with a base adapted to be rigidly secured to a support, a member pivoted for horizontal movement thereon, a second member pivoted for vertical movement on the first member, a pulley swivelly carried by the second member, and a stop member interposed between the first and second members to hold the second member and pulley in various positions of elevation with relation to the first member while permitting a free movement thereof upwardly from such positions.

1,626,862. FENCEPOST. ULRICH MYER, Linden, Mo. Filed July 3, 1925. Serial No. 41,394. 5 Claims (Cl. 256—52.)



1. A fence post comprising a metallic bar having a notched edge to receive the line wires of the fence, a sliding line-wire locking bar carried by the first named bar, an arm attached at the upper end of the locking bar overlapping the top of the first named bar and extending downwardly along its face, and a crank connected to the first named bar and to the arm to operate the locking bar.

1,626,863. AUTOMATIC SPRINKLER HEAD FOR SPRINKLING SYSTEMS. HARRY M. NACEY, Chicago, Ill. Filed Apr. 23, 1923. Serial No. 633,839. 2 Claims. (Cl. 169—39.)

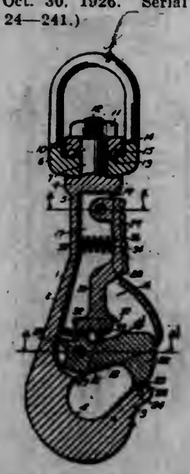


1. A sprinkler head comprising an internal screw threaded support, a tension screw adjusted therein,

said support having a visible external surface indentation resulting in an insetting of a portion of the material thereof, with a consequent mutilation of a portion of

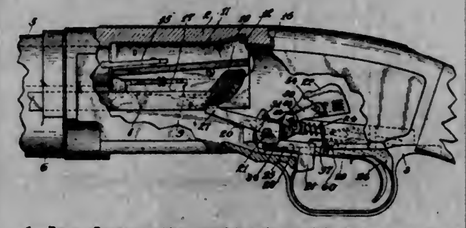
the threads of the tension screw sufficient for permanently locking the screw in its adjusted position, thereby preventing the removal of the tension screw without destroying it for future use.

1,626,864. COMBINATION RELEG AND JACK CLAMP. JAMES P. NEILSON, Sr., Tulsa, Okla. Filed Dec. 7, 1925. Serial No. 73,945. 8 Claims. (Cl. 189—18.)



1. A pair of clamps having gripping portions, and sockets therein, members having socket engaging portions thereon and means for extending said members to separate said socket engaging portions, whereby said clamps are moved away from each other.

1,626,865. SAFETY HOOK. ROBERT E. NEILSON, Tulsa, Okla. Filed May 12, 1926. Serial No. 108,552. 3 Claims. (Cl. 24—241.)

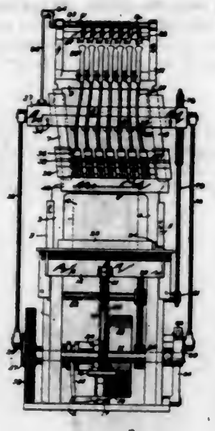


1. In a safety hook, a body comprising a hook portion and a shank, a latch mounted on the shank for movement across the hook opening to position for retaining an object therein, and an actuator for the latch normally yieldingly urging the latch to functional position, and a handle member having camming relation with the actuator.

1,626,866. SAFETY HOOK. ROBERT E. NEILSON, Tulsa, Okla. Filed Oct. 30, 1926. Serial No. 145,202. 12 Claims. (Cl. 24—241.)

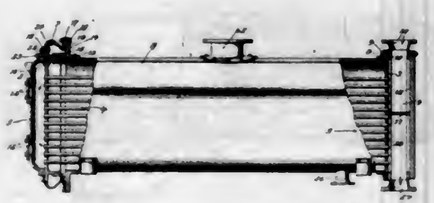
1. In a hook of the character described, a body portion and a bill spaced from the body portion to form a socket, a latch pivotally mounted on the body portion and adapted for projection across the socket to close the socket, and a trigger comprising a handle portion and an actuator for the latch, the actuator constituting a detent for holding the latch in functional position and a stop for limiting opening movement of the latch.

1,626,867. FIREARM. CHARLES A. NELSON, Utica, N. Y., assignor to Savage Arms Corporation, Utica, N. Y., a Corporation of Delaware. Filed June 12, 1920. Serial No. 388,458. 15 Claims. (Cl. 42—16.)



1. In a firearm, the combination with firing means, an action bar, an action bar lock, and a spring urging the action bar lock toward locking position with a substantially constantly applied pressure, of a spring to move the said lock to unlocking position, said second mentioned spring being mounted to move bodily with the actuation of the firing means and to be tensioned against the action bar lock to move the latter against the tension of the first mentioned spring on the release of the firing means.

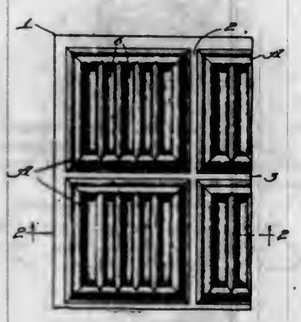
1,626,868. NAILING MACHINE. ELMER C. NORTHRUP, San Francisco, Calif., assignor, by mesne assignments, to Sprague-Sells Corporation, Hoopeston, Ill., a Corporation of Delaware. Original application filed Jan. 26, 1920, Serial No. 354,070. Divided and this application filed Dec. 17, 1923. Serial No. 681,054. 5 Claims. (Cl. 1—16.)



1. In a nailing machine a plurality of nail chutes, means for filling said chutes with a succession of nails,

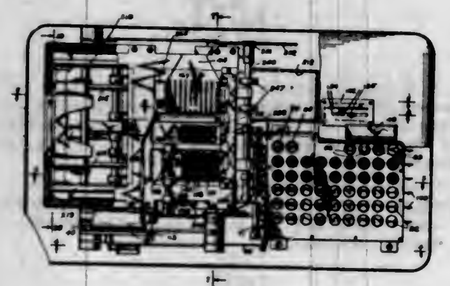
means including a pivoted lever for releasing one nail at a time from each of said chutes, a shaft extending adja-

cent the upper ends of said levers, means for rocking said shaft, and means on said shaft for operatively engaging said levers.



1,626,869. EXPANSION JOINT FOR HEAT EXCHANGERS. EDWARD M. O'DONNELL, San Francisco, and DAVID D. PEEBLES, Eureka, Calif. Filed Apr. 1, 1926. Serial No. 98,976. 2 Claims. (Cl. 257—239.)

1. In an apparatus of the character described, an elongated cylindrical shaped shell, a plurality of tubes interior thereof and extending from end to end of the shell, a stationary tube sheet at one end of the shell supporting one end of the tubes, a floating tube sheet at the other end of the shell supporting the opposite ends of the tubes, and an annular expansion member forming a seal between the floating tube sheet and the shell, and a head member supported by the floating tube sheet.

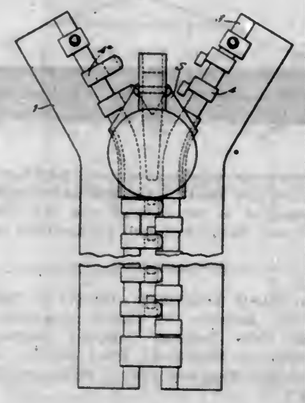


1,626,870. CUSHIONING AND FILLER-LOCKING FLAT. LEOPOLD OXHANDLER, Chicago, Ill. Filed Mar. 29, 1927. Serial No. 179,386. 5 Claims. (Cl. 217—26.)

1. A flat comprising a sheet of approximately uniform thickness throughout divided into plateau-like sections by intersecting grooves, each section having therein a series of long parallel depressions that separate it into trough-like ribs the ends of which extend downwardly and in-

wardly from adjacent side walls of the section to reinforce such walls and form cushions for supporting an article to be packaged.

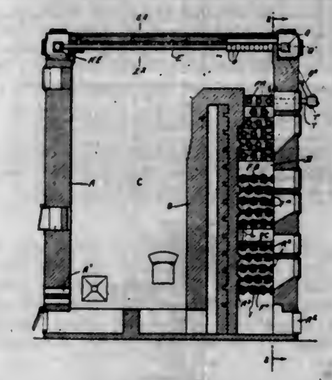
1,626,871. ACCOUNTING MACHINE. JOHN ROYDEN PEIRCE, New York, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a Corporation of New York. Original application filed July 9, 1924, Serial No. 724,933. Divided and this application filed Dec. 23, 1924. Serial No. 757,589. 21 Claims. (Cl. 164—112.)



4. In a machine of the class described, the combination with a plurality of series of punches, of a main operating mechanism, a device given an invariable extent of movement at each operation of the main operating mechanism, punch operators pivotally mounted on said device, and means for differentially angularly adjusting the punch operators on their pivots to select the punches to be operated by movement of the invariably moved device.

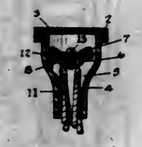
1,626,872. PROCESS FOR MAKING AN INSECTICIDE. WILLIAM C. PIVER, Hillside, N. J. Filed Mar. 30, 1923. Serial No. 628,774. 9 Claims. (Cl. 167—6.)

1. The process of making an insecticide which consists in a soluble arsenic compound acting on an excess of calcium oxide, and the addition of a metallic salt during the reaction adapted to impart adhesive property to the product, producing the insecticide in a dry powdered form.



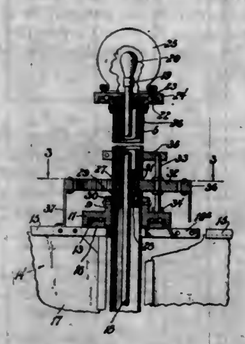
9. An insecticide in dry powdered form, comprising calcium arsenate and aluminium arsenate.

1,626,873. SEPARABLE FASTENER. GEORGE E. PRENTICE, Berlin, and ROBERT C. LEGAT, New Britain, Conn., assignors to G. E. Prentice Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed June 12, 1926. Serial No. 115,470. 7 Claims. (Cl. 24—205.)



7. A fastener of the class described comprising opposed series of hook and eye elements, each hook element consisting of a flat block having an integral substantially rectangular projection jutting from one end of the block, the block being of least thickness in the direction of the series, the entire projection being offset downwardly from the plane of the upper face of the block and projecting downwardly beyond the plane of the lower face of the block to form a hook member.

1,626,874. OIL HEATER AND METHOD OF OPERATING SAME. JOHN PRIMROSE, New York, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed May 11, 1925. Serial No. 29,411. 6 Claims. (Cl. 196—116.)

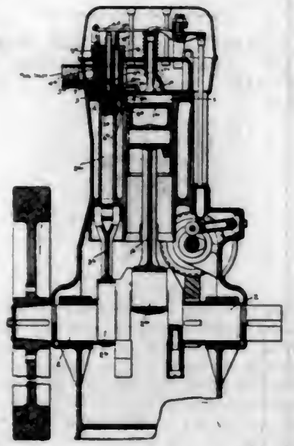


1. In the process of cracking oil in a tubular oil heater, the improvement which consists in heating the oil in three stages, in the first of which the oil containing tubes are subjected to a countercurrent heating effect by heating gases previously cooled in the two succeeding oil heating stages, and in the second of which the oil is heated by radiant heat absorbed from the combustion chamber of the furnace and the highly heated combustion gases, and in the third stage the oil containing tubes are subjected to a parallel current heating effect by heating gases partially cooled in the second oil heating stage.

1,626,875. ELECTRIC CONNECTER FOR BRANCH CIRCUITS. ALFRED W. REISER, Toledo, Ohio. Filed Apr. 10, 1925. Serial No. 22,022. 1 Claim. (Cl. 173—263.)

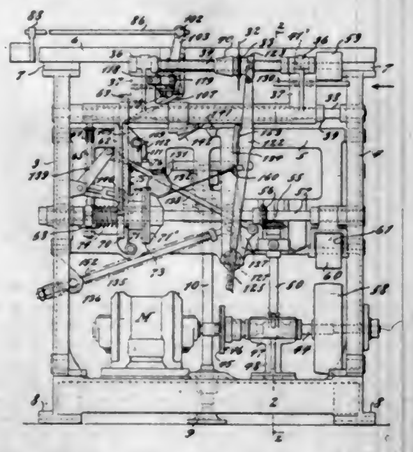
In an electric wire connecter, an insulating shell, a pair of metal disks, one of the disks having an opening for receiving the ends of the wires, a bolt extending through one of the disks and threaded into the other of the disks for clamping the ends of the wires between the disks, an insulating shell for containing the disks in one of its ends and having a restricted portion smaller in its inner diameter than the disks and an insulating cap for closing the end of the shell having the disks whereby wires may be electrically connected together and secured in the shell by the disks.

1,626,876. TRAFFIC SIGN. BENJAMIN J. ROSEWATER, Eureka Springs, Ark. Filed Feb. 8, 1927. Serial No. 166,745. 3 Claims. (Cl. 40—40.)



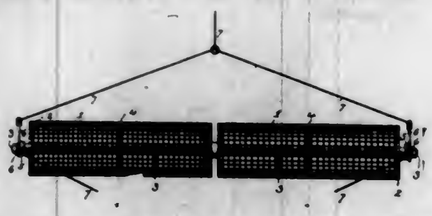
1. In a device of the character described, a stationary tubular mast, direction signs secured thereon, a lamp supported near the top of the mast, an advertising device rotatably supported on the mast, a globe of distinctive design enclosing said lamp, a member rotatably mounted at the upper end of the mast and supporting said globe, a sleeve secured to said member and depending within the mast, and means operatively connecting the advertising device to said sleeve to rotate the latter, together with the globe, at a greater angular velocity than the advertising device.

1,626,877. INTERNAL-COMBUSTION ENGINE. DAVID E. ROSS, La Fayette, Ind. Filed Apr. 13, 1921. Serial No. 461,011. 13 Claims. (Cl. 123—33.)



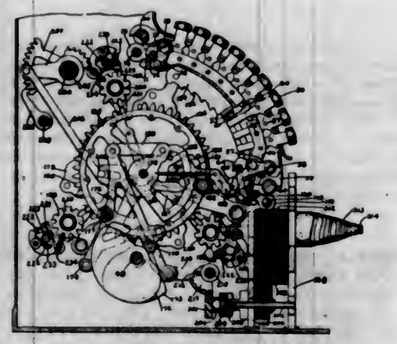
1. In an internal combustion engine, the combination of a working cylinder; a compression cylinder; a valve for admitting a charge into the working cylinder; a valve for admitting air into the compression cylinder; means for operating the second mentioned valve by and with

the first mentioned valve; a piston in the compression-cylinder adapted to compress the air therein until its temperature is raised above the ignition point of the fuel;



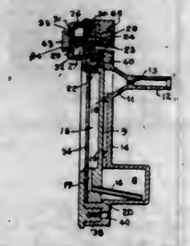
a piston in the working cylinder adapted to compress the charge therein to a point below the ignition point of the fuel; and means for discharging the superheated air from the compression cylinder into the working cylinder.

1,626,878. TUBE-CUTTING MACHINE. CHARLES R. SEYMOUR, Rochester, N. Y., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 30, 1923. Serial No. 660,154. 42 Claims. (Cl. 164—61.)



1. In a tube cutting machine, the combination with means for guiding a travelling tubing into the machine, of a saw mounted for transverse and parallel movements relative to the travel of the tubing, means operative to project the saw into the path of travel of the tubing, a yieldingly supported member operatively connected with the saw for movement therewith in its said transverse and parallel movements, and means independent of the tubing co-operating with said member to move the saw parallel with the tubing and without drag thereon during a cutting operation.

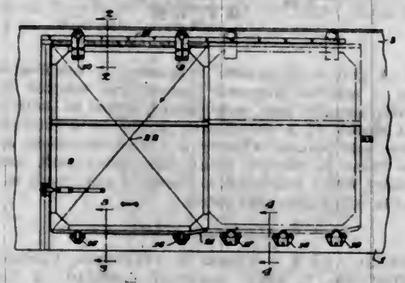
1,626,879. APPLIANCE FOR FINISHING CONCRETE PAVEMENTS. FRANK L. SHIDLER and ROBERT D. GREGG, Kankakee, Ill. Filed Dec. 18, 1924. Serial No. 756,647. 4 Claims. (Cl. 94—50.)



1. A roller for finishing concrete pavements comprising a cylindrical shell of foraminous material, skeleton heads connected to the ends of said shell, an axle connected to said heads and pull connections connected to said axle.

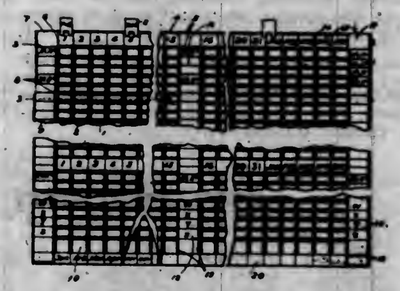
1,626,880. CASH REGISTER. BEANIS M. SHIPLEY, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 12, 1920, Serial No. 350,917. Renewed Apr. 3, 1925. 40 Claims. (Cl. 235—3.)

1. In a machine of the class described, the combination of type carriers for printing items and totals on an inserted sheet, impression means co-operating therewith, means for feeding said sheet between impressions when a plurality of items are printed, and means for ejecting said sheet when the total of said items has been printed thereon.



1,626,881. LIQUID INDICATOR. FRANK W. SKINNER, West Norwood, N. J. Filed Dec. 5, 1923. Serial No. 678,719. 2 Claims. (Cl. 73—31.)

1. In a gauge of the class described, a casing having a liquid well in the base, a transparent front portion, a column of liquid behind said front adapted to be observed therethrough, said column communicating with said well,

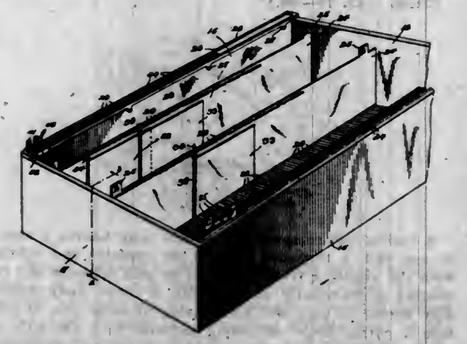


there being a passage from said well to the liquid to be gauged and means in said passage for retarding flow of air between said well and the liquid to be gauged, push button pump means adjacent the top and on the front of said gauge for admitting and forcing air through said column, well and said air retarding means, said push button means when inoperative, providing escape for air above the top of said column.

1,626,882. SIDE DOOR FOR RAILWAY FREIGHT CARS. ARTHUR E. SMALL, Oak Park, Ill., assignor, by mesne assignments, to Railway Metal Products Company, a Corporation of Delaware. Filed Feb. 25, 1926. Serial No. 90,561. 2 Claims. (Cl. 20—32.)

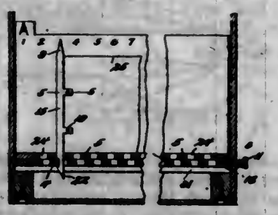
1. In a railway car, the combination of a horizontally movable door, a track mounted on the car adjacent the upper part of the door opening supporting said door when in a closed position, and brackets mounted upon the car so as to solely support the door when the door is in open position, said elements so relatively positioned that as the center of gravity of the door passes the first bracket, upon opening movement, said track is entirely relieved of the weight of the door.

1,626,883. FILING DEVICE. RITTENHOUSE M. SMITH, Mobile, Ala. Filed Mar. 27, 1920, Serial No. 369,352. Renewed July 20, 1926. 20 Claims. (Cl. 129—16.)



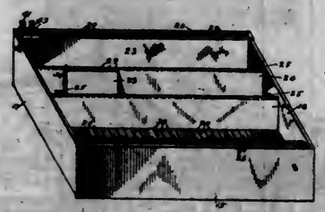
19. A card index case having means for filing cards in accordance with two indexes extending at right angles to each other, one index consisting of the numbers 1 to 31, inclusive, for designating the days of the month, and the other index being alphabetical, and means adjustably associated with one of said indexes for qualifying the same.

1,626,884. FILING DEVICE. RITTENHOUSE M. SMITH, Mobile, Ala. Filed Aug. 16, 1920. Serial No. 403,906. 54 Claims. (Cl. 129—16.)



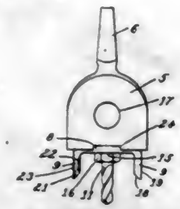
32. A card for a card file having a positioning finger projecting from one edge, and an indicator projecting from the opposite edge and secured to the card in one position only.

33. A card-filing device, including in combination, a case having parallel partitions extending from the bottom to the top thereof, spaced bars at the bottom of the case



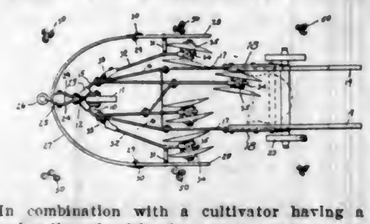
disposed at right angles to the length of said partitions and indices at the top of the case for designating days and months.

1,626,885. INDEX-LOCKING DEVICE AND CARD ATTACHMENT. RITTENHOUSE M. SMITH, Mobile, Ala. Filed Sept. 1, 1920. Serial No. 407,372. 11 Claims. (Cl. 129—16.)



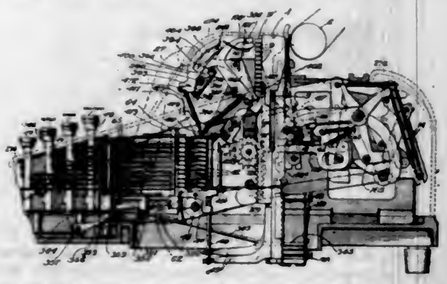
1. In a filing device, a holder for filing units having a plurality of elongated openings therein, a filing unit having a projection aligned with a vertical edge thereof adapted to be slidably positioned in any of said openings, and means for locking the projection therein.

1,626,886. FILING DEVICE. RITTENHOUSE M. SMITH, Mobile, Ala. Filed Feb. 20, 1922. Serial No. 538,043. 1 Claim. (Cl. 129—16.)



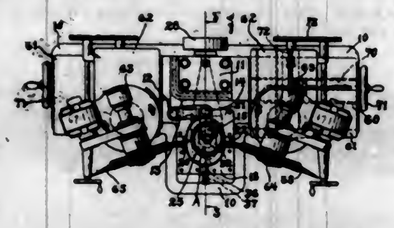
A card filing device, comprising in combination a grid of spaced parallel bars, a pair of parallel side members supporting said grid, disposed perpendicular to said bars at opposite ends thereof, one of said members being provided with a series of index characters each vertically above a space between two grid bars, and cards each having aligned with a vertical edge thereof an indicator and a positioning finger, said positioning finger fitting between any two grid bars, a portion on said finger being out of alignment with said vertical edge to prevent its ready removal from between the grid bars.

1,626,887. BORING TOOL. GEORGE H. SPENGLER, Rockford, Ill., assignor to Frank S. Vander Bogart, Rockford, Ill. Filed July 5, 1924. Serial No. 724,279. 1 Claim. (Cl. 77—69.)



A boring tool comprising a rotary body having a shank at one end, a threaded hole at its opposite end coaxial with the shank, a transverse slot in said opposite end extending diametrically of said hole, a cutter body removably fitting in said slot and having at each side of said hole a cutter blade extending parallel with the axis of rotation of the body proper, and a center pin threadedly engaged in said hole and clamping the cutter body to said body proper.

1,626,888. SELF-GUIDING AND RIDING CULTIVATOR. ALONZO L. STEWART, Rushville, Ind. Filed Feb. 2, 1926. Serial No. 85,459. 2 Claims. (Cl. 97—192.)



1. In combination with a cultivator having a frame and a plurality of cultivating gangs, a turner attachment comprising U-shaped turning means adapted at its midportion to be attached to the forward part of the cultivator frame, a turning means hingedly connected to each of the free ends of said U-shaped turning means, and tie links connecting said last mentioned turning means to the cultivator gangs.

1,626,889. ADDING AND LISTING MACHINE. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor, by mesne assignments, to Sundstrand Corporation, Wilmington, Del., a Corporation of Delaware. Filed Dec. 31, 1920. Serial No. 434,242. 33 Claims. (Cl. 235—60.)

4. An adding machine adapted to print in decimal and English currency notation, including a type-carrying member provided with twelve type adapted to print different characters, means to move said member to position a selected type at the printing line when printing an English currency item, and means to prevent said moving means from moving the uppermost type above the printing line when printing a decimal item.

1,626,890. GEAR-TOOTH GRINDER. HUBERT D. TANNER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 16, 1922. Serial No. 544,176. 26 Claims. (Cl. 51—52.)

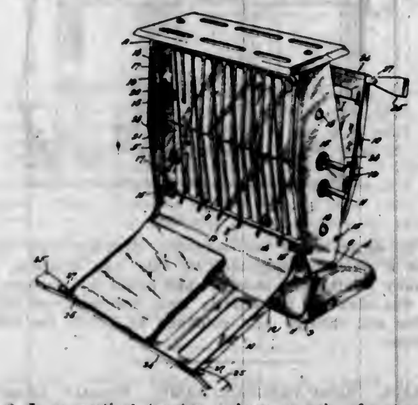
1. A gear tooth grinder comprising in combination, a base, a spindle supported thereon and adapted to rotatably mount a gear to be ground, means to bodily move said spindle in a closed path, means to simultaneously rotate said spindle whereby a rolling movement of the gear blank is effected about said closed path, and an abrasive wheel positioned to engage a gear tooth as said gear is rolled past said wheel.

1,626,891. JACK. WALTER B. TEMPLETON, Chicago, Ill. Filed Apr. 5, 1922. Serial No. 549,710. 2 Claims. (Cl. 254—1.)

2. A casing for a lifting jack adapted to support eccentrically applied loads, said casing formed with a hollow malleable cast metal base comprising outwardly and downwardly flaring front, rear and side walls, and a substantially flat bottom wall integrally joined to and extending inwardly of the lower margins of said walls, said bottom wall having a central opening and being of gradually decreasing thickness from its outer margins to the said opening, whereby it tends to assume an inverted dish shape under heavy loads.

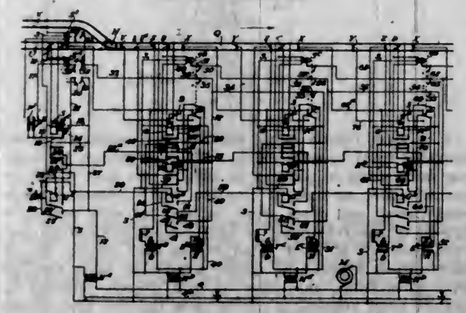
1,626,892. TOY GUN. WILLIAM A. TIDWELL, Indianapolis, Ind. Filed Dec. 16, 1926. Serial No. 155,153. 7 Claims. (Cl. 124—14.)

1. In a toy gun, a barrel, a disk pivotally mounted on each side of the barrel, a hammer finger normally extending upwardly from each disk, each of said disks having a notch formed therein, a trigger having its upper end bifurcated to straddle the barrel from its under side and pivotally carried on the barrel by said ends, and a pawl extending from each of said ends to engage in said disk notches.



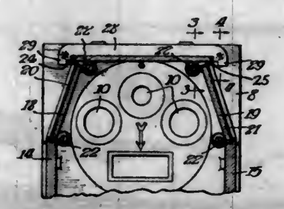
1,626,893. AUTOMOBILE BODY-VENTILATING SYSTEM. B WICKLIFFE TWYMAN, Marysville, Mich., and SYDNEY PAUL, Lima, Ohio. Filed Sept. 11, 1924. Serial No. 737,063. 3 Claims. (Cl. 98—22.)

1. The combination with a closed body of an automobile having a top canopy extending forwardly in front of the front wall and an air chamber formed in said canopy and communicating with the space in front of and adjacent said front wall, of air conduits leading rearwardly from said chamber and opening into the interior



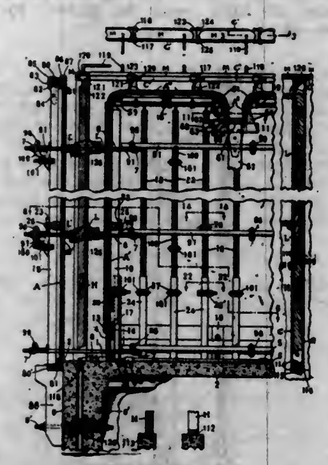
of the closed body, an air conduit leading from said air chamber into the upper forward corner of the closed body.

1,626,894. ELECTRIC TOASTER. FREDERICK A. VOLLBRECHT, Detroit, Mich. Filed Feb. 20, 1925. Serial No. 10,540. 6 Claims. (Cl. 53—5.)



6. In a vertical toaster, a base, a pair of outwardly and downwardly swingable trays, a pair of tray carrying inverted U-shaped members mounted on said base, a vertical heating element, and means supporting said heating element from and between said U-shaped members.

1,626,895. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1923. Serial No. 658,553. 20 Claims. (Cl. 246—37.)

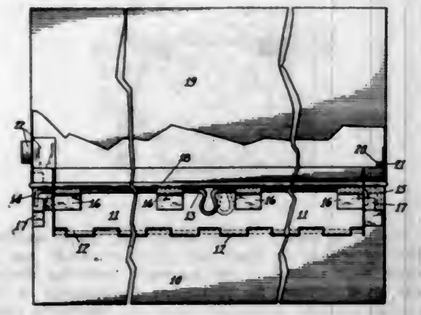


2. In combination, a stretch of railway track to which traffic is admitted at the same point from separate routes, railway traffic controlling apparatus associated with said stretch, means operative when a vehicle enters said stretch from one said route for controlling such apparatus, and means operative when a vehicle enters said stretch from another said route for modifying such control.

1,626,896. VENDING MACHINE. JOHN B. WATLING, Chicago, Ill. Filed May 24, 1924. Serial No. 715,558 7 Claims. (Cl. 211—8.)

1. Means forming a cabinet comprising plural sections, certain of which are fixed and others of which are removable with respect to the assembly, retaining devices on the fixed sections for preventing displacement of the removable sections in one direction, and inherently yieldable retaining devices also carried by the fixed sections for cushioning the removable sections and preventing their displacement in another direction, said yieldable retaining devices being positively secured to the fixed sections and adapted for rolling contact with the removable sections on occasion for the purpose defined.

1,626,897. CONCRETE CONSTRUCTION. AXEL G. W. WEDBERG, Floral Park, N. Y. Filed Dec. 7, 1922, Serial No. 605,394. Renewed Feb. 7, 1927. 54 Claims. (Cl. 25—131.)

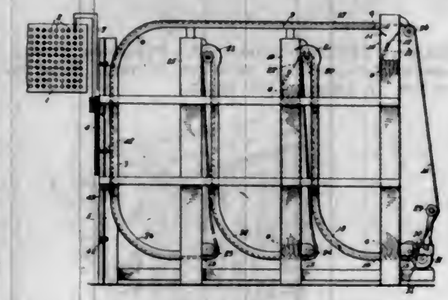


35. In concrete construction, inside and outside forms providing a mold for a vertical wall, concrete key blocks extending transversely across the mold space in vertical series, and a vertical series of detachably interlinked spacer blocks, one between each two adjacent key blocks, the interlinked blocks being restrained against movement in one direction relatively to each other.

50. A panel having a stiffener seat formed in the back surface thereof and a stiffener detachably held in said seat.

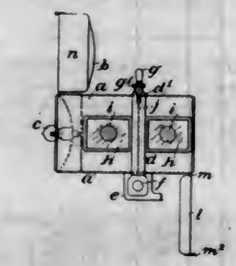
53. In concrete construction, a core shell having a rigid back portion, sectional front portions, and means within the shell for moving the front portions first towards the back and thereafter slidingly one upon the other to partially collapse the shell.

1,626,898. FILING TRAY. NELSON S. WELK, Athens, Ohio, assignor to The McBee Binder Co., Athens, Ohio, a Corporation of Ohio. Filed Sept. 19, 1925. Serial No. 57,300. 6 Claims. (Cl. 129—16.)



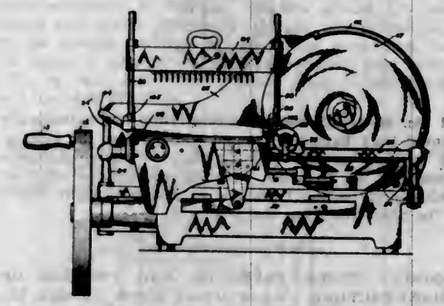
2. A filing tray comprising a lower section and an upper section, the lower section being formed with side walls and end walls, and a base; one of said side walls comprising a hinged section, formed to swing outwardly and downwardly from its hinge; means to lock the hinged section in normal position, as a part of the side walls; means to lock the upper section in position on the lower section.

1,626,899. ELECTRIC SIGN. FRANCIS E. J. WILDE, Meadowmere Park, N. Y., assignor to Motogram Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 57,984. 25 Claims. (Cl. 200—46.)



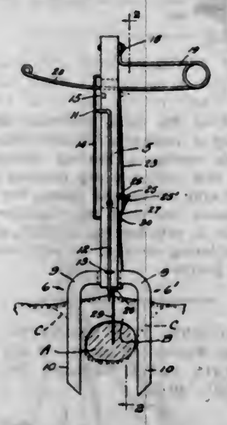
1. Apparatus of the character disclosed comprising a stack of disconnected sign patterns, a bank of switch devices having individualized contact elements operable on engagement by said sign patterns to control an electric sign in accordance with the outlines of said sign characters, a guideway for directing said sign patterns past the bank of switch devices in position to engage the contact elements of the switch devices which are positioned in the path of travel of such patterns, means for confining a group of the sign patterns stacked vertically in flat relation one on top of the other and means for automatically abstracting the sign patterns from one end of said stack and traversing them through the guideway to selectively operate the switch devices and for then returning said sign patterns to the opposite end of the stack faced in the same direction in which they were removed from the stack.

1,626,900. ELECTRIC-SIGN CONTROL. FRANCIS E. J. WILDE, Meadowmere Park, N. Y., assignor to Motogram Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1926. Serial No. 96,910. 12 Claims. (Cl. 200—46.)



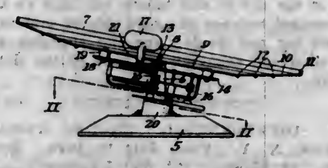
1. In apparatus of the character disclosed, sign elements, a series of magazines for said sign elements, a guideway for the sign elements and means for conveying said sign elements successively from one magazine into another and through said guideway back into the first magazine.

1,626,901. ROAD-VEHICLE LAMP. WILLIAM ERNEST WISH, Edgware, England. Filed Apr. 7, 1925, Serial No. 21,259, and in Great Britain Feb. 27, 1925. 3 Claims. (Cl. 240—82.)



1. A road vehicle lamp, comprising a casing, a glass-provided front to said casing, supporting means for holding said casing in position in such a way that it can be turned about an axis of rotation which passes through said casing and from front to rear of said casing, a lateral transparent panel to said casing, alternative electrical sources of light fitted within said casing, one of said sources adapted to project a forward beam through said glass front, the other of said sources adapted to project when required a lateral beam through said lateral panel, means for controlling both beams from the vehicle, a lever secured to the casing for turning said casing by hand about its axis of rotation, and an opaque cover for the rear of said casing, said cover normally confining the illumination of said other source of light to the interior of said casing for projection through said lateral panel but being displaceable to allow light from said other source to be projected rearwardly of the lamp casing.

1,626,902. MEAT SLICER. GEORGE RUE WOOD, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed June 13, 1923. Serial No. 645,139. 25 Claims. (Cl. 146—102.)

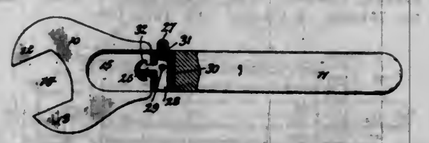


1. In a meat slicer machine, in combination, a rotary knife, a meat table, means for rotating said knife, and means for reciprocating said table past said knife, said knife rotating means and said table reciprocating means including driving means to bring said knife in a different angular position about its center relatively to said meat table during successive strokes of said meat table, and having means for changing said positions by uniform angular increments until a 360 degree cycle of positions is completed, said cycles being repeated indefinitely and a plurality of said cycles being required before any particular position of knife and table relatively to each other is exactly repeated.

1,626,903. MOLE TRAP. CHARLES A. WYMAN, Auburn, Wash. Filed June 20, 1925. Serial No. 38,403. 3 Claims. (Cl. 43—80.)

1. The combination with a trap frame having a slot, a plunger mounted for relative vertical movements to said frame, a sear spring for imparting downward movement to said plunger, said spring having one of its arms secured to the frame and its other arm extend through said slot into striking relation with the plunger, and a trigger fulcrumed to the frame, of connections between the trigger and the spring for releasably retaining the striking arm of latter in operative relation with respect to the plunger, said connections including a lever provided with a shoulder which is engageable with the spring for supporting the striking arm thereof and a trip arm controlled by the trigger for releasably retaining the lever in engaged relation with the spring.

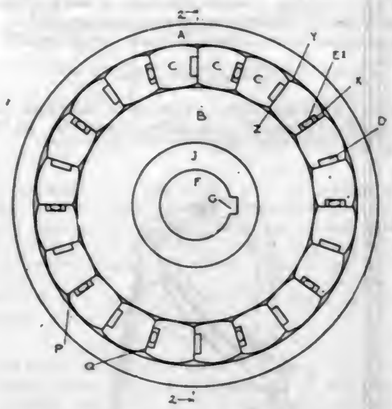
1,626,904. GYRATORY PAN TOY. CHARLES ZABEL, Coraopolis, Pa. Filed Dec. 15, 1925. Serial No. 75,529. 8 Claims. (Cl. 272—35.)



1. A toy including a track structure, a motor secured thereto, a shaft rotatably connected with the motor, a base, and an eccentric terminal on said shaft guided in the base.

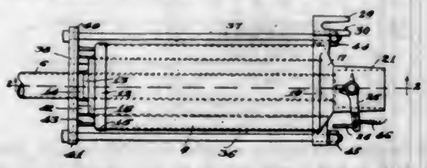
1,626,905. NUTCRACKER. LOTHAR R. ZIFFERER, Columbia, Pa. Filed Feb. 15, 1926. Serial No. 88,288. 2 Claims. (Cl. 146—16.)

1. In a nut cracker, the combination of a pair of jaws interpivoted at one end, spring means tending to separate the jaws, an arm extended from the free end of one jaw to overlie the corresponding end of the other jaw, a rib extending longitudinally along the jaw last named, a lever having a slotted arm adapted to straddle the rib and bear against the jaw, and a pivotal connection between the lever and the arm which is extended from the other jaw, substantially as described.



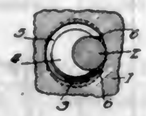
1,626,906. WRENCH. JOHN ZILLIOX, Orchard Park, N. Y. Filed Aug. 26, 1924. Serial No. 734,310. 1 Claim. (Cl. 81—119.)

A wrench comprising a head provided on its front end with a socket adapted to receive the article to be engaged and provided on opposite sides of its rear end with recesses which are separated by an intervening web, a handle bar provided with a longitudinal slot extending from its front end rearwardly and forming two arms, said slot being adapted to receive said web and said recesses being adapted to receive said arms, the rear end of said web being provided with a notch which is undercut on its opposite sides forming two forwardly facing shoulders, a T-shaped latch arranged within said slot and pivoted to said handle and having a hook projecting longitudinally forward from said pivot and adapted to engage with either of said shoulders and a cross-bar having its ends projecting



laterally in opposite directions from said pivot, one end of said cross-bar forming a finger-piece and having a slit in its rear side, and the other end of said cross-bar forming a stop which is adapted to engage with the rear end of the slot in said handle bar, and an L-shaped spring arranged between the rear side of said catch and the handle bar and having one end engaging said slit and the other end engaging the back of the slot in the handle bar.

1,626,907. DIFFERENTIAL. CIPRIANO ANDRADE, Jr., New York, N. Y. Filed July 9, 1924. Serial No. 725,065. 12 Claims. (Cl. 74—7.)

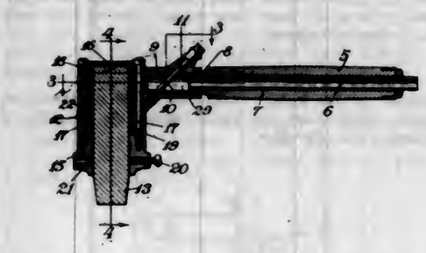


1. In a differential; a first driven member; a second driven member; a driving member with its locking surface cylindrical in form; a first plurality of locking members between the driving member and the first driven member, said locking members being arranged in contact with each other; a second plurality of locking members between the driving member and the second driven member, said locking members being arranged in contact with each other; and means whereby the first plurality of locking members and the second plurality of locking members are held from any substantial relative circumferential movement past each other about the circumference of the driven members.

1,626,908. MUFFLER CUT-OUT. FREDERICK A. ARMSTRONG, Sawtelle, Calif. Filed Dec. 6, 1924. Serial No. 754,325. 2 Claims. (Cl. 137—160.)

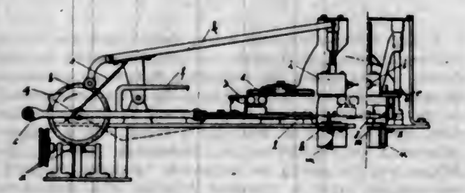
1. In a muffler, the combination of an exhaust pipe formed with an annular rib, spaced from its outer end, a muffler housing embodying end walls formed with openings through which said exhaust pipe extends, said muffler being arranged with its inner end wall abutting the rib on the inner side thereof, a yoke positioned astride said exhaust pipe adjacent the rib thereon, bolts connecting said yoke to the outer end wall of said muffler for retaining said inner end wall in place and also securing the muffler to the exhaust pipe, and a valve in said outer end wall adapted to open or close direct communication between the outer end of said exhaust pipe and the atmosphere.

1,626,909. BONDING PIN. LOUIS H. AYER, Chicago, Ill. Filed Feb. 9, 1923. Serial No. 617,969. 9 Claims. (Cl. 173—283.)



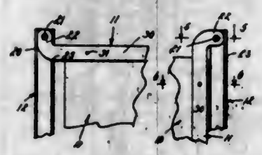
1. An electrical connector comprising a longitudinally grooved body having a tapered end portion, the remaining portion of the body having the same thickness throughout on a plane bisecting the groove, and of gradually increasing thickness on planes at right angles to the plane bisecting the groove.

1,626,910. FLOUR IMPROVER AND PROCESS OF MANUFACTURE. DAVID JULIAN BLOCK, Chicago, Ill., assignor to William D. Stein, Chicago, Ill. Filed Aug. 29, 1925. Serial No. 53,426. 5 Claims. (Cl. 99—10.)



3. A flour improver comprising as its essential ingredients principally a monosaccharide and a non-injurious acid.

1,626,911. SOLDERING IRON. HENRY E. BRACH, Valparaiso, Ind.; Frances Brach administratrix of said Henry E. Brach, deceased. Filed Feb. 20, 1922. Serial No. 537,758. 4 Claims. (Cl. 158—26.)

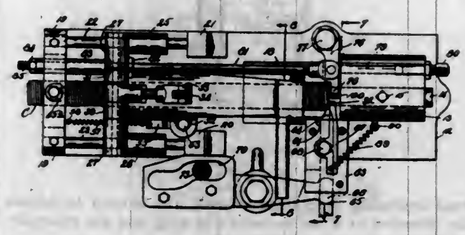


1. In a device of the class described, an open-ended holder comprising a casing, a handle connected to the side wall of said casing, a heating element insertable into one end of said casing, a cap forming a closure for the other end of said casing, and means for securing said casing, said element and said cap together, a soldering element insertable in said heating element, and means for securing said soldering element in said heating element in any adjusted position.

1,626,912. MACHINE FOR PRINTING AMPULLÆ. ALBERT BRAND, Munich, Germany. Filed Dec. 9, 1925, Serial No. 74,412, and in Germany Feb. 4, 1924. 1 Claim. (Cl. 101—40.)

A machine for printing ampullæ, comprising in combination with the machine frame a printing head containing positive type, a main driving shaft, means for communicating a reciprocating movement in vertical direction from said main driving shaft to said printing head, a rubber plate underneath said printing head, an elastic support for said rubber plate, an inking mechanism mounted on a carriage, means for communicating to said carriage of the inking mechanisms a forward and backward movement so that an ampulla placed by hand behind said rubber plate is rolled over said rubber plate by the moving carriage of the inking mechanism and the negative copy of the text printed onto said rubber plate by said descending printing head is transferred onto the ampulla.

1,626,913. SIGNAL. FRED A. BROWN, Los Angeles, Calif. Filed Apr. 23, 1923. Serial No. 634,167. 1 Claim. (Cl. 116—173.)



A danger signal including a base, a standard adapted to be detachably mounted on the base, an arm having an offset part at one end, a pin pivotally connecting the offset part of the arm to the upper end portion of the standard whereby the arm is movable between a position where its main part is parallel with the standard and a position where its main part extends laterally from the standard, the standard being formed with a notch which receives the offset part of the arm and which forms a shoulder in the standard to engage the main part of the arm and support it in the last mentioned position, a signal part carried by the arm, the signal part being of flexible material and carried by the arm to hang therefrom when the arm is in the last mentioned position and to wrap around the arm and standard when the arm is parallel to the standard, and tape on the signal part for securing it when wrapped around the arm and standard.

1,626,914. MACHINE FOR PLACING WASHERS ON UPSTANDING PINS. WILLIAM H. BROWN, Cleveland, Ohio, assignor to Dryden Rubber Company, a Corporation of Illinois. Filed Aug. 24, 1925. Serial No. 52,146. 21 Claims. (Cl. 18—1.)

1. In a machine of the class set forth, a rotary tumbler-barrel having around its edge a series of inclined notches leading into a series of radial channels, these channels being centrally deepened, a closure-plate for the open end of the tumbler-barrel, and a receiving-channel arranged in juxtaposition to the aforesaid radial channels.

1,626,915. APPARATUS FOR MAKING RINGS. EDWIN C. BUFFINGTON, Manchester, N. H., assignor to U. S. Bobbin & Shuttle Company, Manchester, N. H., a Corporation of Rhode Island. Filed Jan. 26, 1926. Serial No. 83,860. 58 Claims. (Cl. 140—88.)

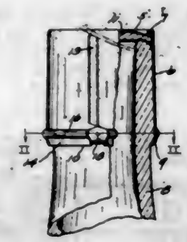
1. Apparatus of the class described comprising means for severing a turn from a helical coil, means for holding said turn during the severing operation and means forming said turn into a true ring, the turn being discharged from the forming means before the next turn is severed from the coil.

1,626,916. STABILIZATION OF PLASTICS. CHARLES E. BURKE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 24, 1925. Serial No. 39,380. 9 Claims. (Cl. 106—37.)

4. A nitrocellulose plastic composition containing an ester of phenylglycine as a stabilizer.

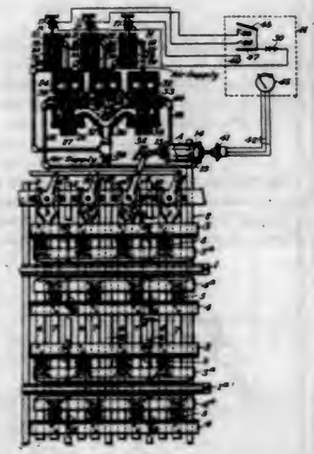
7. A nitrocellulose plastic composition containing between one half per cent and five per cent of an ester of the phenyl derivative of amino-acetic acid.

1,626,917. RECEPTACLE CLOSURE. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a Corporation of Ohio. Filed July 5, 1923. Serial No. 649,576. 8 Claims. (Cl. 215—44.)



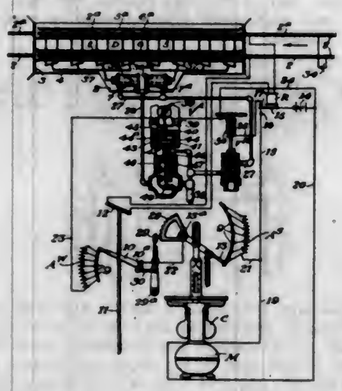
1. A sheet metal cap comprising a cover portion and a flange portion projecting downwardly therefrom, said flange portion being bent outwardly to form an annular rib, the bottom portion of the flange being bent outwardly horizontally beneath said rib closely adjacent thereto and parallel therewith to provide a smooth substantially flat annular double fold surface at the bottom of said flange.

1,626,918. RECEPTACLE CLOSURE. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a Corporation of Ohio. Filed July 5, 1923. Serial No. 649,577. 15 Claims. (Cl. 215—46.)



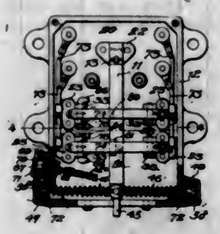
1. A closure comprising a cover portion and a skirt or flange, said flange being circumferentially scored adjacent its lower edge to provide a removable strip comprising

that portion of the flange between the score and bottom edge of the flange, said strip being formed with a hollow



bead extending lengthwise thereof and shaped to permit the insertion of a tool between the strip and the container to which the closure is applied.

1,626,919. RAILWAY BRAKING APPARATUS. JOHN P. COLEMAN, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1924. Serial No. 759,209. 17 Claims. (Cl. 303—20.)

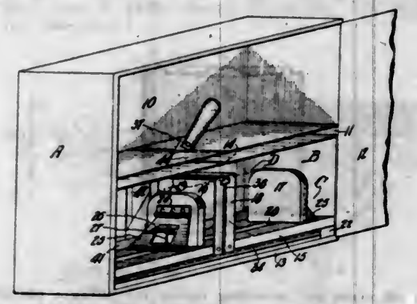


1. Railway braking apparatus comprising a brake bar in the trackway, a cylinder, a piston in said cylinder operatively connected with said brake bar, a first main valve normally closed and arranged when opened to admit air to one end of said cylinder to move said brake bar into engagement with a part of a vehicle, a first pilot valve for controlling said first main valve, a second main valve normally open to connect the said end of the cylinder to atmosphere, a second pilot valve for controlling said second main valve, a third main valve normally closed and arranged when opened to admit air to the other end of said cylinder to release the brake bar, a third pilot valve for controlling said third main valve, and electrical means for controlling said pilot valves from a distant point.

1,626,920. RAILWAY-CAR RETARDER. JOHN P. COLEMAN, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1925. Serial No. 16,329. 41 Claims. (Cl. 303—22.)

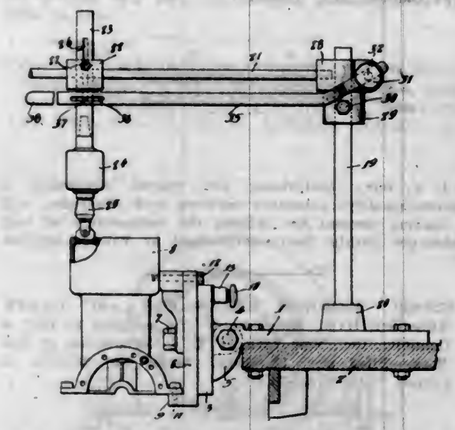
1. In combination, a car retarder, and means controlled jointly by the weight of a car and by the speed of a car approaching the retarder for varying the braking effort exerted by the retarder.

1,626,921. SAFETY ATTACHMENT FOR AIRCRAFT. THEODORE DOUGLAS, Scarboro, N. Y., assignor to Duplex Engine Governor Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 24, 1919. Serial No. 272,958. 9 Claims. (Cl. 200—52.)



1. The combination of an element mounted to be movable in response to a shock, a pair of springs engaging said element, means for adjusting said springs, and a third spring adjustably mounted adjacent said element to prevent operation thereof except under predetermined conditions.

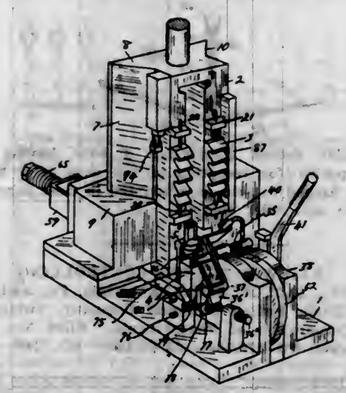
1,626,922. CULINARY APPARATUS. CHARLES F. DOWNS, Cleveland, Ohio. Filed Aug. 10, 1925. Serial No. 49,335. 10 Claims. (Cl. 146—150.)



1. An apparatus of the character described including, a table to support an object, a bracket attachable to and removable from said table and adapted to be moved on said table to abut one end of the object, a bracket attachable to

and removable from said table and adapted to be moved on said table to abut the other end of the object, and each

of said brackets provided with means to automatically engage said table and thereby lock the bracket in the position it is moved to.



1,626,923. UNIVERSAL BENCH MOTOR STAND. WILLIAM MARTIN DRENNON, Anaheim, Calif. Filed Dec. 10, 1924. Serial No. 754,973. 5 Claims. (Cl. 29—89.)

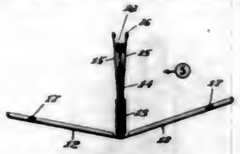
1. In a bench stand for supporting the cylinder block of an engine, the combination of a base-plate constructed to rest upon the bench, a rotary head supported on the base-plate so as to rotate on a horizontal axis, said head having a transverse shoulder to be engaged by the flange of the cylinder block, a bolt carried by the rotary head on the opposite side of the said axis of rotation for connection to regular tapped holes in the block, means for holding the rotary head in a plurality of different positions, a post extending up from the base-plate, a radial arm carried by the post, and a carriage movable along the arm for supporting a motor for driving a vertical tool to operate upon the block.

1,626,924. MACHINE FOR TRIMMING THE EDGES OF BEARING OR LIKE SECTIONS. CHARLES W. EGGENWEILER and WILLIAM J. FIEGEL, Detroit, Mich., assignors, by mesne assignments, to Bohn Aluminum and Brass Corporation, a Corporation of Michigan. Filed Nov. 17, 1924. Serial No. 750,502. 36 Claims. (Cl. 90—33.)

27. In a machine for trimming bearing or like sections, the combination with a clamping member having a concave face with a radius equal to the radius of the outer face of the final bearing or like section, of a cooperating clamping member engageable with the inner face of the bearing or like section for forcing its outer face

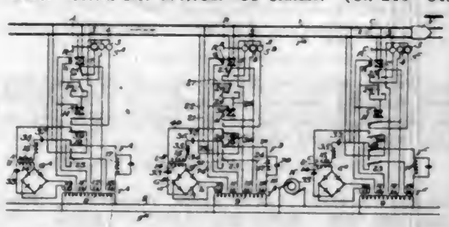
into contact with the concave face of said first-mentioned clamping member, and means for trimming the side edges of the bearing or like section while held between said clamping members.

1,626,925. ALLOY. VAHAN FENER, Chicago, Ill. Filed Jan. 14, 1926. Serial No. 81,314. 1 Claim. (Cl. 75—1.)



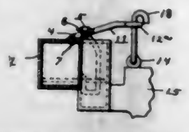
An alloy comprising copper in the proportion of substantially 100 pounds to tin varying from 3 to 25 pounds, modified by the addition of ammonium chloride approximately one pound, and potassium ferrocyanide varying from 5 to 25 drachms while the metals are in molten condition.

1,626,926. FLEXIBLE SWAB. ELWIN W. FORROW, Anaheim, Calif. Filed May 19, 1925. Serial No. 31,309. 11 Claims. (Cl. 103—225.)



1. In a swab of the class described, the combination of a plurality of sections, means for connecting the sections in flexible relation and cup shaped packing members mounted on the connecting means between said sections and a fluid passage formed through the said sections and through the said connecting means.

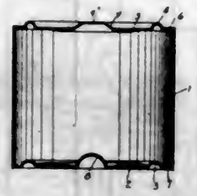
1,626,927. TOILET ARTICLE. WILLIAM FRIEDMAN, New York, N. Y. Filed Feb. 12, 1926. Serial No. 87,812. 7 Claims. (Cl. 132—79.)



1. A toilet article comprising a base having an elongated pocket for reception of the base of a filler, and covers hinged to said base adapted to close together and enclose said filler therein.

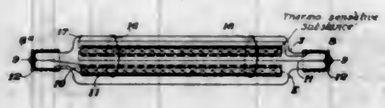
1,626,928. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. PAUL H. GEIGER, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1923. Serial No. 676,731. 38 Claims. (Cl. 246—34.)

1. Railway traffic controlling apparatus comprising means responsive to traffic conditions in advance for at times supplying periodic current at one frequency to the track rails of a section, and for at times supplying said rails with alternating current of one relative polarity or the other at another frequency, and governing means responsive to said currents.



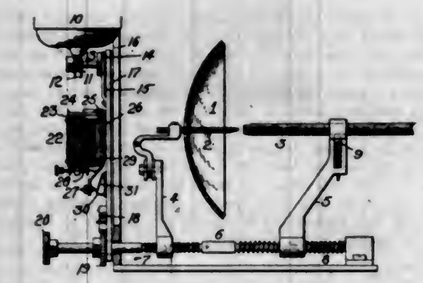
1,626,929. UNCOUPLING LEVER. CARL M. GOLDINGER, Tarentum, Pa., assignor to Walter P. Murphy, Chicago, Ill. Filed June 15, 1921. Serial No. 477,767. Renewed Oct. 1, 1926. 6 Claims. (Cl. 213—170.)

1. In an uncoupling device for car couplers the combination with a car coupler having an automatic lock pin provided with an eye, of a substantially U shaped rigid lock pin lifting link loosely journalled at its bottom in the eye of the pin, and forwardly extending open bend portions at the top of each leg of the link, and two independently mounted levers, a flexible operative connection between each of said levers and each leg of the link, whereby the link and pin may be raised by either lever independently and without disturbing the normal position of the other lever, and whereby the lever operated may return to normal position without disturbing the lock set position of the lock pin.



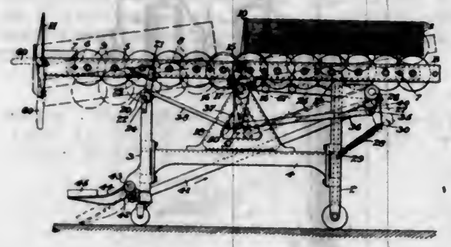
1,626,930. CONTAINER. CHARLES C. GROGG, Mansfield, Ohio. Filed Sept. 11, 1925. Serial No. 55,705. 2 Claims. (Cl. 220—97.)

1. In a container of comparatively small size, a body portion of uniform size, a closure member of the same size as the body portion for the body provided with an annular rib, another closure member of the same size as the first closure member provided with an annular groove, both closure members being constructed complementary



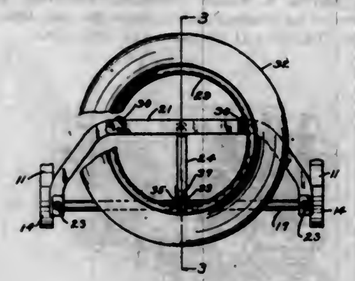
to each other for providing means for piling a plurality of containers symmetrical in alignment with each other and maintaining the equilibrium of said containers, when piled upon each other.

1,626,931. ELECTRICAL RELAY. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1921. Serial No. 525,097. 14 Claims. (Cl. 179—171.)



1. A relay comprising two spaced electrodes, a thermo-sensitive substance between said electrodes, and a heating element for varying the temperature of said substance within limits determined by voltage applied.

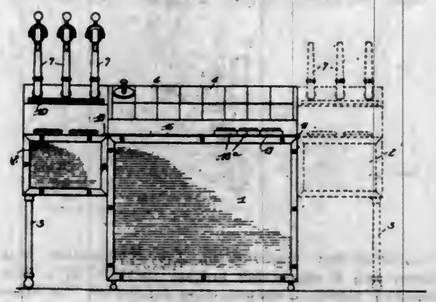
1,626,932. FEEDING MEANS FOR ARC LAMPS. THEODORE HALL, Brooklyn, N. Y., assignor to Hall & Connolly, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 13, 1923. Serial No. 668,273. 5 Claims. (Cl. 176—76.)



1. In a feeding mechanism for projector lamps, the combination with a control coil connected across the arc, of motive means for effecting the feed, a pair of contacts governed by the coil and in circuit with said means to render the same operative, one of said contacts having an inclined face and being connected to said means so as to be moved transversely to the other contact for the purpose specified.

1,626,933. RECEIVING BANK. EDGAR M. HAWKINS, Rochester, N. Y., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed June 9, 1925. Serial No. 35,865. 23 Claims. (Cl. 193—40.)

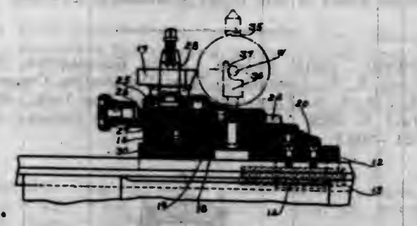
1. A receiving bank comprising a frame, a work-receiving table mounted thereon, means for moving said table from a generally horizontal work-receiving position to an inclined work-shifting position, a work holding stop intermediate the length of the table, and means for moving said stop to releasing position when the table is tilted.



1,626,934. TIRE CARRIER. GUY P. HENRY, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 25, 1925. Serial No. 46,119. 2 Claims. (Cl. 224—29.)

1. In a motor vehicle, the combination with frame side members and a cross-member, means for supporting a spare rim thereon comprising an inverted U-shaped frame secured at its free ends to said side members, means on said U-shaped frame for supporting a rim, and a brace for said U-shaped frame rigidly connected to the central portion thereof and extending rearwardly and downwardly to receive a clamping member, the lower portion of said brace being bent forwardly and downwardly to provide a rim abutment.

1,626,935. BEVERAGE COOLING AND DISPENSING APPARATUS. FREDERICK W. HOLDERLE and CARL L. HOLDERLE, Rochester, N. Y. Filed Jan. 18, 1926. Serial No. 82,033. 11 Claims. (Cl. 225—28.)

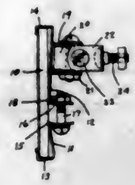


1. In a beverage cooling and dispensing apparatus, the combination with a central cooler unit, of a reversible sink and draft arm end unit, attachable at either end of the central unit, and a drain board reversibly positionable on the cooler unit so as to cooperate with a sink and draft arm unit at either end of the cooler unit.

4. In a beverage cooling and dispensing apparatus, the combination with a cooler compartment and rinsing sink, of a cover for the cooler compartment consisting of a drain board that is slidable over the sink.

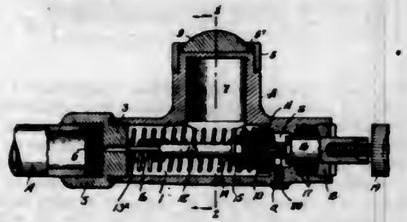
11. The combination with a cooler compartment and adjacent rinsing sink, of a cover slidable along over the cooler compartment and over the sink.

1,626,936. BALL-TURNING DEVICE. WALTER E. INGHAM, Newington, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 14, 1924. Serial No. 713,263. 3 Claims. (Cl. 82—12.)



2. A ball turning rest for lathes comprising in combination, a cross slide, a supporting plate adjustably secured thereto, a rotatable member retained in said supporting plate, a cutting tool adjustably mounted on said rotatable plate, a member inserted in said rotatable member, a member inserted in the axis of rotation of said rotatable plate and adapted to engage a member mounted for rotation in said lathe, whereby the axis of rotation of said rotatable member will intersect the axis of rotation of work being in said lathe.

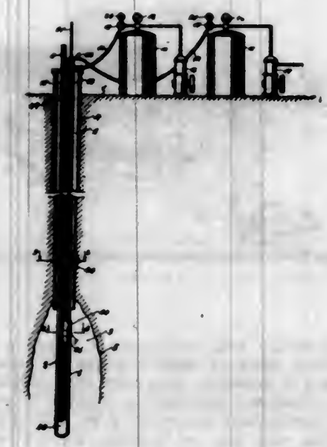
1,626,937. NECKTIE HOLDER. ARNO KAUFMANN, Pforzheim, Germany. Filed Mar. 23, 1926, Serial No. 96,769, and in Germany Mar. 30, 1925. 2 Claims. (Cl. 24—61.)



1. A neck-tie holder comprising in combination, a capsule, and a wire frame on which the tie is supported, the ends of said bent wire frame forming the locking springs in said capsule and being held between the front and rear walls of said capsule.

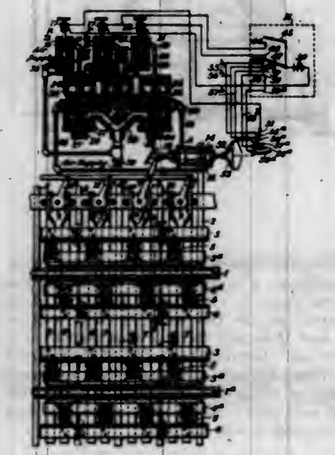
1,626,938. REAR-VIEW-MIRROR SUPPORT. BERT F. KELLY, Indianapolis, Ind., assignor to Parts Corporation, Indianapolis, Ind., a Corporation. Filed Dec. 21, 1925. Serial No. 76,720. 2 Claims. (Cl. 45—97.)

1. In a rear view mirror, the combination with a mirror and a supporting bracket therefor, of a pair of clamping plates, U-shaped clips formed on the opposite ends of said plates having a downwardly protruding lip for engaging over the front edge thereof and spaced from the relatively long shank portion of the plate at a greater distance than the width of the mirror, the intermediate portion of the U-shaped clip engaging the rear edge of the mirror, whereby the relatively long shank portion of the plate will extend inwardly at an angle to the rear surface thereof, rearwardly extending ears bent outwardly from the opposite end of the shank portion of said plate from the U-shaped portion, and a bolt extending through and drawing said ears together at a distance from the point of contact with the rear surface of the mirror for causing said plates to bear against said surface as a fulcrum at said point of contact and impart oppositely directed forces to said U-shaped clips whereby the mirror will be clamped between said clips and the fulcrum points of said plates intermediate its edges.



1,626,939. SOAP VALVE. LOUIS KOOPERSTEIN, New York, N. Y., assignor to West Disinfecting Company, New York, N. Y., a Corporation of New York. Filed June 9, 1926. Serial No. 114,731. 3 Claims. (Cl. 221—102.)

1. A soap valve comprising a casing provided with an inlet and an outlet passage, a valve disk normally shutting off the outlet from the inlet, a rod supported by the valve disk and provided with a duct normally closed by the disk, means carried by the rod for closing the inlet and means for successively actuating the rod and the valve disk to first close the inlet and open the duct for passage of soap to the discharge outlet and secondly permit the passage of soap around the valve disk to the outlet.

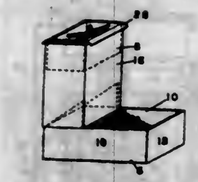


1,626,940. BURNER FOR OIL-WELL CLEANERS. WILLIAM A. J. KREAGER, Denver, Colo. Filed Dec. 19, 1925. Serial No. 76,460. 5 Claims. (Cl. 166—16.)

1. An apparatus for burning gas, comprising in combination, a burner head having an opening for the passage of air and another opening for the passage of gas, a cylindrical member attached to the burner head at one end and having the other end closed, a flue for the escape of products of combustion attached to said cylindrical member near the closed end, means for introducing air and gas in proper proportions to produce a combustible

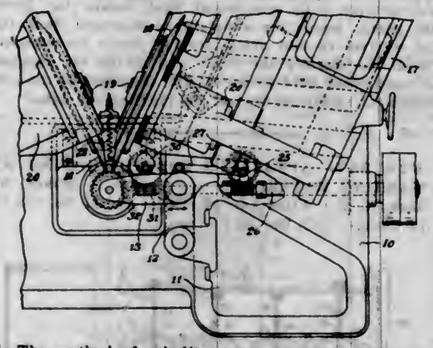
mixture, means for intimately mixing the air and gas at the point of entrance and means for introducing any additional air for the purpose of enveloping the flame.

1,626,941. RAILWAY BRAKING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1924. Serial No. 759,205. 11 Claims. (Cl. 303—20.)



1. Railway braking apparatus comprising a brake bar located in the trackway, a fluid pressure motor for operating said bar, a plurality of contacts successively actuated as the pressure supplied to said motor increases, and means including said contacts for supplying fluid pressure to said motor.

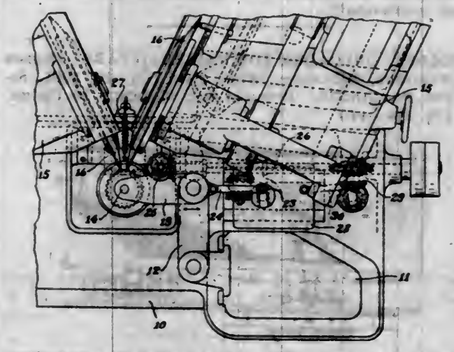
1,626,942. CALCIUM ARSENATE PRODUCTS AND PROCESS OF MAKING THE SAME. WILLIAM J. LIPPERT, Timonium, Md., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1924. Serial No. 691,025. 9 Claims. (Cl. 23—53.)



1. The process which consists in causing precipitated calcium arsenate material to become converted into the form of a swelling paste-like mass and then treating said paste-like mass for the recovery therefrom of small, uniform, rounded, solid particles of product.

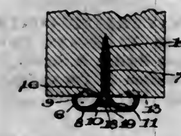
1,626,943. DISPENSING DEVICE. GORDON THOMAS LYONS, Los Angeles, Calif. Filed May 21, 1926. Serial No. 110,795. 4 Claims. (Cl. 206—31.)

2. The combination with a match box equipped with a slidable cover, of a holder comprising an upstanding tongue, a delivery portion, beveled guide projections associated with said delivery portion, said tongue and said projections being adapted to guide and support said match box as said box is pushed down thereon to feed the matches to said delivery portion, and a removable burned match container associated with the upper space of said match box.



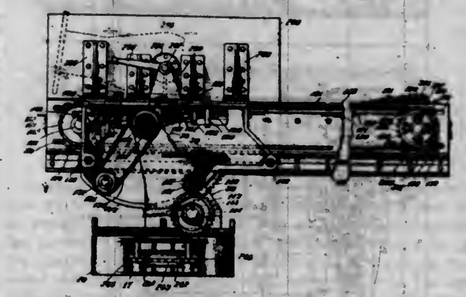
1,626,944. GEAR GRINDER. MAX MAAG, Schwamendingen, Switzerland, assignor to Maag Gear Wheel and Machine Company, Ltd., Zurich, Switzerland, a Corporation of Switzerland. Filed Nov. 30, 1923. Serial No. 677,841. 11 Claims. (Cl. 51—52.)

1. The method of grinding tooth curves of gears comprising supporting a gear so that it may be moved in any direction while its axis is maintained in parallel positions, rolling said gear blank past an abrasive wheel, returning the blank to its initial position without further rolling movements, and moving said blank into and out of relation with said wheel in timed relation with the rolling movements.



1,626,945. GEAR GRINDER. MAX MAAG, Schwamendingen, Switzerland, assignor to Maag Gear Wheel and Machine Company, Ltd., Zurich, Switzerland, a Corporation of Switzerland. Filed Nov. 30, 1923. Serial No. 677,842. 7 Claims. (Cl. 51—52.)

1. The method of grinding the tooth curves of a gear comprising rolling a blank past a grinding wheel through a distance substantially equal to its circular pitch, withdrawing said gear from contact with said wheel, indexing said gear between successive rolling and withdrawing motions, returning said gear to engage said wheel, and

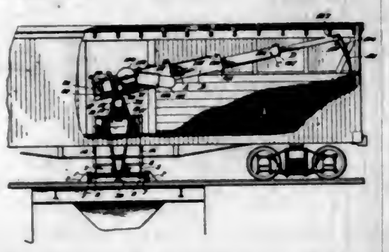


continuing said rolling and indexing motions in timed relation to each other while the gear is being advanced in the direction of the rolling motion.

1,626,946. ANTIFRICTION TIP FOR FURNITURE. FRANK MACEY, Milwaukee, Wis. Filed Mar. 9, 1922. Serial No. 542,336. 4 Claims. (Cl. 16—42.)

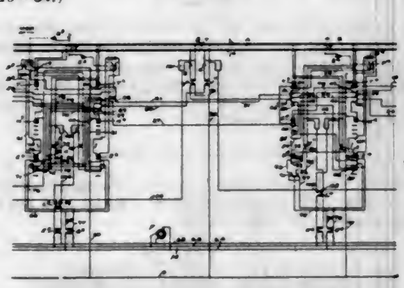
1. In an anti-friction tip for furniture, the combination of a cup-shaped floor-engaging member having a recessed central portion and an annular floor-engaging portion, and a brad having spaced cooperative flanges on its head end fixedly clamping it to said recessed central portion out of contact with the floor.

1,626,947. CAR LOADER. GEORGE MANIERRE, Milwaukee, Wis. Filed Nov. 14, 1921. Serial No. 514,972. 25 Claims. (Cl. 198—3.)

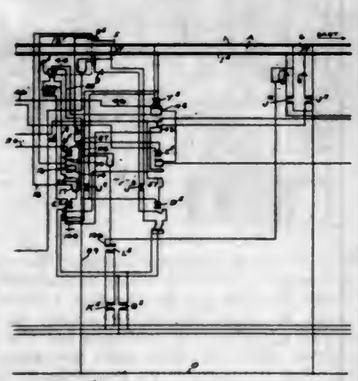


8. In a device of the character described, the combination of an endless conveyor, a motor for actuating the same, a frame structure for the conveyor, a tilting support on which the frame structure is carried, the frame structure being provided with guideways and the tilting support having rollers co-acting with said guide-ways, means controlled by the motor for longitudinally displacing the frame structure on said guide-ways and rollers, and means controlled by the motor for tilting said support.

9. In a device of the character described, the combination of an endless conveyor, a motor for actuating the

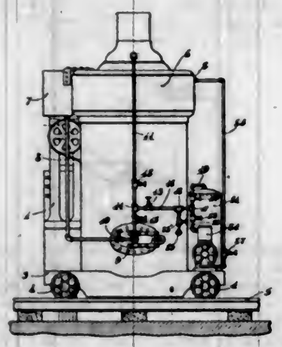


same, a countershaft from which the drive of the conveyor is derived, a supporting structure for the conveyor, and means for tilting said support about the axis of said countershaft.

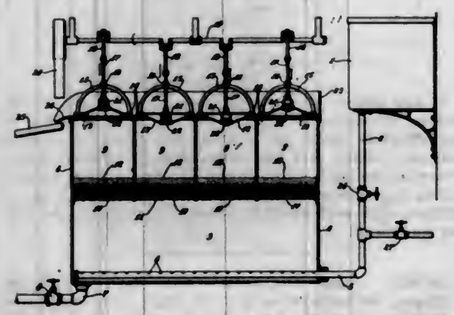


1,626,948. UNLOADER FOR RAILROAD CARS. GEORGE MANIERRE, Milwaukee, Wis. Filed Nov. 16, 1921, Serial No. 515,578. Renewed Oct. 6, 1926. 30 Claims. (Cl. 214—44.)

1. In an unloader, a supporting structure, including an angular bracket projecting laterally and upwardly from the structure, a boom structure carried by said bracket, and means carried by the boom structure for extending and contracting the same.



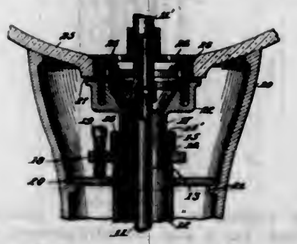
1,626,949. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 24, 1923. Serial No. 659,103. 6 Claims. (Cl. 246—34.)



1. In combination, a stretch of railway track provided with track circuits, two signals governing traffic in one direction along said track, means for controlling the rear signal by the forward signal and by the intervening track circuits, normally inactive means controlled by a portion of the controlling means for the rear signal for supplying train governing energy to the track in advance of the rear signal, and means controlled by a train approaching said rear signal for rendering said last mentioned means active.

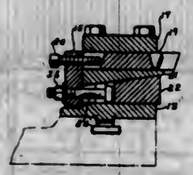
1,626,950. STEAM-GENERATING APPARATUS. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 23, 1921. Serial No. 454,778. 8 Claims. (Cl. 158—36.)

1. In a steam generating apparatus, a plurality of oil fired steam generating devices each having a steam storage chamber and an oil atomizer burner, means including a pump carried by one of said devices for filling the storage chambers of the others of said devices with compressed fluid after the generation of steam in said latter devices has ceased, a fluid receiver carried by the device which carries the pump, said pump being adapted to fill said receiver with compressed fluid, means for driving said pump, means for supplying compressed fluid from said receiver to said pump-carrying device for atomizing the oil for starting the same, and means for supplying the compressed fluid stored in said chambers of the other devices for atomizing the oil for starting the same.



1,626,951. APPARATUS FOR THICKENING AND WASHING MATERIALS. ASHELEIGH S. MOSES, New York, N. Y. Filed Apr. 17, 1922. Serial No. 554,121. 11 Claims. (Cl. 92—32.)

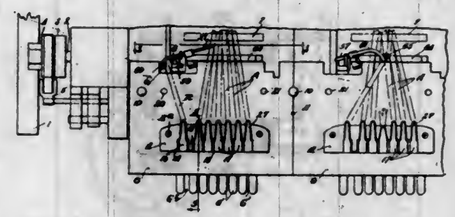
8. In the art of concentrating wet pulp or like material, the process, comprising, filtering the liquor from the material by passing the liquor upwardly through the filtering medium, applying periodically a downward pressure to the liquor in order to dislodge the filtered material downwardly from the filtering medium, and accumulating the filtered material below the filtering medium.



9. In the art of concentrating wet pulp or like material, the process, comprising, filtering the liquor from the material by passing the liquor upwardly through the filtering medium, applying periodically alternate opposite pressures to the liquor, whereby the liquor is forced upwardly through the filtering medium and the filtered material is dislodged downwardly therefrom, and accumulating the filtered material below the filtering medium.

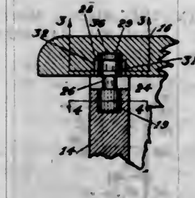
1,626,952. SLIP-JOINT COUPLING. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed July 21, 1920. Serial No. 397,824. 5 Claims. (Cl. 285—162.)

1. The combination with a pipe to be coupled having an exteriorly threaded end, of a correspondingly interiorly threaded coupling connected to said pipe, a recess in said coupling, an interiorly projecting packing seated in said recess, a clamping plate encircling said pipe, a second pipe telescoping said first mentioned pipe and in frictional engagement with said packing, a flange projecting outwardly from said coupling having a plurality of openings therein, and means extending through said openings for maintaining the clamping plate in position.



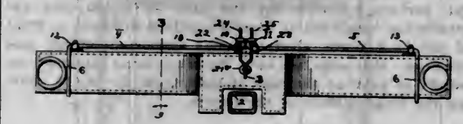
1,626,953. TOOL POST. FRIEDERICH MÜLLER, Elizabeth, N. J., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Original application filed Dec. 14, 1921, Serial No. 522,304. Divided and this application filed Dec. 7, 1923. Serial No. 679,218. 8 Claims. (Cl. 82—36.)

1. In a tool post, the combination with a frame, a top plate secured to the frame, and a cutting tool mounted in said frame, said cutting tool having the rear end formed at the same angle as the relief angle at the front end, of means for adjusting the longitudinal position of the cutting tool, and means for holding the tool in engagement with the top plate.



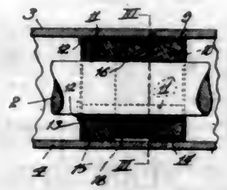
1,626,954. PIECE-UP MECHANISM FOR TEXTILE MACHINES. ROBERT E. NAUMBURG, Winchester, Mass. Filed July 11, 1925. Serial No. 42,957. 31 Claims. (Cl. 19—157.)

1. A machine of the class described comprising means for moving a group of active slivers in the same general direction, a holder for a reserve sliver common to the group, said holder normally being laterally removed from said group, and means responsive to breakage or exhaustion of any of said active slivers to move the reserve



sliver holder to a position such as to cause substitution of the reserve sliver for any such broken or exhausted sliver.

1,626,955. DESK BUMPER DEVICE. ALBERT S. NEWTON, Providence, R. I. Filed Oct. 8, 1926. Serial No. 140,267. 4 Claims. (Cl. 16—86.)



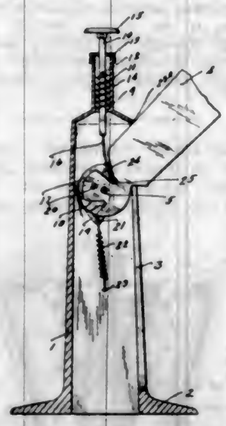
1. In a device embodying a movable member and a relatively fixed member, the combination with such members, of a plug embedded in one of said members and projecting therefrom, a sleeve embedded in the other of said members, and an elastic plug embraced by the sleeve in alignment with the first plug.

1,626,956. UNCOUPLING LEVER. CHARLES W. NICHOLAS, Tarentum, Pa., assignor to Walter P. Murphy, Chicago, Ill. Filed June 15, 1921, Serial No. 477,784. Renewed Oct. 1, 1926. 8 Claims. (Cl. 213—170.)

1. In a release rigging for car couplers the combination with two independently mounted levers on a car, an operating handle on the outer end of each lever depending normally in a substantially vertical position and lying against the end structure of the car, a crank on the inner end of each lever projecting forwardly from the car structure and terminating in an eye, of a single rigid member operatively connecting said cranks with the lock pin of the coupler, said member comprising two spaced arms terminating in a stop at their upper ends and a single open hook uniting the lower ends of said arms: said arms engaging the eyes of said cranks and vertically slidable therethrough, and said hook constructed to engage the lock pin of a coupler, whereby the member may be elevated as a unit by either lever to lift the lock pin without disturbing the normal position of the other lever and whereby the lever operated may return to its normal position without disturbing the lock set position of the lock pin.

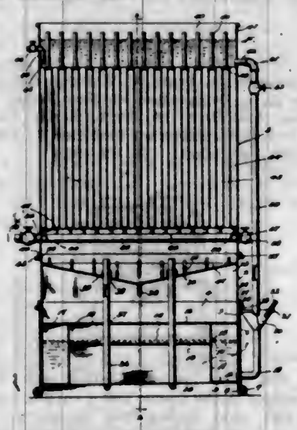
1,626,957. OIL PACKING FOR INCLOSED AXLES OR SHAFTS. ERNEST E. NOBLE, Yale City, Okla. Filed Mar. 8, 1922. Serial No. 541,959. 2 Claims. (Cl. 286—5.)

1. The combination of a housing, a shaft located in said housing, a lapped split pliant band mounted on said shaft, compressing means encircling said band, a washer located on each side of said band in frictional engagement therewith, and with the inner periphery of said housing for preventing said band from being turned by said shaft, and a retaining cage for supporting said band and said washers in abutting relation having apertures so that portions of said washers can engage said housing.



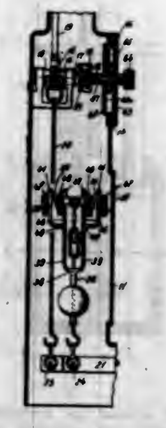
1,626,958. ILLUMINATED SIGN. MORTIMER NORDEN, New York, N. Y. Filed Feb. 14, 1924. Serial No. 692,677. 1 Claim. (Cl. 40—130.)

An illuminated sign comprising a back plate, a housing extending longitudinally along the top of said plate, another like housing at its bottom, solid letters having a dull surface, supports for the same to which they are detachably connected at a predetermined distance in front of the back plate, electric lamps supported within said housings, the edge of each housing being inclined inwardly to prevent the rays of light from the lamps striking the front surface of the letters.



1,626,959. TABLE SIGNALING DEVICE. LOUIS R. NYE, Portland, Oreg., assignor of forty-nine per cent to William O. Gallaway, Portland, Oreg. Filed Jan. 27, 1926. Serial No. 84,114. 2 Claims. (Cl. 116—132.)

2. In a table signaling device, the combination of an upright body portion having an outwardly projecting base, there being a longitudinal opening formed in said body portion; an arm pivotally mounted within said body portion adjacent the upper end thereof, and adapted to having an arrested rocking movement imparted thereto; said arm being adapted to pass through said longitudinal opening and to normally rest in said body portion; oppositely positioned and inwardly disposed notches formed on the inner end of said arm; the relative positions of said notches being changed from raised to lowered position, or vice versa, as said arm is rocked on its pivotal mounting; a sliding stem vertically mounted through the top of said body portion, and terminating at its lower end in a contacting rod engageable with the notch in the upper position to move the same down to lower position, at the same time rocking the arm and raising the notch theretofore in lower position, to upper position subsequently engageable by said contacting rod, a compression spring mounted about said



stem and adapted to disengage said contacting rod of said notches; and a yoke pivotally mounted to said arm adjacent its inner end and at a point spaced between said notches and adapted by means of a tension spring, having one end secured to said yoke and the opposite end secured to the upright body portion to maintain said arm stationary at the point of arrest of its rocking movement.

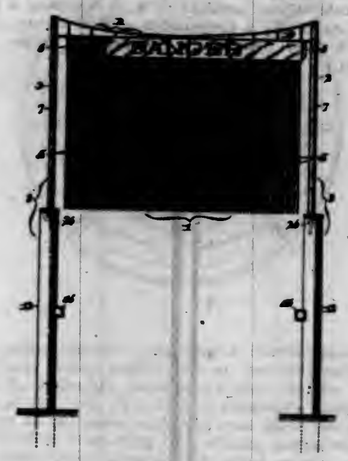
1,626,960. WATER STILL. ENNON V. OLIVER, Portland, Oreg. Filed Dec. 4, 1923. Serial No. 678,451. 11 Claims. (Cl. 203—5.)

1. In distilling apparatus, a generator comprising a hollow body, a preheating chamber extending about the interior of the body and including walls spaced from the walls of the body, means for supplying fluid to be distilled to the preheating chamber, a plate supported by and within the boundaries of the said walls of the preheating chamber and constituting, in connection with the upper portions of said walls, a generating chamber, the said upper portions of the walls above and relatively close to the said plate being formed with openings to provide for supply of the fluid from the preheating chamber to the generating chamber in a relatively shallow pool extending over the surface of the said plate.

1,626,961. PORTABLE SCALE. LOUIS ASHLEY OSGOOD, Dayton, Ohio, assignor, by mesne assignments, to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Mar. 16, 1920. Serial No. 366,223. 12 Claims. (Cl. 265—62.)

1. In a scale having a weight moved element and a pendulum counterbalancing means adapted to be variably displaced thereby in accordance with varying loads on the scale, in combination a plurality of counterbalancing pendulums, an aligned pivot mounting for all said pendulums, oppositely extending crank arms adapted to actuate said pendulums, an evener bar disposed below said crank arms, means connecting said crank arms and said evener bar and connections between said evener bar and said weight moved member.

1,626,962. GASKET. FRANK J. OVEN, Chicago, Ill., assignor to Victor Manufacturing & Gasket Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1921. Serial No. 526,163. 7 Claims. (Cl. 288—1.)

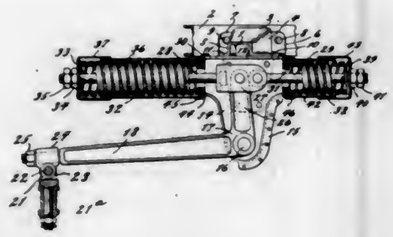


6. In a gasket, the combination with an annular structure having a circumferential recess and formed with laterally projecting flanges, of a seamless reinforcing member arranged within said annular structure with its edges overlapping the edges of said flanges.

1,626,963. WEIGHING SCALE. LOUIS A. OSGOOD, Dayton, and ELMER E. WOLF, Springfield, Ohio, assignors to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed July 25, 1922. Serial No. 577,316. 31 Claims. (Cl. 265—62.)

1. A pendulum load counterbalancing means for a weighing scale comprising in combination, a pair of pendulums having hub portions for said pendulums, a bearing member intermediate said hub portions, a flexible suspension means wrapped upon said hub portions and cooperating with said bearing member, and load transmitting flexible members wrapped upon said hub portions in an opposite direction to the aforesaid suspension means, and a common load transmitting element to which said last mentioned flexible members are connected.

1,626,964. GRADE-CROSSING GATE. JOSEPH DAVID PAUL, Philadelphia, Pa. Filed Dec. 2, 1924. Serial No. 753,428. 7 Claims. (Cl. 39—1.)

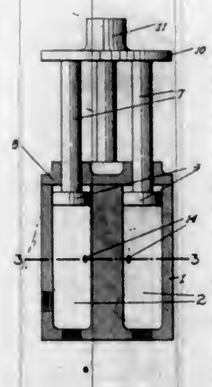


1. A grade crossing gate with supporting columns at opposite sides of the roadway to be protected; said gate comprising rods movable vertically in the columns, a flexible barrier hung crosswise between the upper ends of said rods by a catenary suspension, mechanism co-ordinating movement of the rods aforesaid to elevate the gate, latching means effective to restrain the movable rods when raised, said latching means when retracted permitting the gate to descend by gravity, and electromagnetic means controlling the aforesaid elevating mechanism and latching means.

1,626,965. FIRE-KINDLING MATERIAL. PETER L. PAULSON, Clinton, Minn. Filed Sept. 7, 1926. Serial No. 134,130. 3 Claims. (Cl. 44—34.)

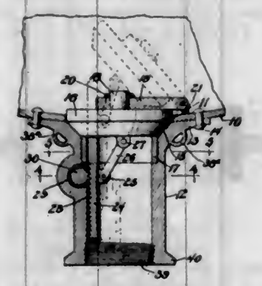
1. A kindling composition of the class described, including, in a mixture, resin, wood shavings, rubber, coal tar creosote oil, gasoline, and celluloid.

1,626,966. SPRING-SUSPENSION DEVICE OR SHOCK ABSORBER. ERIC J. PILBLAD, Brooklyn, N. Y., assignor to Russel Sutherland Smart, Ottawa, Canada. Filed Apr. 21, 1924. Serial No. 707,820. 24 Claims. (Cl. 267—20.)



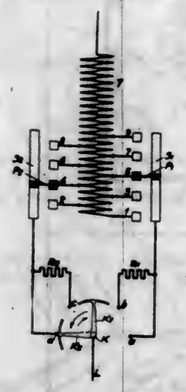
11. In a suspension device of the character described, a horizontally extending arched and flanged bracket and a vertically extending supporting member connected thereto.

1,626,967. GOLF-CLUB SHAFT. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1927. Serial No. 163,187. 6 Claims. (Cl. 273—81.)



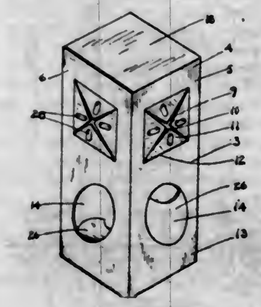
1. A metallic golf club shaft having an encircling hand grip sleeve of relatively firm material united to the shaft by an interposed member of torsionally distortable material having an inherent quality of returning to normal position after distortion.

1,626,968. LIQUID-CONTROL MEANS FOR HYDRAULIC BRAKES. LAURENCE L. RECKLER, Westwood, Calif. Filed Nov. 11, 1925. Serial No. 68,320. 1 Claim. (Cl. 188—152.)



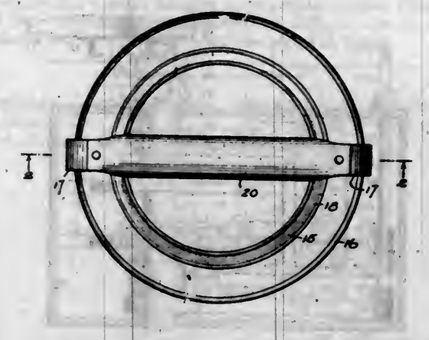
A fluid control means for hydraulic brake systems comprising a plurality of cylinders, having outlets for connection to individual pipes, plungers in the cylinders, a common means for enabling all said plungers to be operated simultaneously, the cylinders between the inner ends of the plungers and the outlets being arranged to be maintained filled with a liquid, there being communicating passages between the cylinders intermediate the limits of travel of the plungers.

1,626,969. OUTLET VALVE. GEORGE G. REEVES, Shreveport, La. Filed Feb. 6, 1926. Serial No. 86,504. 5 Claims. (Cl. 251—16.)



2. In combination, a housing adapted to be secured to a container and having an outlet passage therethrough, a valve for closing the inner end of said passage and formed with an inwardly projecting stem, a yoke pivoted at one side of the passage and secured to said stem, said housing being formed with a longitudinal dovetail channel in its inner face and having an extension outside said channel with a transverse bore therein, a rack bar reciprocable in said channel, a link connecting the rack bar to the valve, a mandrel in said bore having teeth meshing with said rack bar, and means connected with said mandrel for rotating the same to open or close the valve.

1,626,970. VOLTAGE REGULATOR FOR TRANSFORMERS. ADOLF ROOTH, Ludvika, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed Mar. 17, 1926, Serial No. 95,281, and in Sweden Mar. 18, 1925. 2 Claims. (Cl. 171—119.)



1. In voltage regulators for transformers, a transformer winding having a series of taps, two rows of fixed contacts alternately connected to said taps, contact rails running along said rows, slidable contacts adapted to connect said rails respectively to the contacts of said rows, a resistance, an outgoing lead, and contacts adapted to connect said outgoing lead alternately to said contact rails and alternately over and past said resistance.

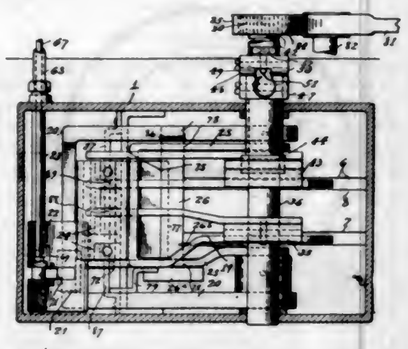
1,626,971. CARTON. WILLIS W. RUSSELL, Cincinnati, Ohio. Filed Mar. 12, 1923. Serial No. 624,625. 5 Claims. (Cl. 229—6.)

2. In a package, the combination of a container having normal major and minor diameters lying in the same plane, the container comprising exterior walls, having intersecting slits therein, whereby to form openings in the package, an article in the container, said article having a diameter intermediate the major and minor diameters of the container, and having its indicated diameter disposed at the slits in the container walls, the article thereby outwardly projecting the portions of the container intermediate the slits for providing protective means for the package, and the entry of the article into the said openings in the container permitting the container to assume its normal condition.

1,626,972. MORTAR-APPLYING DEVICE. ALBERT H. SANDERS, Glendora, Calif. Filed Feb. 25, 1926. Serial No. 90,630. 7 Claims. (Cl. 25—1.)

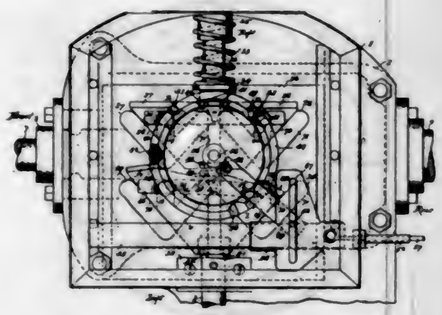
1. A device of the character described comprising means for receiving and confining mortar on the edge of a pipe, and means by which the first means is operable to uniformly spread the mortar around the edge of said pipe.

1,626,973. ROTARY MACHINE. PAUL SCHAURTE, Zurich-Altstetten, Switzerland. Filed Jan. 19, 1926, Serial No. 82,188, and in Germany Sept. 10, 1924. 17 Claims. (Cl. 103—121.)



1. A rotary machine comprising a rotating casing, and a stationary hollow piston with at least two axial compartments, a flexible sheet metal plate on the circumference of the outer face of said stationary piston, sliding shoes on the outer surface of said sheet metal plate, vanes pivotally connecting said rotating casing with said sliding shoes, guide slots for said vanes within said casing, openings in said sheet metal plate for distributing the inlet and outlet of the fluid employed in and out of said compartments of said piston.

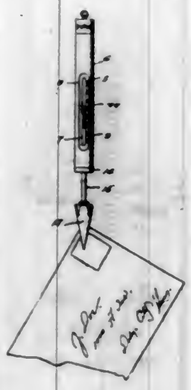
1,626,974. GEAR-SHIFT MECHANISM. BENJAMIN F. SCHMIDT, South Pasadena, Calif. Filed Nov. 3, 1920. Serial No. 421,581. 7 Claims. (Cl. 74—58.)



1. In a gear shift mechanism, the combination of: gear shifting forks; interconnected shifter arms for actuating each fork; a shifter frame; a selector member translatable on said frame to positions before any of said shifter arms and adapted to operate the same with the operation

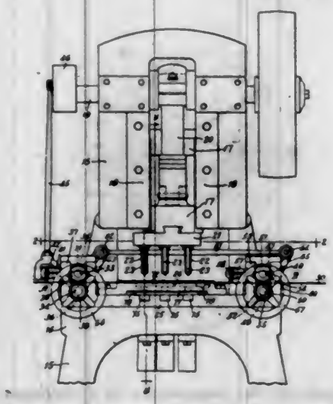
of the shifter frame; a shifter frame operating means; means for imposing translating tension upon the selector member; and means positioned relative to the selector

member to insure a progressive shifting from reverse to high driving speeds with successive operations of the shifter frame.



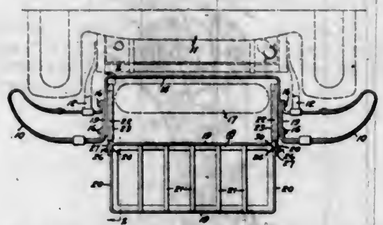
1,626,975. GEAR SHIFT. BENJAMIN F. SCHMIDT, Los Angeles, Calif. Filed Apr. 24, 1925. Serial No. 25,714. 5 Claims. (Cl. 74—58.)

1. In a gear shift mechanism, the combination with shifter forks having upstanding members, a clutch, of a slidably mounted shifter plate engaging said upstanding members, operatively connected with the clutch, a selector disc rotatably positioned on said plate, and having operable connections from the driver's seat for rotating it at selected positions corresponding to the gear changes, means operable at the selected positions of the disc to function with the clutch operation and effect the selected speed gear changes.



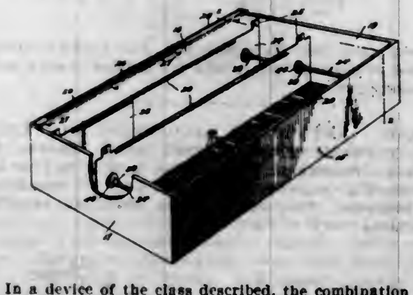
1,626,976. POCKET POSTAL SCALE. RALPH T. SCHOOF, Dodge City, Kans. Filed Feb. 11, 1926. Serial No. 87,576. 1 Claim. (Cl. 265—63.)

In a pocket postal scale of the character described, a cylinder having a slot intermediate its ends, and scale readings at the exterior thereof, and at one edge of said slot, a retractile coiled spring secured at its upper end within said cylinder, a rod secured to the opposite end of said spring and projecting through the lower end of said cylinder, a letter attaching clasp upon the external end of the rod, a gauge member upon the rod visible through the slot in said cylinder, closure caps at the



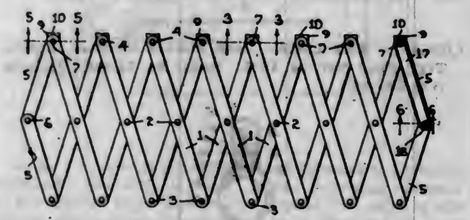
opposite ends of the cylinder through the lowermost one of which said rod is adapted for sliding movement, and cooperating construction between the clasp and lower closure cap for preventing sliding of the rod when the scale is not in use.

1,626,977. MACHINE FOR FORMING FASTENERS. TARRANT SIBLEY, Bennington, Vt. Filed Aug. 15, 1925. Serial No. 50,510. 10 Claims. (Cl. 113—42.)



1. A machine for forming fasteners embodying therein blank cutting instrumentalities, means to feed a strip of sheet material to said cutting instrumentalities, fastener forming instrumentalities upon opposite sides of said cutting instrumentalities, and means to feed blanks in opposite directions into alignment with each of said forming instrumentalities alternately, whereby said blanks may be pressed into fasteners.

1,626,978. LUGGAGE CARRIER. BRYAN H. SMITH, Berkeley, Calif. Filed Mar. 1, 1926. Serial No. 91,826. 11 Claims. (Cl. 293—55.)

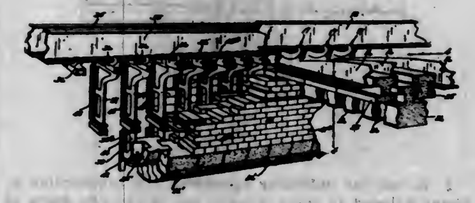


1. In a luggage carrier, a luggage rack, means for permitting shifting of the rack in a horizontal plane, and means permitting pivotal movement of the rack about a horizontal axis.

1,626,979. FILING DEVICE. RITTENHOUSE M. SMITH, Mobile, Ala. Filed May 8, 1923. Serial No. 637,553. 1 Claim. (Cl. 129—16.)

In a device of the class described, the combination with a rectangular container for cards, of a laterally movable rectangular partition in said container longitudinally parallel to two sides, a pair of guide rods parallel to each of the other two sides, said guide rods passing through said partition within its rectangular outline intermediate its top and bottom edges, one of said rods being at each end of the partition, the said rods being stationary in normal use, and said partition having a pair of sleeves secured at right angles thereto through which said rods pass, said sleeves having an opening therethrough of slightly larger diameter than the diameter of said rods and being of such a length that the ends of the sleeves will frictionally engage the rods to prevent longitudinal movement of the partition thereon when the partition is canted slightly from a position at right angles to said rods.

1,626,980. PROPORTIONAL DIVIDERS. WILLIS F. SPROUT, Lebanon, Kans. Filed Dec. 30, 1924. Serial No. 758,816. 1 Claim. (Cl. 33—192.)

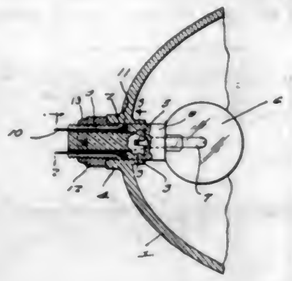


A tool for the purpose indicated comprising a plurality of pivotally connected bars arranged in the form of lazy tongs and provided with means on one line of pivotal connections for locating division points between the terminals of the connected series, and a latch plate dimensioned according to one of the terminal links and having a pivotal connection therewith coincident with that link's connection with the next link, said latch plate having a notch adapted to selectively engage a knob at the adjacent end of the series of links or one at the remote end of the series when the series is folded.

1,626,981. GLARESHIELD. HENRY EVANS STAMPLEY, Sibley, La. Filed Jan. 4, 1926. Serial No. 79,106. 4 Claims. (Cl. 296—97.)

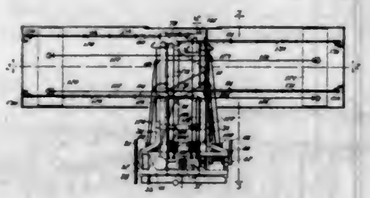
2. A glare shield for automobiles comprising an elongated plate formed of opaque material and having a vertical pivotal eye at one end, a bracket adapted to be secured to the front of the top supporting post at the driver's side of the car and to extend forwardly therefrom, an upstanding pivotal post carried near the front end of the bracket and traversing the eye of the plate to pivotally support the same in advance thereof, a pull rod pivotally connected to the front end of the plate and passing rearwardly through the post and terminating in a handle within the car for swinging the plate at a slight angle across the car for shielding the driver's eyes from approaching headlights.

1,626,982. FIRE-ARCH STRUCTURE. CLARENCE A. STRACHOTA, St. Paul, Minn., assignor to Liptak Firebrick Arch Company, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 553,848. 8 Claims. (Cl. 110—99.)



1. The combination with a fire arch, of a beam supported independently of said arch and extended above the inner extremity of said arch, wall-supporting brackets mounted on said beam, shelves mounted on said brackets, an apron wall built on said beam and shelves, and filler blocks filling the space between said arch and shelves.

1,626,983. INCANDESCENT ELECTRIC-LAMP CONNECTION. JOSEPH HAROLD SULLIVAN, Portage, Wis. Filed Apr. 21, 1926. Serial No. 103,593. 3 Claims. (Cl. 240—41.)



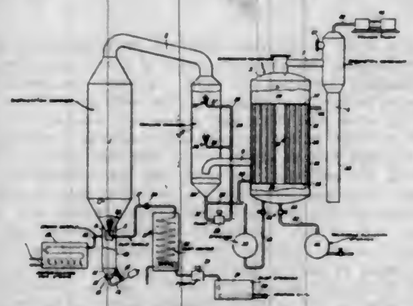
3. In combination, a reflector having an aperture and an annulus about the aperture and in the reflector and also having a boss about the aperture at the outer side of the reflector, a dielectric stem arranged in said aperture of the reflector, means between the annulus and the

dielectric stem to prevent the rotation of the dielectric stem in the annulus, said dielectric stem having opposed longitudinal grooves for receiving electric conductors and a threaded rear portion, a lamp bulb joined to said stem,

a filament in the bulb having portions extending through the stem, means for connecting said conductors to the stem and effecting electric connection between the conductors and the filaments, and a nut mounted on the stem and disposed in rear of the boss on the reflector.

1,626,984. BOX-CAR-UNLOADING APPARATUS. WILLIAM SUNDBERG, deceased, Chicago, Ill., by Elizabeth L. Sundberg, administratrix, Chicago, Ill., assignor to Elizabeth L. Sundberg, trustee, Chicago, Ill. Continuation of application Serial No. 331,561, filed Oct. 18, 1919. This application filed Dec. 16, 1922. Serial No. 607,311. 57 Claims. (Cl. 214—44.)

1. In box car unloading apparatus, the combination of means adapted to enter through one of the side doors of a car for removing material from that portion of the car adjacent said door, and means associated with said first mentioned means and insertable through said door therewith for moving material from one end of the car into the field of operation of said first mentioned means.



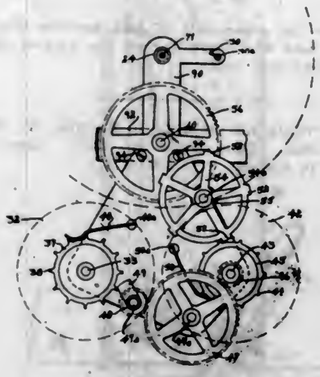
1,626,985. PIPE WRENCH. GEORGE W. THOMPSON, Pittsburgh, Pa. Filed Dec. 16, 1926. Serial No. 155,131. 4 Claims. (Cl. 81—111.)

4. In a pipe-wrench, a handle having a longitudinal aperture provided therein; a stationary jaw removably secured at one end of said handle; a supporting-plate hingedly connected to said handle and rockable within said aperture; a movable-jaw member hingedly mounted on said supporting-plate, said jaw-member having a pair of legs disposed in spaced parallel relation and adapted to slidably receive therebetween said supporting-plate; an adjusting-worm rotatable within said jaw-member; teeth cut on said supporting-plate and concentric to the fulcrum of the jaw-member adapted to be engaged by said worm for the purpose of rotating said jaw-member toward

or away from said stationary jaw, and yielding means adapted to normally rotate said jaw-member toward said stationary jaw.

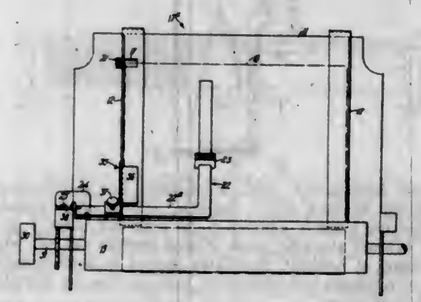
1,626,986. METHOD OF RECOVERING GLYCERIN FROM FERMENTED-MOLASSES MASH. SAMUEL K. VARNES, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 14, 1922. Serial No. 568,179. 6 Claims. (Cl. 87—4.)

1. In the art of producing glycerin by the fermentation of molasses, the steps of dividing unclarified concentrated slop into minute portions, exploding the so-divided slop into mist in contact with a hot gaseous carrier chemically inert at the temperatures involved while maintaining a temperature to quickly vaporize the glycerin from the slop, and condensing the evolved glycerin vapors.



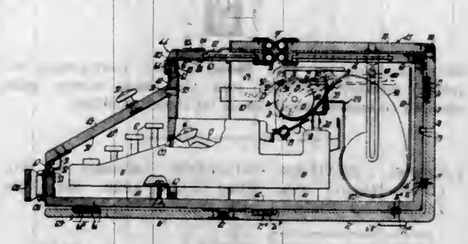
1,626,987. KEY LOCK. JOSE PUENTE VENEGAS, Laredo, Tex. Filed Nov. 24, 1925. Serial No. 71,045. 1 Claim. (Cl. 59—99.)

In a device of the class described, a split ring, a plurality of teeth on the upper edge thereof adjacent the split portion, a holder slidable on the ring, means for



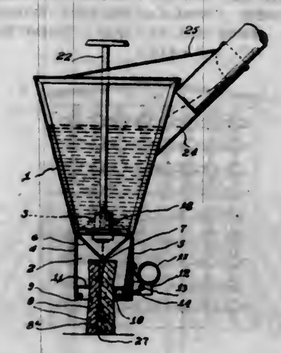
locking the holder over the split portion of the ring, a loop on the holder, and toothed side flanges on the lower end of the loop, engageable with the teeth on the ring.

1,626,988. HANDLESS CLOCK. MANUEL A. VINAS, New York, N. Y. Filed Aug. 29, 1925, Serial No. 53,268, and in the Dominican Republic Apr. 18, 1925. 2 Claims. (Cl. 58—125.)



1. In dial indicator mechanism for converting clocks of the hand type, a support member engageable with the clockwork frame, a tens minutes dial, a units minutes dial, an hours dial, dial drive gearing connecting said dials and timing relative movements thereof, said drive gearing including intermittently engaging gears and a main drive gear engaging the hour hand shaft of the hand clockwork mechanism, said support member provided with journal and arbor bearings whereon said dials and dial drive gearing may be assembled and applied as a unit to said clockwork to convert the same to a dial indicator clock.

1,626,989. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 13, 1924. Serial No. 749,621. 18 Claims. (Cl. 197—127.)



1. In a typewriting machine, in combination, a platen, releasable feed-rolls therefor, means including a chute and a bottom edge gage at the introductory side of the platen, for locating and truing a work-sheet for the first line of typing, and a leading-edge gauge at the delivery side of the platen for positioning the work-sheet for a second line of typing.

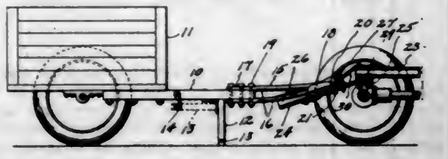
1,626,990. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Oct. 19, 1921, Serial No. 508,698. Divided and this application filed July 3, 1925. Serial No. 41,281. 3 Claims. (Cl. 197—127.)

1. In combination with a typewriting machine having a platen, a paper-guide and container at the rear of the machine for the overhanging ends of a work-sheet being typed in the machine, said guide directing said ends downwardly and at its bottom rolling up said ends at the bottom of the container to occupy a minimum amount of space, the terminal end of the work-sheet being fed out of said guide and container to the platen, and the leading end of the work-sheet being fed from said platen into said guide and container.

1,626,991. FLOOR OILER. ABRAHAM WEBER, New York, N. Y. Filed Apr. 22, 1926. Serial No. 103,886. 1 Claim. (Cl. 91—39.)

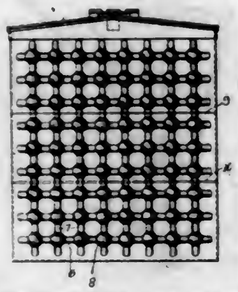
In a floor oiler of the class described, a reservoir, a distributing chamber attached to said reservoir, a pair of floor oilers gripped in place in said chamber, one of the said walls of the chamber being fixed and the other being movable towards and from the opposing fixed wall, a cam carried by the receptacle and engaging the movable side wall, and means to cause the cam to move backwards when partly revolved for releasing or for gripping the said oilers.

1,626,992. FOLDING POWDER PUFF. ALEXANDRE WILLK, Paris, France. Filed Mar. 17, 1926, Serial No. 95,360, and in France Aug. 25, 1925. 2 Claims. (Cl. 132—78.5.)



1. A folding powder puff comprising in combination, a puff provided with spring members for sustaining the

puff in its open position, a powder container, means for securing said spring members to said container, and a



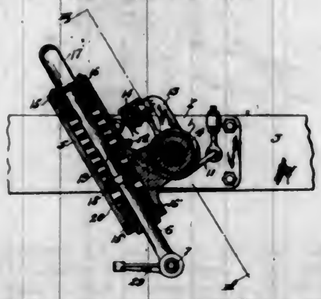
sleeve slidable on said container for contracting the spring members to fold said puff, said sleeve being adapted to enclose said puff in its folded position.

1,626,993. TRAILER COUPLING. HUBERT P. WILLIAMS, Hamlin, Tex. Filed Oct. 4, 1926. Serial No. 139,330. 2 Claims. (Cl. 280—33.15.)

1. In a trailer coupling, the combination of a hook for connection to a trailer tongue, a down-turned bill on the free end of the hook, an inclined plate having a bracket for attaching to a motor vehicle, said plate having a socket for receiving the bill of the hook, a V-shaped guide mounted on the plate, the hook having a stop for supporting the hook above the plate when the bill is engaged in the socket.

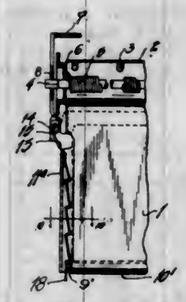
1,626,994. METAL SHEET USED FOR FREIGHT CAR STRUCTURES. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill. Filed Oct. 17, 1923. Serial No. 669,081. 9 Claims. (Cl. 105—410.)

1. An integral metal sheet, rolled in sections and then integrally united in the flat, and then formed into a box car member, having stiffening portions pressed in the body of the metal of the sheet.



1,626,995. SNOW GUARD. KARL D. WILLMS, Baltimore, Md. Filed Dec. 2, 1926. Serial No. 152,223. 1 Claim. (Cl. 108—27.)

A snow guard comprising a single length of wire having a straight end portion constituting a shank for anchorage upon a roof, the wire at the lower end of said shank being arched and then extended on a straight line in a down-roof direction from the arch, forming a base portion to rest on the roof, the wire being bent upwardly at an acute angle at the lower end of said base portion to provide a brace, said wire being curved laterally in one direction and downwardly from the upper end of the brace to the aforesaid arched portion and being coiled tightly around this portion to form one half of an annular snow-stop, the wire being then curved laterally in the other direction and upwardly from the

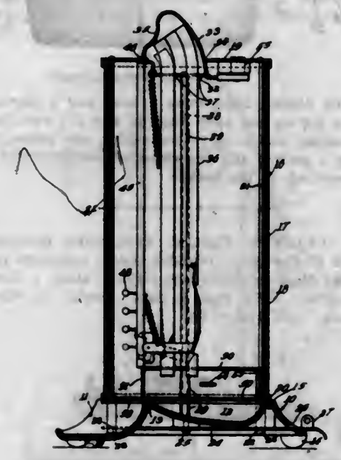


coil to form the other half of said annular stop, the free end of said wire lying against the up-roof side of the first named stop half.

1,626,996. VEHICLE SPRING. WALTER W. WOOD, Canton, Ohio. Filed June 7, 1922. Serial No. 566,556. 10 Claims. (Cl. 280—124.)

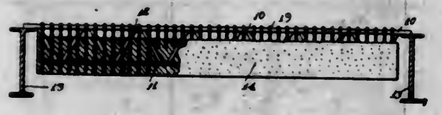
1. A vehicle spring support including a spring controlled rocking member having a guideway therein normally inclined downward and forward, and a spring controlled spindle stem slidable endwise in the guideway and rotatable therein.

1,626,997. WINDSHIELD. LULU M. WRAGG, Spokane, Wash. Filed July 20, 1925. Serial No. 44,696. 1 Claim. (Cl. 296—85.)



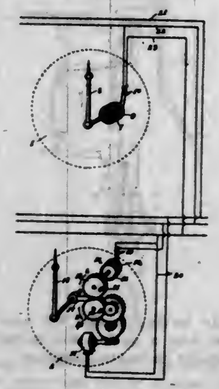
The combination with a curtain, an automatically actuated winding roller therefor, and pivoted foldable supporting hangers adapted to be extended parallel with and support the side edges of said curtain against wind pressure, of resilient rackplates carried by said hangers, and a retaining rod carried by said curtain for co-action with said plates.

1,626,998. NONCORRODING ANTIFREEZE COMPOSITION. ROBERT S. WRIGHT, Minot, N. Dak. Filed Oct. 25, 1926. Serial No. 144,184. 14 Claims. (Cl. 252—5.)



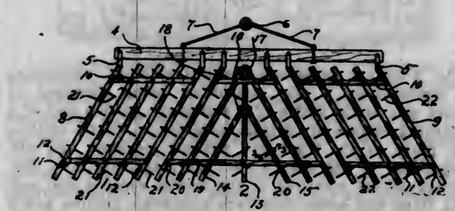
1. A composition comprising an aqueous mixture of calcium chloride, potassium bichromate, mineral oil, molasses and potassium bicarbonate.

1,626,999. CASING FOR COIN-CONTROLLED APPARATUS. JOHN G. WYNN, Madison, Wis., assignor to The Zeno Button Company, Indianapolis, Ind., a Corporation. Original application filed Aug. 27, 1924, Serial No. 734,373. Divided and this application filed June 25, 1925. Serial No. 39,462. 4 Claims. (Cl. 211—8.)



1. In a vending machine, a base, and a case on the base adapted to house the holding and delivering mechanism of the machine, said case having top and bottom frame members and corner portions, spacing members between the top and bottom frame members and metallic washers having angularly bent leg portions mounted on the connecting members, said angularly bent leg portions adapted to engage beneath the edges of the panels of the case and a frame member to take the pressure on the panels.

1,627,000. STRUCTURAL BUILDING FLOOR. ROY V. YEAGER, Des Moines, Iowa. Filed Mar. 8, 1926. Serial No. 93,148. 1 Claim. (Cl. 72—71.)

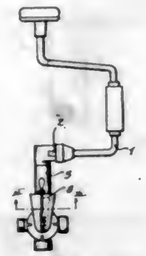


An improved structural building floor comprising two fixed supports spaced apart, a series of beams extended between and resting upon said supports and spaced apart from each other, each beam comprising a self-contained metal body portion with its ends projected outwardly and designed to rest upon said supports and to thereby support the bodies of the beams between said supports, each beam being also formed with a precast plastic body portion covering the bottom portion of the beam and extended upwardly to a point spaced apart from the top of the beam to form outwardly projected shoulders beyond the metal portions of the beam, floor sheets of rigid material placed on said shoulders between the beams, and a plastic floor body formed on top of the beams and rigid sheets and completely enclosing the upper portions of the metal beams, for the purposes stated.

1,627,001. SYSTEM OF UNIFYING A GROUP OF CLOCKS. MASAJI YOKOYAMA, Setagaya-Cho, Japan. Filed May 25, 1926, Serial No. 111,480, and in Japan May 28, 1925. 6 Claims. (Cl. 58—36.)

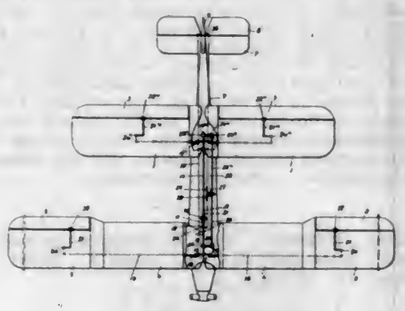
1. A device for unifying the face time of a plurality of clocks, comprising switching means associated with a rotating member of an arbitrary one of the clocks chosen as the leader clock, the part of the device incorporated with any one of the remaining clocks comprising a cam rod attached to the shaft of the minute hand, two pinions of equal diameter meshing with each other and each provided with a guide member to come into a sliding contact simultaneously with the said cam rod from opposite sides thereof, switching means connected mechanicaly in operating relation to one of the said pinions, and an electric motor for driving the said pinions, the said pinions being sufficiently removed from the axis of the cam rod so that normally the guide members will not interfere with the operation of the clock mechanism.

1,627,002. HARROW. FRED H. ZUEHLKE, Davenport, Wash. Filed July 20, 1925. Serial No. 44,718. 1 Claim. (Cl. 55—84.)



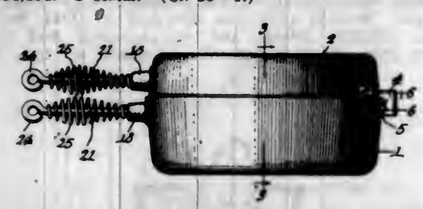
A harrow, comprising a draft bar and flexibly connected drag sections, said sections having supporting bars angling forwardly towards the longitudinal center of the harrow, teeth carried by said bars, and the teeth on one side of the longitudinal center being oppositely disposed with reference to those on the other side of the harrow, the teeth on the opposing sides being inwardly, downwardly, and rearwardly inclined.

1,627,003. WRENCH. JAMES L. ABERNETHY, Park Ridge, and LEONARD E. MUMBOWER, Chicago, Ill. Filed Apr. 5, 1926. Serial No. 99,709. 1 Claim. (Cl. 81—58.)



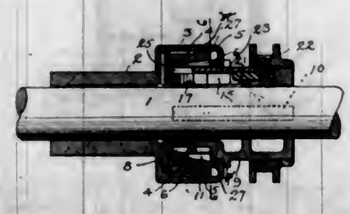
In a wrench, a stem having spaced wing plates, a member having a plurality of sockets rotatably mounted between said wing plates, said member having one of its

faces provided with notches, a detent member having an integral lug adapted for engaging said notches and pivoted intermediate its ends to one of said wing plates,



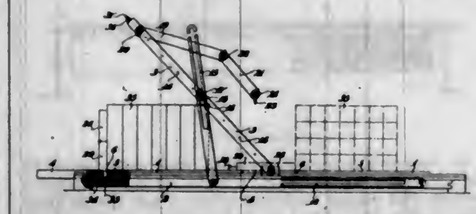
said wing plate having a slot for accommodating said detent member, and a spring for normally maintaining said detent member in locking position.

1,627,004. AEROPLANE. JOSEPH ALBESSARD, Paris, France. Filed May 20, 1926. Serial No. 110,458. 1 Claim. (Cl. 244—29.)



An aeroplane possessing natural stability, comprising in combination, a rear supporting plane composed at either side of the frame of a stationary portion and of a balancing surface of variable incidence, a central stationary plane at the front end without incidence and corresponding to the span across the rear plane, two supporting planes arranged at the lateral ends of said central plane and comprising each a movable portion and a balancing plane of variable incidence, a lever for each balancing plane of a variable incidence, a connecting rod connected to each lever, a two-armed transmission lever hingedly connected to the free end of each connecting rod, a horizontal connecting rod at the free end of each transmission lever, a bell crank transmission at the end of each horizontal connecting rod, a vertical connecting rod hingedly connected to each bell crank transmission, a horizontal oscillatable lever hinged to the lower end of each vertical connecting rod, two horizontal shafts on one of which said oscillatable levers are keyed, a hand lever for operating said horizontal shafts, two slidable bearings one on each shaft, pivotable forks one for carrying one bearing and designed to raise or lower said bearings, and a mechanism for controlling the angle of inclination of said forks said mechanism consisting of transmission levers, connecting rods, a toothed sector, a pinion on each shaft and a hand wheel for rotating said pinions.

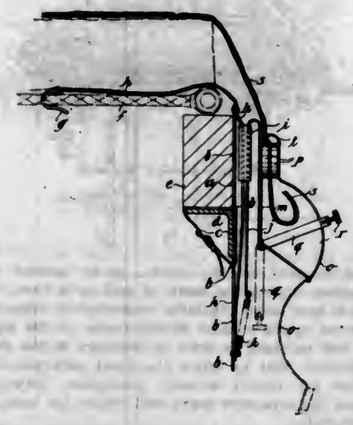
1,627,005. STEAM-PRESSURE COOKER. FRED W. ALLEN, Kingston, Tenn. Filed Jan. 28, 1926. Serial No. 84,404. 1 Claim. (Cl. 53—1.)



A cooking utensil comprising a base and a closure on the base, a lug on the base, the lug and the base having a vent passage, and a valve controlling the passage, the lug having a socket, and the closure being provided with a finger received in the socket.

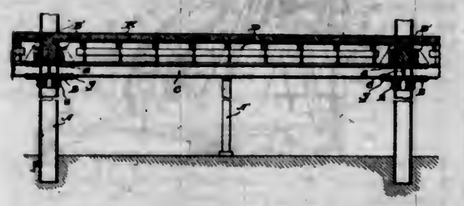
1,627,006. CLUTCH. CARL M. ANGLEMYER, Dayton, and WILLIAM P. COFFMAN, Dunkirk, Ohio, assignors to The Edgemont Machine Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 8, 1924. Serial No. 684,987. 13 Claims. (Cl. 192—77.)

1. In a clutch device for engaging and disengaging two relatively rotatable elements, a pair of concentrically arranged clutch rings having correspondingly tapered engaging faces, one of said rings being expansible and contractable, means for controlling the expansion and contraction of said ring, and having simultaneous engagement with both rings, a concentric revoluble collar for axially adjusting said rings in relation to each other.



1,627,007. APPARATUS FOR CUTTING LARD, BUTTER, OR MARGARINE. MARK BAKER, Boston, England. Filed Jan. 21, 1926, Serial No. 82,725, and in Great Britain Jan. 29, 1925. 4 Claims. (Cl. 31—25.)

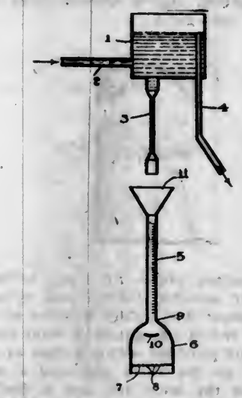
1. Apparatus for cutting or sub-dividing blocks of lard or the like, into blocks of uniform size and weight, said apparatus consisting of a stationary grooved base, a three-part board with the members hingedly connected together, and slidably mounted in said grooved base, slots formed between the hinges which connect the members of the board, a pusher block provided with projections for insertion into said slots, a cutter frame pivotally connected to the walls of the groove of the base, horizontal cutting wires carried by said frame, means for tautening said wires, means for supporting and locking said frame in adjusted position either side of the perpendicular,



means for supporting and locking said frame and said supporting means when in their extreme right hand position, and means for scraping or smoothing the block prior to the cutting or sub-dividing thereof.

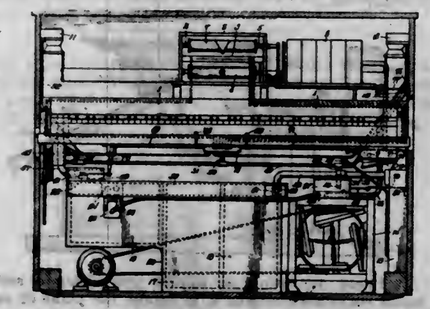
1,627,008. MEANS OR DEVICE FOR THE RETENTION OF BEDCLOTHES. STEPHEN HENRY BARTTER, Kingston-on-Thames, England. Filed Nov. 17, 1926, Serial No. 148,861, and in Great Britain Aug. 14, 1926. 5 Claims. (Cl. 24—72.5.)

1. Bedclothes retention means comprising a gripping member including an attachment plate adapted to be detachably connected to the side rail of a bedstead, a guide member carried by the attachment plate, a spring-controlled slide bar slidably guided on said guide member, and resilient gripping jaws carried by said spring-controlled slide bar.



1,627,009. METHOD FOR CONSTRUCTING FIREPROOFING BUILDINGS. LESLIE GRAHAM BERRY, Charlotte, N. C. Filed May 29, 1925. Serial No. 33,801. 6 Claims. (Cl. 25—131.5.)

1. A method of constructing steel and concrete buildings which consists first in erecting upright metal columns forming a permanent part of the building structure, then rigidly connecting said columns by transverse temporary metal supporting members separably fastened thereto, next forming a concrete floor base upon said temporary supporting members, then forming the concrete floor on said base, and subsequently removing said members and base.

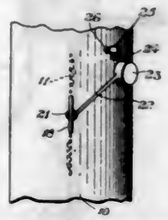


1,627,010. FREENESS TESTER FOR PULP. WILLIAM BOYD CAMPBELL, Montreal, Quebec, Canada. Filed June 21, 1926. Serial No. 117,546. 4 Claims. (Cl. 73—51.)

1. An apparatus for measuring the resistance offered to a flow of water through a porous mat of material, comprising a graduated tube closed at its lower end by a screen plate to support the mat of material, and a

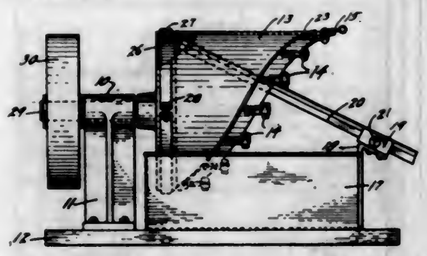
device for feeding water to the tube at a fixed rate of flow sufficient to cause the water to rise in the tube so as to register with the graduations thereon.

1,627,011. PNEUMATICALLY-OPERATED MUSICAL INSTRUMENT. WILLIAM C. COLLIGNON, Chicago, Ill., assignor to The Cable Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1924. Serial No. 703,071. 30 Claims. (Cl. 84—39.)



1. In a pneumatically operated musical instrument, the combination, with a plurality of pneumatically operable instrumentalities (1—13), an exhaust-pump (14) for reducing the air-pressure to effect the pneumatic operation thereof, and pressure-controlling means (15) for admitting atmospheric air to vary the degree of reduced air-pressure available for the operation of certain of said instrumentalities (1), of means (34—62) for predetermining the maximum degree to which the air-pressure shall be reduced and the minimum degree to which the reduced air-pressure available for the operation of another of said instrumentalities (13) may be modified.

1,627,012. GOLF TEE. ROBERT J. COPELAND, Toronto, Ontario, Canada. Filed Oct. 27, 1026. Serial No. 144,622. 4 Claims. (Cl. 273—33.)

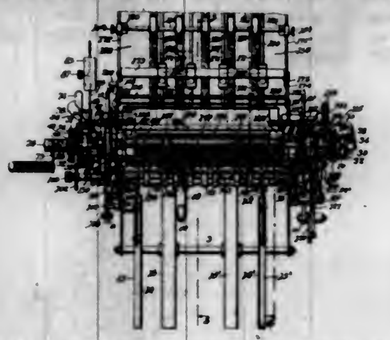


1. A golf tee, comprising a peg having a recess therein, a hole of smaller diameter than said recess leading outwardly therefrom, a cord threaded through said hole and having its end secured in said recess, and an anchor weight attached to the cord.

1,627,018. STOVEPIPE DAMPER. JOHN COWIE, Sutherland, Saskatchewan, Canada. Filed July 30, 1926, Serial No. 126,008, and in Canada June 2, 1926. 3 Claims. (Cl. 126—287.5.)

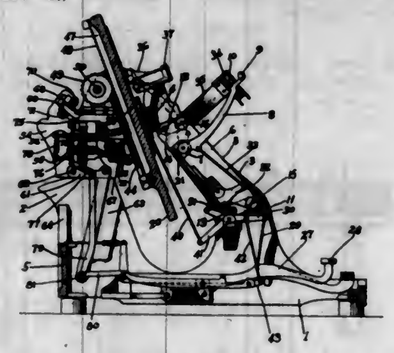
1. The combination with a stove pipe section having a spindle rotatably mounted therein and extending therebeyond, of a damper disc rigidly mounted on the spindle, a sleeve on one end of the spindle, a lever arm connected to said sleeve and provided with a weight at the opposite end, a bracket on the stove pipe and a hook on the weighted end of the lever arm and a fusible link between the bracket and the hook whereby the lever arm is suspended in raised position, whereby on the fusible link being consumed by the heat of the stove pipe, the lever arm automatically drops to turn the spindle to close the damper disc.

1,627,014. OIL FEEDER FOR FLOTATION MACHINES. ARTHUR C. DAMAN, Denver, Colo. Filed Jan. 12, 1924, Serial No. 685,932. Renewed Aug. 15, 1925. 5 Claims. (Cl. 221—97.)



1. A liquid delivering mechanism comprising a series of liquid containers, arranged to rotate, the plane of said series being disposed at an angle to a perpendicular to the axis of said rotation; a pan from which said containers will carry said liquid and a trough into which said containers will pour said liquid, the extension of said trough into said series being adjustable.

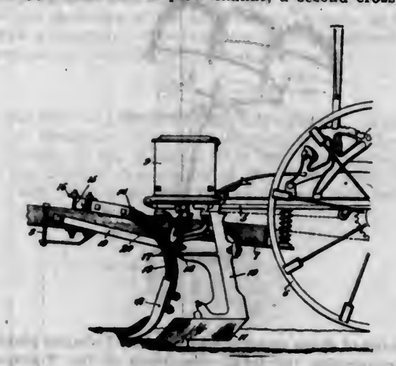
1,627,015. MACHINE FOR SEPARATING AND FEEDING BLANKS. WILLIAM WARD DAVIDSON, Evanston, Ill., assignor to Davidson Manufacturing Company, Madison, Wis., a Corporation of Wisconsin. Filed Nov. 21, 1922. Serial No. 602,359. 33 Claims. (Cl. 271—39.)



1. In a blank separating machine, the combination of vertically movable pack supporting means, actuating means therefor, and blank separating means comprising a separator roll rotatably mounted above said pack supporting means in position to contact with the uppermost blank of a pack supported thereby, and a separator plate in association with said separator roll, said separator roll and plate forming parts of a separator unit supported so as to be vertically movable, the relation being such that in operation the separator roll will rest upon the pack of blanks, and means for imparting intermittent rotation to said separator roll.

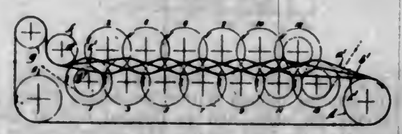
17. A blank separating machine as specified in claim 1, in which the separator roll is adjustable towards and from the separator plate and said separator roll and plate are adjustable together to provide for varying the inclination of said separator plate while maintaining the position of said separator roll relative to the free edge of said separator plate substantially constant, and which comprises means for adjusting said separator roll towards and from said separator plate and for effecting adjustment of said separator roll and plate together, comprising bearing blocks therefor, rack bars on which said bearing blocks are slidably supported, a gear shaft rotatably

mounted in said bearing blocks, gears secured to said shaft which engage the teeth of said rack bars, each of said rack bars being pivotally connected to arms pivoted in pairs on opposite sides of the frame of the separator unit, a rod mounted to turn in bearings in the frame of the separator unit to which the front rack bar supporting arms are rigidly secured, connection between said arms and the separator plate, and means for turning said arms pivotally.



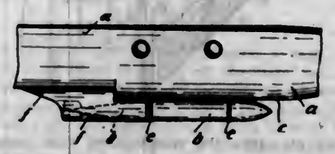
1,627,016. TYPEWRITER. SEWARD A. DEAN, Hastings, Minn., assignor to Dean Card Typewriter Company, Hennepin County, Minn., a Corporation of Minnesota. Filed Nov. 22, 1923. Serial No. 676,339. 9 Claims. (Cl. 197—1.)

1. A typewriter comprising a housing including rigidly connected transverse front and rear portions with an intervening space, a flat platen supported in the intervening space of the housing, a feed mounting for the platen oscillative on the rear transverse portion of the housing and operative to move the platen to and from the front transverse portion of the housing, and type bar mechanism on the front transverse portion of the housing to coact with the platen when the latter is moved toward said front transverse portion.



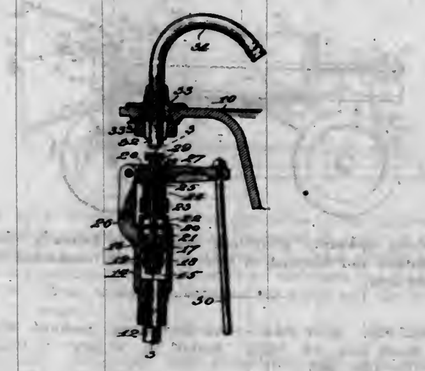
1,627,017. PLANTER. CARL ADOLPH DEMPEWOLF, Henderson, Ky. Filed Oct. 9, 1926. Serial No. 140,662. 1 Claim. (Cl. 97—194.)

In a planter, the combination of a wheeled frame, a plurality of drill tubes supported by the frame, means for supplying seed to the drill tubes, a runner secured to the lower end of each drill tube, plows located in front of the respective runners and spaced therefrom, each plow having an upwardly and forwardly extending shank, a cross bar secured to the tongue and rigidly connected to the upper ends of the plow shanks, a second cross bar in



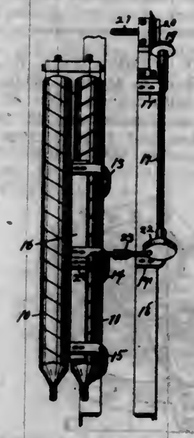
rear of the first-mentioned cross bar, means for supporting and bracing the second cross bar from the frame and from the tongue, and means connecting said second cross bar with the intermediate portions of the plow shanks to brace the latter, each of said runners being lower than the plow which precedes it, so as to open a drill in the furrow left by the plow.

1,627,018. ROPE OR BELT DRIVE FOR DRYING CYLINDERS AND THE LIKE. GERALD DOD, Southport, England. Filed Sept. 28, 1925, Serial No. 59,239, and in Great Britain Oct. 23, 1924. 5 Claims. (Cl. 74—21.)



1. In multi-cylinder drying machines, wherein the cylinders lie close together, and the material to be dried passes under and over consecutive cylinders, a pulley on the axis of each cylinder, each of the pulleys being of one size and of larger diameter than the distance between the axes of the said consecutive cylinders, and belts for driving the said pulleys and cylinders.

1,627,019. FLYING MACHINE. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor of one-half to the Firm Dornier Metallbauten Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Filed Oct. 13, 1924. Serial No. 743,418, and in Germany Oct. 18, 1923. 4 Claims. (Cl. 244—1.)

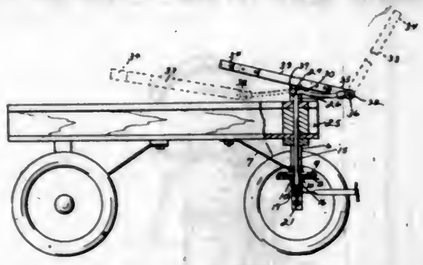


1. Flying boat comprising a hull, a casing attached to the hull's bottom and adapted to accomodate the rear portion of a torpedo and separate means for suspending the torpedo from the hull's bottom.

1,627,020. PEDAL-ACTUATED FAUCET. GLENN O. DOUGHERTY, Los Angeles, Calif. Filed Oct. 21, 1922. Serial No. 595,963. 10 Claims. (Cl. 137—139.)

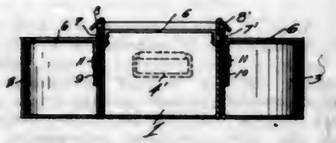
4. In a faucet, a housing having twin fluid passageways that are adapted to be connected to separate sources of fluid supply, a valve arranged in each passageway for controlling the flow of fluid therethrough, which valves are maintained in closed position by the pressure of the fluid from the sources of supply, a common outlet duct from the valve controlled passageways, and a spring supported pedal actuated lever for unseating said valve.

1,627,021. CLEARING DEVICE FOR CORN-SNAPPING MECHANISMS. CHARLES DUEKER, Fort Dodge, Iowa. Filed Feb. 8, 1926. Serial No. 86,851. 4 Claims. (Cl. 130—5.)



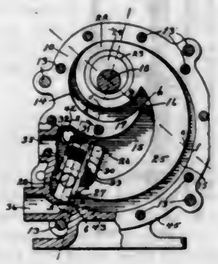
1. In a machine of the character described, curved carrying arms hinged to a suitable support, a bar fixed to said arms and an operating device acting on said bar for lateral vibration thereof.

1,627,022. STEERING MECHANISM FOR COASTER WAGONS. WALTER ERNI, Milwaukee, Wis. Filed Nov. 5, 1925. Serial No. 66,948. 4 Claims. (Cl. 280—87.5.)



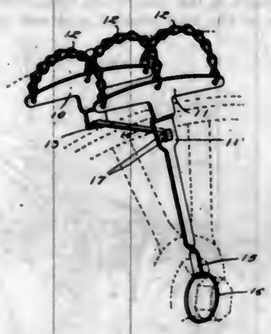
4. The combination with a steering shaft bent to provide a forwardly extending arm, of a saddle apertured

to receive said shaft and provided with a channel opening to said aperture and engaging said arm, said saddle



having upwardly projecting members in laterally spaced relation and adapted to receive a handle connected with said arm.

1,627,023. ASH PAN. ROY B. FARRAR, Spokane, Wash. Filed Feb. 16, 1926. Serial No. 88,545. 2 Claims. (Cl. 126—243.)

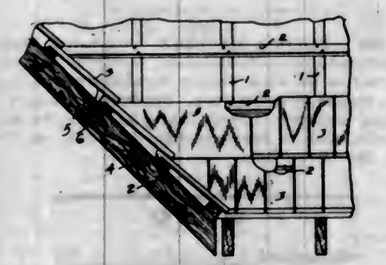


1. An ash pan comprising a pair of side sections having flat vertical inner walls of an elevation greater than the outer walls thereof, an intermediate section having flat vertical side walls of an elevation greater than the side inner walls of said side sections, and downturned flanges on the tops of the side walls of said intermediate section, said flanges extending at an incline down over the edges of the inner walls of said side sections in service position.

1,627,024. ROTARY PUMP. PAUL R. FINCH, Des Moines, Iowa, assignor to Alvah C. White, Des Moines, Iowa. Original application filed Dec. 27, 1923, Serial No. 682,873, and in Canada Aug. 22, 1925. Divided and this application filed July 17, 1926. Serial No. 123,181. 5 Claims. (Cl. 103—132.)

1. A compressor comprising a substantially cylindrical chamber, a second chamber communicating with the first and having intake and exhaust ports, an eccentrically movable, substantially cylindrical impeller within the cylindrical chamber having traveling contact with the wall of the latter, a curved blade projecting from the impeller and extending into the second chamber, a partition plate mounted for rocking movement in the second chamber and having one margin rounded and in contact with a wall of said chamber between the intake and exhaust ports, and slidable connections between said partition plate and the free end of said curved blade.

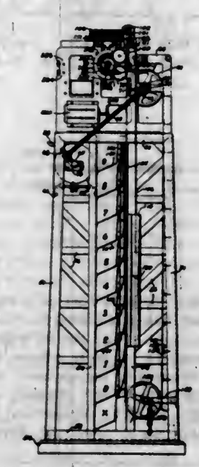
1,627,025. ANTISKID CHAIN. CLARENCE F. FISHER, Lancaster, Kans. Filed Dec. 21, 1925. Serial No. 76,767. 1 Claim. (Cl. 152—14.)



An antiskid chain comprising a pair of T-shaped plates, chains connecting the transverse heads of the T-shaped members, the leg of one of said plates being longer than the leg of the other plate, a ring connected with the extremity of the longer leg, said longer leg having a pair of openings, the shorter leg having an opening and a hook member movably connected with the shorter leg and having its hooked end detachably engaged in said pair of openings.

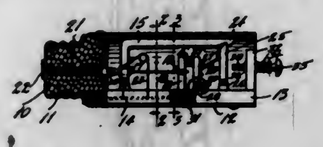
1,627,026. COLUMN SPACER. HARRY M. FORKER, Washington, D. C. Filed Aug. 4, 1926. Serial No. 127,142. 4 Claims. (Cl. 101—400.)

1. A column spacer for separating machine-cast type slugs in printing column matter, comprising a body portion having flat sides, and an integral base of greater thickness than the body portion, the spacer being of such height that its bottom surface is flush with the bottom surface of the type slugs when the form is made up.



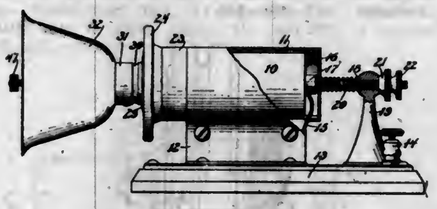
1,627,027. ROOF. ARTHUR B. FOSSEEN, Spokane, Wash. Filed Nov. 18, 1924. Serial No. 750,571. 1 Claim. (Cl. 108—10.)

In a roof structure the combination with supporting rafters carrying transversely arranged spaced horizontal battens, of applicable sheathing strips applied over and extending between adjoining battens with their upper edges folded over and secured by cementitious material to the upper battens, a layer of cementitious material



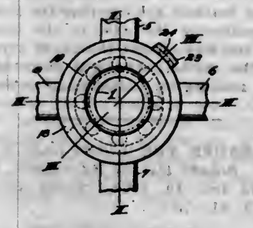
substantially applied over said sheathing strips, tile shingles applied in staggered courses over said sheathing strips by embedding in the cementitious material, ribbed heads formed on said tiles for hooked engagement over the upper faces of the upper battens beneath the lower free edges of said sheathing strips, said lower free edges of the sheathing strips being coated on their under faces with a cementitious material for binding engagement with portions of the tiles disposed therebeneath.

1,627,028. CARD-ASSORTING MACHINE. MAXIMILIAN M. GOLDBERG, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Nov. 15, 1922. Serial No. 601,131. 48 Claims. (Cl. 209—110.)



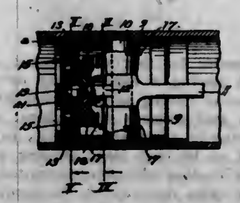
1. In a machine of the class described, the combination of means for feeding cards having a plurality of control positions, a feeler cooperating with the cards as they are fed through the machine, card distributing mechanism, and a plurality of devices operated either singly or in combination as determined by the control positions of the card for controlling the distributing mechanism.

1,627,029. AUTOMATIC CIRCUIT BREAKER. MILTON E. GREENWAY and RALPH W. CHAMBERS, Whitewright, Tex. Filed May 8, 1925. Serial No. 28,770. 7 Claims. (Cl. 200—116.)



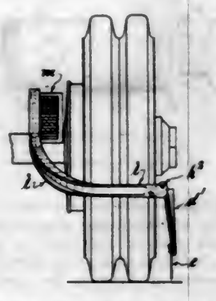
1. In an automatic circuit breaker, a base, a yielding angular latch lever mounted on the base and having an elongated hooked end, means for tensioning said lever in one direction, a dog pivoted upon the base and engaging the hooked end of said lever, a fixed contact parallel to the pivoted end of the lever, a movable contact engaging the fixed contact adapted to be released from said dog, tension means for shifting the movable contact and dog to break circuit, and a thermostatic member extending from the fixed contact to said lever for normally holding the latch lever in restraint.

1,627,030. TELEGRAPH RECEIVING INSTRUMENT. RANSOM ALBERT GROUT, San Bruno, Calif. Filed Jan. 5, 1926. Serial No. 79,372. 11 Claims. (Cl. 178—100.)



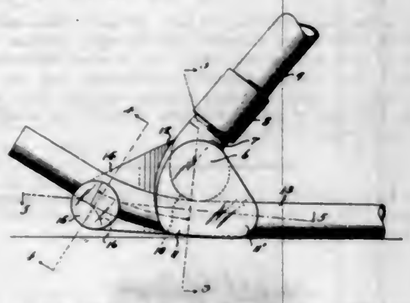
1. In a telegraph receiving instrument, the combination of a magnet, a diaphragm mounted in front of the magnet, an anvil secured centrally to the diaphragm, and a sounding element acting as an armature and guided for rectilinear movement between the anvil and the core of the magnet.

1,627,031. BEARING FOR ENGINES, AIR COMPRESSORS, AND THE LIKE. JASON E. HARRIS, Howard, Kans. Filed June 8, 1925. Serial No. 35,597. 3 Claims. (Cl. 74—17.)



1. A bearing comprising a pair of inner rings and a pair of outer rings arranged in telescopic relation, the rings of each pair having tongue and grooved connections to hold them against separating movement, and rods respectively for and extending radially outward from said rings, the axis of all of the rods lying in the plane of the inner edges of the rings.

1,627,032. INTAKE VALVE. JASON E. HARRIS, Howard, Kans. Filed July 20, 1925. Serial No. 44,700. 5 Claims. (Cl. 123—47.)



1. The combination of a shaft having a crank, a crankcase inclosing the crank of the shaft, and a cylinder communicating at its inner end with the crank-case, a piston in the cylinder and a connecting rod between the piston and said crank, the piston having an intake port in its head, of a rotary valve carried by the piston head for controlling the port thereof and provided with a stem extending longitudinally of the piston, a rocker arm pivoted on said stem, means actuated by sufficient pressure in the combustion chamber of the cylinder to operate the rocker arm, and means actuated by a change of angular relation between the piston and the connecting rod, to apply lateral pressure on the rocker arm and to effect rotation of the valve to open position.

1,627,033. ANTISPLASH DEVICE FOR THE WHEELS OF MOTOR ROAD VEHICLES. ERNEST WILLIAM HAWARD, Old Trafford, England. Filed Aug. 11, 1925, Serial No. 49,630, and in Great Britain Aug. 11, 1924. 4 Claims. (Cl. 280—157.)

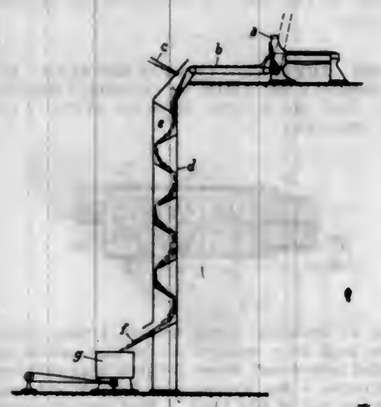
1. An anti-splash appliance for a road vehicle wheel, comprising a guard of light sheet material, a rotatable axle carrying said guard, a pair of brackets or supports mounted on a relatively fixed part of the vehicle and extending at their lower ends to the back and front of the wheel respectively, short levers pivotally mounted near the ends of the brackets and carrying the guard axle, and means for positioning the axle in the levers and the levers on the brackets so that the guard normally lies at an angle to the vertical, and will move upwardly and outwardly on meeting an obstruction, as set forth.

1,627,034. BENDER FOR LIGHT-GAUGE CONDUITS OR PIPES. ROBERT HALSEY HENDERSON, East Orange, N. J. Filed Dec. 10, 1926. Serial No. 153,769. 4 Claims. (Cl. 81—15.)

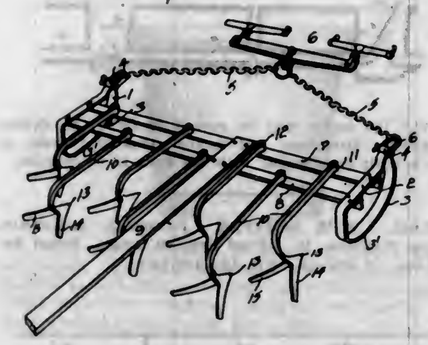
1. A hand bender for thin wall conduit, comprising a curved element having a handle lever extending therefrom, said element having integral parallel side flanges providing with said element a peripheral main bending groove conforming in width substantially to the diameter of the conduit to be bent, said bending groove at the point where the bending operations occur being of a shape to impinge the sides and top of the conduit and being provided with compensating expansion spaces intermediate said top and side points of impingement, and one of said flanges having a forward extension provided with a transverse abutment post spaced relative to the point of bending operation in said main bending groove at a distance approximating from two or three times the diameter of the conduit to be bent.

1,627,035. WRENCH. HERMAN C. JAHN, Springfield, Minn. Filed Feb. 16, 1926. Serial No. 88,667. 1 Claim. (Cl. 81—99.)

A wrench including a bar, a handle on one end of the bar, a fixed jaw on the opposite end of the bar, a jaw member pivoted to said bar at a point adjacent the fixed jaw, said jaw member provided with a pocket in one edge of the material thereof and located between the pivot and jaw proper, said pocket formed with a cam surface, an arm having one end pivoted to said bar and the opposite end in cooperation with the cam surface, and a spring in engagement with said arm to normally move said jaw and member to closed position.



1,627,036. MILK-BOTTLE CAP. JESSE M. JORDAN, Lovefield, Tex. Filed Jan. 12, 1926. Serial No. 80,744. 2 Claims. (Cl. 215—64.)

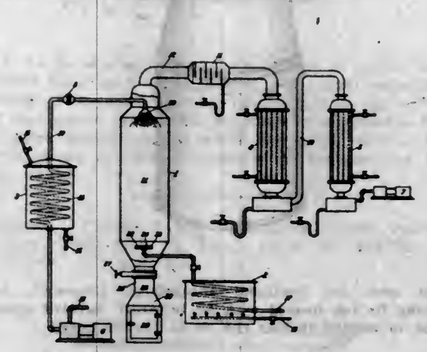


1. In a closure cap for milk bottles, a cap member with a pendent marginal flange adapted to be disposed upon and about the upper end of the bottle, a pair of vertically swingable skirt members hingedly connected to the lower edge of the cap flange for engagement around a bottle directly beneath the upper end thereof, and means for holding said members in tight engagement with the bottle for maintaining the cap in position thereon.

1,627,037. METHOD OF LOOSENING PARALLEL FIBER BUNCHES BY THE WET PROCESS. ADOLF KÄMPF and KARL KRÜNEWÄLDER, Premnitz, Westhavelland, Germany. Filed Oct. 16, 1925, Serial No. 62,906, and in Germany Dec. 18, 1924. 4 Claims. (Cl. 19—66.)

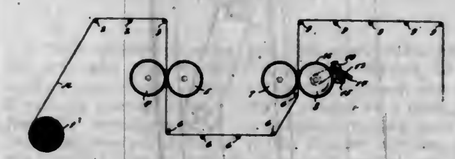
1. A method of loosening parallel fiber bunches by the wet process, comprising suspending said fiber bunches in a suitable liquid and letting the suspension fall freely against impact surfaces.

1,627,038. WEEDING IMPLEMENT. JOHN J. KEARNS, Spokane, Wash. Filed Feb. 14, 1925. Serial No. 9,288. 2 Claims. (Cl. 97—144.1.)



1. The combination with a rigid frame comprising sleds having runners adapted to perform the functions of fulcrums, draft means attached to said sleds at a point whereby the frame will be tilted forwardly, a lever bar fixed on the frame adapted to receive a weight for tilting the frame rearwardly, a plurality of longitudinally disposed beams pivoted on said frame to swing laterally, cutting devices on the beams, and means whereby said cutting devices are located in staggered position transversely of the implement.

1,627,039. PORTABLE FIRE EXTINGUISHER. FRIEDRICH EMIL KRAUSS, Schwarzenberg, Sachsen, Germany. Filed Sept. 15, 1923, Serial No. 662,899, and in Germany Sept. 16, 1922. 1 Claim. (Cl. 169—32.)

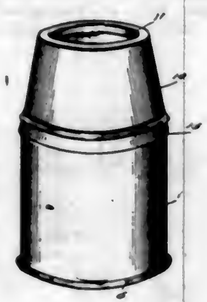


In a fire extinguisher, the combination of a shell, a cylindrical expansion chamber penetrating the top of said shell and fixed in it, a nozzle at the side of the outer portion of said expansion chamber, and an ascending pipe opening into the lower end of said expansion chamber and having a small diameter in relation to that of the expansion chamber and being of uniform diameter in all its length.

1,627,040. METHOD OF RECOVERING GLYCERIN FROM FERMENTED MOLASSES MASH AND APPARATUS THEREFOR. JAMES W. LAWRIE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Co., Wilmington, Del., a Corporation of Delaware. Filed June 6, 1922. Serial No. 566,257. 8 Claims. (Cl. 87—4.)

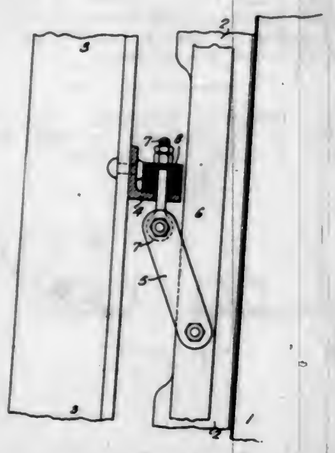
7. In the art of producing glycerin by the fermentation of molasses, the steps of heating the unclarified concentrated slop, bringing the heated slop into contact with a hot gaseous carrier while pressure atomizing the slop under a pressure of at least approximately 30 pounds per square inch, to present an extensive surface to the carrier and maintaining a temperature to quickly vaporize the glycerin from the slop, and condensing the evolved glycerin vapors.

1,627,041. PRINTING MACHINE. JOHN J. LEARY, Brooklyn, N. Y. Filed Sept. 19, 1923. Serial No. 663,541. 5 Claims. (Cl. 101—424.)



1. In printing machines having printing and packing cylinders, a cleaner for the packing cylinder comprising a cylinder contacting therewith and rotating in conjunction therewith, said cleaning cylinder having on its contacting surface a plurality of cleaning strips extending in a direction lengthwise thereof and peripherally spaced, said strips being helically disposed from the center toward each end of the cleaning cylinder whereby the offset deposit which is removed from the packing cylinder by the strips will be progressively carried to the ends of the cleaning cylinder and discharged.

1,627,042. CONTAINER. THOMAS S. MASON and EDWIN L. YUNOK, Hartford, Conn. Filed May 6, 1925. Serial No. 28,487. 6 Claims. (Cl. 220—5.6.)



1. A container and a closure therefor, the container having an inwardly flared neck terminating in an inwardly directed lip, a closure having an inwardly bulged

top and of a length approximately equalling that of the neck of the container and shaped complemental to

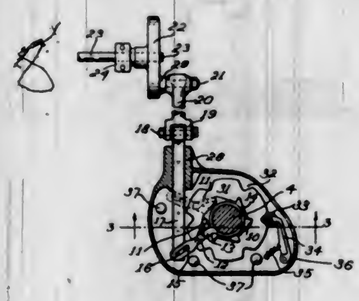
said neck for frictional engagement therewith, and having its top formed with an inwardly directed opened bead to receive therein the lip of the container.

1,627,043. SULPHURIC-ACID CHAMBER. RICHARD THOMPSON MAUDSLEY, Quinton, Birmingham, England, assignor to Packards, & James Fison (Thetford) Ltd., Ipswich, England. Filed May 6, 1926, Serial No. 107,170, and in Great Britain Feb. 17, 1926. 12 Claims. (Cl. 23—284.)

1. In means adapted to permit the expansion or contraction in any direction of a sulphuric acid chamber, the combination with a supporting framework for said chamber, of a pivot mounted on said framework, a pivot on said chamber, a link connected to said pivots, and means for adjusting the pivot on said framework.

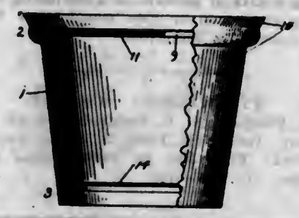
1,627,044. TEMPORARY PIPE COUPLING. DANIEL J. MCGEEHIN, West Hazleton, Pa. Filed Feb. 19, 1926. Serial No. 89,399. 3 Claims. (Cl. 285—2.)

1. A temporary pipe coupling for connecting the spaced ends of two stationary pipe sections, comprising a connecting pipe section longer than the distance between said ends and small enough in diameter to be freely insertible therein, a pair of sleeves having a close sliding fit on said connecting section and formed with peripheral flanges, a pair of levers pivotally connected to one of the flanges, a link opposed to each lever and connecting the same to the flange on the other sleeve,



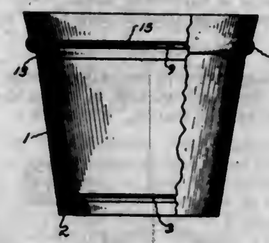
whereby the levers may be rocked to force the sleeves in opposite directions, and means actuated thereby to form a tight engagement with the ends to be coupled.

1,627,045. PIPE SCRAPER. DANIEL J. MCGEEHIN, West Hazleton, Pa. Filed Feb. 19, 1926. Serial No. 89,434. 6 Claims. (Cl. 15—104.16.)



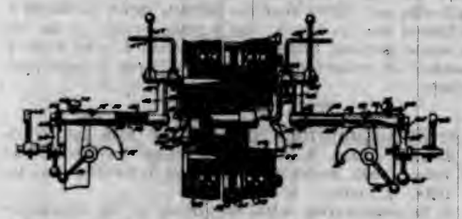
1. A pipe scraper including a plurality of elements connected together in series and each comprising a central stem polygonal in cross section, a U-shaped spring member centrally secured to the stem, an arcuate spring leaf secured within the concave central portion of the spring member and reinforcing the same, a block secured within the concave face of said spring leaf, and bits secured to the ends of said U-shaped spring member and projecting outwardly diametrically opposite directions.

1,627,046. INTERMITTENT GRIP MECHANISM FOR ROTARY CONVEYERS. WILLIAM ALLEN MILLER, Pittsburgh, Pa. Filed July 30, 1924. Serial No. 729,080. 2 Claims. (Cl. 74—54.)



1. In a rotary conveyer, a revoluble shaft, a casing for said shaft, a ratchet wheel fixed to the shaft, a collar loosely encircling said shaft above said ratchet wheel and having an outwardly extending arm, provided with a slot near its outer end, means movable in a straight line for rocking said arm, a pivoted pawl carried by said arm and engaging said ratchet wheel, a notched plate fixed to said shaft on the underside of said ratchet wheel and a spring-tensioned member pivotally mounted on said casing and adapted to engage said notched plate for checking rotation of said shaft at predetermined points.

1,627,047. PAPER CONTAINER. ARLINGTON MOORE, Worcester, Mass., assignor to Clarke-Moore Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 7, 1919. Serial No. 336,292. 51 Claims. (Cl. 229—5.6.)

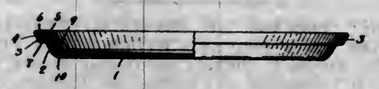


1. In a paper container, a side wall, and a highly-compressed practically-solidified multi-reenforced neck therefor formed from a continuation of the stock thereof folded into three overlying rigidly-set portions in intimate surface contact with one another.

1,627,048. PAPER CONTAINER. ARLINGTON MOORE, Worcester, Mass., assignor to Clarke-Moore Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 24, 1920. Serial No. 376,400. 33 Claims. (Cl. 229—5.6.)

1. In a paper container; a side wall; a bottom closure therefor; a reenforced neck formed from a continuation of the side wall and having a ledge projecting inwardly thereof and formed of a plurality of folded portions including a terminal portion enclosed between the other portions; and a cap seated on said ledge.

1,627,049. PROCESS OF INFOLDING PAPER-CONTAINER BODIES AND THE LIKE. ARLINOTON MOORE, New York, N. Y. Filed June 21, 1926. Serial No. 117,544. 10 Claims. (Cl. 93—36.)



1. The process of making a multiple fold margin on a shell of paper, which consists in rotating same relative to a spinning tool, advancing the tool gradully relative to the shell to fold in the margin, and then advancing the tool abruptly, whereby the turned in raw edge is reversed and a fold produced in which the raw edge is enclosed between folds or thicknesses of paper.

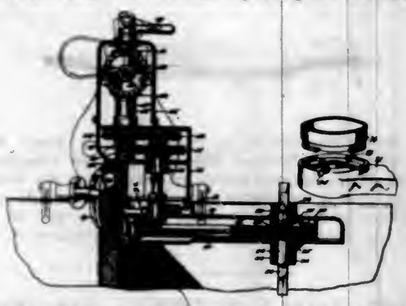
1,627,050. PAPER DISH. ARLINGTON MOORE, Boston, Mass. Filed Mar. 23, 1921. Serial No. 454,771. 4 Claims. (Cl. 229—2.5.)

1. As a new article of manufacture, a paper dish formed from an integral disk of paper and comprising outside of the flaring annulus extending from the bottom of the dish a reenforced, multifold, substantially consolidated annular rim in which the longer way of the folds extend substantially parallel to the plane of the dish bottom.

1,627,051. PAPER DISH. ARLINGTON MOORE, Boston, Mass. Filed Mar. 23, 1921. Serial No. 454,772. 9 Claims. (Cl. 229—2.5.)

1. As a new article of manufacture, a paper dish formed from an integral paper disk, an upturned flaring outer rim having a recessed upper portion, and a multi-reenforced marginal portion of said rim formed from a continuation of the stock thereof folded into three overlying portions, said folds being anchored in said recess.

1,627,052. RAILROAD-CROSSING GATE-OPERATING DEVICE. GEORGE MOORE, Toronto, Ontario, Canada. Filed Oct. 28, 1926. Serial No. 144,830. 2 Claims. (Cl. 246—293.)



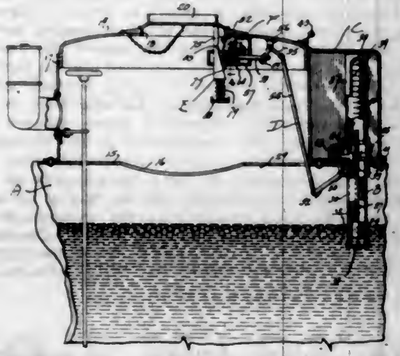
1. In a railroad crossing gate, the combination with the gate arm and operating mechanism thereof, of a support located at a distance from the approach side of a railroad crossing gate, a support located at a distance from the receding side of the railroad crossing gate, a cam arm pivotally mounted on the support, the arm on the approach side being in the depressed position and the arm on the receding side in the raised position, means carried by the train for engaging the arm when in the depressed position and connecting means between the arms whereby one arm is depressed by the raising of the other arm and for simultaneously operating the crossing gate mechanism to lower the gate arm as the train approaches the crossing and for raising the gate arm when the train recedes from the crossing, means for automatically sounding an alarm prior by the operation of the cam arm on the approach side of the railroad crossing gate and for cutting out such alarm as the train reaches the railroad crossing.

1,627,053. WASHING MACHINE. FRANK B. MOREHOUSE and FRANK HAASE, San Francisco, Calif., assignors, by direct and mesne assignments, to Trayway Mfg. Co., a Corporation of California. Filed Oct. 10, 1923. Serial No. 667,635. 21 Claims. (Cl. 68—15.)

1. In a washing machine, a casing, a hollow arm extending horisontally from said casing, a hollow vertical shaft journaled in said arm adjacent its outer end, a

gear on said shaft, a rack enclosed in said arm and engaging said gear, a motor adjacent said casing and above said arm, drive means depending in said casing

and adapted to cooperatively connect said motor and rack, and impeller means connected to said hollow vertical shaft.



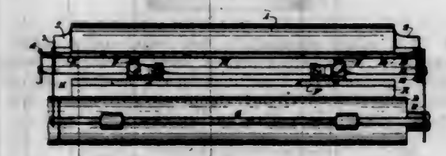
1,627,054. PROCESS OF OBTAINING RESINLIKE BODIES FROM CRACKED HYDROCARBON PRODUCTS. JACQUE C. MORRELL and GUSTAV EGLOFF, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 27, 1923. Serial No. 635,122. 5 Claims. (Cl. 260—2.)

1. A process of obtaining hard resin-like bodies from cracked hydrocarbon distillates, consisting in removing said resinous bodies with an adsorbing agent and subjecting the removed bodies to a partial oxidizing action to produce a hard resin-like body.

1,627,055. METHOD OF PURIFYING HYDROCARBON OILS. JACQUE C. MORRELL and SALMEN COMAY, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 22, 1925. Serial No. 38,924. 3 Claims. (Cl. 196—42.)

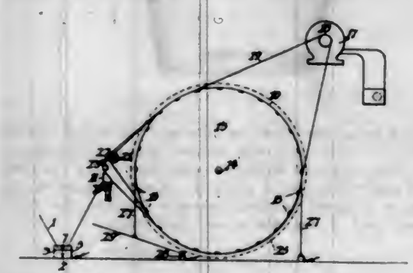
1. A method of purifying hydrocarbon oils, comprising subjecting the oil to reaction with copper hypochlorite in solution.

1,627,056. SELF-LOCKING LIQUID-LEVEL GAUGE. RUSSELL L. MORRIS, Tulsa, Okla. Filed Jan. 3, 1924. Serial No. 684,269. 10 Claims. (Cl. 73—120.)



1. In combination with a tank including a closure, a float device in the tank for indicating liquid level, jaw means for gripping the float to hold it in a supported position within the tank, a lock for holding said jaw means in float gripping relation, and spring operated means normally acting to hold said jaw means in non-locking relation.

1,627,057. PRESERVATION OF BACON OR HAM. THOMAS W. MORRIS, Liverpool, England. Filed May 18, 1926, Serial No. 110,018, and in Great Britain Feb. 12, 1926. 3 Claims. (Cl. 99—8.)

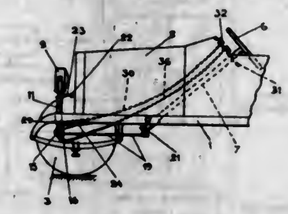


1. The process of treating bacon or ham which consists in heating a bath of glycerin to a sterilizing temperature, immersing the bacon or ham momentarily therein, and quickly removing it therefrom.

1,627,058. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1926. Serial No. 105,776. 8 Claims. (Cl. 197—143)

1. A paper table mounted at the rear of the platen formed of a single piece of sheet metal and having at each end an arm bent at substantially right angles to the body of the table, each arm being provided with an open ended slot forming two legs adapted to receive between the same a supporting means about which the table may swing to operative or inoperative position.

1,627,059. FILAMENT-DYEING APPARATUS. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed Mar. 3, 1926. Serial No. 91,963. 8 Claims. (Cl. 8—19.)

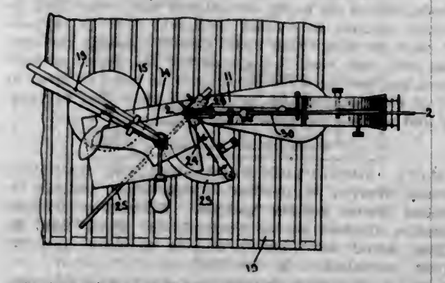


5. In filament dyeing apparatus; the combination with a rotary drying reel; of means arranged to pass extruded viscose filaments singly axially through dye liquor during their traverse toward said reel from the place of their extrusion and before they are initially dried, including a container for dye liquor; and a guide having an eye for a single filament, adapted to be moved to and from a position of submergence in the dye liquor in said container.

1,627,060. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. AXEL T. NYBLOM, Varberg, Sweden. Filed June 9, 1925. Serial No. 35,986, and in Sweden June 16, 1924. 2 Claims. (Cl. 240—61.)

1. In combination with the frame of an automobile and its steering device, a tubular stanchion fixedly attached to said frame, a shaft carrying a headlight rotatably mounted within said stanchion, a sleeve slidably and rotatably mounted on said shaft connected with and actuated by the steering mechanism, means to move said sleeve up and down so as to couple and uncouple same with regard to said shaft, said means adapted also to couple and uncouple said shaft with regard to the frame,

a coupling member on the shaft, a second sleeve, said means in the first mentioned case cooperating with the coupling member on the shaft, in the last mentioned case actuating the second mentioned sleeve cooperating with the first mentioned sleeve in its sliding motion independently of its revolving motion, the last mentioned

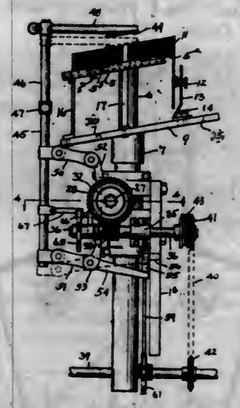


sleeve being slidably but non-rotatably mounted on said headlight shaft and adapted in its upper position to couple said shaft immovably to the frame, a spring actuating said two sleeves whereby to normally keep the one sleeve in engagement with said headlight shaft and the other sleeve out of engagement with the automobile frame.

1,627,061. SWITCH FOR AUTOMOBILE STOP LIGHTS. BENJAMIN V. OGDEN, Philadelphia, Pa. Filed Oct. 19, 1923. Serial No. 669,637. 7 Claims. (Cl. 200—59.)

1. A switch for automobile "stop" lights and the like comprising a member made of insulating material having an internal passageway, a pair of bus bars internally mounted in said member and adapted to be electrically connected with a signal lamp circuit, a plurality of pairs of separated contact devices arranged at intervals in said passageway and electrically connected with said bus bars, a globule of mercury adapted to pass through said passageway to close said circuit as the same contacts with respective pairs of contact devices, said passageway being so shaped as to retard the passage of said globule of mercury, and means for mechanically associating the device with the brake mechanism of the automobile whereby the device will be tilted to thereby cause said globule of mercury to travel through said passageway when the brake mechanism is operated.

1,627,062. PATTERN-GRADING MACHINE. MARSHALL V. PRESTON, Boston, Mass. Filed Nov. 23, 1922. Serial No. 602,742. 35 Claims. (Cl. 164—48.)



1. A pattern grading machine having a punch and a die as cutting elements and including a pantograph mechanism of which the stationary pivot is related to a given point in the cutting edges of the punch and die.

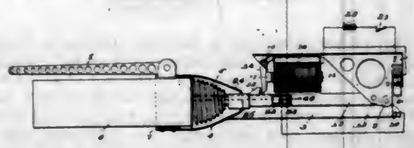
1,627,063. HAND-BAG ACCESSORY. FRANK J. QUIGAN, Brooklyn, and SAMUEL CAROLIN, New York, N. Y. Filed Oct. 9, 1926. Serial No. 140,447. 4 Claims. (Cl. 150—34.)

1. In combination with a handbag having a flexible body and a channelled frame member, a metal attaching strip adapted to be arranged in the channel of said frame member at the outer side of the edge of the flexible body wall positioned therein and the side walls of said frame member clinched upon said metal strip and body wall to confine the same in connection therewith, and an accessory holder connected with said metal strip and normally depending therefrom exteriorly of the bag.

1,627,064. FEED TABLE FOR SHEET-FEEDING MECHANISM. CHARLES F. ROOT, Cleveland, Ohio, assignor to The Chandler & Price Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 16, 1923. Serial No. 668,903. 9 Claims. (Cl. 271—62.)

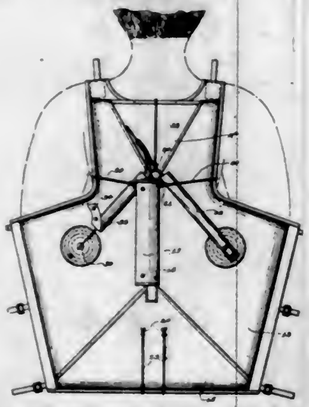
1. The combination with a feed table of the character described; of means adapted to elevate said table at a predetermined rate; a vertically reciprocatory member adapted to contact on downward movement with the top of a stack of sheets on said table; means adapted periodically to raise said member; a second member normally preventing operation of said elevating means; and connections between said members whereby the second thereof is rendered ineffective and operation of said elevating means is permitted whenever said first member is allowed by the stack to drop to a predetermined position.

1,627,065. CAP. STANLEY M. RUMBOUGH, New York, N. Y. Filed Feb. 18, 1924. Serial No. 693,431. 2 Claims. (Cl. 221—60.)



1. A container having a threaded neck in combination with a cap screwing thereon, a retainer ring also screw-

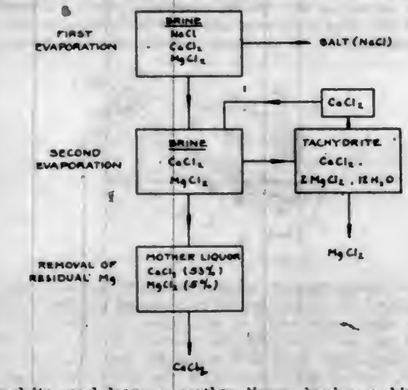
ing on the threaded neck, a spring wire ring having a portion fixedly secured to the cap and having downwardly



extending resilient arms formed with laterally extending pintle portions which engage the retainer ring.

1,627,066. ELECTRICALLY-OPERATED WING-TIP FLARE BRACKET. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,403. 6 Claims. (Cl. 240—1.)

1. The combination of a supporting bracket, a flare candle housing, a supporting arm for said housing connected by a pivot to said bracket and adapted to swing from its normal carrying position to its operative position, a spring-actuated thrust member acting to move said arm to its operative position and connected to the bracket by a pivot offset from the pivot of said arm, and means for holding and releasing said arm and thrust member.

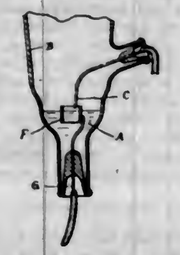


1,627,067. PARACHUTE PACK. JAMES M. RUSSELL, Dayton, Ohio. Filed June 18, 1924. Serial No. 720,815. 13 Claims. (Cl. 244—21.)

1. In a parachute pack of non-rigid flexible construction adapted to extend across the back and around the sides of the wearer, a plurality of releasable flaps for retaining a folded parachute in said pack, elastics extending about the pack connected to said flaps, and stiffening means to hold the shape of the pack at said elastics.

1,627,068. METHOD OF TREATING BRINE. ALBERT KELVIN SMITH, Midland, Mich., and CARL F. PRUTTON, East Cleveland, Ohio, assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Sept. 29, 1923. Serial No. 665,737. 20 Claims. (Cl. 23—91.)

1. In a method of treating a brine of the character described, the steps which consists in evaporating such brine to crystallize out the sodium chloride and evaporating the residual brine containing calcium and magnesium chlorides to crystallize out the latter in the form of

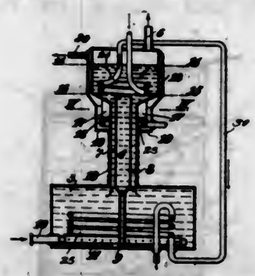


tachydrite, and leave a mother liquor having a higher proportion of calcium chloride to magnesium chloride than the original brine.

1,627,069. LIQUID COATING COMPOSITION. VERNON M. WADE, ARTHUR C. ZIMMERMAN, and SAM D. HERON, Dayton, Ohio. Filed Oct. 19, 1923. Serial No. 669,532. 3 Claims. (Cl. 134—51.)

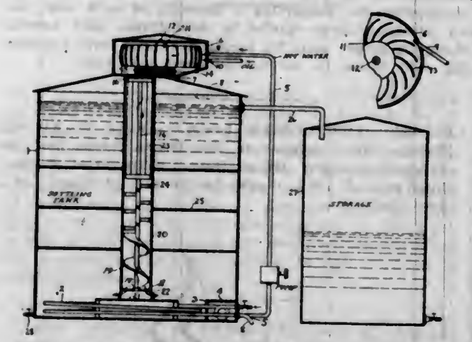
2. An enamel adapted to be baked on a surface for use under high temperature conditions, comprising a mixture of a bitumen which is solid at ordinary room temperatures and including gilsonite, a vegetable oil; the weight of the bitumen content being substantially from 60% to 80% of the weight of the oil, and a thinner.

1,627,070. METALLIC VAPOR DEVICE. EZECHIEL WEINTRAUB, Neuilly-sur-Seine, France. Filed Dec. 14, 1923. Serial No. 680,691. 8 Claims. (Cl. 176—42.)



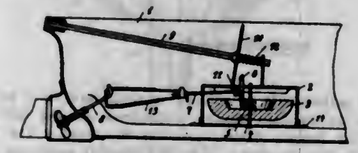
1. In a mercury vapor device including a mercury cathode, means for fixing the cathode spot comprising an electrode element in contact with said mercury cathode, said electrode comprising metal classified within the combined fifth and sixth groups of the Mendeleef periodic system and having a specific gravity at least as great as that of molybdenum and not greater than that of tungsten and melting point above 2000° C.

1,627,071. ABSORPTION REFRIGERATING MACHINE. ELIAS WIRTH, Winterthur, Switzerland, assignor to Sulzer Frères Société Anonyme, Winterthur, Switzerland, a Corporation of Switzerland. Filed Mar. 31, 1924, Serial No. 703,078, and in Germany July 17, 1923. 4 Claims. (Cl. 62—118.)



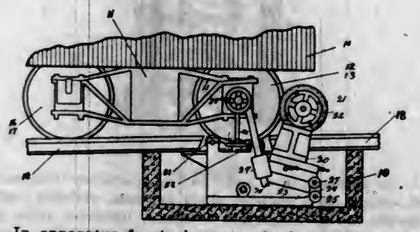
1. In an absorption refrigerating machine, a container comprising an upper and a lower closed compartment in restricted connection, means for heating said upper compartment, means for cooling said upper compartment,

means for leading off the expelled gases from said upper compartment, means for introducing the returning gases into said lower compartment, said restricted connection



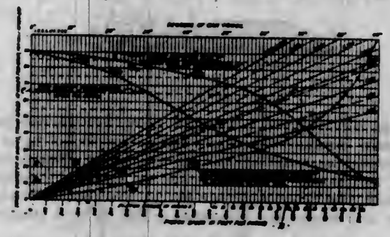
being subdivided into passages, the walls of which are adapted to produce an exchange of heat between the liquid flowing into the lower compartment and the liquid flowing into the upper compartment.

1,627,072. PROCESS OF TREATING IMPURE CRUDE OIL. JOHN F. WRIGHT, El Dorado, Ark. Filed Jan. 26, 1924. Serial No. 688,633. 2 Claims. (Cl. 196—5.)



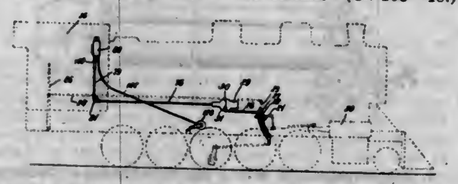
1. The process of treating impure petroleum to relieve it of its impurities comprising spraying and atomizing the impure oil against the rotatable member, spring hot water into contact with said atomized oil, agitating said mixture and passing the same through a series of vertically arranged chambers where the oil and water may separate by gravity and drawing off the oil.

1,627,073. MOTOR MECHANISM FOR TOY-BOATS. CARL ARNOLD, Nuremberg, Germany. Filed Feb. 1, 1924, Serial No. 690,092, and in Germany Mar. 31, 1923. 1 Claim. (Cl. 46—37.)



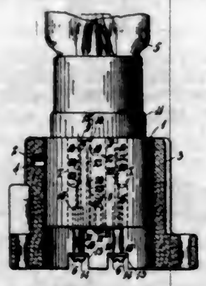
A toy boat comprising a body, a bracket positioned on the bottom thereof, a vertical projection on said bracket, starting means comprising a shaft slidably mounted through one end of said body and through said projection, the end extending without the body adapted to receive a starting crank, a gear fixed on said shaft adjacent the projection and a spring between said gear and projection, a momentum wheel mounted in the bracket, a power imparting shaft extending laterally through the bracket, one end of said power shaft having pinion connections with said gear and said wheel, a link connection on the other end of said power shaft, said link connection cooperating with a propeller carrying shaft extending through a lower end part of the boat body to impel the boat.

1,627,074. APPARATUS FOR TRUING CAR WHEELS. ROBERT S. BLAIR, Sound Beach, and BURLING D. WELLS, Danbury, Conn.; said Wells assignor to said Blair. Filed May 13, 1921. Serial No. 469,154. 13 Claims. (Cl. 51—179.)



1. In apparatus for truing car wheels and the like, in combination, means adapted to rotate a car wheel in a stationary truck, a truing device adapted to coact with the tread of said wheel, means mounting said truing device at a predetermined distance from the axis of said wheel and maintaining said distance irrespective of bodily movement of said wheel, and means adapted to feed said device toward said axis.

1,627,075. METHOD OF STEAM-ENGINE OPERATION. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y. Filed Sept. 10, 1924. Serial No. 738,708. 7 Claims. (Cl. 105—48.)



1. A method of steam engine operation which comprises indicating the values of speed in selected units and simultaneously indicating in terms of the same units, the speed at which each position of the cut-off valve will produce the maximum cylinder result.

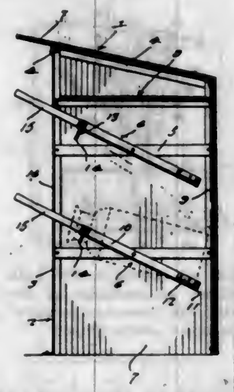
1,627,076. VALVE CUT-OFF AND SPEED INDICATOR. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y. Filed Jan. 12, 1925. Serial No. 1,869. 33 Claims. (Cl. 105—48.)

1. The combination with the operating gear for the cut-off valve of a locomotive, of means for indicating the surface speed of the locomotive, and means actuated by the said operating gear and indicating in the same units as those in which the surface speed is indicated, those speeds at which the different positions of the cut-off valve will produce the maximum draw-bar pull.

1,627,077. ADAPTER. POWELL CROSLEY, JR., Cincinnati, Ohio. Filed Oct. 9, 1922. Serial No. 593,404. 4 Claims. (Cl. 173—344.)

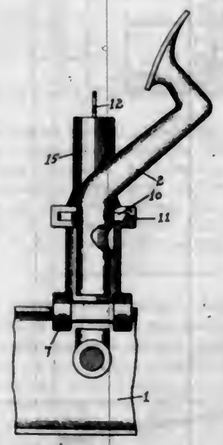
1. In an adapter, a body having apertures from end to end, each with a channel along one side, yielding contact elements in the respective channels, insulated from each other and lying partly in the respective apertures to be forced therefrom by the prongs of an electrical instrument inserted into the respective apertures, and protruding contact elements on one end of said body, offset from the apertures, insulated from each other, and electrically connected to the respective yielding contact elements.

1,627,078. CONTROLLER FOR FISH LURES. JOHN A. DIENNER, Chicago, and ALEXANDER C. MABEE, Villa Park, Ill. Filed Sept. 15, 1924. Serial No. 737,652. 12 Claims. (Cl. 43—46.)



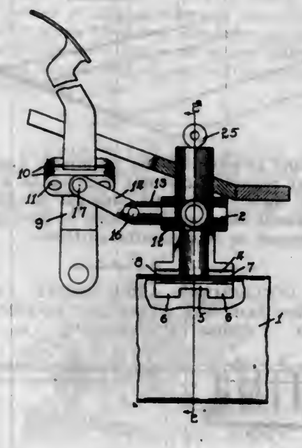
3. In combination, a buoyant body, a Y-shaped guide, a rudder consisting of two blades connected by a flat connecting bar, said connecting bar being adapted to operate within the Y-shaped guide, spring means operating to retain the connecting bar in the base of the Y-shaped guide, and means for attaching a line to said connecting bar.

1,627,079. BRICKMAKING MACHINERY. ARTHUR O. DUPUY, Cleveland, Ohio, assignor to Lancaster Iron Works, Inc., Lancaster, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1923. Serial No. 673,411. 3 Claims. (Cl. 83—12.)



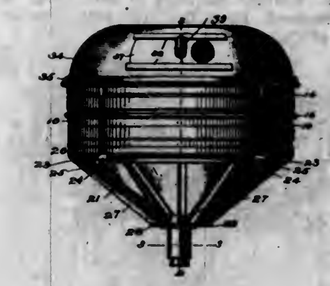
1. The combination with a pug-mill having a discharge opening at one end, of a pair of crusher rolls mounted adjacent said opening, a pivotally mounted spout adapted to direct the material discharged from said opening to said rolls and a reciprocating finger adapted to travel between said rolls and said spout, said finger being a point for suitably clamping the bolts against the side side of said spout and beyond the ends of the rolls.

1,627,080. MILK-CAN RACK. DANIEL T. FELLENBAUM, Coatesville, Pa. Filed Sept. 10, 1926. Serial No. 134,685. 2 Claims. (Cl. 141—1.)



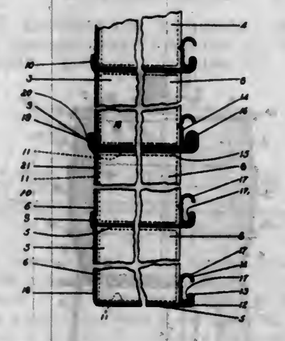
1. In a structure of the class described, a housing, a rockably mounted frame mounted in said housing and constructed for supporting a plurality of milk cans, and an operating lever carried by said frame, said housing including keeper seats for reception of said lever for holding said frame in various adjusted positions.

1,627,081. AUTOMOBILE LOCK. FRANK C. FISHER, Toledo, Ohio, assignor to The Bryan Screw Machine Products Company, Bryan, Ohio, a Corporation of Ohio. Filed Oct. 17, 1924. Serial No. 744,115. 1 Claim. (Cl. 70—128.)



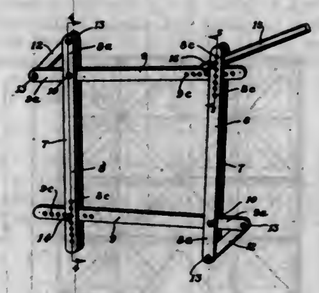
In an automobile lever lock a shell having a pair of lips, the automobile having a channel chassis side bar, one of the flanges fitting between the lips of the shell, one of the lips having a pair of threaded openings, bolts having threaded portions, the threaded portions of the bolts having a length such that when it is threaded into the openings and so as to engage the flange of the side bar, the outer end of the threaded portion will be located within the lip having the openings, the bolts having weakened portions at the ends of the threaded portions and breakable when subjected to a rotative strain beyond a point for suitably clamping the bolts against the side of the flange.

1,627,082. AUTOMOBILE LOCK. FRANK C. FISHER, Toledo, Ohio, assignor to The Bryan Screw Machine Products Company, Bryan, Ohio, a Corporation of Ohio. Filed Feb. 2, 1925. Serial No. 6,280. 1 Claim. (Cl. 70—128.)



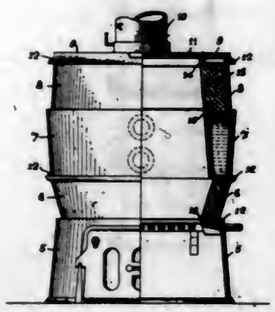
In a lock for an automobile having a speed controlling pedal lever, a frame fixedly connected to the side bar of the chassis frame of the automobile, a key rotatable barrel member, the barrel member having a pin projecting therefrom, a lock bolt having a slot into which the pin projects and slidably mounted in the first named frame and operated by the member, a slide bar located in the frame, a link for connecting the slide bar to the lever, the said bar having a recess for receiving the bolt when it is operated by the barrel member to lock the lever in a definite position.

1,627,083. FILTER FUNNEL. KENNETH G. FRASER, Wellton, Ariz. Filed Jan. 26, 1921. Serial No. 440,197. 2 Claims. (Cl. 210—156.)



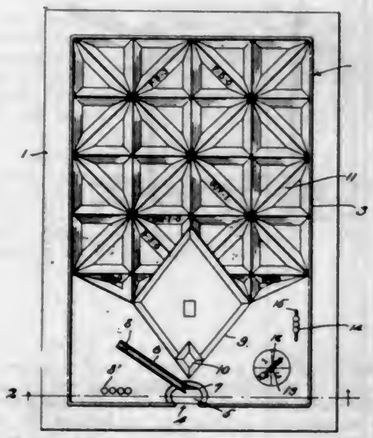
1. In a filter funnel, a filter body having an inlet and an outlet, a filter disposed within said body, a cover for the inlet having a filler hole therein, a cover for said filler hole, said body having a frusto conical bottom provided with a discharge opening in its apex, a rest for the body in the form of an annular plate surrounding said discharge opening, radial reinforcement ribs provided on the bottom of said body and interposed between same and said rest member.

1,627,084. SECTIONAL BIN. GEORGE FRITZ, Cincinnati, Ohio. Filed Sept. 6, 1924. Serial No. 736,255. 5 Claims. (Cl. 211—8.)



5. In a sectional bin structure, the combination of bin units, grooved card holder strips extending along the forward, lower edge of each unit and a grooved member extending along the forward, upper edge of each unit, the last mentioned grooved member being adapted to slidably interlock in the card holder of the bin next above, for locking together the forward edges of said bins.

1,627,085. FORM CLAMP. WILLIAM C. GIGGAL, Denver, Colo. Filed Aug. 4, 1924. Serial No. 729,957. 1 Claim. (Cl. 144—291.)



A clamp comprising a rectangular frame composed of bars crossed at the corners of the frame and extended beyond the same, the bars at two opposite sides of the frame being arranged in pairs and the bars at the other sides of the frame being single bars, means for rigidly connecting the extended ends at two diagonally opposite corners of the frame, the extended ends of the bars at the other two corners of the frame being provided at intervals with perforations for the reception of pins, and a lever for adjusting the bars, said lever being pivoted near one end between the pair of bars at one corner of the frame and provided at the pivoted end with a notch extending longitudinally of the lever and permitting the lever to straddle the adjacent single bar for fulcruming the lever against the outer edge thereof.

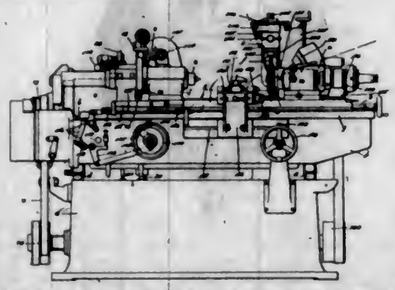
1,627,086. HEATER. MAXWELL F. GILBERT, Philadelphia, Pa., assignor to Richardson & Boynton Company, New York, N. Y., a Corporation of New York. Filed Jan. 14, 1926. Serial No. 81,136. 6 Claims. (Cl. 126—58.)

1. A heater, comprising a plurality of sections, a lining of fire-resistant and heat-retentive material positioned adjacent one of said sections, and a flange forming a part of an adjacent section and overlapping certain portions of said lining.

1,627,087. GAME. CHARLES WILLIAM GRANT, Lynn, Mass. Filed May 11, 1926. Serial No. 108,320. 2 Claims. (Cl. 273—88.)

1. A game including a board, an upstanding wall thereabout having an opening for receiving a finger of a player, there being a recess in the board adjacent the opening, of laterally extending means inclined downwardly toward the opening for directing a spherical game piece to a point above and dropping it toward the recess.

1,627,088. TRANSFER MEDIUM FOR METALLIZING PURPOSES. WILLIAM F. GRUPE, Lyndhurst, N. J. Filed Aug. 20, 1925. Serial No. 51,364. 10 Claims. (Cl. 41—33.)



1. A metallic transfer medium comprising a carrier, a layer of heat releasable material disposed on a face of said carrier, metallic particles disposed on said layer of heat releasable material and a layer of heat releasable material disposed on said metallic particles.

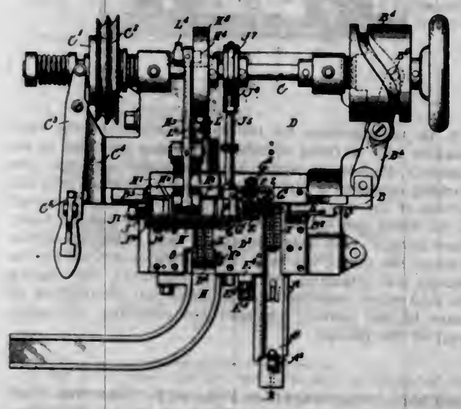
1,627,089. INSTRUMENT ATTACHMENT. ABRAHAM HALPIN, New York, N. Y. Filed Mar. 18, 1926. Serial No. 95,581. 3 Claims. (Cl. 84—271.)

1. In a musical instrument, the combination with a circular body, a vibrating member stretched over the body to produce a sound, and tension means on said body for retaining said sound producing member stretched taut upon the body, and manipulatable from a side of the body opposite the sound producing member, of a resonance chamber, and fastening means for retaining said chamber in detachable engagement with said body opposite to the sounding member and adjacent to the tension means, said fastening means including a yoke member secured to the chamber, a movable member having pivotal engagement with the yoke member, and a bridge member on the body having a lateral opening to receive the movable member when the same is swung around its pivot, the movable member having a head to grip the bridge member in holding position.

1,627,090. METAL-WORKING MACHINE. BENGT M. W. HANSON, Hartford, Conn.; Elnar A. Hanson and Clarence E. Whitney executors of said Bengt M. W. Hanson, deceased. Filed Oct. 10, 1922. Serial No. 593,487. 48 Claims. (Cl. 51—95.)

1. In a machine of the character described, a fixed bed, a rocking bed, a grinding wheel supported on one of said beds, a slidable work holder on the other of said beds and having means for rotatably supporting a threaded piece of work, means for moving said holder in accordance with the lead of the thread on the work, and a cam operative during the cutting operation for swinging said rocking bed to effect a longitudinal contour of the work.

1,627,091. MAKING KETO AND ALDO ALIPHATIC CARBOXYLIC ACIDS. ALFRED HÄUSSLER, Niederingelheim-on-the-Rhine, Germany, assignor to C. H. Boehringer Sohn Chemische Fabrik, Niederingelheim-on-the-Rhine, Germany, a Society of Germany. Filed Dec. 22, 1925, Serial No. 77,094, and in Germany Mar. 5, 1923. 10 Claims. (Cl. 260—116.)

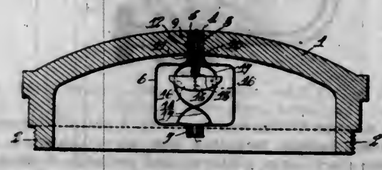


1. The method of making keto and aldo aliphatic carboxylic acids which comprises dehydrogenating esters of hydroxy aliphatic carboxylic acids in the vapor phase by the action of oxygen and converting the obtained esters into the respective acids.

1,627,092. PORTABLE DERAIL. STANLEY W. HAYES, Richmond, Ind., assignor to Hayes Track Appliance Company, Richmond, Ind., a Corporation of Indiana. Filed July 25, 1925. Serial No. 45,968. 27 Claims. (Cl. 246—163.)

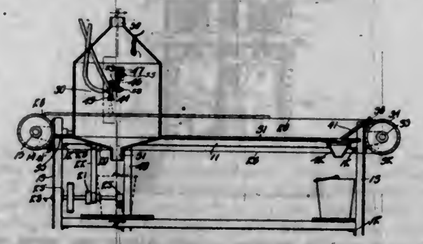
1. A portable derail capable of quick application and release comprising a derailing member having a unitary derail block provided with wheel-derailing contours and having also rail clamping structure movably mounted on and beneath said derailing member at one side of the rail and including power applying means for merely finishing the clamping movement and beginning the release movement, and means for manually effecting the quick rough application and release of the rail clamping means by shifting said clamping structure toward and from the rail.

1,627,093. MACHINE FOR CLEARING MATRIX CAVITIES. HENRY R. HOCHULI, Jamaica, N. Y., assignor to Merganthaler Linotype Company, a Corporation of New York. Filed Aug. 20, 1924. Serial No. 733,111. 34 Claims. (Cl. 29—33.)



1. In a machine of the class described, the combination of a matrix support adapted to sustain a matrix with its cavity exposed, a picking tool sustained relatively to the support to act in the matrix cavity to remove obstructions therefrom, and means for imparting a relative movement between said support and tool and operatively connected to one of said parts to cause the tool to enter the matrix cavity in one direction and remove the obstruction by movement in a different direction.

1,627,094. RAILWAY-TIE REMOVER. BENJAMIN J. HOOVER, Okolona, Miss. Filed Oct. 13, 1926. Serial No. 141,357. 4 Claims. (Cl. 104—0.)

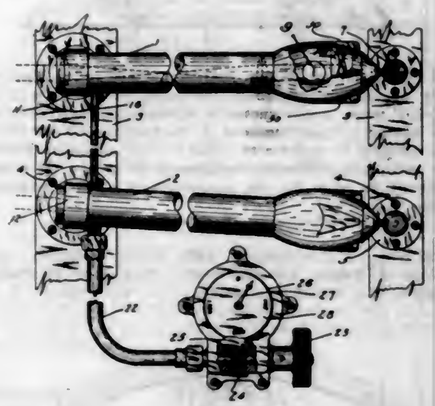


1. In a device of the character described, a hollow body portion adapted to be positioned on the rails of a railway track, a bar movable through the body portion and having a depending head, a chain carried by the head and adapted to operate to remove a tie positioned under the rails, and means for securing a tie to the tie being removed, to cause the last mentioned tie to be positioned under the rails.

1,627,095. ATTACHMENT FOR TANK VENTS. ALBERT S. JAMES, Eureka, Calif. Filed June 18, 1925. Serial No. 38,066. 8 Claims. (Cl. 220—44.)

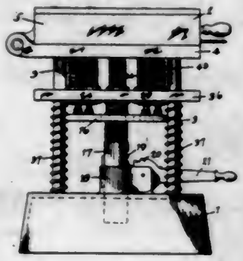
3. In combination with a tank having a normally open circular air vent, a plunger, and means for mounting said plunger on said tank in a manner and in position for being susceptible to agitation in and through the air vent on movement of said tank, said plunger being non-circular in cross section.

1,627,096. TILE-COATING MACHINE AND PROCESS. LOUIS S. JONES, GARFIELD W. FISHER, and CARL G. HENRIKSON, Anderson, Ind., assignors to The National Tile Company, Anderson, Ind., a Corporation of Indiana. Filed Mar. 16, 1925. Serial No. 16,025. 9 Claims. (Cl. 91—45.)



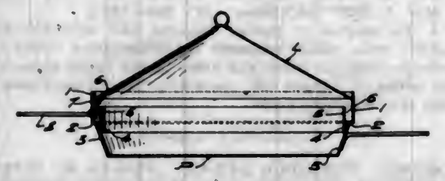
1. A combination machine for treating tile of heterogeneous form comprising a series of parallel wires providing a traveling belt, bands of greater cross section than the wires at one side of said belt extending parallel to said wires, a chamber through which the belt travels, means for producing within the chamber a spray of glazing compound, doors in the chamber adajcent said

bands, and pulleys at opposite sides of the chamber for guiding the elements of said belt in spaced relation to each other, substantially as set forth.



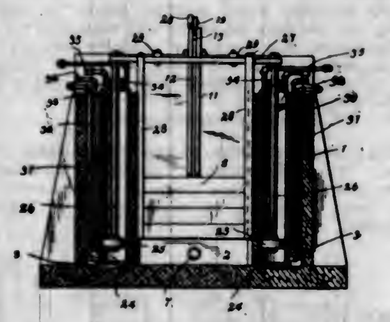
9. In a machine adapted to treat tiles of irregular shape, a conveyor, a fixed arm above the conveyor, a finger secured to the arm for lateral, vertical and pivotal adjustment relatively thereto, and a nozzle pivotally supported on the arm, said nozzle being adjustable lengthwise of said arm, substantially as set forth.

1,627,097. SEARCHLIGHT RANGE FINDER. ROBERT KAUCH, Dayton, Ohio. Filed Dec. 14, 1922. Serial No. 607,003. 6 Claims. (Cl. 33—66.)



1. In a range finding device, a base, a pair of telescopic searchlights, means mounting said searchlights on the base with their axes coplanar and normally horizontal and for moving said telescopes simultaneously in elevation, and, at the same time, imparting to one of them an angular movement in their common plane, and means connected with the mounting means for indicating the distance at which the searchlight rays intersect.

1,627,098. CASTING MACHINE. JOHN G. KOEGLE, Toledo, Ohio, assignor of one-half to Hugo Boelter, Toledo, Ohio. Filed June 17, 1926. Serial No. 116,603. 4 Claims. (Cl. 22—153.)

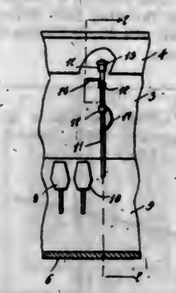


1. In a casting machine, a mold having two parts, one of the parts having a non-inverted cone shaped sprue hole and recesses forming the gateways and a side of each of the matrices of the mold, the other part for closing one side of each of the recesses that form the gateways and having recesses that with the other of the said recesses of the first named part form the matrices of the mold.

1,627,099. ATTACHMENT FOR FRYING PANS. CHARLES A. LANDGREN and JULIA A. LANDGREN, Silverton, Oreg. Filed Feb. 11, 1926. Serial No. 87,641. 1 Claim. (Cl. 53—7.)

An attachment for a frying pan, comprising a continuous rim, an inwardly disposed flange at the inner edge of said rim adapted to rest upon the upper marginal portion of the pan, an upstanding flange formed upon the inner edge of the inwardly disposed flange in spaced relation with the rim to form an annular collecting chamber, a depending flange at the inner edge of the inwardly disposed flange adapted to engage the inner wall of the pan below the marginal edge thereof, a plurality of circumferentially spaced lugs arranged upon the inner wall of the rim adjacent the upper edge thereof and a conical shaped lid having its base edge adapted to rest upon said lugs.

1,627,100. MOTOR. CÉLESTIN LECHENNIER, Tampa, Fla. Filed Sept. 15, 1926. Serial No. 135,603. 3 Claims. (Cl. 253—18.)

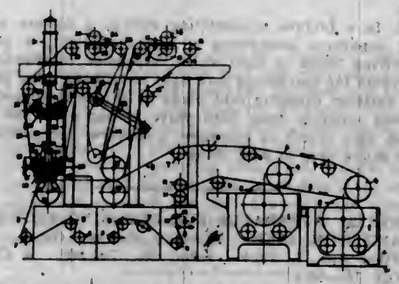


1. In an apparatus for the purpose set forth, the combination of a working chamber, a plunger mounted to reciprocate therein, a water tank arranged adjacent the working chamber, a pipe leading from said tank into the bottom of the working chamber, a valve arranged to seat in the upper end of said pipe to cut off the flow of water therethrough, said valve having a bail rising therefrom through the top of the tank, and means controlled by the plunger and engaging the bail for unseating and seating the said valve whereby to establish or cut off the flow of water to the working chamber for reversing the movement of the plunger.

1,627,101. COMPOSITION FOR TOY TORPEDO CASINGS. JOSEPH MARTELLI, Vineland, N. J. Filed Dec. 23, 1924. Serial No. 757,610. 2 Claims. (Cl. 106—39.)

1. A composition for the construction of toy torpedo casings consisting of a mixture of 4 parts of saw dust, 1 part of starch and 2 parts of rosin.

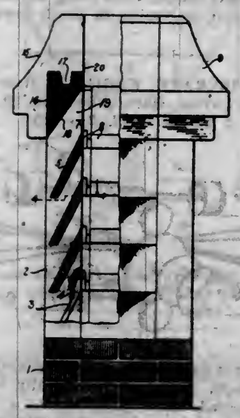
1,627,102. KNEE-OPERATED THROTTLE-VALVE-CONTROLLING MEANS. ANTONIO S. MARTIN, Schenectady, N. Y. Filed Jan. 18, 1927. Serial No. 161,850. 9 Claims. (Cl. 137—139.)



1. Knee operated means for the throttle valve of an automobile, comprising a vertical shaft, an arm secured to the shaft, means connecting the arm to the throttle valve, a downwardly and rearwardly inclined arm secured to the shaft, and a spring secured to the automobile and shaft.

1,627,103. BAGASSE BOARD AND METHOD OF MAKING THE SAME. CHARLES W. MASON, Olaa, Territory of Hawaii. Filed Sept. 9, 1926. Serial No. 134,585. 10 Claims. (Cl. 92—13.)

1. The method of making artificial lumber from bagasse, which comprises cooking the bagasse in milk of lime, refining the cooked fiber to produce a substantially uniform pulp, adding to the pulp from 10% to 20% of raw bagasse, forming the resultant fibrous mixture into sheets, and uniting the sheets in superposed relation to form boards of the desired thickness.

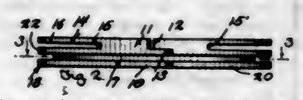


10. A fiber board comprising a body of cooked and refined bagasse fiber admixed with raw bagasse impregnated with a vermin destroying agent.

1,627,104. APPARATUS FOR THE MANUFACTURE OF TUBES OF CEMENT ASBESTOS OR SIMILAR SUBSTANCES. DIEGO MATTEI and ADOLFO MAZZA, Genoa, Italy, assignors to "Eternit," Pietra Artificiale, Societa Anonima, Genoa, Italy, an Italian Company. Filed Feb. 18, 1921, Serial No. 446,046, and in Italy Mar. 2, 1920. 4 Claims. (Cl. 92—66.)

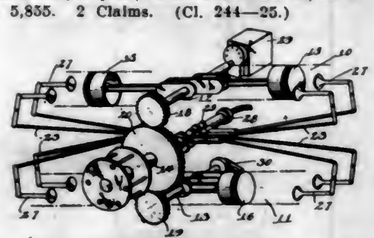
1. In a machine for the manufacture of pipes of the character described, means for forming a pulp layer comprising a pair of squeezing rollers, an endless band for protecting from the pulp the upper rollers of said pair, a main pipe forming cylinder for receiving the layer of pulp, after the latter has passed between said squeezing rollers, a flexible band partially encircling the periphery of the pipe forming cylinder for compressing the pulp thereon, a set of heavy driven rollers distributed along the periphery of the pipe forming cylinder to compress the pulp during the manufacture of the pipe, and means for guiding the latter rollers to permit their displacement and for gradually decreasing their pressure on the pipe forming cylinder as the thickness of the pipe is increased.

1,627,105. CHIMNEY. WILLIAM J. MEIER, Lansing, Mich. Filed June 16, 1925. Serial No. 37,553. 3 Claims. (Cl. 98—66.)



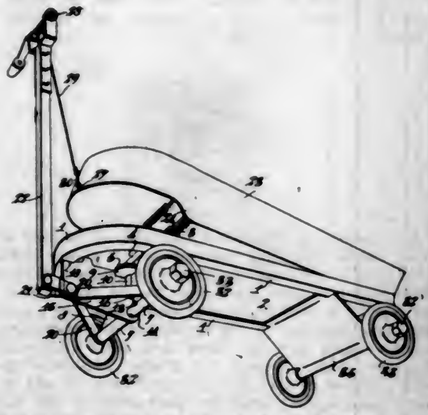
1. In a chimney, the combination with corner uprights each having on adjoining faces downwardly and outwardly inclined grooves, of vanes provided with side flanges constructed to engage the grooves of the uprights thereby affording upwardly inclined air channels between them, and a chimney top formed of separable members constructed to engage each other and to engage the said uprights, the said uprights and chimney top having upwardly and inwardly inclined portions in contact whereby the weight of the top exerts an inward pressure on the uprights.

1,627,106. MEASURING INSTRUMENT. MAX MOELLER, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, and elsewhere, a Corporation of Germany. Filed Sept. 16, 1924, Serial No. 738,039½, and in Germany Apr. 29, 1924. 3 Claims. (Cl. 116—129.)



2. A measuring instrument adaptable to indicate measuring values requiring calibrations in values different from those to which the instrument is normally calibrated, comprising a visible scale fixed in the instrument and bearing the normal instrument calibration, and a stationary cover mounted on the outside of the instrument, a rotatable disk disposed below said cover and operable from the disk periphery, a circular removable double scale mounted on said disk, one graduation of said double scale corresponding with the graduation in the normal values of the fixed scale, the other graduation indicating correspondingly the other, different measuring values to be determined by the measurement.

1,627,107. PISTON RING. MATHEW M. MORATTA, Princeton, Ind. Filed July 16, 1926. Serial No. 122,951. 5 Claims. (Cl. 74—109.)

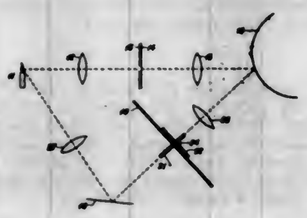


1. A piston ring comprising a split resilient body formed with a pair of oil grooves, one of said grooves extending completely through the body and substantially the entire circumference of the ring, and the other groove extending entirely through the body of the ring at the front thereof and decreasing in depth towards the back of said ring.

1,627,108. AIRCRAFT ENGINE. HAROLD EMERSON MOREHOUSE, Dayton, Ohio. Filed Jan. 30, 1925. Serial No. 5,855. 2 Claims. (Cl. 244—25.)

1. In a four-cylinder aircooled propeller-driving engine, a propeller shaft, a pair of horizontally opposed engine cylinders disposed below said shaft, a double throw crankshaft having pistons connected thereon operating in said cylinders, a two to one gearing between said propeller shaft and said crankshaft, a second pair of opposed engine cylinders above said propeller shaft in parallel relation to said first cylinders and the duplicate thereof, said cylinders having a crankshaft geared to said propeller shaft in relation to the crankshaft of the first pair of cylinders, so that the firing impulses are displaced 180° crankshaft travel and 90° propeller shaft travel, both of said pairs of engine cylinders being disposed broadside to the propeller slipstream and valve mechanisms between the pairs of engine cylinders operated from the propeller shaft.

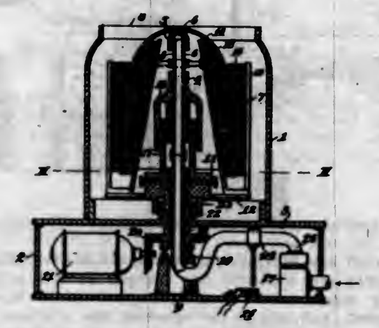
1,627,109. WAGON. JOSEPH T. NORMAN, Frederick, Md. Filed May 7, 1926. Serial No. 107,401. 8 Claims. (Cl. 280—87.5.)



1. In a wagon, a frame consisting of a pair of longitudinal side bars united at the front by a curved section, rear supporting wheels and a standard therefor on which the frame is mounted, front wheels and axle and means including a fifth wheel with a king bolt for mounting said frame on the front wheels and axle, and a means distinct from the fifth wheel and movable with the axle on the axis of the king bolt as a center to apply stresses which tend to bend the king bolt directly to said curved section of the frame, thereby relieving the king bolt, and a floor on said frame.

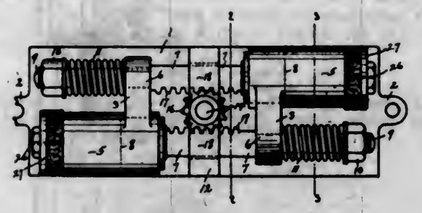
1,627,110. INDICATOR. CHARLES M. NORRIS, Denver, Colo. Filed Aug. 20, 1926. Serial No. 130,491. 1 Claim. (Cl. 197—189.)

A device of the character described comprising a body, fingers secured thereto and adapted to be associated with a sheet of typewriting paper, so as to indicate that the bottom of the paper is being reached while typewriting thereon, and said device being formed from resilient metallic material curved upon itself to follow the curvature of the platen of a typewriter and being colored so as to be readily observed by the typist.



1,627,111. PICTURE-TRANSMITTING SYSTEM. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 23, 1925. Serial No. 4,352. 7 Claims. (Cl. 178—7.)

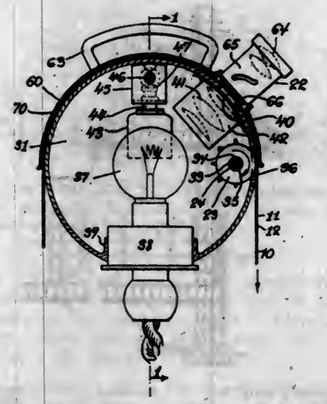
1. In a picture transmitting system, a picture receiving apparatus comprising a source of light, a picture receiving blank, a light valve responsive to transmitted currents for controlling said light to reproduce the picture by variably exposing said blank to the light source, and means separate from said valve acting upon the light from said source to superpose a uniform dot pattern on the entire area of said blank.



1,627,112. APPARATUS FOR CLEANING POTTERIES AND THE LIKE. ACHILLE PARODI, Genoa, Italy. Filed Apr. 7, 1924. Serial No. 704,869. 4 Claims. (Cl. 15—56.)

1. An apparatus of the character described including a casing embodying a lower closed chamber and an upper open chamber, a tubular shaft mounted vertically in the two chambers, a brush support carried with the shaft and positioned in the upper chamber, means in the lower chamber for rotating the shaft, valved liquid supply means located in the lower chamber, a pipe including a vertical portion slidably mounted through the shaft and projected into the upper part of the upper chamber and having a horizontal portion continuing from the vertical portion and arranged through the lower chamber and a vertical lower portion continuing from the horizontal portion and forming part of the valve supply means, resilient means for holding the pipe in an elevated and closed position, the pipe being adapted to move downwardly upon the insertion of an object to be cleaned to

actuate the valve supply means to allow liquid to pass through the pipe and to be directed against the inserted object, means for controlling the rotation of the shaft, and means carried with the horizontal portion of the pipe and coacting with the controlling means for rotating the shaft simultaneously with the depression of the pipe so that the brush support will be rotated while the liquid is being directed against the inserted object.

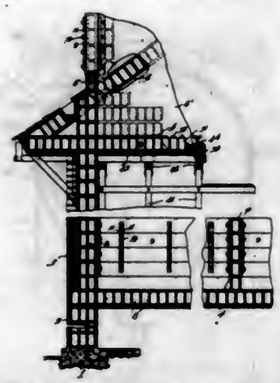


1,627,113. SNUBBER FOR VEHICLES. GEORGE C. PEARSON, Youngstown, Ohio. Filed Jan. 7, 1926. Serial No. 79,873. 1 Claim. (Cl. 267—8.)

A snubber comprised of two air chambers, two compression springs arranged so that one compression spring and one air chamber are oppositely disposed and function upon a single piston arm, inwardly extending rack teeth formed on the central portion of each of said piston arms, a shaft, a cog wheel secured to said shaft and functioning with said inwardly extending rack teeth, a drum secured to an exposed end of said shaft, a flexible strap secured to said drum member and wound around the same, the lower end of said flexible strap secured to an axle, substantially as described for the purpose set forth.

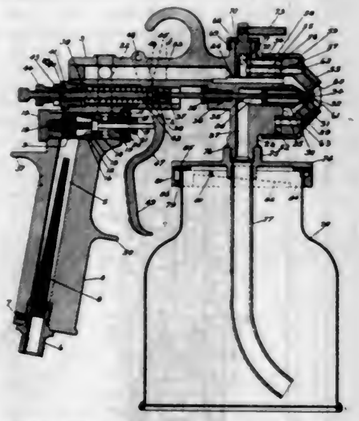
1,627,114. PROJECTING APPARATUS. JULES A. PERRAULT, Lowell, Mass., and HENRY LUBA, Astoria, N. Y., assignors to Recreator Phonograph Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 17, 1921. Serial No. 523,185. 4 Claims. (Cl. 88—16.)

1. A motion picture apparatus comprising a cylindrical casing, a cover therefor, cooperating film projecting means carried by said casing and cover, and means for operating a motion picture film between said casing and



cover to cause the film to be projected by the said cooperating film projecting means.

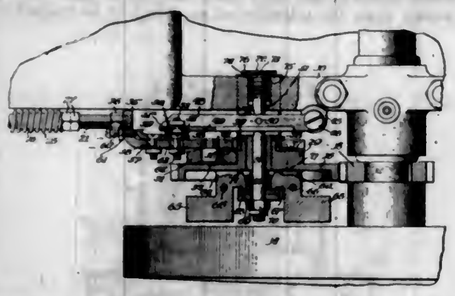
1,627,115. LIQUID-DISPENSING APPARATUS. LOUIS HENRI PITZSCH, Coburg, Melbourne, Victoria, Australia. Filed Mar. 11, 1927, Serial No. 174,644, and in Australia Dec. 18, 1925. 27 Claims. (Cl. 221—100.)



1. In apparatus for measuring and dispensing petrol and other liquids the combination of a measuring chamber, a series of independent liquid supply pipes passing to said chamber, an inlet valve in each supply pipe for separately controlling the admission of liquid through each of said supply pipes to the measuring chamber, a vertically adjustable overflow tube passing into said chamber, a distributary drain valve connected with said overflow tube, a series of drain pipes leading from said drain valve, and means for selectively operating said inlet and drain valves whereby a corresponding supply pipe and drain pipe may be simultaneously opened to the measuring chamber to the exclusion of the other of said pipes for the purpose specified.

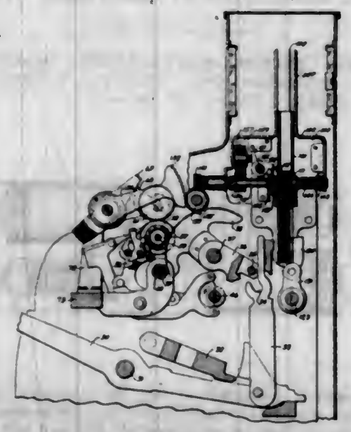
1,627,116. MOLD FOR CONCRETE BUILDINGS. JOHN C. POETZ, Leonia, Idaho. Filed Dec. 21, 1925. Serial No. 76,583. 2 Claims. (Cl. 25—131.)

1. A sustaining wall for molding plastic material comprising form plates having sockets therein, slotted stays for engaging a plurality of plates, and headed bolts in said stays for engaging said sockets.



1,627,117. APPARATUS OR TOOL FOR APPLYING COATING MATERIAL. JAMES JARVIS PREBLE, Newton, and WAYNE B. THOMPSON, Winchester, Mass., assignors to Spraco Painting Equipment Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 13, 1925. Serial No. 15,283. 11 Claims. (Cl. 91—45.)

1. A spray gun, having, in combination, means to supply coating material, means to subject the same to the action of a motive agent thereby effecting the discharge of the coating material, a member through which the motive agent may be discharged supplementally upon the discharged coating material, and means independent of the member for determining the plane of the supplemental discharge.

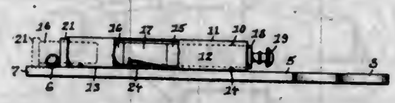


1,627,118. GOVERNOR FOR EXPLOSIVE ENGINES. CHARLES A. ROBERTSON, Jackson, Mich., assignor to Montgomery Ward & Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1924. Serial No. 701,260. 21 Claims. (Cl. 123—118.)

1. In a governor of the class described, the combination with the ignition mechanism of an explosive engine, and the actuating means thereof for effecting the generation of a spark thereby, of an abutment hingedly mounted with respect to the engine frame and adapted to be swung into the path of movement of said actuating means, whereby to arrest movement of the latter and to prevent generation of the spark, a member slidably

mounted and controlled by the speed of the engine for swinging said abutment into engagement with said actuating means when a predetermined speed has been attained, and means for releasing the abutment from engagement with the actuating means when the speed has been reduced.

1,627,119. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 11, 1924. Serial No. 698,447. 50 Claims. (Cl. 235—23.)

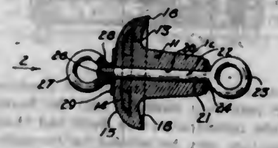


1. In a cash register, the combination of a single stationary indicator holder comprising a plurality of compartments, a plurality of indicator tablets located in each compartment, a totalizer having a plurality of denominational elements, and a plurality of groups of notched disks, one group for each compartment of indicator tablets for selecting a certain one of said tablets in each group for operation.

1,627,120. GAME APPARATUS. TOUFIK ALBERT SATEOH, Central Falls, R. I. Filed Jan. 6, 1927. Serial No. 159,872. 1 Claim. (Cl. 273—107.)

A game apparatus comprising an elongated base, a handle on one end of the base, a cover on the base and forming a tube, a tubular striking member in one end of the cover and normally contacting with the end of the cover, a tubular pull striking member in the other end

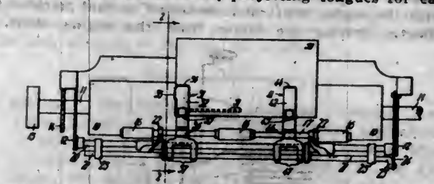
of the cover, a knob on the pull striking member, an intermediate tubular striking member in the cover, the tubular striking members forming a central bore closed at each end, a helical spring in the central bore, one end of the spring being secured to the tubular striking



member and the other end of the spring being secured to the tubular pull striking member and helical springs secured at one end to the intermediate tubular striking member and at their other ends to the base, for the purpose as described.

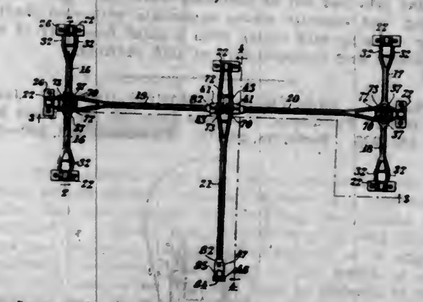
1,627,121. EYE PROTECTOR. LOUIS SCHERZ and EMIL SCHERZ, Wilkes-Barre, Pa. Filed Apr. 28, 1926. Serial No. 105,176. 2 Claims. (Cl. 2—10.)

1. The combination with a cap, of an eye protector comprising separable sections, an elastic connecting the outer end of each section with a side of the cap and complemental fastening elements, on the crown of the cap and at the inner ends of the said sections for securing the latter to the cap when detached or connecting the sections when the device is placed against the face to protect the eyes.



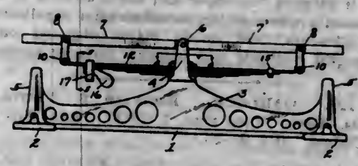
1,627,122. CONDUIT CLEANER. RALPH B. SCOTT, Los Angeles, Calif. Filed Aug. 26, 1926. Serial No. 131,570. 2 Claims. (Cl. 15—104.16.)

1. A conduit cleaner comprising: a tough resilient body having a boss elongated on the axis of said body, and an annular flange, said annular flange having a rear convex face and a front face which faces meet to form an annular and continuous contact edge; and means for connecting pull wires to said conduit cleaner.



1,627,123. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 2, 1925. Serial No. 27,377. 9 Claims. (Cl. 197—135.)

1. In a typewriting machine including a platen; a set of two clips arranged to be detachably mounted on said machine provided with vertical and lateral gage-pin means, said clips arranged for holding a card vertically in printing position against said platen, said gage-pin means comprising rearwardly-projecting tongues for each

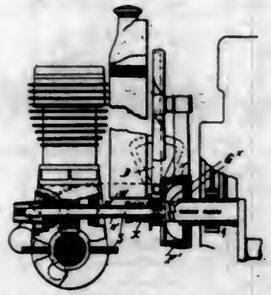


of said two clips, and a rearwardly-projecting flange positioned upwardly from said tongue on the left edge of the left one of said two clips.

1,627,124. WEIGHING MACHINE. MORTON H. STARR, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Dec. 29, 1924. Serial No. 758,521. 28 Claims. (Cl. 265—71.)

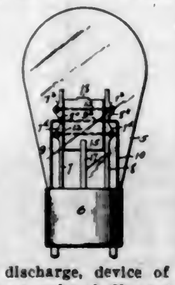
1. In a scale, the combination with a lever having an opening formed therein, of two levers arranged transversely thereto and having their ends projecting into the said opening, and adjustably mounted universal connections between the said levers.

1,627,125. DEMONSTRATING DEVICE FOR SHOCK ABSORBERS AND THE LIKE. HARVE R. STUART, Springfield, Ohio, assignor to The Bauer-Stuart Company, Springfield, Ohio, a Corporation of Ohio. Filed Aug. 19, 1924. Serial No. 733,009. 7 Claims. (Cl. 35—16.)



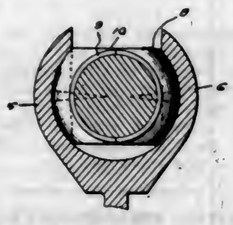
1. In a demonstrating device of the character described, parts representing an axle, a pair of duplicate movable frame members each independent of the other, and a supporting spring, one frame member being connected with one end of said spring, and the other frame member connected with the other end of said spring, and a shock absorbing device between the axle and one only of said frame members.

1,627,126. DRIVING ARRANGEMENT FOR MACHINES INSTALLED ON AUTOMOBILES. MARIO TAMINI, Milan, Italy. Filed Aug. 29, 1921, Serial No. 496,567, and in Italy Mar. 30, 1921. 2 Claims. (Cl. 180—53.)



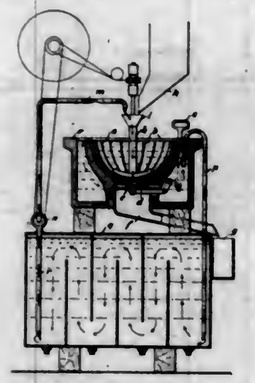
1. In combination with a motor vehicle having its engine arranged at the front portion of the same, of a

driven machine carried by the vehicle, located slightly forwardly of the engine and arranged between the side bars of the chassis of the vehicle, rigid shafting coaxial with the engine shaft and connected to said machine for directly driving the latter from the engine shaft, a



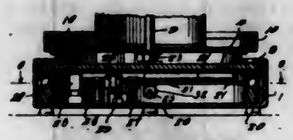
clutch associated with said shafting to throw said machine into and out of operation while the engine is running, and separate means concentric with said shafting for cranking said engine from a point forwardly of said machine and independently of said shafting.

1,627,127. ELECTRON-DISCHARGE DEVICE. JAMES HENRY THOMPSON, Hollidays Cove, W. Va. Filed Mar. 18, 1925. Serial No. 16,414. 2 Claims. (Cl. 250—27.)



1. An electron discharge, device of the character described comprising a pair of filament supporting posts, both in spaced relation to each other, with a pair of independent strands extending therebetween on each side thereof and in vertically spaced relation to each other and removably secured at their ends to said posts; a grid electrode extending around said posts at a level to bring it between the upper and lower strands of the pair of filaments where it lies in substantial parallelism with said filaments, and anode plates disposed outwardly of the grid electrode and supports for said anode plates.

1,627,128. OARLOCK. REGINALD S. TRAVIS, Union Mills, Wash. Filed Sept. 7, 1926. Serial No. 134,004. 3 Claims. (Cl. 9—25.)

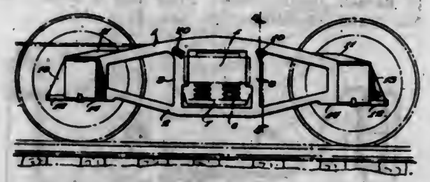


1. In combination, an oar bushing including a pair of sections each comprising a substantially semi-spheroidal body having semi-cylindrical ends, each body having a flattened side, and an oar lock including a pair of spaced parallel arms with their inner sides dished out.

1,627,129. APPARATUS FOR WASHING REFUSE CONTAINING PRECIOUS METAL. GOTTHILF UNRATH, Pforzheim, Germany. Filed May 18, 1926, Serial No. 110,006, and in Germany Mar. 17, 1925. 1 Claim. (Cl. 209—465.)

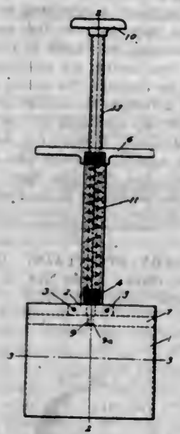
An apparatus for washing refuse from sweepings containing precious metal by means of circulating and permanently cleaned water, comprising in combination a stirring cup of semispherical shape and having a central discharge opening in the bottom and radial grooves in its inner surface converging towards said central opening to conduct the heavy particles of the refuse which contain precious metal to said central discharge opening, a hollow agitator in said cup, an outer vessel enclosing said stirring cup and designed to receive the water with the light refuse particles flowing over from said stirring cup, a settling tank under said outer vessel, an overflow connecting said outer vessel to said settling tank, and means for lifting the water from said settling tank into said hollow agitator.

1,627,130. ROTATABLE DISPLAY STAND. JAMES B VOGLER, Charlotte, N. C. Filed June 19, 1924. Serial No. 721,121. 2 Claims. (Cl. 211—20.)



1. In a rotatable display stand, the combination of a base, a floor rotatably mounted on the base, a hollow cylindrical tube mounted on the floor and through which electric conductors may be carried in concealed position, said tube being adapted to support an electric lamp on the top of the tube, a series of trays of graded sizes having annular upturned flanges, said trays gradually decreasing in size tier by tier toward the top of the stand, a series of cylindrical supports, the respective trays and cylindrical supports being rotatable relative to the hollow cylindrical tube which supports the lamp, a ring gear affixed to said floor device, and means operatively connected with said ring gear for rotating the floor and trays.

1,627,131. CAR-TRUCK SIDE FRAME. BURNETT THOMAS WASHINGTON, Williamson, W. Va. Filed Nov. 5, 1925. Serial No. 67,039. 2 Claims. (Cl. 105—206.)

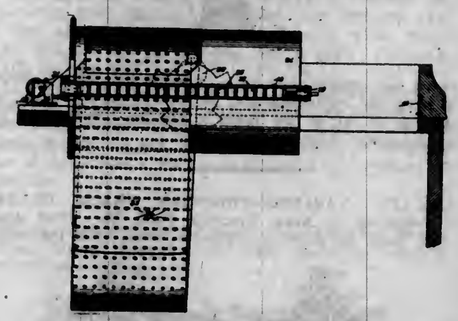


2. A car truck side frame comprising upper and lower members, intermediate connecting bolster side columns, and end journal boxes, the lower member having its end

portions extending beyond the outer sides of the journal boxes in line with their bottom surfaces to provide extended surfaces for a lifting jack when supported upon

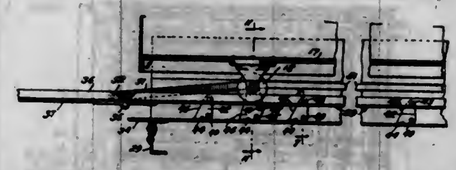
a cross tie, webs between the outer sides of the journal boxes and the end extensions of the lower frame member, and other webs between the tops of the journal boxes and upper frame member.

1,627,132. ICE-CREAM DISHER. WILLIAM F. WENDEL, Girard, Pa. Filed June 25, 1925. Serial No. 39,485. 1 Claim. (Cl. 107—48.)



In an ice cream disher, the combination of an oblong thin-walled shell open at its front end; a plunger in the shell; a head secured in the shell; a sleeve secured to the head; a handle on the sleeve; a stem on the plunger extending through the sleeve and handle on the sleeve; a handle on the stem; a spring in the sleeve; and a sleeve on the stem extending from the handle on the stem into the first-mentioned sleeve and engaging at its end the spring.

1,627,133. DISPLAY EASEL. GEORGE H. AILES, Philadelphia, Pa. Filed Nov. 10, 1925. Serial No. 68,061. 5 Claims. (Cl. 211—14.)

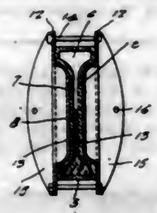


1. A display easel comprising two separable members formed of bent wire, one of said members being adapted to be placed in an upright position, said upright member being substantially U-shaped in general contour and having side portions provided with coils and leg portions extending below said coils, parts extending across between the upper ends of the side portions, and a lower member also substantially U-shaped in general contour having side portions slidably mounted in the coils in the side portions of the upright member, and a horizontal bar extending across between the front ends of the side portions of the lower member, the arrangement being such that the extension of the front end of the lower member may be varied by sliding the side portions thereof in the coils in the side portions of the upright member.

1,627,134. PROJECTING MACHINE. ORAZIO ANTONELLI, Brooklyn, N. Y., assignor, by mesne assignments, to Recreator Phonograph Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 12, 1921. Serial No. 444,547. 19 Claims. (Cl. 88—16.)

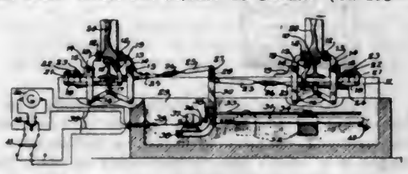
1. The combination with an endless relatively wide film band, having pictures arranged thereon in a continuous spiral line and equipped with feeding perforations also arranged in a spiral line corresponding to said picture line and bordering the same throughout, of a support relatively elongated with respect to the width of such film band over which the film band is adapted to slide and also move laterally, and operating means associated with said support, adapted to engage the perforations of the film band to advance the same, and by such engagement to also feed the film band laterally upon said support, whereby the spiral picture line on the film band is caused to traverse a given line of picture projection.

1,627,135. MOVING VAN. RUDOLF ARIO, Brooklyn, N. Y. Filed Mar. 29, 1926. Serial No. 98,150. 6 Claims. (Cl. 214—38.)



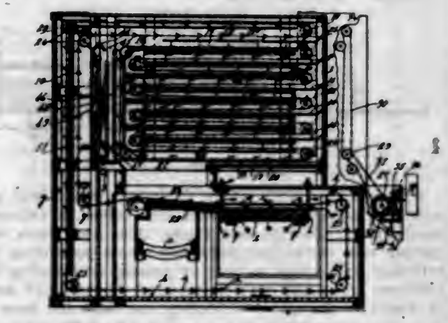
1. A van body with rollers, a platform under said van body and movable tracks under said rollers, a tailboard pivotally connected to said tracks, links and levers supporting said tracks and links and pivots connecting the tailboard and levers so that by raising or lowering the tailboard the tracks may be raised or lowered and made to disengage the rollers or engage and raise the same so as to permit the van body to be shifted from the platform.

1,627,136. INCLINOMETER. ENOS FRANKLIN ARNOLD, Long Beach, Calif. Filed Jan. 8, 1926. Serial No. 80,078. 2 Claims. (Cl. 33—209.)



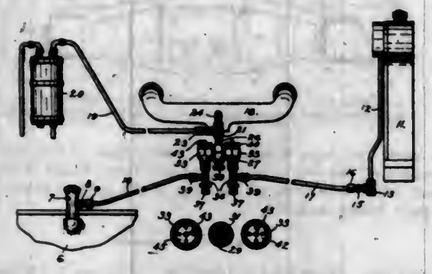
1. In an inclinometer of the class described adapted to be supported within an opening of a vehicle instrument board, a relatively square shaped transparent vessel including a central web portion and a marginal liquid channel for providing depressions upon the opposite sides of

the vessel, said vessel being partly filled with a liquid, a pair of plate members adapted to be supported upon the opposite sides of the vessel and having depressions therein for interfitting relation with the depressions of the



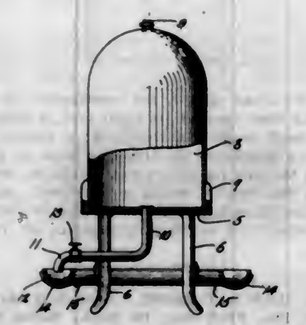
vessel, and graduations upon the front side of the vessel whereby the inclination may be ascertained by reason of the rise or fall of the liquid within the forward side of the marginal channel.

1,627,137. VARIABLE-PRESSURE TRACK BRAKE. MARSHALL E. BARR, Franklin Park, Ill. Filed Aug. 21, 1925. Serial No. 51,643. 16 Claims. (Cl. 188—62.)



1. In a track brake structure, gripper rails spaced at opposite sides of the track rail, spreading and contracting mechanism connected to the gripper rails, an adjustable weight connected to the mechanism, and remotely controlled means for shifting the weight to control the operation of said mechanism.

1,627,138. STARCH-MOLDING APPARATUS. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 11, 1925. Serial No. 36,395. 11 Claims. (Cl. 107—3.)

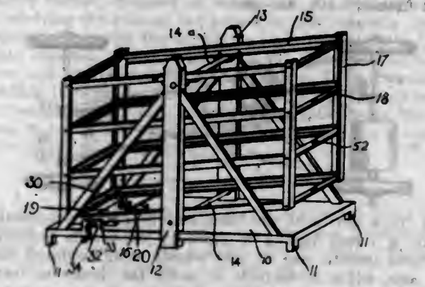


7. In apparatus of the general class described, having means for separating candles and starch into which means trays filled with candles molded in starch may be emptied and also having supporting means on which an empty tray may be placed in position to be filled with starch, a starch drying means, and means for taking starch delivered from said separating means and carrying it to and through said drying means and delivering it into an empty tray on said supporting means, said drying apparatus comprising a heated surface over which the starch is carried in a thin layer by said conveying means.

1,627,139. AUXILIARY CHARGE-FORMING MEANS FOR INTERNAL-COMBUSTION ENGINES. ADOLPH J. P. BERTSCHY, Plattsmouth, Nebr., assignor to David O. Barnell, Omaha, Nebr. Filed May 9, 1925. Serial No. 29,135. 3 Claims. (Cl. 123—25.)

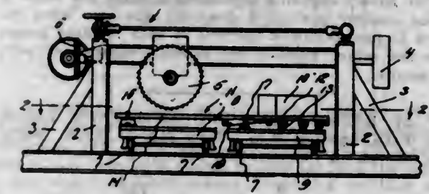
1. Auxiliary charge-forming means for liquid-cooled internal-combustion engines, comprising a conduit arranged to receive air and vapors from the cooling-fluid of the engine, a second conduit arranged to receive vapors from the crank-case of the engine, an adjusting-valve for each conduit to limit flow through the same, means connecting said conduits and arranged to deliver the vapors received therefrom to the intake manifold of the engine, and automatic suction-controlling means for each conduit, said suction-controlling means adapted and arranged to proportionally impede flow through the respective conduit as suction from the manifold is increased.

1,627,140. POULTRY FOUNTAIN. GEORGE H. BINDEMANN, Wauseon, Ohio. Filed Nov. 3, 1926. Serial No. 146,011. 1 Claim. (Cl. 119—72.)



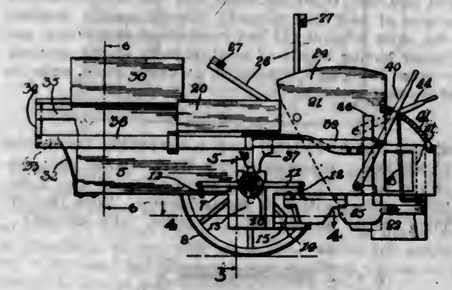
In a device of the character described, a support, upwardly extended fingers forming a part of the support, a container positioned on the support, legs forming a part of the support, arms extending outwardly from the legs and having curved extremities, a rectangular trough curved to conform to the curvature of the arms to rest in the curved portions of the arms, and means for delivering water to the trough.

1,627,141. EGG PRESERVER. HANS BOGAN, Springfield, Ill. Filed July 13, 1925. Serial No. 43,231. 1 Claim. (Cl. 99—6.)



A device of the class described comprising a platform, posts thereon, a shaft journalled on said posts, a rack balanced intermediate its length on said shaft, trays

adapted to be supported on said rack, means for tilting said rack comprising a plate mounted on said rack, a



tilting screw engaging a pivoted boss centrally disposed on said plate and rotatably mounted on said platform, and means for rotating said screw.

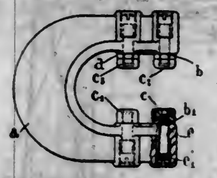
1,627,142. STONE-CUTTING MACHINE. EARL BOLTON and FLOYD D. BOLTON, Tulsa, Okla. Filed June 19, 1926. Serial No. 117,094. 2 Claims. (Cl. 125—14.)

1. In a structure of the class described, a supporting structure, a cutting saw mounted thereon, spaced tracks disposed beneath said supporting structure, roller supported cars mounted on said track, one of said cars being fixed to the rails of its respective tracks, and the other car being movably supported on the rails of its respective tracks, and a stone supporting member pivotally connected at one end to the stationary car and movably mounted at its opposite ends on the movable car.

1,627,143. PLANTING MACHINE. FRANK BONCHINA, Cairnbrook, Pa. Filed July 30, 1926. Serial No. 126,032. 2 Claims. (Cl. 221—118.)

1. A planting machine comprising a frame having a relatively shallow seed hopper mounted thereon, a delivery spout arranged in advance of the seed hopper, means for intermittently delivering predetermined quantities of seeds from the seed hopper and dropping the same into the delivery spout, a seed box having a delivery end arranged to discharge into the seed hopper, and an ejector mechanism for intermittently ejecting predetermined quantities of seeds from the seed box into said hopper, said ejector mechanism comprising a longitudinally slidable ejector plate slidable upon the bottom of the seed box, yieldable means for normally retracting the ejector plate to an inoperative position, and cam mechanism for automatically intermittently sliding the ejector plate from inactive position to effect delivery of the quantity of seeds to the hopper.

1,627,144. PROCESS FOR THE PRODUCTION OF HYDROCYANIC ACID. GEORG BREDIG and EGON ELÖD, Karlsruhe, Germany, assignors to the Firm of Rudolph Koepp & Co., Oestrich-on-the-Rhine, Germany, a Society Organized under Laws of Germany. Original application filed Jan. 28, 1924, Serial No. 689,156. Divided and this application filed Nov. 21, 1924, Serial No. 751,375, and in Germany Dec. 7, 1922. 6 Claims. (Cl. 23—151.)

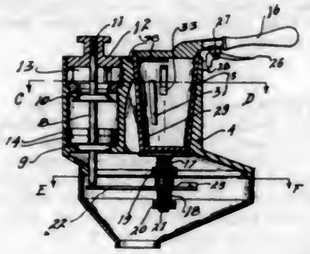


1. A process for the production of hydrocyanic acid, consisting in causing carbon monoxide and ammonia to react at high temperatures in the presence of oxides of metals of the 3rd, 4th, 5th and 6th groups, in the presence of more than 1 volume of hydrogen to 1 volume of ammonia.

1,627,145. GOLF-TEE HOLDER. RALPH STUART BREED, Lynn, Mass. Filed Nov. 19, 1926. Serial No. 149,374. 9 Claims. (Cl. 224—5.)

1. A holder for golf tees comprising front and rear walls connected at their lower edges only in spaced relation, and a yielding pad interposed between the two walls whereby the shanks of the golf tees may be inserted between one face of the pad and the adjacent wall and be frictionally retained therebetween by deforming the pad.

1,627,146. ADJUSTABLE LIMIT GAUGE. ARTHUR JOHN CHARLES BROOKES, Bridgnorth, England. Filed Oct. 15, 1925, Serial No. 62,625, and in Great Britain Jan. 1, 1925. 6 Claims. (Cl. 33—163.)

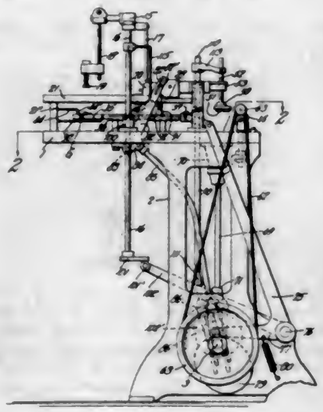


1. An adjustable limit gauge comprising a solid frame having parallel flat surfaces spaced a fixed basic distance apart, anvil-pieces of predetermined length in flat contact with said flat surfaces and right- and left-hand screw-threaded elements, one thread of which engages an anvil-piece while the other engages the solid frame.

1,627,147. COFFEE-URN ATTACHMENT TO AUTOMATICALLY MEASURE MORE THAN ONE SUBSTANCE SIMULTANEOUSLY TO DELIVER A COMBINED UNIFORM VOLUME. DOLPH M. CLARK, Portland, Oreg. Filed Mar. 9, 1926. Serial No. 93,455. 7 Claims. (Cl. 225—26.)

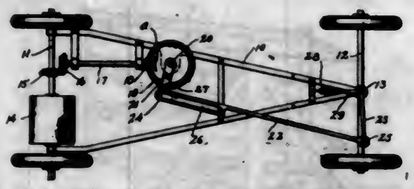
1. A coffee and cream dispenser, consisting of a valve frame, inlet and outlet ports connected to a source of

cream and liquid coffee, formed in said frame; valves combination, to permit one, or all of the liquids simultaneously seated within the frame and controlling the flow of said



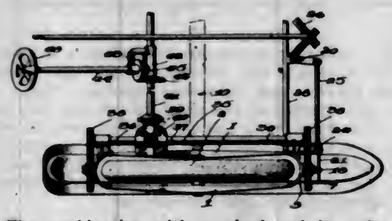
liquids from the inlet ports to the outlet ports; and a means for opening and closing said valves, singly and in tandem, to flow in measured amounts through said dispenser.

1,627,148. MARKING FUSED BIFOCAL LENSES FOR IDENTIFICATION. GEORGE A. CLEMENT, Mount Vernon, N. Y. Filed Aug. 13, 1925. Serial No. 50,085. 7 Claims. (Cl. 49—82.)



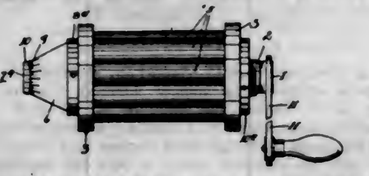
1. A fused bifocal lens or blank therefor having an identifying mark formed on the contact surface of one of the fused lens elements.

1,627,149. APPARATUS FOR LINING ENVELOPES. GEORGE E. P. COLLINS, Springfield, Mass., assignor to Birnie Paper Company, Springfield, Mass., a Corporation of Massachusetts. Filed July 21, 1926. Serial No. 124,017. 10 Claims. (Cl. 93—62.)



1. A machine of the class described comprising in combination, means for holding a supply of envelope blanks and liners in separate stacks, a daubing and blank gripping device for engaging with the uppermost blank of one stack, and independently movable devices for engaging opposite ends of said blanks for transporting said blanks over the other stack, the said devices being arranged to reverse said blank during its movement from one stack to the other.

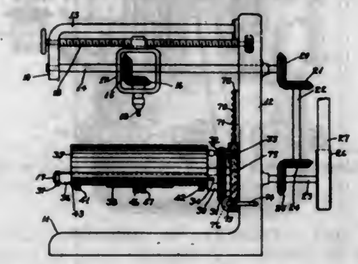
1,627,150. TOY VEHICLE. RAYMOND DE FILIPPIS, Brooklyn, N. Y. Filed July 10, 1925. Serial No. 42,669. 2 Claims. (Cl. 46—48.)



1. In a device of the class described, the combination with a frame having a plurality of wheels rotatably secured thereto, one of said wheels being mounted upon an axle which is movable to cause the device to travel circularly, means for propelling the device, a rotary member having engagement with a member that rotates when the device is made to travel along, whereby said member is caused to rotate, a link joining said axle and said rotary member to cause the axle to rotate about its vertical axis, and resilient means operative to return said axle to normal predetermined position, said link being provided with means for movably engaging said rotary member while the same is making one part of a rotation, and for fixedly engaging said member while the same is making another part of a rotation, said axle being returned to predetermined position by said resilient means while the rotary member has movable engagement with said means.

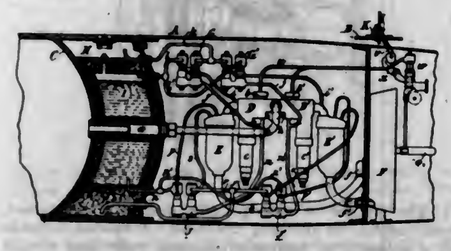
1,627,151. RETRACTABLE VEHICLE RUNNER. DANIEL DE WALD, Rawlins, Wyo. Filed Jan. 23, 1926. Serial No. 83,356. 5 Claims. (Cl. 280—10.)

1. The combination with a wheel and its axle, of a frame including a pair of side members of greater length than the diameter of the wheel and having aligned transverse openings for the reception of said axle, said side members being disposed at opposite sides of the wheel and said frame including end members connecting the ends of said side members, aligned journal members at the outer sides of the end members of said frame, and a runner having a pair of longitudinally spaced upstanding arms swingingly supported at their upper ends on said journal members.



1,627,152. BURNISHING AND REFITTING TOOL FOR BEARINGS. CHARLES E. DE WITT, Dallas, Tex., assignor to V. H. Barwood Manufacturing Co., Lynn, Mass., a Corporation of Massachusetts. Filed Dec. 20, 1923. Serial No. 681,895. 4 Claims. (Cl. 29—90.)

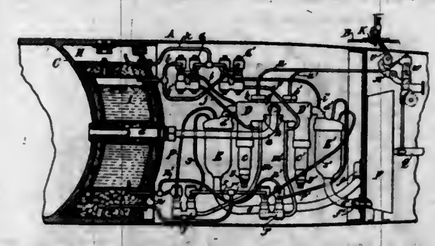
1. A device for burnishing, refitting and gauging bearings of Babbitt or other soft metals, including a tapered mandrel having integral threaded end portions; a series



of elongated rollers spaced around the mandrel; centrally apertured circular plates having inwardly facing annular channels therein, disposed on either end of said mandrel and receiving the ends of the rollers in said channels; an elongated, expansible sleeve slidable over the tapered body of said mandrel; a nut disposed on the threaded portion of one end of the mandrel and having a flange thereon extending through the bore of one of said circular plates and impinging one end of said expansible sleeve, and means on one end of said mandrel for gauging the action of the rollers on the bearing.

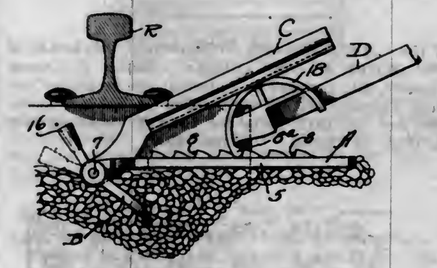
1,627,153. DEVICE FOR USE WITH ROUTING MILLS. ERWIN G. DEYE, Newport, Ky., and HERMAN F. HAVERBUSCH, Cincinnati, Ohio. Filed May 6, 1924. Serial No. 711,489. 6 Claims. (Cl. 90—58.)

6. A table for holding arcuate electrotypes comprising a central support member, a plurality of bars extending in parallelism with one another and the axis of the support member, the bars being spaced equidistant from the center of the support member, means connecting the bars and the support member and movable along the support member for moving the bars in equidistant spaced relation toward and away from the support member axis and means attached to the bars for holding an arcuate electrotype upon the outer faces of selected bars.



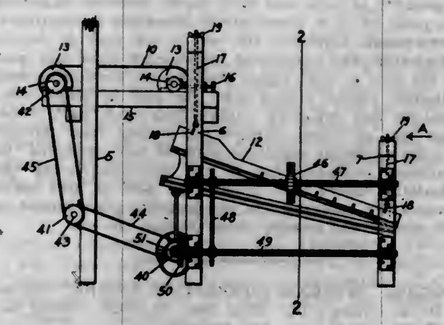
1,627,154. AUTOMOBILE TORPEDO. WILLIAM DIETER, Newark, N. J. Filed July 15, 1925. Serial No. 43,791. 9 Claims. (Cl. 60—40.)

1. In a torpedo having a compressed air flask and propelling mechanism, dual power generators each comprising a reducing valve, a heater, means for feeding fuel and water to the heater, and a discharge from the heater to the propelling motor, with controlling means for admitting compressed air to one or both reducing valves, and thereby to one or both heaters.



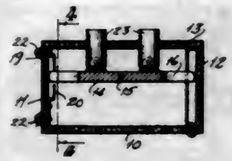
1,627,155. AUTOMOBILE TORPEDO. WILLIAM DIETER, Newark, N. J. Original application filed July 15, 1925, Serial No. 43,791. Divided and this application filed Sept. 14, 1926. Serial No. 135,495. 4 Claims. (Cl. 60—40.)

1. In a torpedo having a compressed air flask and propelling mechanism, dual power generators each comprising a reducing valve, a heater, means for feeding fuel and water to the heater, and a discharge from the heater



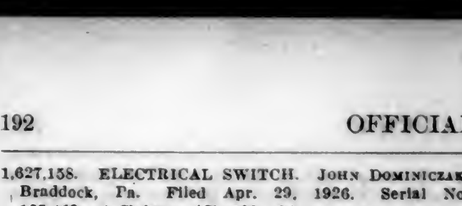
to the propelling motor, with controlling means adapted to admit compressed air to one of the power generators in advance of the other.

1,627,156. TRACK-LINING DEVICE. CLARKSON A. DIBBROW, New Rochelle, N. Y., and WILLIAM E. GADD, Philadelphia, Pa., assignors to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1925. Serial No. 2,914. 6 Claims. (Cl. 254—44.)



1. A track lining device including a base, and a ballast-engaging anchor pivotally connected to one end of said base, the outer end of said anchor extending beyond the pivot and forming a hand grip.

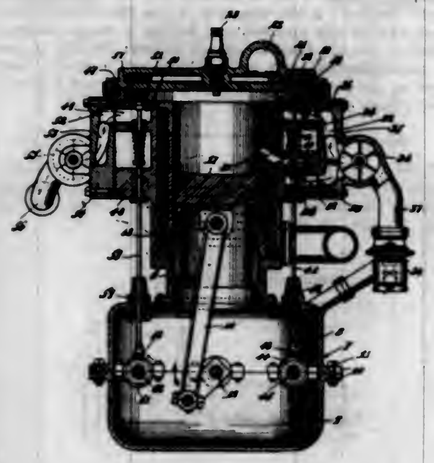
1,627,157. CONCENTRATOR. JAMES B. DODDS, Denver, Colo. Filed Dec. 29, 1925. Serial No. 78,183. 8 Claims. (Cl. 209—488.)



1. In a concentrator, a table having an impervious riffled flexible deck, and means for subjecting the deck to upwardly directed impulses by a fluid medium underneath the deck.

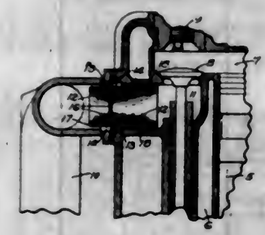
1,627,158. ELECTRICAL SWITCH. JOHN DOMINICZAK, Braddock, Pa. Filed Apr. 29, 1926. Serial No. 105,469. 4 Claims. (Cl. 200—6.)

1. In a switch of the kind described, a casing, an insulating block pivoted centrally of its length within said casing for tilting movement, a pair of knife switch blades each mounted on a respective side of the tilting block and projecting at both ends beyond the block, a pair of fixed contact rods at one end of the casing and positioned to be slightly engaged by the portions of the blades projecting from one end of the block throughout their full range of movement, a pair of upper fixed contacts and a second pair of lower fixed contacts in the paths of the remaining ends of said blades, terminal connecting posts for said fixed contacts, a single connecting post for each contact rod leading to a source of energy, and means to actuate the switch.



1,627,159. METHOD FOR TREATING PETROLEUM AND OTHER HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 30, 1917. Serial No. 204,526. Renewed July 16, 1923. 2 Claims. (Cl. 196—49.)

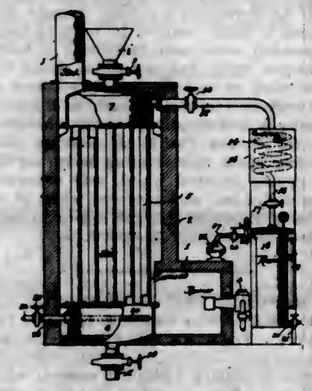
1. A process for converting petroleum into lower boiling point hydro-carbons consisting in collecting the oil in a plurality of pools and while under pressure subjecting the pools of oil to progressively increasing temperatures, continuously supplying the oil to the pool of lowest temperature and conducting the overflow from each pool to the pool of next higher temperature, condensing and collecting vapors arising from the pool of lowest temperature and removing vapors from each pool, other than that of lowest temperature, passing them through a reflux condenser associated with the pool, returning the condensed products back to the pool and forcing the remaining vapors back through the pool of next lower temperature, collecting the uncondensible gases formed in the process and passing them through the oil.



1,627,160. INTERNAL-COMBUSTION ENGINE. LIONEL DYCK, Chicago, Ill. Filed Dec. 29, 1925. Serial No. 78,081. 2 Claims. (Cl. 123—75.)

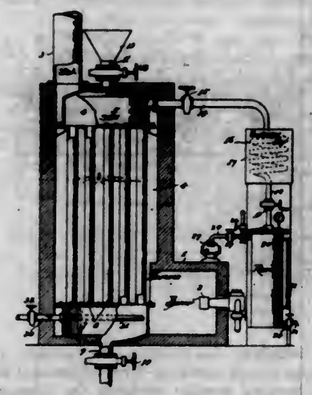
1. An internal combustion engine including a cylinder and a reciprocating piston therein; a pair of fuel inlet passages for the cylinder; one discharging thereinto at the point of highest compression; the other discharging thereinto at a point substantially between the mid-stroke of the piston and the terminal of the compression stroke thereof; a rotor arranged to force-feed the fuel through

said passages into the cylinder; and valves controlling the flow of fuel through said passages, substantially as described.



1,627,161. METHOD AND MEANS FOR HOMOGENIZING FLUID-FUEL MIXTURES. WILLIAM A. EDWARDS, Chicago, Ill. Filed Feb. 23, 1922. Serial No. 538,500. 18 Claims. (Cl. 48—180.)

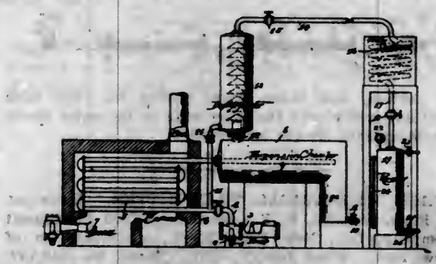
1. The method of homogenizing a fluid fuel mixture, which consists in dividing a stream of flowing mixture into a plurality of individual streams, redividing one of said streams while preventing collection of the liquid particles contained therein, and delivering certain of said streams into another of the streams at an angle to the direction of flow thereof, whereby to commingle all of said streams into a homogeneous mixture.



1,627,162. PROCESS FOR TREATING OIL SHALE. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 10, 1921, Serial No. 436,043. Renewed Feb. 4, 1927. 2 Claims. (Cl. 202—16.)

1. A process of treating oil shale, comprising introducing a supply of comminuted shale to an enlarged drum, in allowing the shale to pass from the drum into a plurality of vertically disposed tubes, in providing a drum beneath said tubes, in passing superheated steam internally through said tubes in physical contact with the shale, in externally heating the tubes to a temperature

sufficient to cause vaporization of volatiles therein, and in discharging the shale vapors for condensation and collection.



1,627,163. PROCESS OF TREATING OIL SHALE. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 10, 1921, Serial No. 436,044. Renewed Feb. 4, 1927. 2 Claims. (Cl. 202—16.)

1. A process of destructively distilling oil shale, consisting in subjecting the oil shale containing an aluminum content to the action of heat and pressure to destructively distill the same and separate the light oil constituents therefrom, and simultaneously passing chlorine gas through the hot oil shale, and countercurrent to the direction of movement of the oil shale.

1,627,164. APPARATUS FOR TREATING OILS. GUSTAV EGLOFF, Chicago, Ill., and WILLIAM R. HOWARD, Washington, D. C., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 8, 1921, Serial No. 475,862. Renewed Feb. 5, 1927. 4 Claims. (Cl. 196—107.)

4. In an oil distilling apparatus, an enlarged reaction chamber, a closed means for conveying heated oil substantially completely through the same, said means permitting the discharge of the heated oil into the chamber at a point remote from that at which said closed means enters the reaction chamber, said chamber being provided with a downwardly extending enlarged portion adjacent the point of discharge of the oil from said closed means into said reaction chamber, a vapor outlet

leading from the reaction chamber at a point remote from said enlarged portion and condensing means in communication with said vapor outlet.

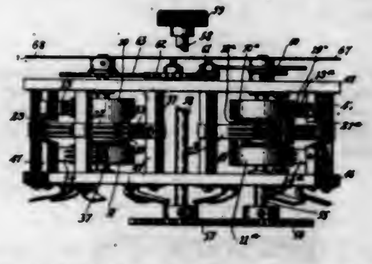
1,627,165. BAR FOR FOUNDRY FLASKS. CLARENCE H. ESTES, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed May 18, 1925. Serial No. 30,968. 5 Claims. (Cl. 22—111.)

1. A bar for molders' flasks, consisting of a supporting member and lugs located at spaced intervals along the bottom margin of said member and inclined inwardly into the mold-forming space defined by the bar; said lugs enlarging downwardly.

1,627,166. BABY RATTLE. BEN J. FELDSTEIN, New York, N. Y. Filed Jan. 15, 1927. Serial No. 161,255. 6 Claims. (Cl. 46—40.)

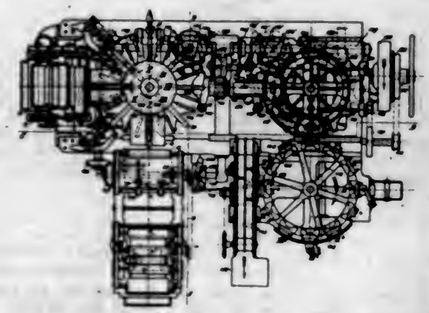
1. The herein described head member for a toy, having in combination a pair of eyes comprising transparent eye chambers and loosely disposed pupils in said chambers, a tongue and ears slidably supported within said head and capable of projecting from and receding into the head through openings in the latter, when the inclination of the head is changed.

1,627,167. GASKET. PATRICK J. FITZGERALD, Torrington, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed June 22, 1925. Serial No. 38,685. 7 Claims. (Cl. 288—1.)



1. A gasket comprising a body portion having an aperture therethrough, a bushing comprising an inner sleeve adapted to be inserted in said aperture, said sleeve having a flange lying against one face of the body portion, said

sleeve projecting beyond the other face of said body portion, an outer sleeve fitting on said inner sleeve and having a flange adapted to engage the opposite face of the

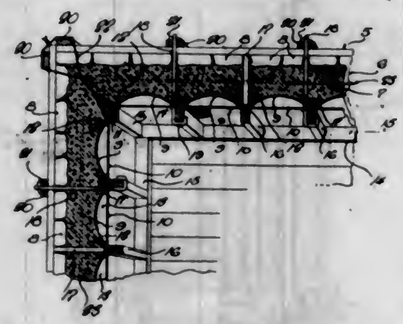


body portion, said inner sleeve having its outer edge turned outwardly over the outer edge of the outer sleeve for holding said sleeves assembled.

1,627,168. ELECTRICAL TRANSMITTER. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., New York, N. Y., a Corporation of New York. Filed July 3, 1918. Serial No. 243,147. 13 Claims. (Cl. 177—337.)

1. In an electrical step-by-step transmission, a receiver motor having at least five field coils, said field coils being star connected, an electrical step-by-step transmitter comprising a pair of insulated rotary contact segments, means for connecting said segments to a source of electrical current, a brush connected to each of said field coils, said segments being of a length and said brushes being arranged so that at least one brush is in engagement with each contact segment in each position of the transmitter and two brushes in alternate positions, whereby the circuits through two and then three of the field coils, are closed in successive positions of the transmitter.

1,627,169. MACHINE FOR MANUFACTURING, FILLING, AND CLOSING PACKAGES. PAUL GANGLER, Esslingen, Germany, assignor to the Firm Fr. Hesser, Maschinenfabrik - Aktiengesellschaft, Stuttgart - Cannstatt, Germany. Filed Aug. 31, 1926, Serial No. 132,699, and in Germany Sept. 17, 1925. 13 Claims. (Cl. 93—3.)

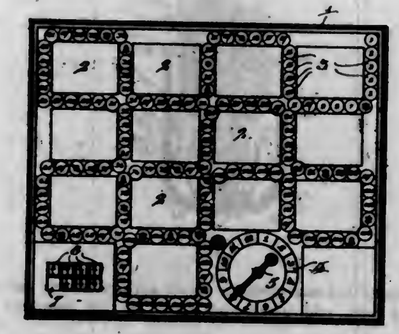


1. In a machine for manufacturing, filling and closing packages consisting of an inner and an outer wrapper, in combination, a reel for paper web for the inner wrapper, a device for notching and severing the sheets for the inner wrapper off said web, a pile of sheets for the outer wrapper, a horizontally rotating folding mandrel wheel and means adapted to withdraw the sheets for the inner wrapper from said severing device and the sheets for the outer wrapper from said pile and to form the package consisting of an inner and an outer wrapper upon said mandrel wheel, a device adapted to work in conjunction with said mandrel wheel and comprising a horizontally rotating conveyor wheel and means for filling the packages manufactured on said mandrel wheel, and a device adapted to work in conjunction with said filling device and comprising a horizontally revolving conveyor wheel and means for closing the filled packages discharged from said filling wheel, said severing device for the inner sheet, said folding mandrel wheel, said conveyor wheel of the filling device and said conveyor wheel of the closing device being arranged at right angles to each other so as to form substantially a square.

1,627,170. MANUFACTURE OF HYDRAULIC CEMENT AND THE LIKE. OSCAR GERLACH, La Salle, Ill. Filed Oct. 9, 1924. Serial No. 742,618. 6 Claims. (Cl. 106—25.)

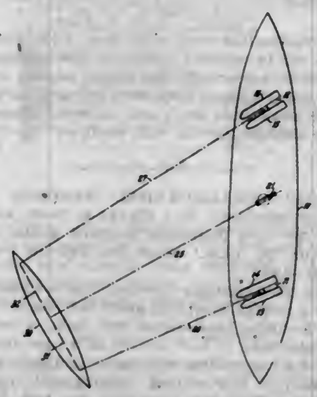
6. A process of making hydraulic cement, which comprises burning a mixture of calcium carbonate, zinc retort ashes and carbon at a temperature of approximately 950 to 1000° C., whereby the zinc is volatilised and then burned to zinc oxide and deposited as such on the lime, and crushing the burned product, which contains lime impregnated and coated with zinc oxide.

1,627,171. FORM FOR BUILDING CONSTRUCTION. PROSPER L. GOTTSCHALK, Wauwatosa, Wis. Filed Aug. 3, 1925. Serial No. 47,877. 11 Claims. (Cl. 25—131.)



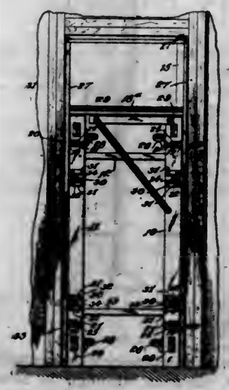
1. In a building construction, an outside retaining form, a fibrous inside retaining form of channel shape, an inside wall forming member bridging the channel of the inside form, and means whereby the inside wall forming member becomes anchored to the wall proper poured in the space between the outside and inside retaining forms.

1,627,172. CLAMP. RENÉ GOUIRAND and AUGUSTE PACHE, New York, N. Y.; Julia Pache administratrix of said Auguste Pache, deceased. Filed Mar. 6, 1923. Serial No. 13,494. 1 Claim. (Cl. 24—19.)



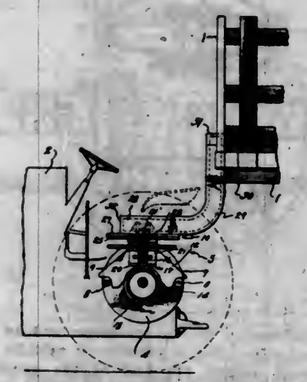
A clamp embodying a yoke having spaced apart, alined, circular perforations, one of which has a serrated circumference, a pin extending through said perforations and longitudinally slotted between the perforations, said pin being provided with a serrated frusto conical boss normally spaced with respect to and disengaged from the serrated perforation, a band, one end of which is secured to the yoke and the other end of which is passed through the slot in the pin, whereby rotation of the pin will cause the band to be wound on the pin, said pin being thereafter shiftable longitudinally to engage the serrated boss with the serrated perforation to lock the pin against inadvertent unwinding.

1,627,173. TOY GAME BOARD. IGNATIUS HAAZ, deceased, Philadelphia, Pa., by Carrie Haaz, administratrix, Philadelphia, Pa. Filed Jan. 22, 1926. Serial No. 83,010. 2 Claims. (Cl. 273—134.)



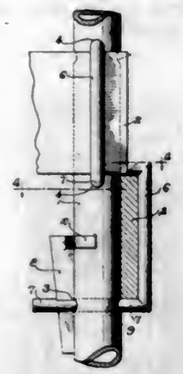
1. A game board having a series of symmetrically arranged spaces adapted to contain educational reading matter, a plurality of identical shaped enclosures surrounding said spaces, each enclosure containing one of a plurality of symbols or numbers, said enclosures comprising a path having section intersecting at corners over which a score indicator may be progressively moved, each of said symbols representing a number and indicating a play to be made upon said indicator halting in the enclosure containing the symbol, said path sections being so disposed that a person may be caused to play out of the course and be obliged to read the matter in the spaces.

1,627,174. SALVO FIRING. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 22, 1922, Serial No. 583,604. Renewed Oct. 21, 1926. 17 Claims. (Cl. 89—41.)



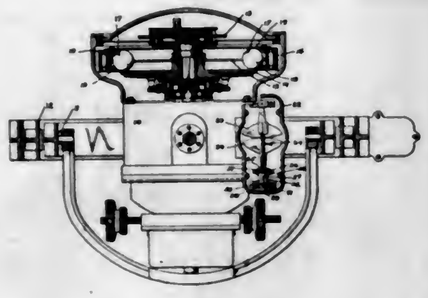
6. A system of salvo firing comprising sighting means, a plurality of weapons, members synchronized with said sighting means and weapons, and means cooperating with said members for modifying their setting in accordance with a desired dispersion and the range of the hostile object.

1,627,175. LEVELING DEVICE. JOHN C. HANSEN, Jr., Newark, N. J. Filed Nov. 28, 1925. Serial No. 71,916. 2 Claims. (Cl. 33—194.)



2. A leveling device comprising a pair of plumb rules, means for holding the rules in parallel relation, clamps for holding the side jambs of a door frame parallel with the outside edges of the rules, slides on the rules, and squares insertible into the slides and when so positioned engaging the jambs for alignment perpendicularly relative to the plane of the rules.

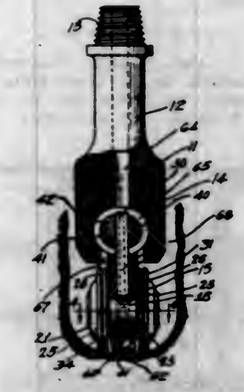
1,627,176. FIFTH-WHEEL ASSEMBLY. GEORGE C. HENDERSON, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a Corporation of Michigan. Filed Aug. 25, 1924. Serial No. 734,088. 10 Claims. (Cl. 280—33.1.)



1. The combination with a tractor having a sectional rear axle housing and a differential housing between the sections of the axle housing, of a rocker straddling the differential housing of the tractor, pins projecting from the sections of the rear axle housing in a plane substantially parallel with the major portions thereof for supporting the said rocker, and a pivot for a trailer mounted on the rocker.

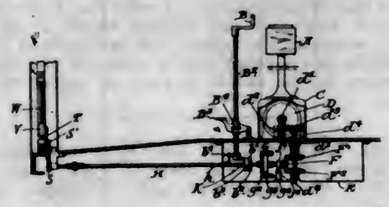
1,627,177. CLAMP FOR SCAFFOLDING OR THE LIKE. KNUD HENNINGSEN, Chicago, Ill. Filed Dec. 4, 1924. Serial No. 753,894. 1 Claim. (Cl. 304—40.)

A scaffolding clamp comprising a device having a slotted arm adapted for insertion through a member of the scaffolding, a wedge extending through said slotted arm and having oppositely and forwardly extending wings adapted for embracing said member for preventing a rotational turning movement of said arm and means extending from said arm for supporting another member of the scaffolding.



1,627,178. CONTROL OF GYROSCOPE-ERECTING SYSTEMS. FERDINAND GEORGE HENRY, New York, N. Y., assignor to Fairchild Aerial Camera Corporation, a Corporation of New York. Filed July 27, 1925. Serial No. 46,371. 14 Claims. (Cl. 74—78.)

1. The combination with a gyroscope, and an erecting system therefor including a plurality of radially movable balls revolving around the axis of the gyroscope, of means for holding the balls against radial movement when the system is subjected to acceleration at an angle to the gyroscopic axis.

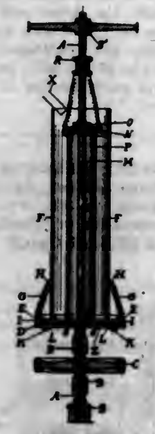


1,627,179. CENTRAL-SHANK-REAMING DISK BIT. FREDERIC W. HILD, Los Angeles, Calif. Filed Nov. 8, 1924. Serial No. 748,565. 8 Claims. (Cl. 255—73.)

1. A disk bit comprising: a body having a central portion and a depending leg; lower bearing members carried by said depending leg; boring disks rotatably supported on said lower bearing members; upper bearing members carried by said central portion; reaming disks carried by

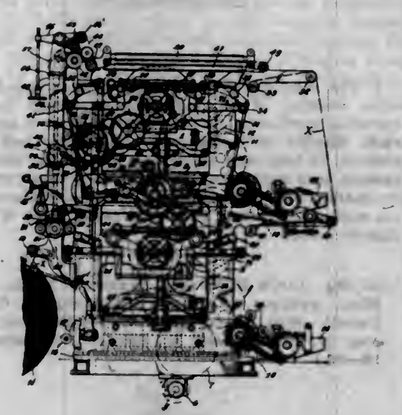
said upper bearing members; and unitary means for retaining both said lower and upper bearing members in place.

1,627,180. MOTOR SYSTEM FOR CAR DOORS. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Feb. 10, 1919. Serial No. 276,186. 30 Claims. (Cl. 268—49.)



1. The combination with a car door, of an electric motor on the car in constant operation, speed-reducing gearing, a reversible door-operating shaft, manual connecting means for engaging said shaft with said gearing for either opening or closing the door, and automatic disconnecting means for disengaging the said shaft at the end of the door run.

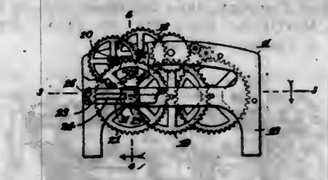
1,627,181. AMALGAMATOR. NATHANIEL SHEPARD KEITH, Philadelphia, Pa.; Claude L. Roth, administrator of the said Nathaniel Shepard Keith, deceased. Filed Apr. 21, 1924. Serial No. 707,810. 4 Claims. (Cl. 209—180.)



1. In an amalgamating machine, the combination consisting of a rotatable, vertical shaft carrying concentrically a disc having a boss around said shaft; a hollow, vertical cylinder held to said disc by said boss and by compression of a cap holding the top of said cylinder rigidly to said shaft; a tube of lead covering said cylinder, but insulated therefrom and from said disc and cap; encircling said tube, an annular cup bolted to said disc but elevated therefrom by adjustable washers; a removable vertical cylinder with an inner surface of copper and a serrated bottom resting in said cup and guyed to said disc and an insulated ring near the top of said shaft con-

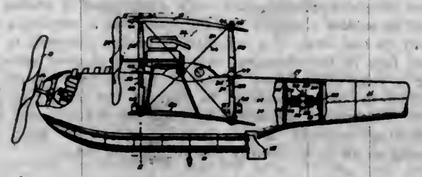
nected by conducting wire with said tube of lead and means for rotating said parts as a unit and supplying pulp containing mercury to the annular space between

said cylinders and passing an electrical current to said ring and taking it up from said outer cylinder when said pulp is passing through the machine.



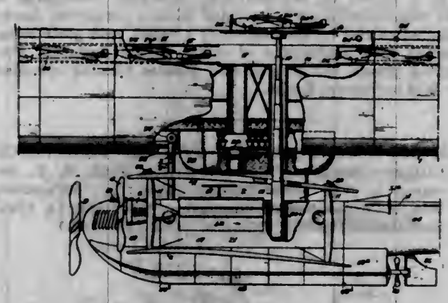
1,627,182. PRINTING MACHINE. CARL A. KELLOGG, Brooklyn, N. Y. Filed Apr. 11, 1922. Serial No. 551,526. 35 Claims. (Cl. 270—1.)

1. A printing press embodying four printing couples, each of which comprises a flat form bed and an impression platen, said couples being arranged in tiers, positioned end to end and means for actuating the several couples in predetermined timed sequence.



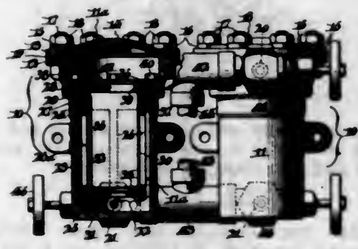
1,627,183. RESETTING DEVICE FOR GAS METERS. ERNEST A. KERSTEIN, Brooklyn, N. Y., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Apr. 25, 1925. Serial No. 25,936. 1 Claim. (Cl. 235—144.)

A resetting device comprising a part capable of being pivotally mounted, said part having a flexible member and a finger-piece and being cut away; and a retainer with respect to which said part is movable, said retainer hav-



ing abutments with which the extremity of said flexible member is adapted to coact to prevent the movement of said part with respect to said retainer.

1,627,184. SECTIONAL FLYING BOAT. HENRY E. KRAMMER, New York, N. Y. Filed July 6, 1918. Serial No. 243,564. 39 Claims. (Cl. 244—2.)

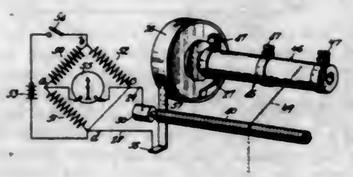


1. A vehicle constituting a combined aeroplane and a marine element including a fuselage formed of separable sections and provided with a propelling mechanism and a supporting wing structure formed of separable sections, one of which is provided with a propelling mechanism, means including a control actuated from the fuselage section provided with the propelling mechanism for discharging in order, wing sections other than the one provided with the propelling mechanism, the section provided with said mechanism and a fuselage section other than the one provided with the control.

1,627,185. AIRCRAFT. HENRY E. KRAMMER, New York, N. Y. Filed Jan. 10, 1921. Serial No. 436,239. 58 Claims. (Cl. 244—2.)

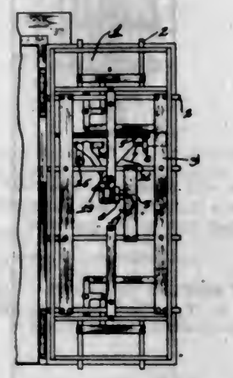
9. In a composite aircraft comprising a dirigible unit and an airplane unit, a disengageably secured superposed relation, said dirigible having means for the alighting thereon of an independent aircraft, in combination, means seated in said airplane unit and extensible through said dirigible unit for vertically moving said independent aircraft relatively to said dirigible unit, and also auxiliary means, seated in said dirigible unit, and extensible therethrough for similarly moving said independent aircraft.

1,627,186. FLUID-STRAINING APPARATUS. JAMES D. LALOR, Baltimore, Md., assignor to The Lalor Fuel Oil System Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed Feb. 18, 1925. Serial No. 10,047. 5 Claims. (Cl. 210—168.)



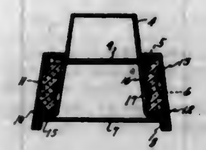
1. A fluid straining apparatus characterized by component interchangeable units each comprising a casing affording a flow chamber for the fluid, and a straining element in the form of a foraminous basket disposed in the fluid flow in the chamber, said straining element embodying a removable inner lining of textile fabric with its bottom in spaced relation to that of the basket to prevent clogging of the latter by collected matter, and said straining element having screw connection with the casing so as to be readily removable therefrom.

1,627,187. COOKING UTENSIL. HJALMAR R. LARSEN, Newark, N. J. Filed Apr. 14, 1925. Serial No. 22,942. 2 Claims. (Cl. 53—1.)



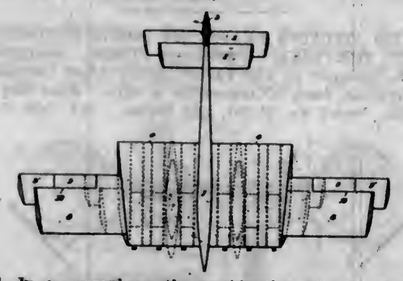
1. A device of the character described comprising a flat imperforated plate provided with a peripheral flange adapted to rest on the bottom of a vessel, said plate being formed with a plurality of radial curved upwardly projecting groves, the ends of said grooves forming openings in said peripheral flange.

1,627,188. MACHINE FOR WINDING RESISTANCE COILS. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 14, 1920. Serial No. 373,867. 4 Claims. (Cl. 175—183.)



1. A machine for winding resistance coils having in combination adjustable means for supporting different sized spools upon which a plurality of series connected coils of resistance wire are to be wound, a plurality of terminals associated with the spool to which the wire may be connected sequentially, means for winding the wire upon the spool, a screw-threaded member arranged to rotate at a definite rate of speed with respect to said spool to guide the wire onto the latter and having electrical contact with the wire as it is wound upon the spool, and a detecting instrument for continuously measuring sequentially the resistance of the wire between the respective terminals and said guide member as the wire is being wound upon the spool.

1,627,189. AUTOMATIC RELEASING MECHANISM FOR LOCKS. ALFRED J. MACY, Chicago, Ill., assignor, by mesne assignments, to The Pro-Tex Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1922. Serial No. 547,616. 7 Claims. (Cl. 109—3.)

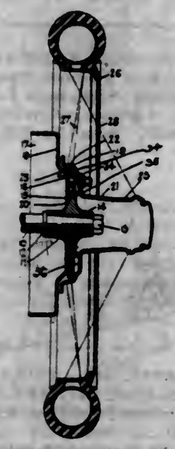


1. The combination with vault doors, including the locks therefor, of an additional emergency lock, and operating mechanism therefor, consisting of a supporting plate adapted to fasten over the regular lock, means adapted to hold said emergency lock in an inoperative position, and means connected with said supporting plate for cutting said first mentioned means and thereby locking said auxiliary lock when said regular lock is forcibly tampered with.

1,627,190. DOOR BUMPER. HERMAN C. MAISH, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 27, 1923. Serial No. 659,670. 7 Claims. (Cl. 16—86.)

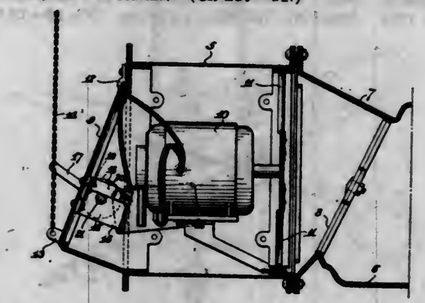
1. In a door bumper, the combination with a holder having a groove open at one end, of a cushion member slidably engageable with the holder through the open end thereof, said cushion member having a recess therein, and a member carried by the holder adapted to spring into engagement with the recess to retain the cushion member in the holder.

1,627,191. AEROPLANE-WING STRUCTURE. JAMES V. MARTIN, Garden City, N. Y. Original application filed Mar. 5, 1921, Serial No. 450,034. Divided and this application filed Aug. 14, 1922. Serial No. 581,702. 22 Claims. (Cl. 244—12.)



1. In an aeroplane, the combination of two relatively telescopic wings, an aileron on one of said wings, said aileron being divided into two independently operable sections the innermost aileron being retractable within a wing section.

1,627,192. DRIVE FOR AMUSEMENT RIDES. HYLA F. MAYNES, North Tonawanda, N. Y., assignor to Maynes Corporation, Dover, Del., a Corporation of Delaware. Filed July 18, 1925. Serial No. 44,589. 2 Claims. (Cl. 272—44.)

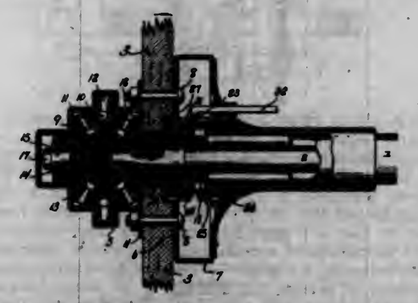


1. An amusement ride comprising the combination of a central pivot, a plurality of radial sweeps designed to rotate about the pivot, wheels on the sweeps, a circular trackway upon which the wheels run, links between the sweeps and pivotally connected thereto, a driving motor carried by a sweep but loosely connected thereto and a rigid connection between the motor and a link.

1,627,193. AUTOMOBILE WHEEL STRUCTURE. EMIL A. NELSON, Abington, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1925. Serial No. 5,418. 5 Claims. (Cl. 301—19.)

1. In a vehicle wheel, the combination of an inner hub, an outer hub, radially-spaced inter-hub seating surfaces arranged in zones displaced axially from each other, and means for securing said hubs together engaging said outer hub in the zone between said inter-hub seating surfaces.

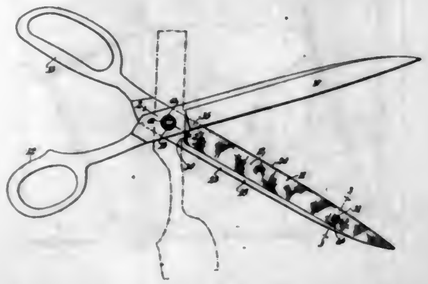
1,627,194. DRAFT CONTROL. CLIFFORD M. NORBERG, Maspeth, N. Y. Filed July 17, 1926. Serial No. 123,104. 6 Claims. (Cl. 230—11.)



6. The combination of a casing, an electrically driven blower therein, a damper operating by gravity normally closing the inlet to the casing, a gravity actuated circuit controlling switch pivotally connected to the damper, manually operated means for adjusting the pivotal relationship between the damper and switch, and recess and detent means for maintaining said adjustment.

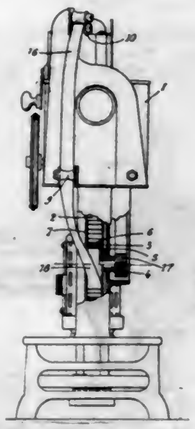
1,627,195. METHOD OF OBTAINING COLORED POLYMERIZED STYROL AND ITS HOMOLOGUES AND PRODUCTS OBTAINED THEREBY. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Jan. 29, 1925. Serial No. 5,457. 15 Claims. (Cl. 260—2.)

1. A process for producing colored polymerised styrols which comprises forming styrol solutions of coloring material soluble in styrols and in their polymers and polymerizing the solution to form polymerized styrols.



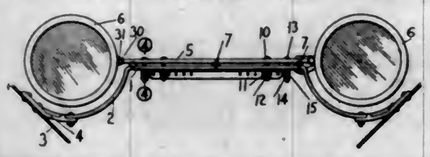
1,627,196. TRANSMISSION MECHANISM. JOHN E. OVREN, Stoughton, Wis., assignor of one-half to Benjamin J. Logan, Stoughton, Wis. Filed July 6, 1925. Serial No. 41,760. 2 Claims. (Cl. 74—7.)

1. The combination of a rotary shaft, a stationary housing surrounding said shaft, a wheel mounted coaxially with said shaft and beyond said housing, a casing rigidly bolted to said wheel, a sleeve keyed to said shaft and projecting therefrom, a spider revolubly mounted upon said sleeve and having projecting pins anchored in said casing and having intermediate bearing portions, a plurality of bevel pinions carried upon said bearing portions, a bevel gear keyed to the outer end of said sleeve and



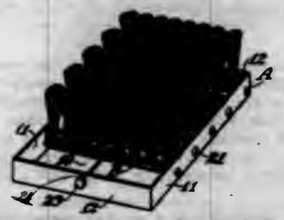
meshing with said bevel pinions, a second bevel gear revolubly mounted upon said sleeve and meshing with said bevel pinions, and means for locking said second bevel gear either to said wheel or to said stationary housing.

1,627,197. SCISSORS OR SHEARS WITH COMPOSITE BLADE. ISAAC PATRICK, Jamaica, N. Y. Filed Oct. 10, 1924. Serial No. 742,829. 7 Claims. (Cl. 30—13.)



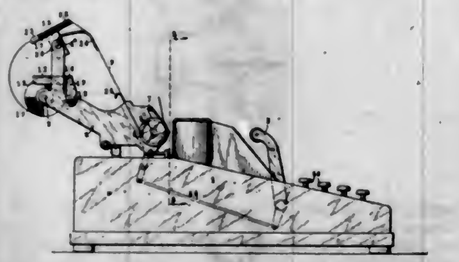
1. Scissors or shears having a composite blade comprising a cutting part and a supporting part, means for fastening said parts together, said supporting part having a longitudinal recess on its inner face into which said cutting part is adapted to fit, said recess having a shoulder at its lower side for supporting said cutting part opposite its cutting edge, said fastening means comprising a tongue and slot connection between said supporting part and said cutting part of the blade at a part not entirely uncovered by the blades when opened in the act of cutting.

1,627,198. FILM WINDING AND UNWINDING DEVICE FOR MOTION PICTURE APPARATUS. EMILE CHRISTIAN PÉNIN, Joinville-le-Pont, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Apr. 22, 1924, Serial No. 708,109, and in France Jan. 15, 1924. 4 Claims. (Cl. 88—18.7.)



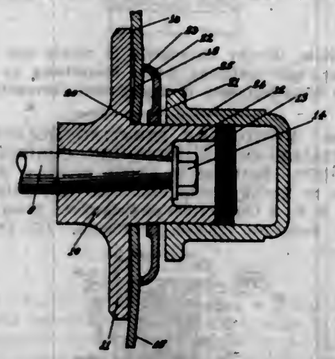
1. In a motion picture apparatus, a storage chamber situated below the feeding mechanism, a substantially horizontal core rotatably mounted within said chamber, means for rotating said core, a ring loosely supported on said core and adapted to be driven by said core by the mere action of gravity, and means for feeding the film into said chamber between the two transversal planes containing the side faces of said ring and parallelly to the axis of the core, whereby the film by engaging the outer surface of the ring is drawn forward within said chamber and spirally turned round said ring.

1,627,199. TILTING HEADLIGHT FOR AUTOMOBILES AND THE LIKE. FERDINAND PFEIFER, Springfield, Ohio, assignor to The Taylor Tilting Light Company, Marysville, Ohio, a Corporation of Ohio. Filed May 2, 1925. Serial No. 27,894. 13 Claims. (Cl. 240—61.)



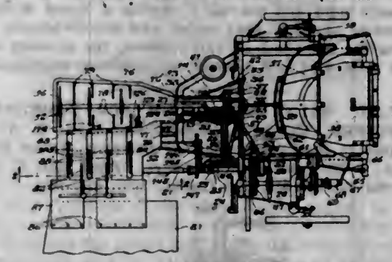
1. In a device of the character described, a transverse frame member adapted to be mounted on an automobile, an elongated lamp supporting member extending lengthwise of said frame member and pivotally mounted thereon for movement about a longitudinal axis, actuating means for said lamp supporting member comprising a part rigidly connected to said lamp supporting member and a device rotatable about an axis extending transversely to the axis of said lamp supporting member and arranged to act on said part.

1,627,200. FOLDING BRUSH. LEO HENRY PICKAR, North Freedom, Wis. Filed Nov. 24, 1926. Serial No. 150,446. 1 Claim. (Cl. 15—203.)



In a device of the kind described, including a frame and bristle holders rotatably journaled therein in a common plane, the said frame and holders having aligned locking pin apertures, a locking pin adapted to removably engage the said apertures.

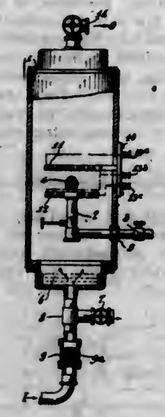
1,627,201. FEEDING DEVICE FOR COMPUTING MACHINES. WILLIAM A. PRINGLE, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Mar. 14, 1923. Serial No. 625,051. 17 Claims. (Cl. 270—41.)



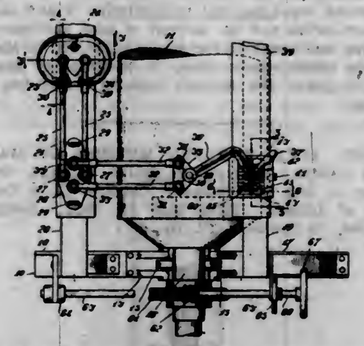
1. A device of the character described, comprising in combination, a roll platen, a support for a paper strip adapted to support a strip with its elements parallel to the elements of the platen, means for feeding said strip over said platen, and means between said strip and said platen for folding a portion of the strip in manifolding relation to another portion.

1,627,202. WHEEL. EARL J. W. RAGSDALE, Norristown, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 4, 1923. Serial No. 636,537. 6 Claims. (Cl. 301—9.)

1. A demountable wheel construction comprising a hub having a clamping flange, a demountable wheel disc adapted to carry a rim and tire and having a central opening through which the body of the hub extends, the portion of said disc adjacent the central opening contacting with said clamping flange, a clamping ring having a yielding periphery mounted on the body of the hub in clamping engagement with the central portion of said disc in two spaced annular zones of contact only, one near the base of said flange and the other near the periphery thereof, and a hub cap screwed on the body of said hub and engaging the clamping ring to maintain it in clamping engagement.



1,627,203. GRAIN SHOCKER. CLEMMA R. RANEY, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 11, 1920. Serial No. 423,226. 40 Claims. (Cl. 56—407.)

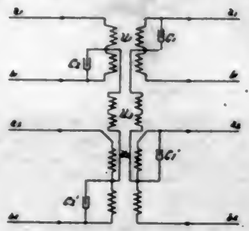


1. In combination, a binder, including a sheaf discharging member, a retarding mechanism cooperating with said discharge member, an upwardly and rearwardly swinging sheaf delivery member for carrying away sheaves discharged by said member, and means for controlling the actuation of said retarding mechanism by said sheaf delivery member.

1,627,204. APPARATUS FOR INDICATING THE PRESENCE AND THE CONCENTRATION OF GASES AND VAPORS IN ATMOSPHERE. SAMUEL RUBEN, New York, N. Y. Filed Nov. 23, 1921. Serial No. 517,416. 10 Claims. (Cl. 73—51.)

1. In a system for indicating the presence and the concentration of gases and vapors, the combination of a chamber, a source of combustion within said chamber, means for supplying to said source a supporting atmosphere, and means for passing therewith gases and vapors, and means for supplying to said source a constant source of energy; a heat responsive element, so located as to be responsive to temperature variations of said source, and means controlled by said element, for indicating, externally to said chamber, the temperature variations of said source.

1,627,205. ENGRAVING METHOD AND APPARATUS. CHARLES R. SEABORNE, Appleton, Wis., assignor to American Lakes Paper Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 6, 1924. Serial No. 742,081. 10 Claims. (Cl. 33—22.)



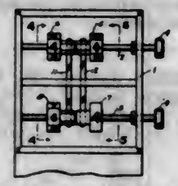
1. In an apparatus for engraving a design on the cylindrical surface of a marking roll, a main frame having supporting means for the roll, a pantographic engraving device having a suitable supporting base, a tool and a tracer, a pattern corresponding to a relatively small segment of the cylindrical surface of the roll and adapted to cooperate with said tracer to guide the tool of the pantographic device to limited extents longitudinally and circumferentially of the roll to engrave a corresponding segmental section of its surface, and means for holding the roll and said supporting base and pattern against movement during the engraving operations, said means permitting relative, axial and circumferential adjustments of the roll and said base and pattern to bring different longitudinal and circumferential segmental sections of the roll surface into the field of operation of the tool.

9. The method of engraving a design upon the cylindrical surface of a marking roll that consists in preparing a pattern corresponding in area to a relatively small

segmental section of the area of the cylindrical surface of the roll, mounting said pattern for adjustment longitudinally of the roll to different fixed positions, mounting a pantographic engraving device for adjustment to correspond to the different positions of adjustment of the pattern, mounting the roll for rotatable adjustment to bring different circumferential segmental sections thereof into cooperative relation with the pantographic device and pattern, effecting such adjustments, and, while the roll is held stationary, employing the pattern in each of said different adjustments to guide the engraving device to engrave a corresponding segmental section of the surface of the roll.

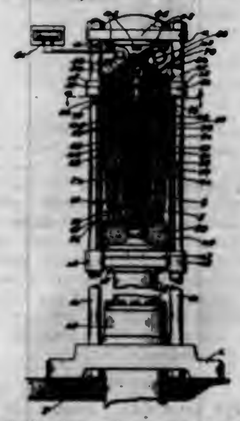
1,627,206. TELEPHONE SYSTEM. WERNER SEITZFAND, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed June 26, 1926, Serial No. 118,646, and in Germany July 6, 1925. 1 Claim. (Cl. 179—173.)

The process of constructing a repeating coil having two windings which are each symmetrical to a center tap, which consists in equalizing the windings during construction so far as the absolute values of resistance and inductance are concerned, but without special regard to phase differences due to capacity unbalance, in testing the finished repeating coil to determine if any capacity unbalance exists and the amount of such unbalance, and in adding condensers of the proper value and in shunt of the coils which require them, as indicated by the test, so as to make the finished repeater completely symmetrical.



1,627,207. LOCK NUT AND METHOD OF MAKING THE SAME. WILLIAM E. SHARP, Chicago, Ill., assignor to Grip Nut Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1922. Serial No. 560,994. 3 Claims. (Cl. 10—86.)

1. The process of manufacturing a lock nut, consisting in taking a nut blank provided with an elevated ridge on one face and a depression on the other face, the width of the depression being slightly greater than the width of the ridge, screw-threading the blank, and placing the nut with its recessed face upon a suitable anvil and applying pressure to the ridge to cause the threads in alignment with the ridge and depression to be slightly distorted out of their normal form.



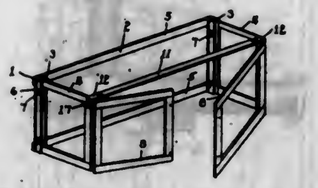
1,627,208. REMINDER FOR CARD PLAYERS. WALTER L. SLATTON, Toledo, Ohio. Filed July 29, 1926. Serial No. 125,661. 6 Claims. (Cl. 40—68.)

1. An indicating device for card players comprising a mounting, a rotatable stem, a pair of blocks on said stem, yieldable means for holding said blocks against movement and means for clutching said blocks to said stem alternately in accordance with the direction of rotation

of the stem, thereby alternately to rotate one block or the other, said clutching means comprising an element for each block normally in engagement therewith.

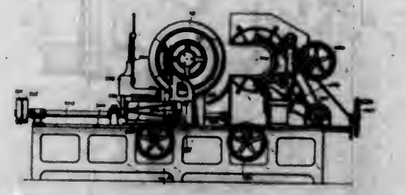
1,627,209. METHOD OF TREATING MOLDINGS OF PARTIALLY-CURED PHENOLIC CONDENSATION PRODUCT. FRANKLIN S. SMITH, Brooklyn, N. Y., assignor to The Products Protection Corporation, New York, N. Y., a Corporation of Delaware. Filed July 29, 1924. Serial No. 728,985. 19 Claims. (Cl. 18—55.)

1. The method of treating moldings of phenolic condensation product which comprises partially curing the same in a mechanical mold, removing said molding from the said mold and placing it within a liquid dielectric of greater viscosity than water and simultaneously subjecting the same to heat and pressure, the pressure causing a portion of said dielectric to penetrate said molding.



1,627,210. VALVE MECHANISM FOR COMBUSTION ENGINES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del., a Corporation of Delaware. Filed Mar. 3, 1921. Serial No. 449,412. 29 Claims. (Cl. 60—15.)

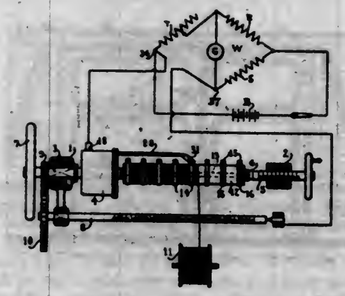
1. In a combustion engine having a working cylinder, a valve adjacent thereto for controlling communication therewith, a balancing piston and cylinder for said valve,



means for passing gases from said working cylinder to the said balancing cylinder, and means for absorbing heat from the gases passing through said first named means by the gases passing to the working cylinder.

1,627,211. BASE FRAME FOR PRIMARY EDUCATIONAL WORK AND PLAY. ANNE H. STEWART, Cleveland, Ohio. Filed Jan. 5, 1925. Serial No. 656. 4 Claims. (Cl. 40—125.)

1. An educational device including a frame having a rear, ends extending outwardly at an angle to the rear and connected thereto, wings hinged to the ends, a tie rod, and means carried by the tie rod for engagement with said ends of the frame, said means being formed so as to engage the ends and hold the tie rod in one position of the rod to permit hinging movement of the wings and in a second position of the rod to engage the wings and hold the latter in a predetermined position.

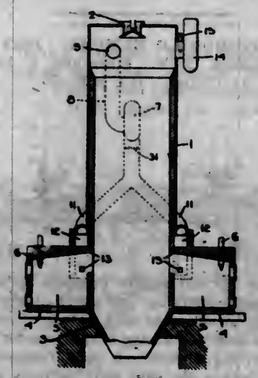


1,627,212. APPARATUS FOR BUILDING TIRE CASINGS. FRANK H. STEWART, Philadelphia, Pa., assignor to Louis B. Eppstein, Jerome Wilsin, and J. B. Gordatowski, New York, N. Y., syndicate managers of The Cum-Art Syndicate, New York, N. Y. Filed June 10, 1924. Serial No. 719,101. 38 Claims. (Cl. 154—11.)

1. In a machine of the character described, in combination, a mandrel means for moving a continuous cord length to and fro across the mandrel, movable means for engaging the cord at a point inwardly of its extreme traverse whereby upon the return movement of the cord laying means a loop will be formed at the point of engagement of the cord by the engaging means and means for moving said engaging means toward the mandrel whereby the loop end of the cord will be similarly moved and means for pressing said loop end into contact with the mandrel.

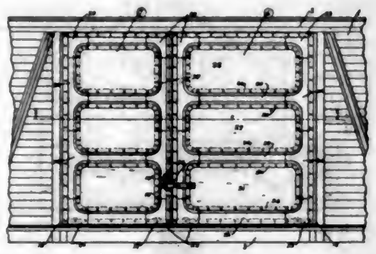
1,627,213. WINDING MACHINE. DAVID STONE, New Rochelle, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 25, 1922. Serial No. 546,922. 9 Claims. (Cl. 175—183.)

1. The combination with a winding machine for resistance units comprising a continuous wire forming a plurality of series connected resistance sections, of a resistance determining device, and means comprising an adjustable conductor terminal whereby different portions



of the resistance wound by said machine may be successively and separately included in circuit with said device during the winding operation.

1,627,214. ART OF MURAL DECORATION. ROBERT M. SUTPHEN, Newark, N. J., assignor to John Francis Booraem, Greenwich, Conn. Filed Nov. 2, 1926. Serial No. 145,918. 4 Claims. (Cl. 41—38.)



1. The method of decoration which consists in superimposing a plurality of different color mediums upon a plaster base and producing a preconceived artistic effect by selectively removing different parts of the superimposed mediums to render the underlying color mediums visible, and then applying appropriate color media to the exposed portions of said superimposed mediums to modify the colors of the latter.

1,627,215. LIMEKILN AND METHOD OF BURNING LIME. ARTHUR E. TRUESDELL, Pittsfield, Mass., assignor of one-half to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1923. Serial No. 633,819. 8 Claims. (Cl. 222—3.)

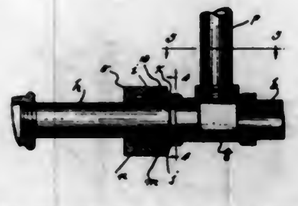
1. In a lime kiln, a combination with the vertical kiln, of a furnace arranged to burn fuel under conditions to produce products of combustion at a temperature in excess of that required for the efficient burning of limestone and to deliver such products of combustion to the kiln, and means to withdraw waste gases from the kiln and introduce them into the furnace between the point where the combustion takes place and where the products of combustion are delivered to the kiln.

1,627,216. STEEL DOOR. AXEL WAHLBERG and WILLIAM W. DARROW, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 27, 1925. Serial No. 25,986. 16 Claims. (Cl. 189—46.)

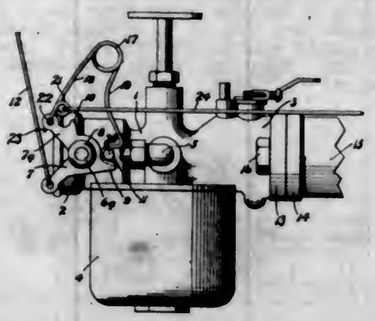
1. A steel door for railway cars, including a rectangular frame made up of flanged structural steel shapes of relatively sturdy construction, swedged sheet steel members of relatively light weight secured to said frame, panels of relatively light weight connecting said swedged steel members, and channel members of relatively light weight secured to said panels and to said swedged steel members for providing box girders.

1,627,217. RAILWAY-TRACK CONSTRUCTION. RALPH J. WELLS, Dayton, Ohio. Filed Aug. 6, 1925. Serial No. 48,510. 10 Claims. (Cl. 238—9.)

6. In a railway track construction, track rails, sleeper plates upon which the track rails rest, tie bars interconnecting the sleeper plates one with another in pairs, bodies of resilient material located beneath the sleeper plates and a body of concrete in which the bodies of resilient material are embedded.



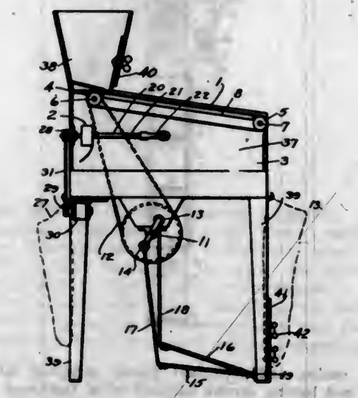
1,627,218. AUTOMOBILE BUMPER. JOHN ST. CLAIR WERNIG, Brooklyn, N. Y. Filed Aug. 1, 1925. Serial No. 47,398. 11 Claims. (Cl. 293—55.)



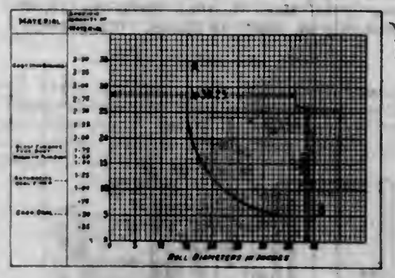
1. A support for automobile bumpers embodying rear supporting members having two pairs of terminal ends, the ends of the members of each pair converging toward each other and jointly forming a split eye-formation, and a single supporting element on each frame-end adapted to conjointly engage the said split portions of each eye-formation.

1,627,219. PIPE CONNECTION. RAYMOND R. WHITE, Detroit, Mich., assignor to White Showers, Inc., Detroit, Mich., a Corporation of Michigan. Filed May 5, 1924. Serial No. 711,294. 1 Claim. (Cl. 285—166.)

In a pipe connection for a liquid distributing system, the combination of a turning union provided at one end with means for securing a distributing pipe thereto and having the opposite other end externally threaded and provided with a bore which is enlarged at the end thereof, means for turning the union together with the distributing pipe on the longitudinal axis of the pipe, a second pipe fitted into the bore carried by the turning union to rotatably support the same to permit the rotation of the distributing pipe, the said second mentioned pipe provided with a circumferential groove near the end thereof, a split metallic spring collar fitted in said groove and arranged to engage the shoulder formed by the enlarged bore, that portion of the pipe beyond the groove engaging in the narrow portion of the bore, pocking engaging behind the spring collar and within the enlarged bore portion of the union, a packing gland fitted into the enlarged bore and engaging the packing, a packing nut screwed onto the external threads carried by the union and engaging the packing gland to squeese the packing between the split spring collar and the gland and force the packing against the side walls of the enlarged portion of the turning union for sealing the joint.



1,627,220. CARBURETOR-CHOKE-VALVE SPRING. FLOYD G. WITHROW, Grand Rapids, Mich. Filed Aug. 10, 1925. Serial No. 49,496. 1 Claim. (Cl. 267—61.)

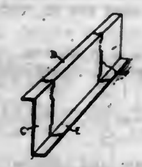


A choke valve spring formed from a single piece of wire comprising a central coil and end portions extending therefrom, a hook formed at one end of one of said end portions, an eye formed adjacent the end of the opposite end portion the wire being then bent laterally for a distance at right angles and then again at right angles in the same direction as said end portions, substantially as described.

1,627,221. DEVICE FOR SORTING BEANS. JOHN W. WRIGHT, Puyallup, Wash. Filed Aug. 1, 1925. Serial No. 47,397. 1 Claim. (Cl. 209—125.)

In a sorting device of the class described, an endless belt, pulleys over which the belt passes, means for supporting the pulleys to hold the belt in an inclined position, a small pulley at one end of one of the said belt pulleys, a crank shaft rotatably supported adjacent the said endless belt, a pulley on one end of the said crank shaft, a belt passing over the said latter pulley and also over the small pulley on the said endless belt pulley, pedals rotatably supported adjacent the said crank shaft, rods connecting the ends of the said pedals to the said crank shaft, means for readily changing the inclination of the said belt, a suitable hopper directly above the upper end of the said endless belt, suitable suction tubes by which objects may be readily picked from the said belt, means for supporting a device for receiving the objects from the lower end of the said belt positioned directly below the belt, means positioned below the belt and hopper for receiving the picked objects, and the relative positions of the said device being such that one operator may sit at the end of the said belt and hold a suction tube in each hand, and operate the machine with his feet.

1,627,222. BRIQUETTING METHOD. ELLSWORTH B. A. ZWOYER, Perth Amboy, N. J., assignor to The General Fuel Briquette Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 8, 1925. Serial No. 21,476. 5 Claims. (Cl. 25—155.)

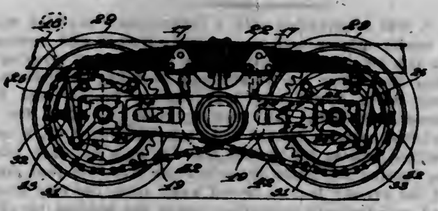


3. In the art of briquetting by the use of presses of the gravity feed type, the method which consists in first determining the specific gravity of the material to be briquetted, then computing the diameter of the rolls of the press, to be employed for briquetting such material, by reference to a formula typified by a graph, the characteristics of which are substantially expressed by the equation,

$$(x-36.25)^2+(y-26.25)=21.25^2$$

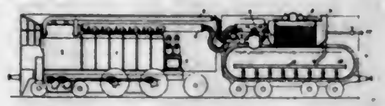
where x equals the roll diameter, and y the specific gravity of the material to be treated, then incorporating in the press a roll having a thus determined diameter and subjecting material of the said specific gravity to the action of said rolls.

1,627,223. PACKING STRIP FOR SHIPPING MATERIALS. WILLIAM B. ALCORN, Detroit, Mich. Filed June 6, 1924. Serial No. 718,202. 1 Claim. (Cl. 206—46.)



A spacer for use in stacking bricks, comprising a strip of sheet material adapted to be vertically disposed between adjacent rows of bricks, said strip having its upper and lower edge portions oppositely bent at substantially right angles to the body of the sheet to form a packing between said rows of bricks and super-posed rows, and further comprising metal reinforcing members extending upon said sheet between their bent edges maintaining the angular relation of said edge portions to the body of the strip.

1,627,224. ATTACHMENT FOR LADIES' BAGS. MAX ASHERMAN, New York, N. Y. Filed July 12, 1926. Serial No. 121,779. 4 Claims. (Cl. 150—35.)

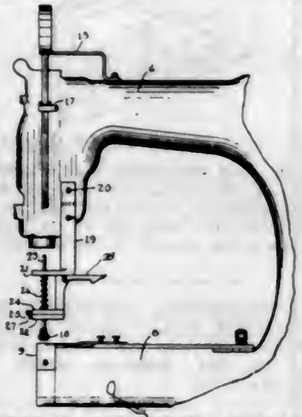


1. An attachment for a hand bag, comprising a tab permanently connected at one end to the bag and separably connected thereto at the free end, said tab being provided with outstanding rigid ribs on its inner face to engage articles placed between the tab and bag.

1,627,225. FOUR-WHEEL EQUALIZED TRACTION UNIT. ELMER H. BABEL, Oakland, and RICHARD L. OWEN, Venice, Calif.; said Babel assignor to said Owen. Filed Mar. 29, 1924. Serial No. 702,938. 7 Claims. (Cl. 180—22.)

1. In a traction unit a main cross member, a pair of articulated side members, the parts of which are mounted to swing through vertical arcs having a common axis on said main cross member, wheels carried by both parts of each side member, means for imparting driving movement to said wheels, means forming a part of said driving connections whereby the wheels may operate independently of each other, and a spring mounted for rocking movement above each side member and arranged to resist upward swinging movement of the parts thereof.

1,627,226. INTERNAL-COMBUSTION LOCOMOTIVE. SIGURD MATTIAS BÄCKSTRÖM, Stockholm, Sweden, assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed Jan. 16, 1922, Serial No. 529,788, and in Sweden Jan 22, 1921. 9 Claims. (Cl. 105—37.)



8. A combined steam and internal combustion engine locomotive in which the steam generator is supported upon one vehicle unit or truck and the steam and internal combustion engine cylinders together with their joint power transmission mechanism are carried by a sparate truck or vehicle.

1,627,227. PHONOGRAPHIC RECORD. PAUL BALKE and GUSTAV LEYSIEFFER, Troisdorf, Germany. Filed Dec. 1, 1920. Serial No. 427,635, and in Germany Feb. 13, 1920. 3 Claims. (Cl. 106—1.5.)

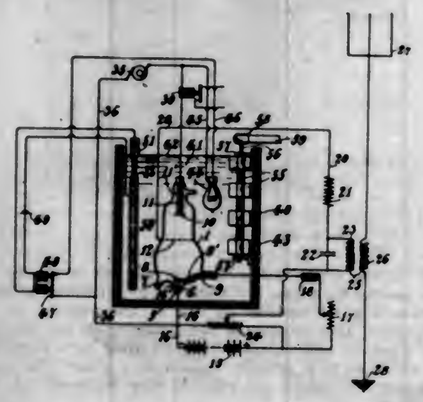
1. A homogeneous sound record for talking machines or the like consisting of cellulose nitrate, a filling material, and a gelatinizing agent, the filling material being present in a quantity greater than the cellulose nitrate, and the gelatinizing agent in a quantity greater than that required to gelatinize the nitrate.

1,627,228. ATTACHMENT FOR SEWING MACHINES. GEORGE BOULTON, Rochester, N. Y. Filed Apr. 29, 1924. Serial No. 709,917. 4 Claims. (Cl. 112—152.)

4. The combination with a feeding plate provided with a needle opening and in a pocket adjacent said opening, an arm pivotally mounted on the machine and carrying a filler for filling the pocket and providing a flush face over which a flat tape may pass, a presser foot for cooperation with the feeding plate, a guide for a flat tape movable toward and from the feed plate, a connection between the presser foot and such flat tape guide for causing the latter to move away from the feed plate as the presser foot is moved away from the feed plate, and automatically operating means for holding the flat tape guide away from the feed plate when such guide is moved by the presser foot, permitting the presser foot to move toward the feeding plate independently of the flat tape guide.

1,627,229. COMBINATION BLOWER AND HEATER. WILLIAM ALLEN BROWN, Philadelphia, Pa. Filed Oct. 19, 1923. Serial No. 669,629. 31 Claims. (Cl. 34—26.)

1. In a device of the character stated, a motor casing, a blower carried thereby, a guard casing for said blower having a bottom skeleton wall whose rear surface is secured to said motor casing, an outer grid member secured to said guard casing trunnions carried by said



guard casing and frictional plates engaging said trunnions and having screws adapted when tightened to hold said blower and guard casing in the desired adjusted position.

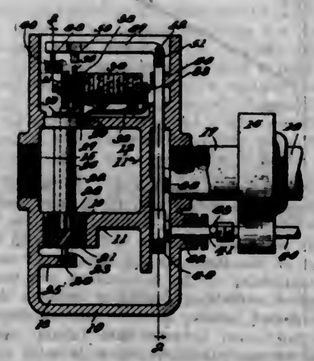
1,627,230. PROCESS FOR PREPARING A REACTION PRODUCT OF ACETALDEHYDE AND ANILINE. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed May 26, 1923. Serial No. 641,764. 5 Claims. (Cl. 260—130.)

1. A process for preparing the reaction product of acetaldehyde which comprises combining acetaldehyde with aniline in the presence of a water solution to which is imparted a hydrogen ion concentration of 1×10^{-3} to 2.5×10^{-4}.

1,627,231. DETECTOR AND METHOD OF CONTROLLING THE SAME. EMORY LEON CHAFFEE, Belmont, Mass., assignor to John Hays Hammond, jr., Gloucester, Mass. Filed Mar. 31, 1915, Serial No. 18,367. Renewed July 24, 1923. 16 Claims. (Cl. 250—27.)

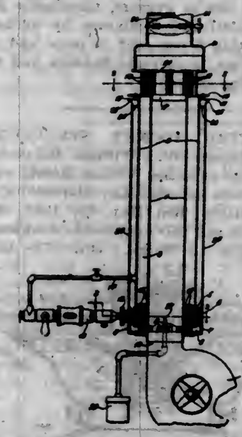
1. A mercury detector comprising a container; a mercury cathode, and an anode in said container, means cooperating with said cathode and anode and responsive to radiant energy to cause electrical disturbances in said container, and means arranged to maintain the whole of said container at a substantially constant temperature to control the internal pressure of said container.

1,627,232. BALL RETAINER FOR BALL BEARINGS. DAVID F. CHAMBERS, Lancaster, Pa., assignor to The Bearings Company of America, Lancaster, Pa., a Corporation of New Jersey. Filed Jan. 7, 1926. Serial No. 79,706. 3 Claims. (Cl. 308—201.)



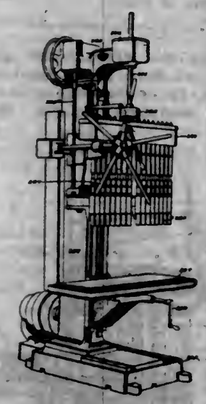
1. A ball retainer for ball bearings consisting of a unitary annulus having flanges extended from its margins in opposite directions and being formed with apertures between its margins to receive the balls, the retainer being asymmetrical in cross section with respect to the plane of the retainer, and means formed in the flanges for positively retaining the ball therebetween, each flange being formed to contact with each ball at a plurality of spaced points.

1,627,233. RECEPTACLE. ROGER MARIE GEORGES MOREL D'ARLEUX, Paris, France. Filed July 28, 1926, Serial No. 125,382, and in France Dec. 11, 1925. 6 Claims. (Cl. 181—51.)



4. In a device of the class described, a body member formed so as to constitute a storing receptacle, a receiving receptacle contained within said body member, and a cover member coacting with said body member, said cover member being formed so as to provide guiding means for material to be deposited in said receiving receptacle.

1,627,234. FLOW METER. JAMES M. DAYTON, Torrington, Conn., assignor to The Dayton, Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Feb. 20, 1926. Serial No. 89,751. 7 Claims. (Cl. 235—1.)

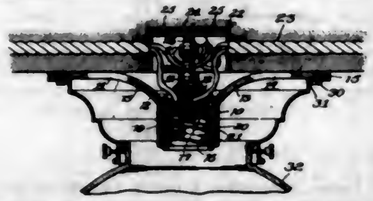


1. In a flow meter, a conduit for a liquid, a shut-off valve on said conduit, a counting mechanism and means actuated by the flow of liquid in said conduit to drive the counting mechanism, the combination therewith of a device to correct the registration of said mechanism, and means controlled by said shut-off valve to actuate said device.

1,627,235. HEATER. HENRY V. DEEMAR, St. Louis, Mo., assignor to John H. Bruninga, trustee, St. Louis, Mo. Filed May 31, 1924. Serial No. 716,986. 11 Claims. (Cl. 126—116.)

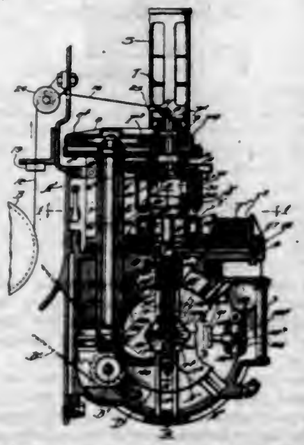
1. A heater comprising, a casing adapted to form an annular chamber, means for supplying a combustible mixture to said chamber, and ducts entering and extending into said chamber and adapted to admit air into the flame beyond the entrance of the combustible mixture.

1,627,236. MECHANISM REVERSIBLE WITHOUT BACKLASH ERROR. ROBERT M. GALLOWAY, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Mar. 24, 1925. Serial No. 17,969. 29 Claims. (Cl. 10—130.)



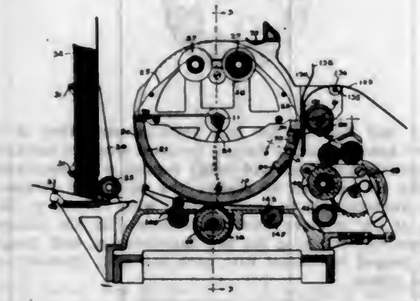
7. In a machine-tool, the combination comprising a cutting tool; a work member adapted to be operated on by said cutting tool; feed mechanism for effecting relative linear movement between the work member and the cutting tool; speed mechanism for effecting a relative rotative movement between the cutting tool and the work member, said feed mechanism and the speed mechanism being interconnected to maintain a predetermined ratio between the linear movement and the rotative movement; and back-lash compensating mechanism for insuring the starting of the linear movement and the starting of the rotative movement in correct relation upon reversal of the feed mechanism and the speed mechanism.

1,627,237. PROCESS OF MANUFACTURING SLAG CEMENT. JOSEPH G. HARDING, Jackson, Ohio, assignor of one-half to William R. Casparis, Columbus, Ohio, and one-half to Samuel E. Stephenson, Jackson, Ohio. Filed Jan. 13, 1923. Serial No. 612,520. 2 Claims. (Cl. 106—25.5.)



1. The herein described process of manufacturing slag cement, which consists in mixing a variable lime content with upward of 70 per cent of undried granulated slag and 3 per cent or less of gypsum, thoroughly drying the mixture and completing the mixture by adding cement clinker approximating 5 per cent or more and thereafter grinding the mixture to extreme fineness and simultaneously mixing the ingredients.

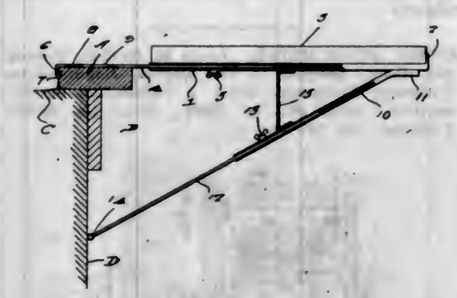
1,627,238. ELECTRIC-SOCKET STRUCTURE. MAX HERSKOVITZ, Chicago, Ill.; William Herskovitz (now, by judicial change of name, William Herst) and Charles Weinfeld executors of said Max Herskovitz, deceased. Original application filed May 23, 1919, Serial No. 299,198. Divided and this application filed Jan. 5, 1924. Serial No. 684,646. 2 Claims. (Cl. 173—342.)



1. In a socket structure, the combination of a cup-shaped member containing electrical contacts for an electric lamp inserted into the open end of said member, said member presenting at one end a portion at which said member attaches to a support and apertured at one side of said portion for receiving electric wires connected with said contacts, and arms extending outwardly from said member, said arms containing threaded apertures adjacent their outer ends and other apertures between their ends, the latter for receiving devices for securing the socket structure in place.

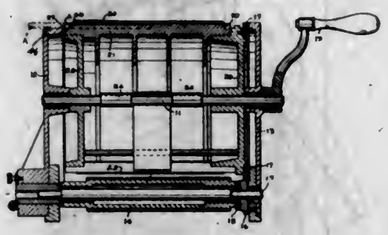
1,627,239. SPOOLING MECHANISM AND METHOD. FRANK HONIG, Oak Park, Ill., assignor to Cyclo Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1924. Serial No. 693,264. 98 Claims. (Cl. 205—16.)

1. In a machine of the character set forth, the combination of a positively driven capstan upon and from which convolutions of a strand form and are discharged progressively, and an independent core so related to said capstan that the discharged strand is progressively wrapped on said core by the discharging action of said capstan.



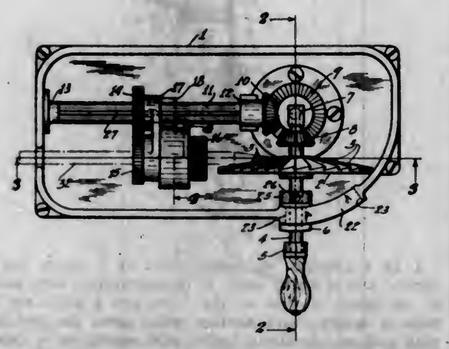
1,627,240. ADDRESSING MACHINE. JOHN A. HULT, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1926. Serial No. 100,224. 46 Claims. (Cl. 101—52.)

4. The combination of a rotary drum, a longitudinal guideway on the drum, a spring tending to discharge an address plate in the guideway, and a latch for holding the plate in place.



27. The combination of a rotary printing drum, a segmental platen mounted to turn on an axle parallel to the axis of the drum, adjustable studs eccentrically carrying said axle, and a combined clutch and variable coupling adapted to control the rotation of the platen while allowing the adjustment.

1,627,241. WINDOW BRACKET. WILLIAM H. JOHNSON, Cambridge, Md. Filed Apr. 7, 1925. Serial No. 21,334. 1 Claim. (Cl. 248—19.)



A window bracket comprising a horizontal longitudinally extensible suporting arm for a shaft, said arm being made of telescopically connected sections, the outer end of the outer one of which is formed with a stop, the inner end of the inner section being bent downwardly, and the extremity of the downturned end being formed with angular serrations providing teeth, a downwardly inclined tubular member fastened to said outer sections, a brace interposed between said tubular member and outer section, an adjustable leg slidable in said tubular member and provided on its free lower end with a cross piece adapted to bear against a supporting surface.

1,627,242. PRINTING DEVICE HAVING CHANGEABLE FORM. VICTOR H. KLINE, Lakewood, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1926. Serial No. 100,246. 12 Claims. (Cl. 101—52.)

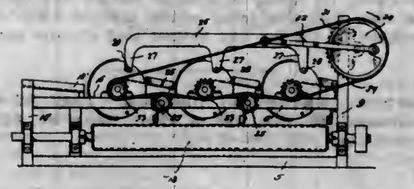
1. The combination of a printing bed having a channel, a removable printing member adapted to occupy the channel, an inking ribbon extending across the channel, and a bridge substantially parallel with the edge of the ribbon and adjacent the entrance of the channel and extending across it beneath the ribbon.

1,627,243. PENCIL SHARPENER. CARL OTTO KOWOL, Alton, Ill. Filed Feb. 6, 1925. Serial No. 7,848. 1 Claim. (Cl. 120—95.)

A pencil sharpener of the class described comprising, a housing adapted to support bearings for the movable parts of said pencil sharpener, a rotatable chuck axially movable and adapted to grip and hold a pencil at a predetermined angle to the plane of a rotatable cutting disc, means for adjusting the plane of rotation of said rotatable cutting disc at different angles relatively to the said rotatable chuck without changing the relation of the teeth of the driven and driving bevel gears, said chuck having movable jaws normally held together by means of helical springs, means for holding said cutting disc in adjusted positions, and means for rotating said chuck and said cutting disc.

1,627,244. TAKE-UP DEVICE. WILBUR S. LEWIS, Cleveland, Ohio. Filed Sept. 2, 1925. Serial No. 53,973. 2 Claims. (Cl. 24—129.)

1. In a take up device of the character described, a pair of superimposed resilient metal members, and means for securing said members integrally together at their central portions, the end portions of said members being bent relatively at angles diverging from the central portions and each having a cord receiving aperture formed

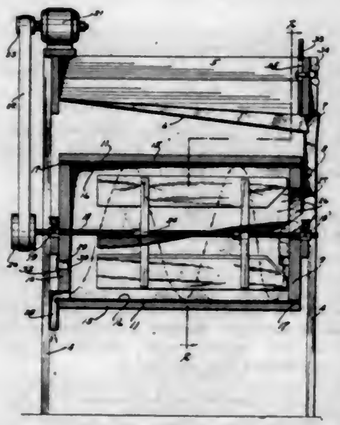


adjacent the free ends thereof, said apertures being capable of being brought into substantial alignment by compression of the free ends of the members.

1,627,245. PROCESS FOR MAKING AND MOLDING HARD PORCELAIN. ARTHUR MARSHALL MCINTOSH, Sydney, Australia. Filed July 15, 1922. Serial No. 575,387. 1 Claim. (Cl. 25—157.)

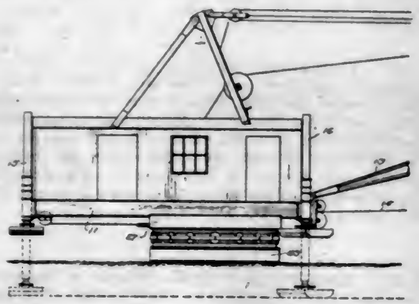
A process for forming porcelain ware comprising the subjection of ordinary finished porcelain to heat until plastic and then simultaneously subjecting the plastic material to pressure and molding it.

1,627,246. FRUIT-GRADING MACHINE. ALLAN H. MCINTYRE, Winchester, Va. Filed June 29, 1926. Serial No. 119,357. 9 Claims. (Cl. 209—101.)



1. In a grading unit for fruit grading machines of the character described, a continuously rotating roller, a pocket arranged partially around said roller but non-rotatably associated therewith, and a gauge bar arranged in spaced relation with the roller and anchored to the pocket at one of its open sides, and means for rotating the pocket with respect to the roller from a generally horizontal position therebeneath, to a position at one side of the roller and vice versa.

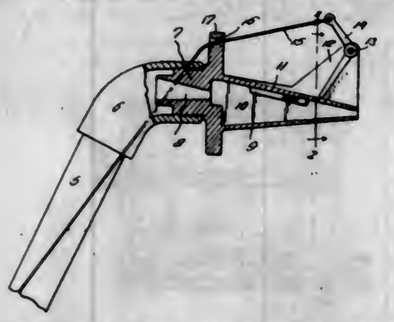
1,627,247. LOADING MACHINE. NORTON A. NEWDICK, Columbus, Ohio, assignor to The Colader Company, Columbus, Ohio, a Corporation of Delaware. Filed Sept. 6, 1923. Serial No. 661,804. 6 Claims. (Cl. 198—7.)



4. In combination with a pivoted conveyor having an inclined shoe member connected thereto, a pony truck for supporting the end of the conveyor, said pony truck including a wheeled frame, a supporting column rising vertically and centrally from said frame, and anti-friction devices mounted on said supporting column for engagement with the inclined shoe.

1,627,248. HULLER AND SCARIFIER. JOHN L. OWENS, Minneapolis, Minn. Filed Aug. 26, 1925. Serial No. 52,543. 4 Claims. (Cl. 83—30.)

1. A huller or scarifier comprising a casing lined with an abrasive surface and combined with a rotary fan in the casing for taking up seeds or the like and throwing the same with a whirling motion into the blast of air produced by the fan and against said abrasive surface.



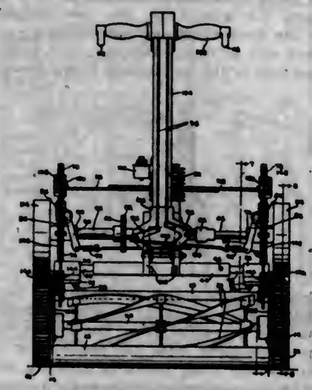
1,627,249. REVOLVING DERRICK. JOHN W. PAGE, Chicago, Ill. Filed Oct. 6, 1924. Serial No. 741,923. 2 Claims. (Cl. 180—8.)

1. A revolving derrick comprising a superstructure and a supporting base; said superstructure being rotatably and slidably mounted on top of said supporting base; and means for raising or lowering said superstructure, said supporting base adapted to hang from the underside of said superstructure and be supported thereby when said superstructure is raised.

1,627,250. ADJUSTABLE LIP-SPRAY NOZZLE. WILLIAM B. PARKER, Placerville, Calif. Filed June 3, 1926. Serial No. 113,498. 1 Claim. (Cl. 299—135.)

A spray nozzle of the class described including a plug having a bore, a fixed lip extending from the plug body, side walls rising therefrom, an adjustable lip extending from the plug body between the side walls, a flange on the plug and having an opening, a bell crank lever rockably mounted between the side walls in position to engage said adjustable lip, and a flexible member trained through the opening in the flange and engaged with the

bell crank lever so that it may be pulled for swinging the bell crank lever to engage the adjustable lip to move the same toward the fixed lip.



1,627,251. HYDRANT. ROY W. PENNY, Raleigh, N. C. Filed Oct. 19, 1925. Serial No. 63,888. 3 Claims. (Cl. 137—13.)

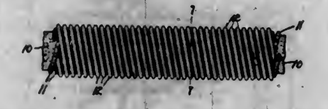
1. In a hydrant, the combination of a casing having outlets and a valve seat, a reciprocating valve seated in the casing, a stem on the valve and a guide for the stem, a rotary valve having outlet ports for co-action with said outlets and a top to said rotary valve closing it against passage of water, a hollow stem on the rotary valve, a valve rod secured within the hollow stem and projecting below the rotary valve, a joint between the upper and lower ends respectively of the valve stem and valve rod, an annular flange on the lower end of the valve rod, a spider frame below the rotary valve, and a spring interposed between said frame and flange.

1,627,252. LAWN MOWER. CORNELIUS A. PETERS, Minneapolis, Minn. Filed June 7, 1924. Serial No. 718,490. 1 Claim. (Cl. 56—26.)

A lawn mower comprising a support, traction wheels upon which said support is mounted, a fixed cutter blade carried by said support, rotary cutter blades adapted to cooperate with said fixed blade, a transverse shaft to which said rotary blades are secured, driving connections between said traction wheels and said transverse shaft, slides mounted for vertical movement above said traction wheels, a transverse shaft mounted in bearings carried by said slides, friction wheels secured to said shaft adjacent said bearings, springs tending to move said slides upwardly to bring said friction wheels out of engagement with said traction wheels, cams engaging the upper sides of said slides for moving said friction

wheels into engagement with said traction wheels, means under control of the operator for operating said cams, a motor carried by said support, and means for driving said second transverse shaft from said motor.

1,627,253. TRUCK. WALTER N. SHANNON, Jr., San Bernardino, Calif. Filed Nov. 6, 1925. Serial No. 67,315. 3 Claims. (Cl. 280—57.)



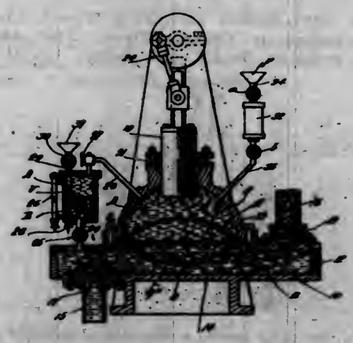
2. A truck comprising a frame, a bearing on the frame, a wheel journaled on the bearing, and a foot pivotally mounted intermediate its ends on the frame, the rear end of the foot being engaged under the bearing, against upward swinging movement, and the rear end of the foot being engaged with the bearing against rearward movement.

1,627,254. SAFETY PAPER. BURGESS W. SMITH, Rochester, N. Y., assignor to The Todd Company, Incorporated, Rochester, N. Y., a Corporation of New York. Filed Aug. 18, 1925. Serial No. 50,136. 10 Claims. (Cl. 91—67.95.)

1. A safety paper having incorporated therewith an organic compound having a molecular arrangement comprising a group of carbon rings joined together by having two carbon atoms in each ring in common with the adjacent ring, a carbon atom of said group of rings being attached to a carbon atom of another carbon ring, and a plurality of amino radicals substituted in said rings for hydrogen atoms, said compound being deepened in color by reaction with ink eradicating chemicals.

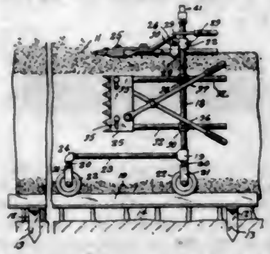
10. A safety paper having alpho-naphthidine incorporated in the body or sizing thereof.

1,627,255. COVERED ELASTIC THREAD OR CORD. JULIUS B. SMITH, Waterbury, Conn., assignor to The American Mills Co., Waterbury, Conn., a Corporation. Filed Oct. 1, 1926. Serial No. 138,883. 2 Claims. (Cl. 117—57.)



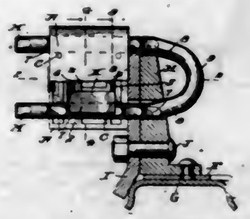
1. A covered elastic thread or cord, comprising an elastic core, a fibrous inner covering enveloping the said core, an elastic adhesive for bonding the said core and said fibrous inner covering together, and an outer or finishing fibrous covering enveloping both the said core and the inner fibrous covering.

1,627,256. COAL CAR. LAWRENCE F. SMITH, Hazard, Ky., assignor of one-eighth to Loyd P. Larkin and one-eighth to Austen Faulkner, Christopher C. Dale, and Alvis Mercer, Hazard, Ky. Filed Mar. 1, 1926. Serial No. 91,578. 4 Claims. (Cl. 105—24.)



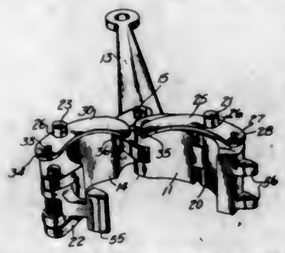
2. In a car of the class described, a bottom including inclined bottom plates, said bottom plates having their adjacent edges curved downwardly and inwardly providing hoppers, the adjacent edges of the plates being spaced to provide outlet openings, and sliding closures for normally closing the openings.

1,627,257. HYDRAULICALLY-OPERATED DIAPHRAGM PUMP. BLAMEY STEVENS, Temascaltepec, Mexico. Filed Oct. 24, 1924. Serial No. 745,623. 5 Claims. (Cl. 103—44.)



1. In a pump, a casing defining a chamber for the fluid to be pumped, inlet and outlet valves for the chamber, a body of actuating fluid within the casing, means for producing pulsations in the actuating fluid; the actuating fluid and the chamber contained fluid to be pumped being so associated that the forces of pulsations set up in said actuating fluid are transmitted to the fluid to be pumped; and an auxiliary reservoir in communication with the body of actuating fluid and the chamber-contained fluid in a manner whereby fluid pulsations in chamber and casing are transmitted to fluid within the auxiliary reservoir.

1,627,258. HEDGE TRIMMER. JOHN J. SULLIVAN, Bridgeport, Conn. Filed Oct. 16, 1926. Serial No. 142,038. 8 Claims. (Cl. 56—233.)



5. In a hedge trimming device, a wheeled carriage including spaced upright bars one on each side of the hedge, a bar extending transversely of the hedge and adjustably secured to the upright bars, blocks adjustably mounted on the bars, and a clipper carried by said blocks.

1,627,259. SLIDING-SHACKLE LOCK. WILLIAM F. TROAST, Lancaster, Pa., assignor to Issachar P. Reese, Lancaster, Pa. Filed Sept. 10, 1924. Serial No. 736,924. 3 Claims. (Cl. 70—108.)

3. In a sliding shackle lock, a shackle having two parallel arm portions having free ends, each of said arm portions having a straight inclined portion extending from its other end at an abrupt angle for a considerable distance toward the other arm portion, and the adjacent extreme parts of said inclined portions being integrally connected.

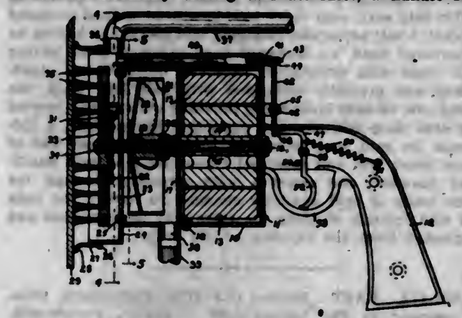
1,627,260. PIPE TONGS. CHARLES E. WILCOX, Anaheim, Calif., assignor to Elihu C. Wilson. Filed Apr. 10, 1922. Serial No. 551,232. 22 Claims. (Cl. 81—66.)

2. In a pipe tongs having a plurality of members adapted to encircle and engage a pipe, the combination of arms removably attached to some of said members, there being projections on said arms so placed as to be automatically actuated by the pipe to close the members about said pipe.

1,627,261. MOTOR-METER PROTECTOR. JAMES P. WILSON, Norfolk, Va. Filed Oct. 14, 1926. Serial No. 141,658. 1 Claim. (Cl. 220—24.)

In a device of the class described, a radiator cap, a motormeter having a stem mounted removably in the cap, a base member provided with arms located at the sides of the motormeter and in the same plane with the motormeter, the space in front of the motormeter and in the rear thereof being open and unincumbered to permit free vision through the motormeter, the base member being mounted on the stem and being located between the cap and the lower end of the motormeter, the base member and the lower end of the motormeter being provided with

lug and recess elements which are positively engaged to prevent relative circumferential movement between the base member and the motormeter, thereby to retain the arms in the same plane with the motormeter, the base member and the cap being provided with lug and recess elements which are positively interengaged to prevent the base member and the motormeter from turning upon the cap, and means on the stem and cooperating with the cap to hold the lug and recess elements interengaged.

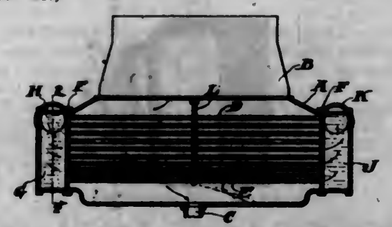


1,627,262. ELEVATED ASH CARRIER. JOHN SEM WOODAHL, Great Falls, Mont. Filed Nov. 18, 1926. Serial No. 149,035. 9 Claims. (Cl. 104—93.)

1. In an apparatus of the class described, the combination of a primary bracket comprising a vertical body provided with an inclined pulley arm, said pulley arm terminating in an upstanding lug, a pulley supported by said lug, a bracket arm on said vertical body, said bracket arm provided with a head, said head provided with a notch, a track provided with side extensions or hooks, said hooks seated in said notch of said head, means extending through the track and the head for positively fastening the same together, a guide arm under the track and integral with said vertical body, said guide arm provided under the track with a V-shaped groove, said guide arm provided at its outer end with an upstanding portion, a receptacle travelling on said track, a cable having its upper run engaging said pulley and its lower run engaging said V-shaped groove, said cable being fastened at its ends to opposite ends of said receptacle, and means for hauling the cable back and forth for operating the receptacle upon said track.

1,627,263. SCRUBBING MACHINE. MILNER B. BAILY, Dunlap, Iowa. Filed Oct. 2, 1925. Serial No. 59,998. 3 Claims. (Cl. 15—50.)

1. A scrubbing machine comprising a casing having a brush compartment, a fan compartment communicating therewith and a motor compartment all disposed on substantially the same axis and said brush compartment being open at the side away from said fan compartment, a motor in said motor compartment, a motor shaft connected with the motor and extending through said fan and brush compartments, a brush mounted on said shaft in the brush compartment, a suction fan mounted on said shaft in the fan compartment, a flexible collar carried by said brush compartment and enveloping the brush, means for supplying liquid connected to said brush compartment, an outlet communicating with said fan compartment, an air inlet to the brush compartment, valve means for normally closing said air inlet, a handle for

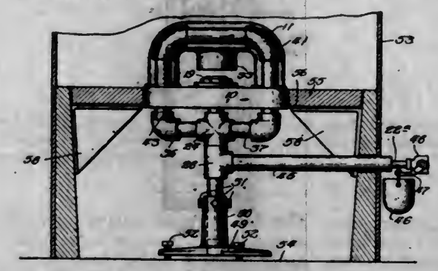


the casing extending substantially axially from the motor compartment end, and operating means carried by said handle for opening said valve means.

1,627,264. ELECTRIC-LANTERN BATTERY. FRANK T. BAIRD, Blue Island, Ill., assignor to French Battery & Carbon Company, Madison, Wis., a Corporation of Wisconsin. Filed Sept. 4, 1923. Serial No. 660,680. 2 Claims. (Cl. 136—108.)

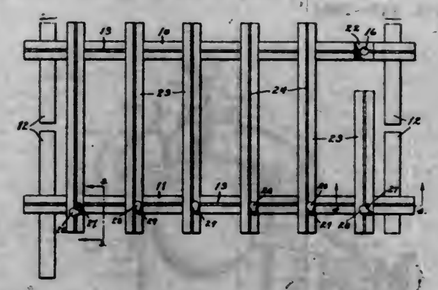
1. The combination with a lantern-casing having at its bottom an internal annular contact, of a battery-unit comprising a container having side walls, a top wall and a bottom wall, the bottom wall of said container having a central perforation and an eccentric perforation, dry-cells confined in said container and insulated from each other, and coil-spring contacts having their upper ends permanently attached to said battery-unit and electrically connected with electrodes of said cells, said coil-spring contacts protruding through said perforations and one of said contacts engaging said annular contact member.

1,627,265. SURFACE CONDENSER. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 20, 1926. Serial No. 149,650. 2 Claims. (Cl. 257—43.)



1. A surface condenser comprising a steam inlet and an air outlet, and cooling tubes arranged in active and inactive zones for steam condensation, the tubes in the inactive zone being of smaller diameter and adapted to conduct water at lower velocity than the tubes in the active zone.

1,627,266. ROOF TILE AND METHOD OF MAKING THE SAME. FRANK A. BEALS, Richmond, Va., assignor of one-half to Muhleman & Kayhoe, Incorporated, Richmond, Va., a Corporation of Virginia. Filed Mar. 31, 1925. Serial No. 19,640. 6 Claims. (Cl. 25—154.)

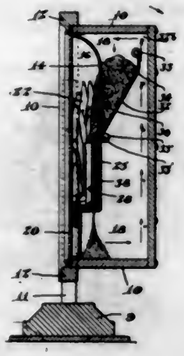


1. The method of making roof tiles which consists in molding a body of wet material, precipitating upon the weather surface of the body a mixture of binding material and surfacing matter, and permitting the binding and surfacing matter to absorb moisture from the body and to harden thereon without being smoothed or otherwise surfaced.

1,627,267. OIL BURNER. ALBERT BODDEKER, Chicago, Ill. Filed Apr. 9, 1926. Serial No. 100,905. 6 Claims. (Cl. 158—91.)

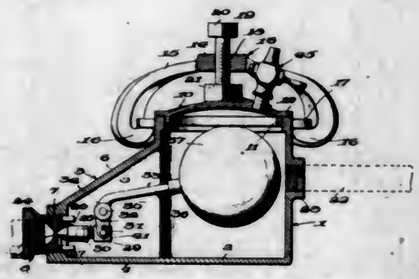
1. In an oil burner in combination, a burner head, means for delivering oil to said burner head, a preheating chamber surrounding said delivery means, means for delivering heated air above the burner head, and means for delivering heated air to said preheating chamber comprising a member having an air intake below the plane of the burner head, a portion extending over the burner head in the path of the flames and a non-perforated delivery connected with said preheating chamber.

1,627,268. POULTRY ROOST. BENJAMIN T. BOUMA, Lynnville, Iowa. Filed Feb. 18, 1925. Serial No. 9,061. 1 Claim. (Cl. 119—25.)



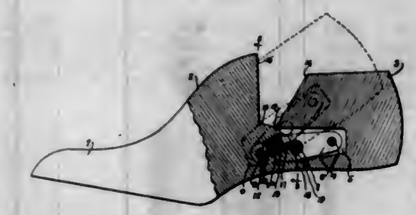
A device of the class described, comprising spaced sills adapted to contain a liquid germicide, said sills being formed with spaced notches opening to their upper margins, and perch bars mounted in said notches and also adapted to contain a liquid germicide, said sills being formed with filling holes located in certain of said notches and adapted to be covered by the perch bars when in place.

1,627,269. METHOD OF MAKING MAGNETIC ALLOYS. VERA B. BROWNE, Brackenridge, Pa. Filed Mar. 19, 1925. Serial No. 16,837. 10 Claims. (Cl. 75—45.)



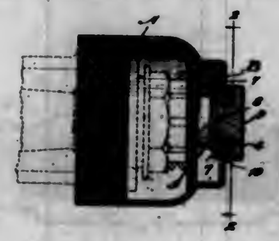
1. The method of making silicon iron substantially free from solid inclusions and having a definite silicon content, which consists in collecting and storing within a container a relatively large bath of such alloy and applying external heat to the same, in holding the stored metal within the container until substantially all of the solid inclusions have floated to the surface of the bath and in assisting this flotation by causing agitation within the bath and then in tapping metal from the bath.

1,627,270. MEANS FOR REPRESENTING CASCADES IN LANDSCAPES. JOHN A. BURNHAM, Marblehead, Mass. Filed Mar. 6, 1926. Serial No. 92,787. 3 Claims. (Cl. 40—126.)



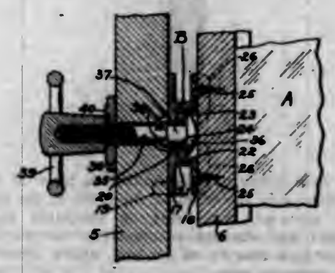
2. In a device for representing a landscape which includes a cascade, the combination, with incidental scenery, of means for simulating the cascade, comprising a mass of minute glass beads; there being an opening in the scenery; and means for holding said mass above the opening and adapted to discharge, by gravity, a thin, flat stream of said beads past the opening.

1,627,271. STEAM TRAP. FRED AMOS BURROWS, York, Pa. Filed Mar. 5, 1925. Serial No. 13,257. 1 Claim. (Cl. 137—103.)



A steam trap comprising a main float chamber having an inlet near its top and an auxiliary outlet chamber extending laterally therefrom and having an outlet opening near its bottom, a nipple threaded in said outlet and having a ported vertical partition provided with a valve seat and with valve guiding fingers extending rearwardly of said seat, a valve located in said trap and cooperating with said seat, said valve having a head with a threaded socket, a bolt adjustably engaging said socket and having an apertured head, an L-shaped float carrying lever having its short arm bifurcated, extended downwardly, straddling and pivotally connected with said bolt head, the long arm of said lever being provided with a float located in said main chamber and extending horizontally, a fulcrum for said lever extending through the inner end of said short arm and arranged transversely of said auxiliary chamber, and socketed bolts extending through the side walls of said auxiliary chamber to receive the ends of said fulcrum whereby the valve may be assembled and adjusted from the exterior of the trap.

1,627,272. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Apr. 15, 1925. Serial No. 23,236. 5 Claims. (Cl. 12—136.)



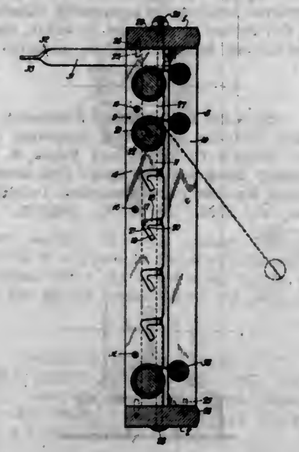
1. In a last, a toe part, a heel part, a projection on the toe part of quadrant form adapted to engage with a cooperating concavity of the heel part, a right angle shoulder on either part adjacent the quadrant projection for forming a limiting shoulder, a link connecting said parts, a spring pressed plunger carried by one of said parts, and means on the link for engaging with said plunger to resist the movement of the parts from one position to the other and to hold them in either of said positions, said projection consisting of a transverse cylindrical member carried by said link, said parts having cut away portions for receiving said link and said transverse member.

1,627,273. PLUG FOR LUBRICANT INLETS. CHARLIE G. COFFIN and JOSEPH A. WOLF, Elgin, Okla., assignors of one-third to Delbert E. Cline, Elgin, Okla. Filed July 29, 1924. Serial No. 728,938. 2 Claims. (Cl. 308—96.)

1. The combination, with a wall having a lubricant inlet, of an exteriorly and interiorly threaded bushing in said inlet, a head and nut on said bushing contacting with opposite sides of said wall, a threaded plug turnable into and out of said bushing, and a head on said plug enveloping and covering the bushing part on the outside of said wall and having a rim arranged to seat against said wall.

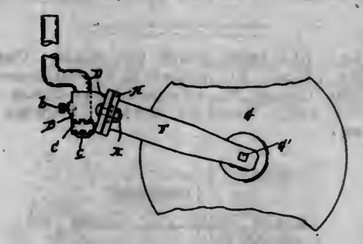
1,627,274. HINGE. THOMAS H. COSTELLO, Chicago, Ill.; Rose M. Costello and William E. Costello, executors of said Thomas H. Costello, deceased, assignors to Rose M. Costello, trustee. Filed June 4, 1920. Serial No. 386,642. 4 Claims. (Cl. 16—140.)

1. In a hinge, a pair of facially contacting hinge members, one of which is stationary and the other rotatable relative thereto, there being registering openings in the hinge members, a securing bolt for the hinge members embodying a key portion non-rotatable and slidable through the stationary member and both rotatable and slidable through the rotatable hinge member for holding the latter against rotatable movement, and means formed integral with the bolt and cooperating with the outer side of the two hinged members to hold the hinged members and first named means in assembled formation.



1,627,275. FRICTION HINGE. THOMAS H. COSTELLO, Chicago, Ill.; Rose M. Costello and William E. Costello, executors of said Thomas H. Costello, deceased, assignors to Rose M. Costello, trustee. Filed June 4, 1920, Serial No. 386,643. Renewed June 19, 1925. 10 Claims. (Cl. 16—140.)

1. In a friction hinge; the combination with a relatively stationary member and a relatively rotatable member coacting therewith and provided with alined openings of a pivot bolt attached to and rotating with said last named member extending through said alined openings, a clamping plate adjustably slidable and relatively non-revolubly mounted on said bolt, and means for adjustably positioning said clamping plate on said bolt.

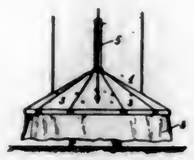


1,627,276. MAP RACK. THOMAS H. COSTELLO, Chicago, Ill.; Rose M. Costello and William E. Costello, executors of said Thomas H. Costello, deceased, assignors to Rose M. Costello, trustee. Filed Oct. 8, 1924. Serial No. 741,399. 5 Claims. (Cl. 40—83.)

1. In a map rack; a heading piece, a base piece, connecting end pieces having inwardly facing grooves throughout their length, positioning pieces attached to the end pieces and engageable with the heading and base pieces

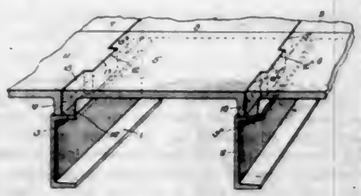
and bolts or rods to connect the top and base pieces adapted to be seated laterally within and be concealed by said inwardly facing grooves.

1,627,277. PLOW COLTER. ANDREW CRAIG, Motutapu Island, New Zealand. Filed Dec. 29, 1922, Serial No. 609,741, and in New Zealand Oct. 7, 1922. 2 Claims. (Cl. 97—209.)



1. A colter securing means, comprising a stalk adapted to be secured in vertical position to a plow frame; a sleeve rotatably adjustable on the lower portion of the stalk and formed with a toothed lower edge; a fastening ring detachably secured to said stalk immediately below the sleeve and formed with a toothed upper edge to adjustably interlock with the teeth on said sleeve so as to hold the latter in adjusted position; a member for clamping the sleeve directly to the stalk; a downwardly and inwardly inclined bearing plate rigidly connected to said sleeve and formed with a central projection, and with a pair of arcuate slots at opposite sides of and concentric with such projection; a colter fork provided with a bearing plate which is disposed flat against the first plate and which is formed with a central recess wherein the projection on that plate is journalled, and with a pair of arcuate slots at opposite sides of and concentric with such recess and adapted to register with the first slots to enable a rotary adjustment of the fork about its axis with relation to the said first plate and the sleeve and stalk; and fasteners passing through the pairs of registering slots to retain the fork in adjusted position.

1,627,278. COLLOIDAL ADHESIVE COMPOSITION. BRADLEY DEWEY, Cambridge, Mass., assignor to Dewey and Almy Chemical Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Nov. 14, 1924. Serial No. 749,998. 2 Claims. (Cl. 87—17.)



1. An adhesive composition comprising colloidal clay in suspension and rubber in emulsion in water, the colloidal clay predominating substantially in quantity over the rubber.

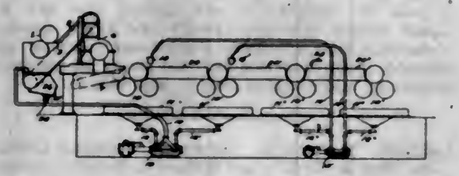
1,627,279. CHICKEN BROODER. FREDERICK FRENGLE, Cotati, and FRANCIS D. ROHAN, Petaluma, Calif., assignors to Francis D. Rohan and Frank S. Conner, a Copartnership doing business under firm name of Pride of Petaluma Brooder Stove Company, Petaluma, Calif. Filed Dec. 27, 1923. Serial No. 682,992. 3 Claims (Cl. 119—32.)

1. A brooder comprising a canopy, an apron depending from said canopy, said canopy being formed of a plurality of triangular panels, a bar secured to the underside of certain of said panels, each of said bars being provided with downwardly extending flanges lying in intersecting planes, each of said flanges being provided with a hole, a brace rod extending thru adjacent holes of adjacent bars and means whereby each brace rod may be adjusted relative to either of the bars which it connects.

1,627,280. BUILDING TILE OR SLAB. CHERI S. FREUND, Chicago, Ill., assignor to Federal Cement Tile Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1922. Serial No. 560,867. 4 Claims. (Cl. 72—68.)

3. A floor construction comprising a plurality of parallel and spaced purlins having relatively narrow floor supporting flanges, load supporting tiles disposed end to end for spanning said purlins and having abutting ends resting on said flanges, said tiles having a projecting tongue at the edge of one of the load supporting ends, and a complementary recess formed in the opposite edges of the load supporting ends and providing a projecting portion on each side of same, said tongue and projecting portions being adapted to rest on the purlins and provide sufficient bearing surface thereon when the same are separated by the contraction of said tiles.

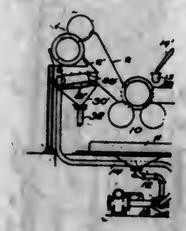
1,627,281. DISPLAY SAMPLE DEVICE. FRANK J. GARRETT, Cincinnati, Ohio. Filed Oct. 19, 1926. Serial No. 142,744. 8 Claims. (Cl. 35—17.)



1. As a new article of manufacture, a piece of sample cloth for displaying the effect of the cloth in the form of a finished garment, comprising an elongated strip of cloth, folded and creased substantially at the center thereof, having a hem at its one end, and a turned over fold at its opposite end.

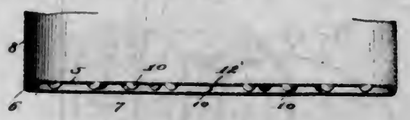
1,627,282. RECEPTACLE. ALBERT GRAN, Chicago, Ill. Filed Nov. 11, 1925. Serial No. 68,422. 10 Claims. (Cl. 220—1.)

1. In a receptacle of the class described, the combination with the side walls, of bead sections slidable along the top edges and constituting the rim of the receptacle, corner pieces having angularly protruding arms, said bead sections having sockets for receiving said arms, and each of said arms having notches therein, and each of said sockets having partially severed portions adapted to be struck into said notches whereby to hold said corner pieces and bead sections assembled.



1,627,283. JUICE-STRAINING SYSTEM FOR SUGAR-CANE MILLS. WILLIAM G. HALL, Honolulu, Territory of Hawaii. Filed Jan. 29, 1926. Serial No. 84,658. 2 Claims. (Cl. 100—47.)

1. The combination of a sugar cane mill including a preliminary crusher and an elevating conveyer having a casing for delivering the cane from the crusher to the



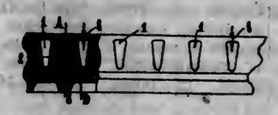
first mill unit, a strainer in the bottom of the casing, a receptacle into which the strainer discharges, and means for delivering the mixed juice from the mill units to the casing above such strainer.

1,627,284. JUICE-STRAINING SYSTEM FOR SUGAR-CANE MILLS. WILLIAM G. HALL, Honolulu, Territory of Hawaii. Filed Jan. 29, 1926. Serial No. 84,659. 2 Claims. (Cl. 100—47.)

1. The combination of a sugar cane mill including a preliminary crusher and a chute connecting the crusher with the first mill unit, a chamber below the crusher and offset from the bottom of the chute, a screen dividing said chamber into upper and lower sections, a strained juice discharge for the lower section, means for delivering the mixed juice from the roller mill units to the upper section, and means for discharging the solid material lodging on the screen into the chute.

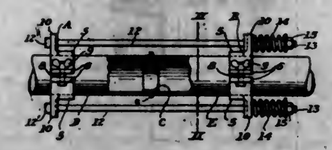
1,627,285. CULINARY UTENSIL. LEMOTT D. HUBBARD, Utica, N. Y. Filed Mar. 27, 1926. Serial No. 97,971. 1 Claim. (Cl. 53—1.)

As an improved article of manufacture, a bottom protector for food in culinary vessels comprising a sheet metal disk having semi-circular openings formed therein in radial lines with the metal released by the formation of said openings turned downwardly at right angles to provide intermediate guards, the disk also having a peripheral depending angular supporting flange of greater vertical extent than the downwardly bent guards so that the latter have their lower terminals normally above the bottom of the receptacle on which the protector is disposed to provide a free circulation of liquid within the culinary vessel between the protector and the bottom of said vessel under normal conditions, the guards only acting under maximum weight conditions to obviate extreme depression of the body of the disk, other circular openings being formed between the said semi-circular openings and disposed in radial lines.



1,627,286. CORD CONNECTER. WILLIAM ILB, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed May 6, 1926. Serial No. 107,284. 6 Claims. (Cl. 173—332.)

1. A cord connecter comprising cap sections and an intermediate section, said sections being constructed of molded insulating material, spring contacts carried by one of the cap sections, knife contacts mounted on the other cap section and adapted to engage the spring contacts, cooperating means carried by the intermediate section and the cap section having the spring contacts and interlocking the intermediate section with such cap section and movable into and out of engagement by a relative rotary movement of the cap and intermediate sections, said intermediate section being provided with slots through which pass the knife contacts, whereby the

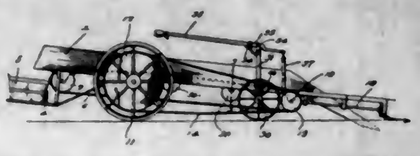


intermediate section is held against relative rotary movement and is retained in its interlocked relation with the cap section when the knife contacts are in engagement with the spring contacts and the parts assembled.

1,627,287. ENDLESS SUPPORTING AND DRIVING FLEXIBLE BELT FOR MOTOR AND OTHER VEHICLES. ADOLPHE KEGRESSE, Paris, France. Filed May 24, 1921, Serial No. 472,200, and in France June 5, 1920. 8 Claims. (Cl. 305—10.)

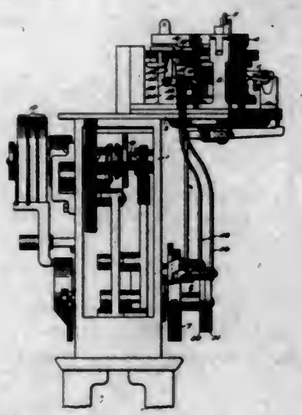
7. An endless, flexible supporting and driving belt for motor and other vehicles, consisting of canvas and rubber vulcanized together under high pressure, said belt embodying counterpart, spaced transverse portions each containing an internal block of semi-elastic material, and endless strengthening cables extending along the edges of the belt.

1,627,288. APPARATUS FOR JOINING OR CONNECTING PIPES. JOSEPH KURKOWSKI, Pittsburgh, Pa. Filed Feb. 2, 1922. Serial No. 533,612. 5 Claims. (Cl. 113—104.)



1. A portable device to be used in making pipe connections comprising a pair of opposed pipe engaging members having intermediate apertured extensions and apertured terminals thereon for the reception of rods, removable means for detachably and adjustably holding and drawing the members together, rods passing said extensions, the rods being receivable in either the terminals of the said members or in the said extensions to enable the device to be arranged for holding two pipes in alinement or two pipes at right angles to each other and compression springs carried by the rod and interposed between one of said pipe engaging members and one end of the rod.

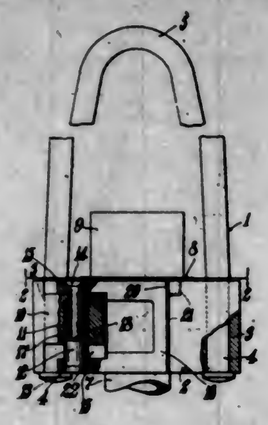
1,627,289. ONION HARVESTER. JOHANNS CHRISTIAN LARSEN, Sturtevant, Wis. Filed Feb. 20, 1926. Serial No. 89,699. 1 Claim. (Cl. 55—127.)



The herein described onion harvester comprising a rear axle equipped with ground wheels, a vertically swingable frame mounted on and extending forwardly

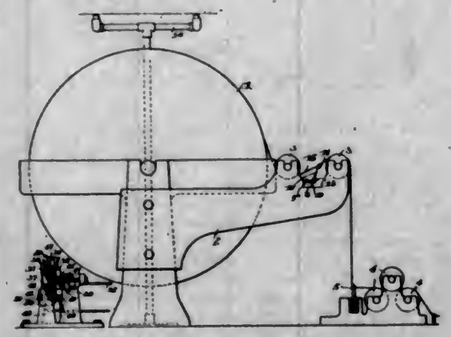
from said axle and having a transverse bail on its forward portion and an eye at the center of said bail and above the same, wheeled front axle portions, a yoke fixed to said front axle portions, and arranged in transverse straddling relation over the frame and having upright side portions, upright guides carried by the side portions of the frame and receiving and movable up and down on the said upright side portions of said yoke, a

longitudinally disposed and central hand lever fulcrumed at an intermediate point of its length on the vertical central portion of the yoke and having on its forward end portion a pendent hook connected with the eye on the transverse bail on the forward portion of the frame, an arcuate rack connected with and disposed rearwardly of the yoke, and a detent on the hand lever and cooperating with said rack.



1,627,290. REVERSE PLATING MECHANISM AND PROCESS. ROBERT H. LAWSON, Pawtucket, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Nov. 22, 1926. Serial No. 149,952. 12 Claims. (Cl. 66—108.)

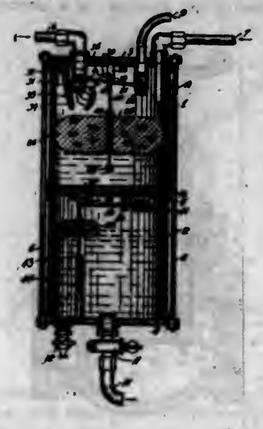
1. That improvement in the process of knitting plated fabrics which consists in feeding two threads simultaneously to the knitting needles, maintaining a greater tension on one thread than the other during the feeding thereof, causing said needles to engage the threads to form loops in said threads, pressing against the threads laterally at one side thereof during the initial steps in the formation of normal loops, and reversing the relative positions of said threads in certain of the loops by pressing against the opposite sides of the threads during the initial steps in the formation of the latter loops.



1,627,291. DRILLING APPARATUS. NORMAN MADSEN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 4, 1925. Serial No. 6,908. 4 Claims. (Cl. 294—90.)

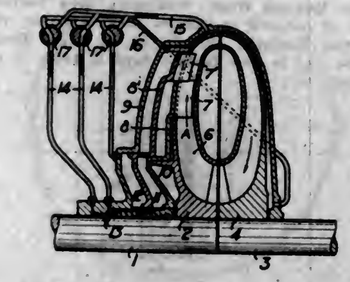
1. In a lifting bail for drill rods, a rod clevis having lugs for receiving the bail and a central laterally extending opening, a lateral lug formed on said clevis and having a vertical bore, a pivot pin slidably mounted in said bore, a gate member for closing the open side of

said clevis, said gate member being connected to said pin, and a spring in said bore acting on said pin for maintaining said gate member in its closed position.



1,627,292. ELECTRIC STOP MOTION FOR TEXTILE MACHINES. HARRY E. MATTHEWS, WILLIAM H. LOVE, and HUGH T. RYDER, Greensboro, N. C. Filed Apr. 23, 1926. Serial No. 104,030. 11 Claims. (Cl. 242—37.)

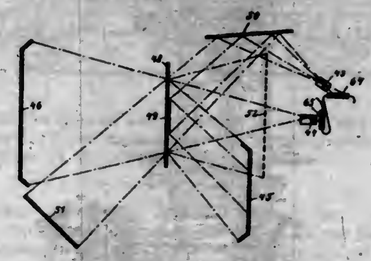
1. In a machine for handling textile threads, a break indicator comprising a pivot member, a contact element mounted on said pivot member, and extending upwardly therefrom and carrying a loop, with a thread of the machine passing through said loop to hold said contact element against rotation, a contact member disposed below and protected by said pivot member, said contact element being movable into engagement with said contact member automatically whenever said contact element is released by a breakage of its supporting thread.



1,627,293. VACUUM TANK. CHARLES S. NELSON, Cocolalla, Idaho. Filed Oct. 23, 1926. Serial No. 143,626. 1 Claim. (Cl. 103—236.)

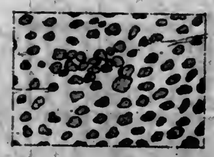
The combination with a vacuum tank having a tubular casing connected with the suction pipe and a second tubular casing connected with an air vent pipe, and ports in said casings, of a pivoted rock arm within the vacuum tank having a suction valve and an air vent valve at its opposite ends for co-action with said ports, a bell crank lever and an overbalancing spring therefor, a float op-

eratively connected to said bell crank lever, and a pair of spaced arms on said lever for co-action with the rock arm.



1,627,294. HYDRAULIC POWER-TRANSMISSION MECHANISM. ANTHNOR NYDQVIST, Trollhattan, Sweden. Filed Oct. 15, 1924, Serial No. 743,730, and in Sweden Oct. 13, 1923. 2 Claims. (Cl. 60—54.)

1. In a fluid device, a casing, blade wheels in said casing, a fluid channel in said blade wheels, blades on said wheels having a concentric annular series of loose blade sections, individual members carrying each of said loose blade sections, said members being movable axially independently of each other and formed as pistons to enable displacement thereof by means of a pressure medium.

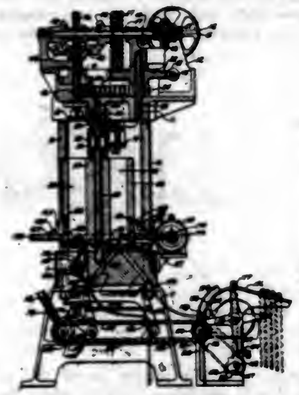


1,627,295. METHOD AND APPARATUS FOR MAKING COMPOSITE MOTION PICTURES. EUGEN SCHÜFTAN, Berlin-Wilmersdorf, Germany. Filed July 6, 1925. Serial No. 41,861, and in Germany Apr. 29, 1924. 9 Claims. (Cl. 88—16.)

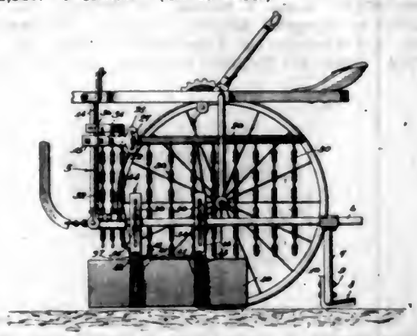
1. An apparatus for taking composite motion pictures of a plurality of sets or scenes comprising a pair of objectives for respectively forming images of complementary portions of the set or scenes, a transparent member having a portion of the surface thereof provided with an opaque reflecting surface and located between a set or scene and one of the objectives so that a portion of the last-mentiontd set or scene may be imaged by the objective directly through the transparent member, the opaque reflecting surface masking the remaining portion of the set or scene, a mirror across the axis of the other objective and so disposed relative to the second objective, the opaque reflecting surface, and the other set or scene that light rays from the last-mentioned set or scene will be reflected successively by the opaque re-

flecting surface and the mirror along the axis of the second objective to provide a complementary image of the second set or scene, and means for moving the frames of a sensitive film in photographic relation with the images of the sets or scenes so that both the images of the sets or scenes will be registered in complementary relation on each frame of the film.

1,627,296. PLASTIC COMPOSITION PRODUCT AND METHOD OF PRODUCING ARTICLES OF MANUFACTURE. ALGER J. SLOSSER, Williamsport, Pa., assignor to Pompeian Flooring Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1926. Serial No. 103,330. 6 Claims. (Cl. 18—48.8.)



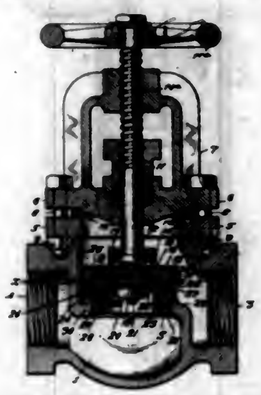
4. The herein described method of producing a composition flooring or other article of manufacture, characterized by mixing together a vegetable fibrous material, fibred asbestos and caustic calcined magnesia in relative proportions of approximately 45, 30 and 25 per cent by weight respectively of the mixture and adding slowly thereto a liquid binder solution of magnesium chloride in sufficient quantity to produce a plastic mass composed almost entirely of soft concretions or lumps of the fibrous materials, spreading or moulding the mass into the desired form, allowing the same to set and harden and then treating the surface thereof, substantially as described.



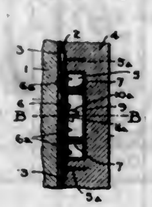
1,627,297. MACHINE FOR MAKING MACARONI. CARMINE SURICO, New York, N. Y., assignor to Clermont Machine Co., Inc., New York, N. Y. Filed Dec. 19, 1923. Serial No. 681,532. 29 Claims. (Cl. 107—14.)

3. In a mechanism of the character described, a container having a plurality of compartments adapted to receive the dough, said container being suitably mounted to permit its rotation about an axis falling between said compartments, a detacnable bottom for said container having a portion adapted to assist in packing the dough in a compartment and a die portion adapted to have the dough pressed through it, said mounting further permitting said container to be reciprocated into contact with

and away from said bottom, means for effecting said reciprocations, and means for effecting said rotation for interchanging the positions of the compartments relatively to the bottom, said reciprocating means being adapted automatically to actuate the rotational means when the container is away from said bottom.



1,627,298. ATTACHMENT FOR CULTIVATORS. JAMES BUFORD VAUGHAN, Lacy Springs, and JOHN TERRELL, Taylorsville, Ala. Filed Mar. 1, 1926. Serial No. 91,510. 7 Claims. (Cl. 43—133.)

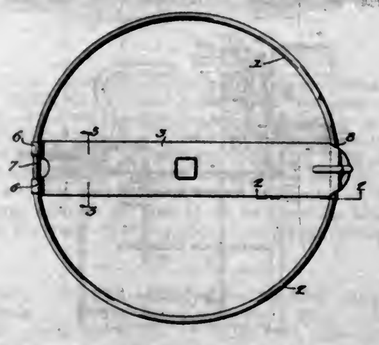


2. A cultivator attachment comprising a beam, brackets having vertical portions formed with slots arranged adjacent said beam, bolts extending through said slots and engaging said beam and having fastening nuts adjustably connecting the brackets to the beam, said brackets being provided with horizontally disposed slotted portions, straps adjustably connected to said horizontally disposed slotted portions, and troughs having attaching member provided with laterally projecting branches adjustably connected to said straps, said troughs being adjustable longitudinally and transversely of said cultivator.

1,627,299. LIFTING VALVE. WYLIE GEMMEL WILSON, Elizabeth, N. J., assignor to Loose Seat Valve Company, Dover, Del., a Corporation of Delaware. Filed Jan. 6, 1926. Serial No. 79,571. 1 Claim. (Cl. 251—25.)

In a valve, the combination with a dense, slightly elastic, valve port sealing annulus of united laminæ and which annulus has a projecting sealing surface composed of laminæ edges between adjacent, tapering laminæ edges and which annulus also has clampable surfaces one adjacent each tapered laminæ edge portion; the tapered laminæ serving, when in use, to sustain one another and also to sustain the laminæ edges in the sealing surface, and then also serving as spacers to hold the sealing surface edges apart from clamping means for engaging said clampable surfaces; one of said clampable surfaces being a peripheral wall portion and the other being an interior, conical portion of the annulus; of a carrier for the annulus, said carrier having an annular recess, the circular wall of which is in contact with said peripheral wall portion of the annulus; an annulus clamping plate having a conical wall engaging the interior conical portion of the annulus and means for holding the clamping plate in place and compressively against said interior conical portion of the annulus.

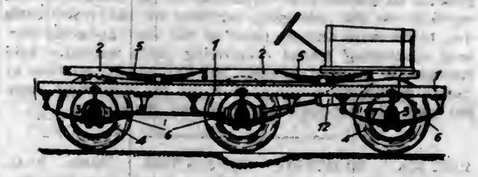
1,627,300. STOP FOR SLIDING WINDOW SASHES. GEORGE EDMOND WOOD, Wellington, New Zealand, assignor of one-half to Charles Richard Lamb, Wellington, New Zealand. Filed Aug. 2, 1924, Serial No. 729,830, and in New Zealand Sept. 5, 1923. 3 Claims. (Cl. 292—74.)



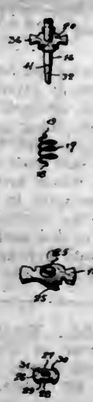
2. Stop means for window sash and the like, comprising, a recessed slidable member to be vertically positioned, a rack in the recess, a fixed member slidably receiving the slidable member, resiliently controlled detent means carried by the fixed member and coacting with the rack, the rack comprising a strip of material having alternate wide and narrow socket and projection portions, the plunger means including a plate positioned opposite the rack, resilient means biasing the plate toward the rack, and rounded detents on the plate and contacting with the rack.

1,627,301. SCREW DRIVER. GLEASON WOOD, Waltham, Mass. Filed Sept. 2, 1924. Serial No. 735,327. 2 Claims. (Cl. 145—52.)

2. A gripping screw driver comprising a shank reduced in one end to form a screw driver blade and having in one side a groove transverse to such blade, which groove extends to the extremity of and subdivides the blade, a gripper piece fitted freely in said groove and having a projection on its inner edge adapted to bear against and rock on the bottom of said groove, the extremity of said gripper having an outline conforming to the outline of the blade in cross section and adapted to coincide therewith, a band surrounding said shank and interlocked with the gripper approximately in the same plane with said fulcrum projection, and means for rocking the gripper about said projection.



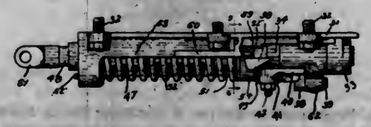
1,627,302. ICE-CREAM FREEZER. WILLIAM E. WRIGHT, Philadelphia, Pa., assignor to Acme Can Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 1, 1925. Serial No. 59,958. 4 Claims. (Cl. 220—31.)



1. In an ice cream freezer, the combination of a sheet metal bucket which is circular in horizontal section and which has an outward projecting beaded top edge, the said bucket having two hinge slots at one side and the said bead being straight for a short distance adjacent the said slots and for a short distance diametrically opposite the said slots, and a cross-bar provided with hinge portions at one end engaging the first said straight portion of the bead and entering the said slots, the said cross-bar having a spring latch portion at the other end adapted to engage the other straight portion of the bead.

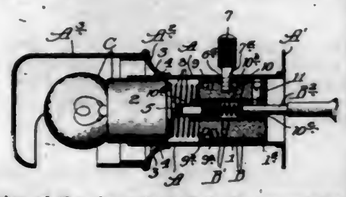
1,627,303. POWER-DRIVEN VEHICLE. HEINRICH ZOELLY, Zurich, Switzerland. Filed June 8, 1926, Serial No. 114,464, and in Switzerland June 13, 1925. 3 Claims. (Cl. 180—22.)

1. A power-driven vehicle, comprising a rigid lower frame, an upper frame, a device for driving the vehicle arranged on said upper frame, resilient means connecting the two frames in the vertical direction, at least three wheel axles mounted by the interposition of springs on said lower frame to allow for play of the axles in the upward direction when the vehicle travels over rising parts in the ground, and means to prevent a downward movement of the axles when the vehicle travels over depressions in the ground.



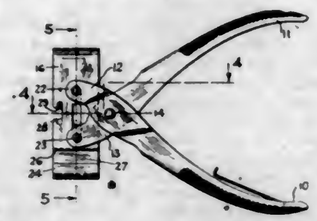
1,627,304. ELECTRIC SWITCH. CARL ERIC ANDERSON, Stratford, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 11, 1923. Serial No. 662,096. 2 Claims. (Cl. 173—354.)

1. An electric switch comprising a rotary spindle, a sheet metal washer rotating therewith and having circumferentially spaced notches in its periphery, in combination with a sheet metal switch bar mounted freely on the spindle for displacement in axial direction and for rotation on said spindle, said switch bar having a surface normally resting against the face of the washer, portions of said surface being warped toward the washer and into the peripheral notches in the latter and bearing against the following margins of said notches together with a spring stressing the switch bar toward the washer and serving to impart a forward throw to the switch bar after predetermined rotation of the spindle to cause longitudinal displacement of the switch bar thereon incident to the engagement of said warped surfaces in the notches of the washer.



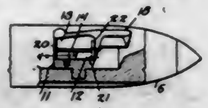
1,627,305. LOAD-ADJUSTED BRAKE MECHANISM. CHARLES O. ANDERSON, Omaha, Nebr. Filed July 26, 1926. Serial No. 125,024. 11 Claims. (Cl. 188—195.)

1. The combination with air-brake mechanism for a railway car, and power-adjusting means operable to vary the braking power of said brake-mechanism, of an



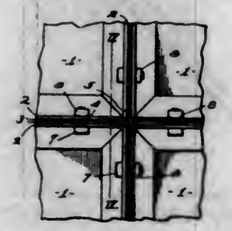
actuating member for said power-adjusting means, means limiting motion of said actuating member, and means connected with said actuating member and movable oppositely in direction by variations in the relation of the car-body to the unsprung portions of the truck-frame due to increase and decrease of the load upon the car, said connecting means comprising parts normally held frictionally in fixed relation but variable in relation by excess movement tending to move the actuating member past the motion-limiting means therefor.

1,627,306. ELECTRIC CONNECTER. JOHN BERG, Chicago, Ill., assignor to Metal Specialties Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 31, 1921. Serial No. 497,099. 1 Claim. (Cl. 173—346.)



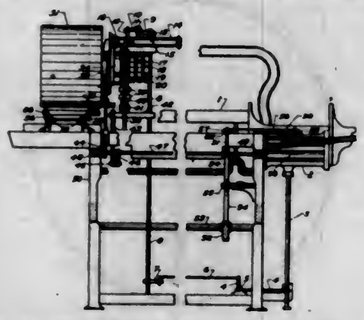
A device of the character set forth, comprising a shell equipped at one end with an attaching flange adapted to be secured to a dash and equipped at the other end with bayonet slots, said shell being provided intermediately with a cam-slot having an offset or recess at its forward end, a slidable plug in said shell equipped with a laterally projecting handle whose stem is movable in said slot, a spring contact mounted in said plug and adapted to make contact with the terminal of a lamp or plug entered in the free end of said shell, and a spring secured to the end portion of said first-named plug and adapted to retract the plug and break the circuit.

1,627,307. HAND TOOL. WILLIAM A. BERNARD, New Haven, Conn., assignor to The William Schollhorn Company, New Haven, Conn. Filed Jan. 31, 1921. Serial No. 441,330. 16 Claims. (Cl. 81—15.)



1. In a hand tool, a pair of operating handles, a pair of jaws respectively pivoted thereto to be operated thereby, each of said jaws having a looped portion to receive an edge portion of the other jaw.

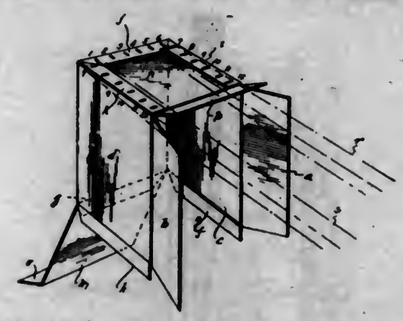
1,627,308. THREADING DEVICE FOR SHUTTLES. ANSELME BERNIER, Biddeford, Me. Filed Mar. 23, 1926. Serial No. 96,813. 4 Claims. (Cl. 139—212.)



1. A loom shuttle having a chamber for a filling carrier, a thread delivery eye, a channel extending longitudinally of said shuttle leading to said eye, and means located in said channel for placing the thread under tension and preventing the passage of bunches and knots to said eye, said last named means embodying a transverse plate having a vertical narrow thread guiding slot of uniform width and opening through the upper edge of the plate, said plate being mounted in the inner end portion of said channel, and a narrow vertically elongated loop open at its upper end and rigidly mounted in the outer end portion of said channel for guiding and frictional engagement with the thread in its passage to the eye.

1,627,309. LEAK-TIGHT SECTIONAL TANK. EDWARD F. BLACK, Tulsa, Okla., assignor to Black, Sivalls & Bryson Mfg. Co., Kansas City, Mo., a Corporation of Delaware. Filed Oct. 25, 1926. Serial No. 143,930. 5 Claims. (Cl. 220—46.)

1. A compressible gasket of angular form, the arms of the gasket being tapered toward their free extremities.

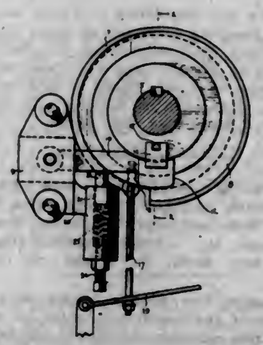


1,627,310. WEFT-REPLENISHING MECHANISM FOR LOOMS OF MORE THAN ONE SHUTTLE. EDWARD ARGEL BLACKSTON, Raleigh, N. C., assignor to Lovic Rogers Gilbert, Raleigh, N. C. Filed Oct. 13, 1924. Serial No. 743,339. 32 Claims. (Cl. 139—232.)

1. A stationary circular magazine or battery for filling-carriers or bobbins having a series of two or more annular spaces and consisting of a stationary cylindrical cover, a series of two or more stationary cylindrical dividing-walls and stationary circular flange having a central bearing therein, concentric shafts rotatable in the said bearing, means carried by the several shafts for moving bobbins in the respective annular spaces, a plurality of doors to permit bobbins to be placed in said battery and to assist in holding said bobbins in position, and a plurality of stationary plates to assist in holding said bobbins in place, substantially as shown and described.

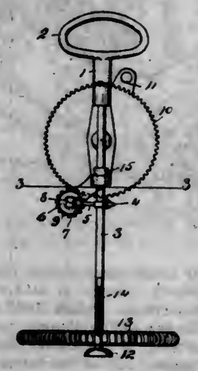
1,627,311. METHOD OF ASSEMBLING FIBER SHIPPING CASES. HERBERT R. BLISS, Niagara Falls, N. Y., assignor to Bliss Containers, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Dec. 20, 1923, Serial No. 681,709. Renewed Nov. 4, 1926. 5 Claims. (Cl. 93—42.)

1. The method of assembling a shipping case constructed of three blanks comprising two end blanks and a single body blank the latter including two side walls with an intervening bottom wall and all three walls having end flaps at their ends, which comprises the simultaneously securing the two end blanks to the flaps at the ends of the bottom wall, second, folding the body blank to bring



the side walls in parallelism and simultaneously securing the end flaps of two of the side walls to one end blank, then third, simultaneously securing the remaining two end flaps of the two side walls to the other end blank.

1,627,312. AUTOMATIC SAFETY CUT-OFF FOR GAS VALVES. CHRISTIAN BLUST, St. Albans, W. Va. Filed Dec. 19, 1925. Serial No. 76,491. 7 Claims. (Cl. 67—115.)

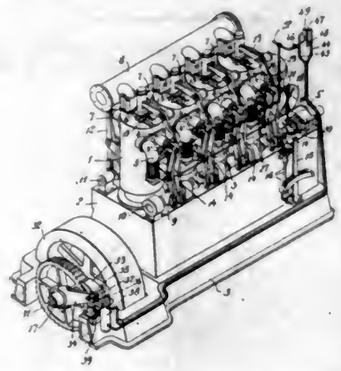


1. In an automatic safety valve for gas burners, a valve casing, an apertured valve seat at one end of the casing, and a tensioned valve having a central opening slidable in the casing, adapted to be held unseated by the flow of gas through the casing and adapted to be spring seated when the flow of gas is reduced to close the seat apertures, said seat being of conical formation with the apertures adjacent the base of the cone and the adjacent end of the valve having a conical socket to receive the seat.

1,627,313. SAFETY CLUTCH-RELEASING DEVICE. THOMAS A. BOWE, Milwaukee, Wis. Filed Dec. 10, 1925. Serial No. 74,553. 1 Claim. (Cl. 192—25.)

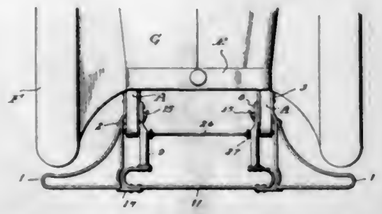
A clutch releasing device; comprising a shaft, a fly wheel mounted loosely thereon and formed with a recess therein; a second wheel keyed to said shaft and formed with a cam groove therein, a spring urged, slidable pin mounted transversely through said second wheel and engageable with said fly wheel recess, a pivotal latch engageable with said pin, and manual means for moving the latch out of engaging position; said cam groove being arranged to return the latch to engaging position.

1,627,314. EGG BEATER. OLIVER R. BOYNTON, Kansas City, Mo. Filed Oct. 5, 1925. Serial No. 60,490. 4 Claims. (Cl. 259—128.)



1. In an egg beater, bearing means having a handhold, a rock shaft oscillatable on and supporting said bearing means and having a crank arm, a beater comprising an annular wire helix encircling said shaft, and an arm secured to said helix and to said shaft, and means for oscillating said crank arm.

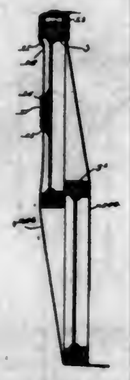
1,627,315. BEATER OR MIXER. OLIVER R. BOYNTON, Kansas City, Mo. Filed Oct. 5, 1925. Serial No. 60,491. 1 Claim. (Cl. 259—132.)



In a beater or mixer of the kind described, two rotary members one revoluble around the other, means for simultaneously rotating said members in opposite directions, two concentric annular wire helices adjacent to each other, and arms respectively attached to said helices and extending obliquely upwardly from the tops of to and respectively fastened to said rotary members.

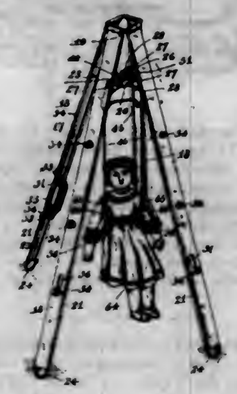
1,627,316. REVERSIBLE INTERNAL-COMBUSTION ENGINE. FRANK T. CABLE, New London, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed Mar. 18, 1924. Serial No. 699,975. 5 Claims. (Cl. 60—16.)

1. An internal combustion engine comprising at least two engine cylinders, pistons in said cylinders, a crank shaft having two cranks spaced 180° apart, means for connecting the cranks to the pistons, means for reversing said engine including a reversing shaft, fluid starting means for said engine, means for forcing the crank shaft away from a position near its dead center position including fluid pressure connections for simultaneously admitting compressed fluid to the two cylinders of the engine having the pistons connected to the cranks spaced 180° apart, whereby said pistons are brought into substantially the same horizontal plane and the engine adapted to be started in either direction.



1,627,317. COMBINED BUMPER AND JACK. BURTON K. COX, Jacksonville, Fla. Filed Oct. 5, 1926. Serial No. 139,661. 20 Claims. (Cl. 293—55.)

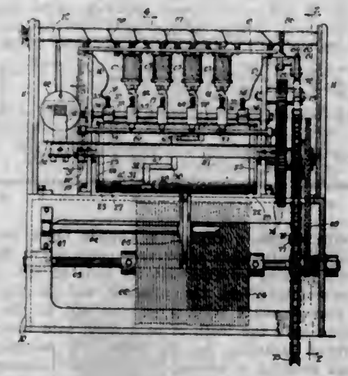
1. A combined bumper and jack for vehicles, comprising arm members pivotally mounted on the vehicle frame and swingable from vertical to horizontal position, a bumper bar, posts carried by the bumper bar and slidable with respect to said arms, and means for moving said posts longitudinally.



1,627,318. WINDOW-CLEANING DEVICE. HANLEY M. DAVIS, Cambridge, Mass. Filed May 29, 1925. Serial No. 33,722. 1 Claim. (Cl. 15—220.)

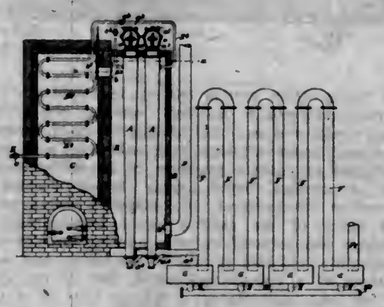
A window-cleaning device comprising a housing substantially U-shaped in cross section and constructed and arranged to fit over the top of a window sash, the lower edge of the outer side of said housing being bent inward toward the window pane, transverse rollers mounted in said housing and adapted to engage the top of a window sash, longitudinal rollers mounted in said housing, a flexible band disposed within said housing, the horizontal portion thereof resting on said longitudinal rollers and vertical portions thereof depending inside and outside the window, respectively, the outside vertical portion passing

under the window sash and terminating inside the window, and a swab detachably secured to the portion of said band depending outside the window.



1,627,319. TOY. JOHN DELLINGER, Buffalo, N. Y. Filed May 17, 1924. Serial No. 714,176. 16 Claims. (Cl. 46—87.)

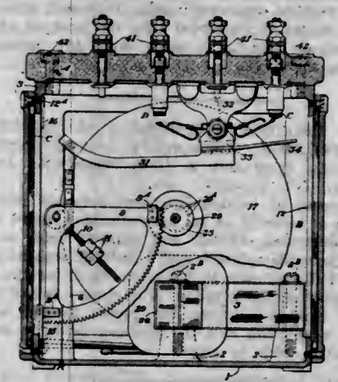
1. A foldable toy comprising a frame having a plurality of legs pivotally connected at their upper ends to swing toward and from each other, and slab-supporting rails supported by aljacent legs and spanning the space between the same when said frame is unfolded, said rails being adapted to be inserted between said legs through the upper end of said frame when folded.



1,627,320. FLOOR SELECTOR FOR ELEVATORS. JAMES DUNLOP, Chicago, Ill., and JOHN F. CLANCY, East Troy, Wis., assignors to Kaestner & Hecht Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1925. Serial No. 40,206. 26 Claims. (Cl. 187—29.)

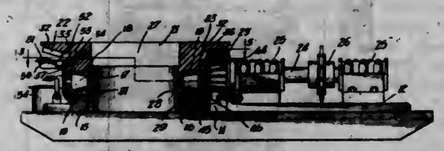
15. An elevator floor selector having, in combination, a base, a pair of end brackets mounted on said base, a commutator drum rotatably mounted in said brackets, said commutator drum having a pair of contact plates separated by a longitudinal space and a zig-zag space of transverse sections and longitudinal sections, contact members arranged in two rows and in pairs aligned respectively with said longitudinal sections for movement toward and from said contact members, a like number of relays for selectively actuating said contact members, and means for rotating said drum in timed relation to

the movement of the cage, the perpendicular distance between two successive longitudinal sections being equal to twice the distance between the contact members of each pair and corresponding to a movement of the cage through two floors.



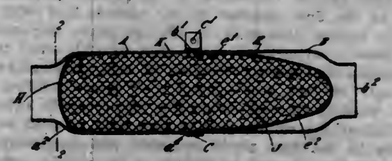
1,627,321. PROCESS FOR THE DESTRUCTIVE DISTILLATION OF SOLID CARBONACEOUS MATERIALS. PAUL DVORKOVITZ, London, England. Filed Oct. 16, 1922, Serial No. 594,865, and in Great Britain Nov. 17, 1921. 3 Claims. (Cl. 202—16.)

1. A process for recovering light oils of the paraffin series from solid carbonaceous material, which comprises heating an elongated upright carbonaceous mass of relatively small cross sectional area on the one hand by external gases which are hottest at the upper end and pass downward around the mass and on the other hand by downwardly drafted internal carrier gas at elevated temperature, the heating of the mass being so regulated as to drive off therefrom substantially only the desired oils of the paraffin series, and leading off from the bottom of the mass to a condenser the carrier gas and the entrained vapor of the paraffin oil.



1,627,322. ELECTRICAL RELAY. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1922. Serial No. 603,943. 1 Claim. (Cl. 200—91.)

A relay comprising a metal frame, a top plate of insulating material, a metal contact-operating bar pivotally supported from said top plate, a motor and reduction gearing supported by said frame, a connection between said gearing and said bar including a link made

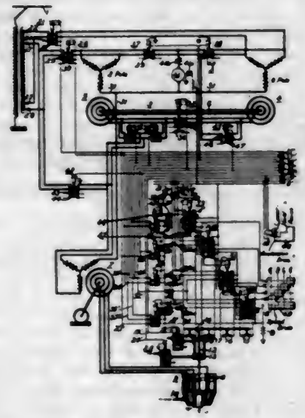


up of two parts electrically insulated from each other, and an electrical connection from said bar to said metal frame.

1,627,323. ROTARY TABLE. EDWIN W. GOEBEL and WILLIAM D. DAVIDSON, Los Angeles, Calif., assignors, by mesne assignments, to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 13, 1924. Serial No. 698,895. 8 Claims. (Cl. 255—23.)

1. In a rotary, the combination of: a base member having a central opening therethrough; a table; bearing means supporting said table on said base; a hold down bracket fitting upon a bearing formed on the periphery of said table; a lip extending inwardly from said hold down bracket and engaging a shoulder formed on said table in such a manner as to limit any upward movement of said table away from said base, said hold down bracket completely surrounding and enclosing said bearing means; and means for rigidly securing said hold down bracket to said base.

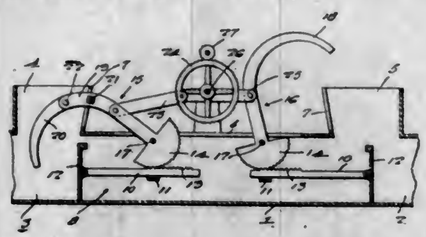
1,627,324. SILENCER FOR GASEOUS CURRENTS. ARCHIBALD HEWLETT GREEN, London, England, assignor to The International Silencer Company (1926) Limited, County of London, England, a British Company. Filed July 27, 1926, Serial No. 125,215, and in Great Britain June 12, 1925. 3 Claims. (Cl. 137—160.)



1. In a silencer for gaseous currents, comprising a body portion built of readily detachable sections, said body portion having a reduced neck at each end, and a filling consisting of a permeable homogenous tangled mass

of very narrow and thin ribbons of flexible metallic material enclosed in a metal bag made of foraminous reticulated sheet material adapted to fit bodily into the said body portion, the combination therewith of a rigid perforated metal cup inserted into the neck at the end of said body at which the gases enter, the convex side of said cup facing the incoming gases.

1,627,325. PROCESS OF MAKING A STABLE HYDROGEN PEROXIDE. ARTHUR L. HALVORSEN, Perth Amboy, N. J. Filed July 2, 1921. Serial No. 482,170. 7 Claims. (Cl. 23—207.)

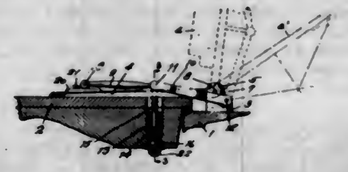


1. A process of making hydrogen peroxide consisting in feeding a peroxide of an alkali-forming metal into a mixture containing alcohol and sulfuric acid, to form hydrogen peroxide solution and a sulfate, separating the sulfate and the solution by filtration, distilling the major part at least of the solution in a single operation and separately condensing from the vapors formed in such operation, a solution rich in hydrogen peroxide and another solution rich in alcohol.

1,627,326. FREQUENCY-CHANGING AGGREGATE. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 6, 1923. Serial No. 655,900. 22 Claims. (Cl. 172—281.)

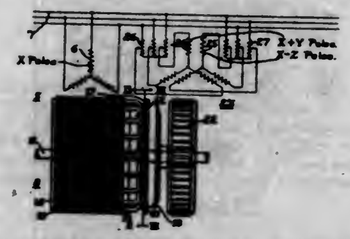
1. The combination with a plurality of alternating current systems, at least one of said systems being polyphase, a frequency-changing set for connecting said systems, said set comprising a pair of mechanically connected induction-machine units of different pole numbers, means for, at times, connecting said units in cascade with the first system connected to the larger-pole-number unit as the first member of the cascade and with the second system connected to the cascade connections, means for, at other times, connecting said units in cascade with the first system connected to the smaller-pole-number unit as the first member of the cascade and with the second system connected in reverse phase sequence to the cascade connections, means for, at still other times, connecting the primary winding of said larger-pole-number unit to said first system and short-circuiting the other winding thereof, connecting the formerly cascaded winding of the smaller-pole-number unit to said second system in the first phase sequence and energizing the other winding thereof to produce a backwardly rotating field corresponding to the line frequency of the first system, the direction of rotation of the set being unchanged throughout, and switching means for ensuring the concurrent completion and discontinuance of the several connections as specified.

1,627,327. DUPLEX BALING PRESS. MANUEL HICKMAN, San Juan, Tex., assignor of one-third to Percy M. Perkins, McAllen, Tex. Filed Mar. 9, 1925. Serial No. 14,202. 1 Claim. (Cl. 100—3.)



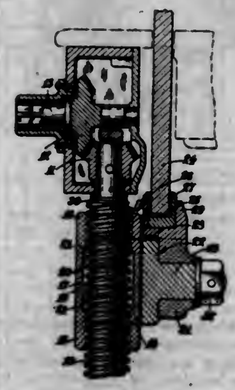
In a baler press, a casing, a hopper upon the casing, a longitudinally slidable plunger mounted in the casing, a lever pivoted intermediate its ends on the casing, a stem extending from the plunger and having rack teeth, a gear segment formed on one end of the lever and meshing with the teeth of said rack, said lever having a curved extension at its other end entering the hopper and forming a tamper, a rotatable member, and a link eccentrically and pivotally engaged with the rotary member and pivotally engaged with the lever between the pivots thereof and the gear segment.

1,627,328. REFRIGERATION SYSTEM. GEORGE HILGER, Chicago, Ill. Filed Oct. 12, 1925. Serial No. 61,878. 10 Claims. (Cl. 62—104.)



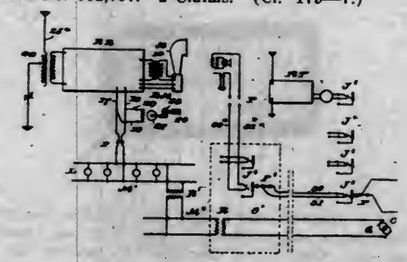
1. A refrigeration system having, in combination, an elongated horizontally disposed cooling compartment having an inlet and an outlet at opposite ends, a storage compartment communicating with said inlet and outlet and adapted to contain products to be refrigerated, a source of cooling liquid, spray means located in said cooling compartment and disposed so as to direct a spray of the cooling liquid longitudinally of the cooling compartment thereby inducing circulation of the cooled air into said storage compartment, and means maintained at a temperature below that of the spray-cooled air and maintaining a cooling zone at a point spaced a substantial distance from said spray means, the last mentioned means normally acting to further cool the air and to effect a separation of mist therefrom before it comes in contact with said products.

1,627,329. HINGE FOR DOORS. CLEMENT V. HILL, Trenton, N. J. Filed Aug. 1, 1925. Serial No. 47,577. 7 Claims. (Cl. 16—80.)



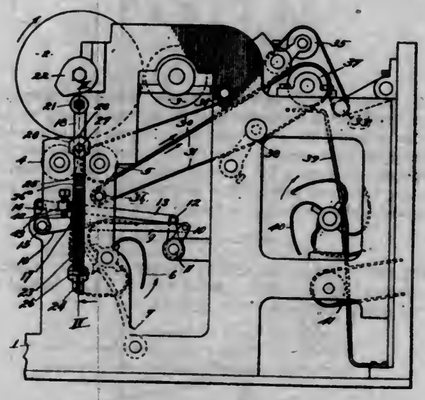
1. In a door hinge and closer, a stationary hinge member adapted to be secured to the door jamb, a swinging hinge member pivoted to the first-named hinge member and adapted to be secured to the door, a pair of toggle levers pivotally connected at their inner ends to each other and at their outer ends to the hinge members respectively, and a closing spring acting upon said toggle levers, the toggle lever pivoted to the stationary hinge member being movable from side to side of said member beyond opposite sides of the pivotal connection between the hinge members.

1,627,330. VARIABLE-SPEED SQUIRREL-CAGE MOTOR. HARRIS D. HIKELINE, Akron, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1922. Serial No. 568,675. 25 Claims. (Cl. 172—274.)



1. A variable-speed induction-motor set comprising a main induction motor having primary and secondary windings, an auxiliary machine having the same pole-number as said main motor, said auxiliary machine being electrically connected to said secondary windings and mechanically connected to said main motor, and an induction machine electrically connected to the supply line and mechanically connected to said auxiliary machine, said induction machine having a synchronous speed different from that of said auxiliary machine, said auxiliary machine having a member rotating at a substantially constant speed relative to the stator of said induction machine.

1,627,331. SCREW AND NUT ACTUATING MECHANISM. CHARLES EDWARD HIRST, London, England, assignor to Beckett, Laycock & Watkinson Limited, London, England, a British Company. Filed Jan. 3, 1925. Serial No. 456, and in Great Britain Feb. 6, 1924. 2 Claims. (Cl. 268—133.)

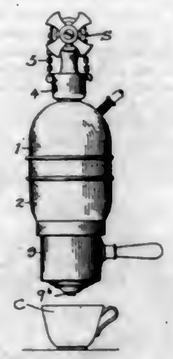


1. The combination of a frame, a window slidable therein, a screw-threaded shaft journaled in said frame, an actuating nut displaceable on said shaft and operatively connected with said window, and means for rotating the shaft, said nut having a lubricant reservoir therein.

1,627,332. RADIOPHONE METER. JAMES B. HOGE, Cleveland, Ohio, and EDWARD E. CLEMENT, Washington, D. C., assignors, by direct and mesne assignments, to Edward F. Colladay, Washington, D. C. Original application filed Sept. 8, 1922, Serial No. 586,482. Divided and this application filed Aug. 18, 1924. Serial No. 732,797. 2 Claims. (Cl. 179—7.)

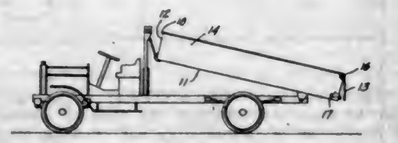
1. In a system of the class described, a central power distributing station and a current supply circuit extending from said power station to consumer stations, a consumer station connected with said supply circuit, permanently connected outlets from said circuit in said consumer station, power translating devices adapted to be connected through said outlets to supply circuit, a radio receiving set at said consumer station having an energizing circuit, a time use meter, and a meter motor with a driving circuit therefor, switch terminals connected to both said energizing circuit and to said meter motor circuit, forming a single inseparable terminal unit adapted to be connected to and disconnected from said outlet terminals at will, whereby the radio receiving set is normally entirely disconnected from said power supply circuit, and cannot be connected thereto for power supply for its operation without also connecting and operating its meter motor to record its time use.

1,627,333. ATTACHMENT FOR PAPER-FOLDING MACHINES. FRANK E. JAMISON, Kansas City, Kans. Filed Mar. 8, 1926. Serial No. 93,125. 3 Claims. (Cl. 271—64.)



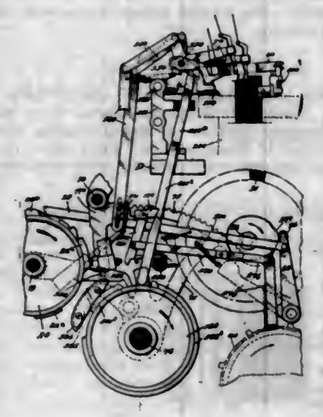
1. The combination with a delivery mechanism, of a switch arranged to intercept the path of delivery of said mechanism, a reciprocating bar, yielding means to advance the bar in one direction, a cam driven in timed relation to the delivery mechanism to move the bar in the other direction, a connection from said bar to operate the switch, and manually operable means to maintain the bar from contact with said cam.

1,627,334. DRY CELL. GEORGE M. LITTLE, Pittsburgh, and JAMES G. FORD, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1923. Serial No. 682,072. 15 Claims. (Cl. 136—107.)



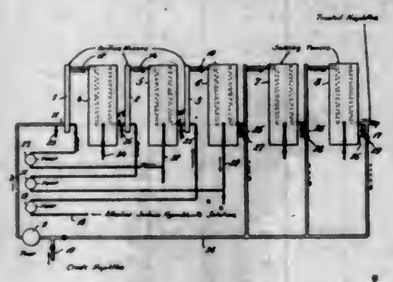
1. In a primary cell, a rigid core member, comprising an electrolyte and a depolarizer, an electrode embedded in the core member, an electrode surrounding the core member and means for maintaining uniform pressure on all sides of the core.

1,627,335. ELECTRIC WATER HEATER. BENJAMIN MIDULLA, New York, N. Y. Filed May 21, 1925. Serial No. 31,936. 8 Claims. (Cl. 53—3.)



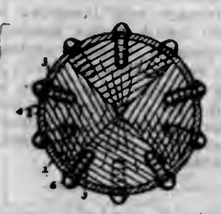
1. An apparatus of the character specified, comprising a casing having an inlet plug in its upper end, and an outlet plug in its lower end; a coil within said casing having its ends connected with the inlet and outlet plugs respectively; means for heating said coil; means for connecting the inlet plug with a source of liquid supply; and a percolator detachably connected with the outlet plug.

1,627,336. SELF-CLEANING DUMP BODY. EMIL A. NELSON, Detroit, Mich. Filed Nov. 8, 1926. Serial No. 147,062. 3 Claims. (Cl. 296—1.)



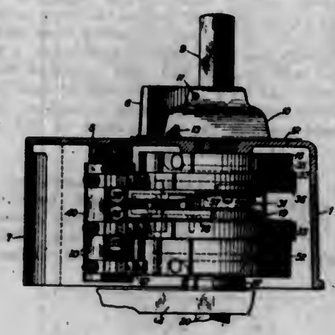
1. A self cleaning dump body having side walls inwardly inclined to the floor thereof by an amount increasingly approaching right angles from front to rear.

1,627,337. CIRCULAR-KNITTING MACHINE. ALBERT E. PAGE, Brooklyn, N. Y., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1925. Serial No. 62,089. 20 Claims. (Cl. 66—42.)



1. A circular knitting machine having a revolving needle cylinder and an intermittently revolving pattern means adapted to cause pattern control movements, in combination with means including an element revolving in time with the needle cylinder adapted to be effective for only the first revolution of the needle cylinder after a pattern control movement has been caused by said pattern means, said means being adapted to cause a pattern control movement at any desired point within that revolution.

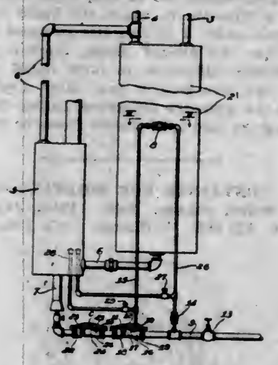
1,627,338. REFINING OILS. HARRISON OAKS PARKER, Tulsa, Okla., assignor to The Mathieson Alkali Works, New York, N. Y., a Corporation of Virginia. Filed June 18, 1925. Serial No. 37,888. 5 Claims. (Cl. 196—42.)



3. An improved method of refining hydrocarbon oils, which comprises flowing a stream of the oil through a succession of mixing and settling operations, supplying an alkaline aqueous solution of hypochlorite to one of the mixing operations wherein the hypochlorite is in part consumed, separating the resulting aqueous solution from the oil in the succeeding settling operation, supplying the resulting aqueous solution relative increased alkalinity to a mixing operation preceding that to which the aqueous solution is first supplied, and separating the aqueous solution from the oil in the succeeding settling operation.

1,627,339. BREAKING ROLLER. CLIFFORD H. RAMSEY, Glen Rock, N. J. Filed Sept. 20, 1926. Serial No. 136,715. 7 Claims. (Cl. 26—1.)

1. A peripherally studded cloth finishing roller including a yielding core, a relatively non-yielding shell fitted thereover and having stud-receiving holes therein, and studs driven into the core through the holes and left projecting beyond the periphery of the shell and supported in the holes by the shell against lateral displacement.

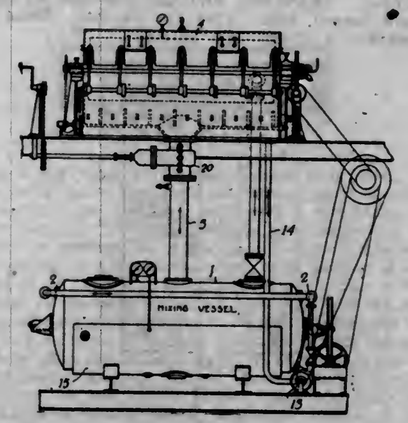


1,627,340. CONTROL APPARATUS. LYNN G. BILBY and HARRY R. MEYER, Wilkinsburg, HOWARD H. JOHNSTON, Edgewood Park, and JAN M. VAN NIEUKERKEN, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 17, 1920. Serial No. 381,980. 32 Claims. (Cl. 200—9.)

30. In a controller, in combination, a plurality of contact fingers, a rotatable drum for engaging the contact fingers, said drum having a plurality of contacting positions, a handle for operating the drum, said handle being disposed for movement relative to the drum and circuit-controlling mechanism comprising a switch disposed for operation when the handle is moved relative to the drum, and means actuated upon the movement of the drum to a predetermined contacting position to cooperate with the switch to effect the control of a circuit through the oscillation of the handle relative to the drum.

1,627,341. FUEL-CONTROL SYSTEM. GEORGE A. ROBERTSHAW, Greensburg, Pa. Filed Jan. 29, 1926. Serial No. 84,745. 11 Claims. (Cl. 236—30.)

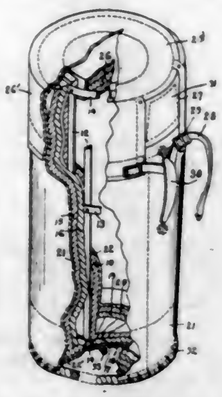
1. In a fuel control, a burner, a diaphragm valve controlling the flow of fuel to the burner, and a second diaphragm valve for delaying the unrestricted passage of fuel from the first mentioned diaphragm valve to the



burner, said valves being connected in series and adapted to be both open while the burner is in operation, substantially as described.

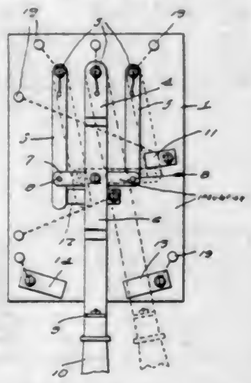
1,627,342. PROCESS OF PRESERVING FOOD FOR MEN OR ANIMALS. THEODOR SABALITSCHKA, Berlin-Steglitz, Germany. Filed Apr. 8, 1925, Serial No. 21,694, and in Germany Apr. 17, 1924. 2 Claims. (Cl. 99—1.)

2. The herein described process of preserving food for men and animals, which consists in adding to the food p-oxy-benzoic acid methyl ester.



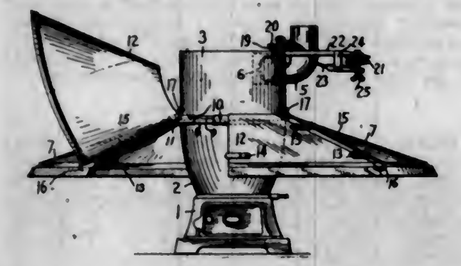
1,627,343. PROCESS OF AND APPARATUS FOR TREATING LIQUIDS WITH PURIFYING AND DECOLORIZING AGENTS. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands. Filed May 25, 1923, Serial No. 641,371, and in Germany May 26, 1922. 1 Claim. (Cl. 210—199.)

A process for purifying a liquid containing an absorbable impurity by means of a solid insoluble absorbent medium capable of being readily suspended in the liquid, which comprises agitating a bulk of the said liquid while carrying said solid in suspension and continuously separating the said solid from the purified liquid, preliminarily mixing such separated solid with a further amount of liquid to be purified in such proportions as to form a readily flowable fluid mass and continuously feeding



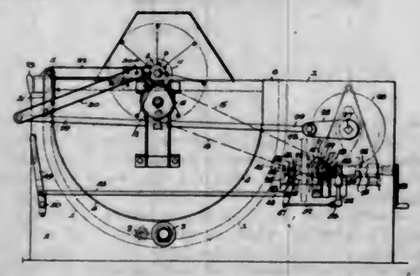
such fluid mass to the said bulk of liquid under agitation, while such continuous separation step is being effected, said continuous separation of said liquid and solid being effected by a filtration in which the liquid to be filtered is maintained under a hydrostatic pressure substantially higher than the filtered liquid, thereby producing a positive pressure difference to force liquid through the filter from the face side of said filter, and effecting a reversal of the pressure difference during the operation of separating the said solid matter from the filter surface.

1,627,344. CONTAINER FOR SHIPPING GOODS. ALLEN C. SCOTT, Omaha, Nebr. Filed July 21, 1926. Serial No. 123,888. 6 Claims. (Cl. 150—52.)



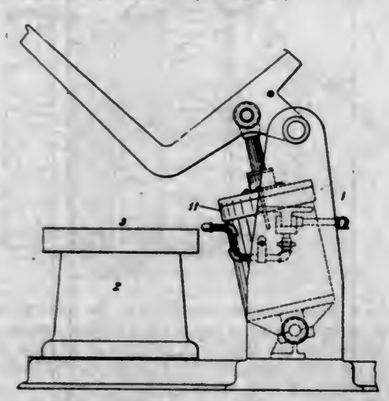
6. A shipping container comprising a felt body portion, a stiffening element disposed in said body portion and comprising a plurality of spaced apart slats arranged lengthwise of the body portion and flexible rings connecting said slats together.

1,627,345. TRANSFER SWITCH. VERNON W. SHERMAN, Detroit, Mich. Filed Apr. 20, 1926. Serial No. 103,285. 1 Claim. (Cl. 200—6.)



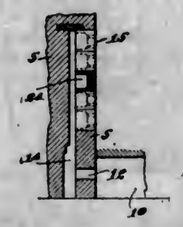
A switch, comprising a base plate, a plurality of posts mounted in transversely aligned relation adjacent one end of the base plate, a main switch blade pivotally mounted on one of said posts and having the opposite end projecting beyond the base, the central portion of said main switch plate being formed with an offset portion, supplemental switch blades of unequal length pivotally mounted on the remaining posts in spaced parallel relation with said main switch blade, all of said switch blades lying in the same horizontal plane in spaced parallel relation to the base plate, an insulating member pivotally mounted on the under side of the offset portion of the main switch blade pivotally connected at its ends to the end portions of the supplemental switch blades, operating means on the ends of the main switch blades operable through said insulating members for moving all of said switch blades simultaneously, and resilient contacts mounted in spaced predetermined relation on said base for independent circuit closing cooperation with each of said switch blades, said contacts being positioned in such a manner that each blade will successively engage or disengage its respective contacts relative to the engagement and disengagement of the remaining switch blades.

1,627,346. BROODER. ANDREW F. SHULER, Arcanum, Ohio; Mary M. Shuler and W. B. Shuler, executors of said Andrew F. Shuler, deceased, assignors to H. M. Sheer Company, Quincy, Ill. Filed Oct. 9, 1922. Serial No. 593,343. 2 Claims. (Cl. 119—32.)



1. In a brooder, a heater, a hover having a continuous relatively narrow inner portion supported by said heater and having its outer portion cut away on one side thereof to form an opening extending from said inner portion through the outer edge of said hover, a movable closure for said opening, and rods connected with said inner portion and with the outer edge of said hover at the respective sides of said opening to support the outer edge of said hover at the lateral edges of said opening.

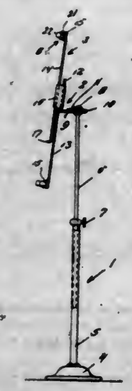
1,627,347. DYEING MACHINE. JAMES H. SKITT, Philadelphia, Pa., assignor to Smith, Drum & Company, Philadelphia, Pa., a Partnership consisting of Robert P. Smith and George E. Drum. Filed Feb. 27, 1924. Serial No. 695,530. 10 Claims. (Cl. 8—19.)



1. The combination with a vat, of a cage adapted to occupy a position within the vat and movable with respect thereto, an agitator carried by the cage, a single power source adapted to move the cage and to operate the agitator, separate clutches for respectively connecting the cage and the agitator with the power source, and means operatively connected with the cage for automatically interrupting the operation of the cage from the power source.

1,627,348. JOLT-ROLL-OVER MECHANISM. FREDERICK A. SEEMAN, Davenport, Iowa, assignor to Davenport Machine & Foundry Company, Davenport, Iowa, a Corporation of Iowa. Filed Mar. 2, 1925. Serial No. 12,612. 4 Claims. (Cl. 22—1.)

1. In a mechanism of the character described, a jolt table, roll-over mechanism, a perforated pipe arranged substantially at the level of the table top, the perforations being directed toward the upper surface of the table, means for supplying a fluid under pressure to the perforated pipe, means for controlling the flow of fluid through the pipe and means connected with the roll-over mechanism for automatically actuating the control means during the functioning of the apparatus.



1,627,349. FURNACE WALL. BENJAMIN H. SNOW, Winchester, Mass., assignor to Bernitz Furnace Appliance Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 13, 1923. Serial No. 618,824. 8 Claims. (Cl. 110—75.)

1. In a furnace, a fuel support, fixed walls for confining the fuel on the support, said walls adjacent to the fuel bed being made of non-metallic refractory blocks, said blocks having enlarged interior air chambers open at the rear or exterior faces thereof, and a conical passage extending from each of said air chambers through the face of the block to the fuel bed and with the larger end of said passages on the side of the block remote from the air chambers.

1,627,350. SIGN HOLDER. SAUL STEINMAN, Shelton, Conn. Filed Mar. 20, 1926. Serial No. 96,241. 2 Claims. (Cl. 40—146.)

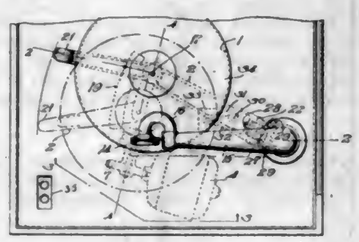
2. In a sign holder of the class described, a standard comprising a vertically adjustable rod having its upper end screw threaded, a sign holding frame, and a coupling between said frame and said rod, said coupling being in the form of a one-piece body of right angular form, one portion of the body being disposed in a horizontal plane and being formed with a screw threaded opening threaded on the upper end of said rod, and the

other portion of the body extending upwardly from the horizontal portion and being detachably connected with said frame.

1,627,351. PROCESS OF TREATING DISCARDED LEAD BATTERY PLATES. ALEXANDER STEWART, Roselle, N. J., assignor to C. L. Constant Company, Hoboken, N. J., a Corporation of New Jersey. Filed Sept. 30, 1926. Serial No. 138,810. 2 Claims. (Cl. 75—15.)

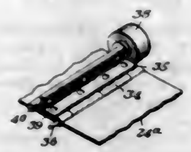
1. The process of treating discarded lead battery plates, which consists in heating to a molten condition the said plates directly with a dry salt capable of converting substantially all the peroxide of the paste portion thereof into a salt separable from the metallic portion of the plates.

1,627,352. BONDING RAILS. GEORGE E. THACKRAY, Westmont Borough, Pa. Filed Apr. 14, 1921. Serial No. 461,352. 1 Claim. (Cl. 173—278.)



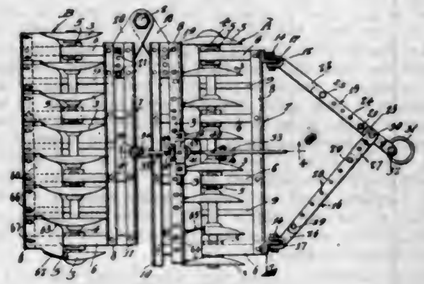
In a rail bond, a terminal of open hook form, one part or the upper portion of the hook of which is adapted to rest upon the upper surface of a rail flange, the other and lower portion of the hook being adapted to underlie the said rail flange and out of contact therewith, an opening or notch in the upper hook member of said terminal of less cross sectional area than that of said member in the plane of contact between it and the rail; metal of composition similar to that of said terminal and the rail deposited in a fused condition in said notch or opening while the adjacent metal of the terminal and rail are partially fused or heated, thereby securing the terminal to the rail, and a flexible cable electrically and mechanically secured within the lower portion of said hook-formed terminal.

1,627,353. CONSTANT-SURFACE-SPEED TALKING MACHINE. GEORGE M. THOMAS, Philadelphia, Pa. Filed Jan. 11, 1926. Serial No. 80,412. 6 Claims. (Cl. 192—119.)



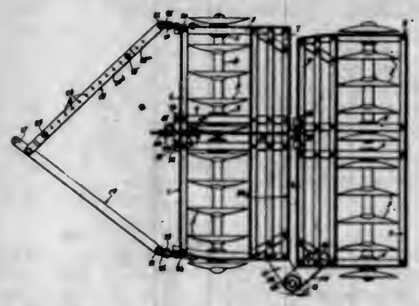
3. In a dervice of the character stated, a fixed tone arm including its sound box and needle, a laterally mov-

able arm, a turntable rotatably mounted with respect thereto and movable laterally therewith, friction means for driving said turntable, electrically operated means



including a motor and a train of gear wheels for driving said friction means, and electrically operated means for stopping rotation of said motor.

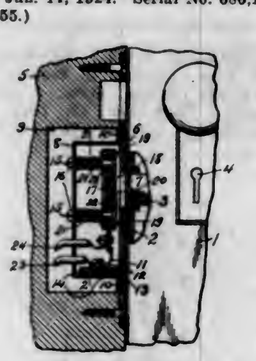
1,627,354. CONVEYER. THORLEIF THORSTEN, Pittsburgh, Pa. Filed Apr. 11, 1924. Serial No. 705,753. 13 Claims. (Cl. 198—193.)



1. A conveyer, comprising a supporting structure having rollers mounted therein adjacent the ends thereof and having a track at each side extending longitudinally thereof between said rollers, a continuous endless belt of flexible material engaging said rollers, anti-friction means carried by said belt adjacent the edges thereof for engaging said tracks to support the upper stretch of said belt, the edges of said belt being otherwise free and unobstructed, and reinforcing means extending transversely of said belt at intervals and located wholly on the outer surface thereof, substantially as described.

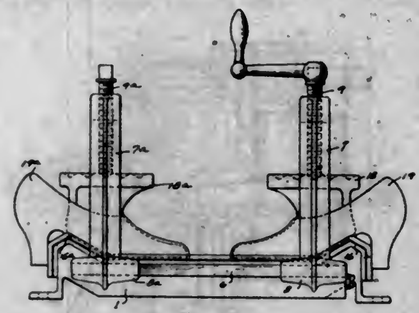
1,627,355. DISK HARROW. HEBER F. TOWNER, Santa Ana, Calif. Filed Oct. 8, 1925. Serial No. 61,193. 5 Claims. (Cl. 55—83.)

1. A disk harrow comprising two gangs only in tandem relation, a rigid draft connection between the forward gang and the rear gang, the two gangs being held against relative vertical movement, a pair of draft connections, means for connecting the said draft connections to the forward gangs near the ends thereof at different levels.



1,627,356. DISK CULTIVATOR. HEBER F. TOWNER, Santa Ana, Calif. Filed June 29, 1926. Serial No. 119,362. 24 Claims. (Cl. 55—83.)

3. In a single tandem disk harrow, the combination of a front gang of disks, a rear gang of disks, means pivotally connecting the front and rear gangs of disks at one end of the said gangs and at a point substantially midway between the said gangs.

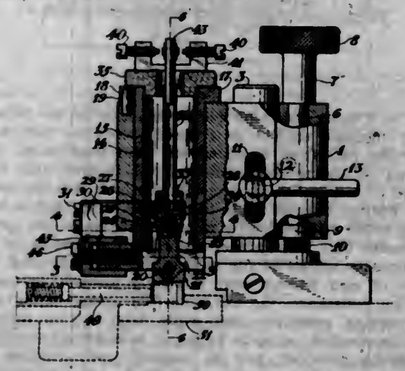


15. A harrow comprising two gangs only in tandem relation, means for pivotally connecting the said gangs together at one end at a single pivot, and a stay and back-up bar pivotally connected between the said gangs between the ends thereof.

1,627,357. ELECTRIC-CIRCUIT-CONTROLLING APPARATUS. JULIAN W. TOWNLEY, Kansas City, Mo., assignor of two-thirds to Lillie E. Weber, Kansas City, Mo. Filed Jan. 14, 1924. Serial No. 686,148. 1 Claim. (Cl. 200—55.)

In an apparatus of the kind described, a strike plate having a hole adapted to receive therein a bolt of a lock on a door, a pan shaped casing fastened to the inner side of the strike plate with its open side next the strike plate, two parallel horisontal bolts fastened at their inner ends to the inner side of the back of said casing at opposite sides respectively of said hole, two coil springs respectively mounted on said bolts and bearing against said casing, two insulation plates slidable on said bolts in front of and toward and from said hole, a conducting plate slidable on said bolts between and rigidly fastened to said insulation plates, and a contact plate fastened to the inner side of said casing and insulated therefrom in front of said conducting plate and adapted to be in contact therewith when the spring force said insulation and conducting plate forwardly, said bolts having heads which limit the forward movement of the insulation and conducting plates after contact between the conducting plate and said contact plate has been effected, the outer insulation plate being adapted to be struck by and forced inwardly by said bolt when the latter enters said hole.

1,627,358. APPARATUS FOR CEMENTING SOLES TO SHOE UPPERS. WILLIAM F. TRAUDT, Buffalo, N. Y. Filed Dec. 18, 1926. Serial No. 155,584. 9 Claims. (Cl. 12—38.)

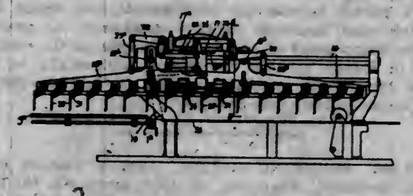


1. In an apparatus for cementing soles to shoes having a pad and a press for forcing a shoe down on said pad surface, the combination, with the above recited elements, of a laterally sliding connection between said pad structure and said press; whereby the latter may be used for wholesoling when in mid position over the pad, or for half-soling when in either end position.

1,627,359. METAL-IODIDE-ALKALI-IODIDE COMPOUNDS SUITABLE FOR USE IN THERAPEUTICS AND PROCESS FOR MANUFACTURING THEM. HANS TRUTTWIN, Vienna, Austria. Filed June 28, 1923, Serial No. 648,349, and in Germany July 3, 1922. 7 Claims. (Cl. 167—9.)

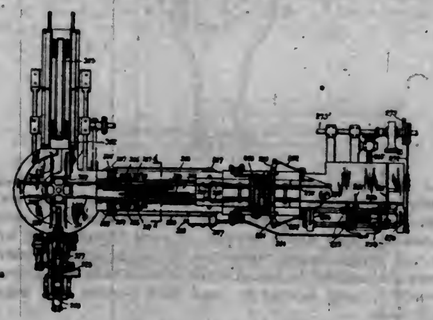
5. Therapeutically effective solutions of metal-iodide-alkali-iodide compounds consisting of a mixture of alkali-iodides, metal-iodide compounds and acids, containing alkali-iodide in a smaller amount than would be sufficient to prevent the albumin precipitating action, whilst the proportions between alkali-iodide and acid are chosen in such a manner, that separation of precipitate does not occur, even when the solution is greatly diluted with water.

1,627,360. TAPER-GAUGING MACHINE. PHILIP WALLIN, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 4, 1926. Serial No. 127,860. 10 Claims. (Cl. 33—174.)



1. A device of the kind described comprising a housing, a slide yieldably mounted therein and taper gauging mechanism carried by said slide, whereby said taper gauging mechanism is adapted to gauge the taper of different sizes of work.

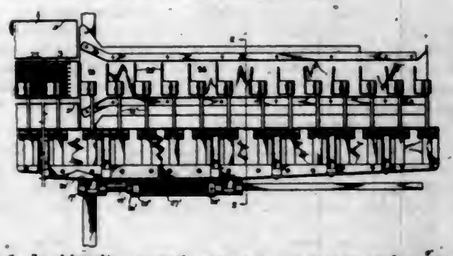
1,627,361. AIR COOLING AND DEHYDRATING DEVICE. WILLIAM E. WATT, Evanston, Ill. Filed July 25, 1924. Serial No. 728,104. 3 Claims. (Cl. 62—133.)



1. In combination, a casing, a container adapted to contain a cooling agent, supported within said container, means for directing a current of air over and about said container, and a baffle plate at the rear of said container engaging the side walls and top of said casing, said baffle plate terminating short of the bottom wall to form an air passage beneath the same.

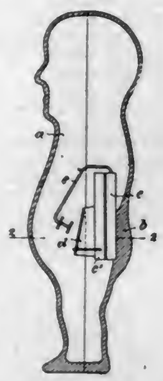
1,627,362. BISCUIT-REMOVAL MEANS. EARL P. WEBSTER, Niagara Falls, N. Y., assignor to The Shredded Wheat Company, Niagara Falls, N. Y., a Corporation of New York. Filed June 29, 1922, Serial No. 571,825. Renewed May 11, 1926. 15 Claims. (Cl. 198—224.)

1. In biscuit removal means, a conveyor including transverse trays, a platform, and horizontally working means for successively removing transverse rows of biscuit in single file from said trays to said platform including an upwardly yieldable vertical pusher member for each biscuit adapted to retain its vertical position throughout its upward movement.



1,627,363. SEALING MACHINE FOR CARTONS. EARL P. WEBSTER, Niagara Falls, N. Y., assignor to The Shredded Wheat Company, Niagara Falls, N. Y., a Corporation of New York. Filed June 9, 1924. Serial No. 718,840. 22 Claims. (Cl. 93—7.)

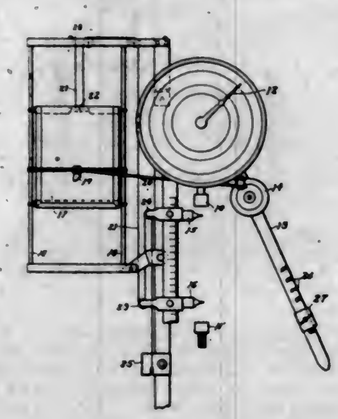
11. In a carton sealing machine, means for feeding a succession of cartons two abreast, means for feeding a succession of the two end members so fed abreast in single file, means for moving the end flaps of the cartons to horizontal closed position and the side flaps to horizontal open position, means for applying glue upon said end flaps and upon the ends of the side flaps, means for moving the side flaps upon the end flaps, means for applying sealing strips along the joints of said side flaps, includ-



ing a turntable wherein the cartons are received and carried to the sealing strip applying means, and means for ejecting the cartons from the machine and whereto the cartons are carried by said turntable.

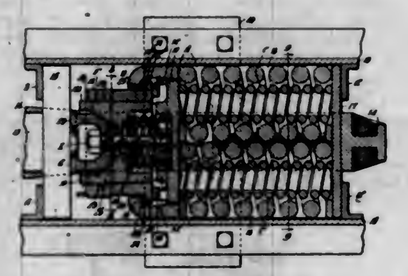
1,627,364. BISCUIT-REMOVAL MEANS. EARL P. WEBSTER, Niagara Falls, N. Y., assignor to The Shredded Wheat Company, Niagara Falls, N. Y., a Corporation of New York. Filed Mar. 11, 1925. Serial No. 14,726. 22 Claims. (Cl. 198—224.)

1. In biscuit removal means, a conveyor, and means for removing successive rows of biscuit therefrom including a pusher member for each biscuit, and means for moving said members pivotally downward in vertical planes transversely of and at right angles to the related row to engage between the biscuit, horizontally to remove the biscuit, pivotally upward in vertical planes and horizontally to first position.



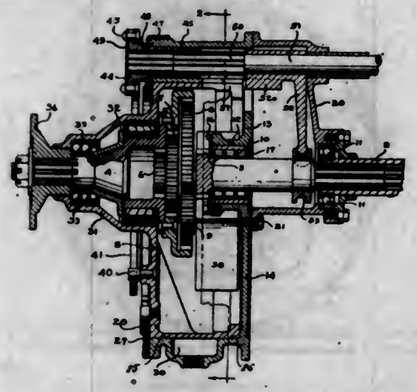
1,627,365. SOUNDING FIGURE. ARTHUR WERLITZ, Berlin, Germany. Filed Jan. 18, 1927, Serial No. 161,755, and in Germany Aug. 29, 1925. 2 Claims. (Cl. 46—40.)

1. A sound producing hollow figure formed of substantially solid walls of fragile edible material, said walls comprising a thick portion for the reception of a sound producing body and a portion of such thinness and area as will permit sound vibrations to be audibly transmitted from the interior to the exterior of said body and a sound producing body carried by said thick portion and within said body.



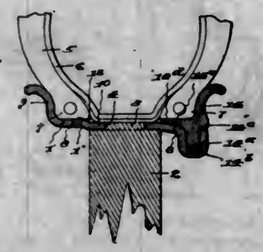
1,627,366. TESTING MACHINE. CARL S. WILLIAMS, Woodbridge, N. J., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1925. Serial No. 19,585. 14 Claims. (Cl. 265—2.)

1. A testing machine comprising relatively movable holding members for the material to be tested, means for varying the separation of said holding members and applying stress to the material, a recorder, means for actuating said recorder in response to the stress on said material, means for measuring the strain on a portion of the material comprising manually operable pair of means



for following the divergence of marks on said material being tested, said manually operable means being mechanically independent of the holding members and of the material being tested, and means for actuating said recorder in response to the measured strain.

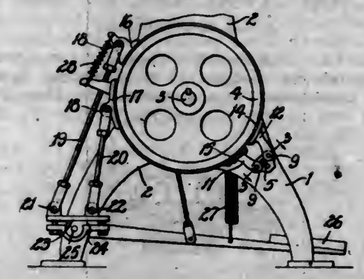
1,627,367. SHOCK-ABSORBING MECHANISM. ALBERT P. WITHALL, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 14, 1925. Serial No. 68,987. 16 Claims. (Cl. 213—24.)



1. In a shock absorbing mechanism, adapted for railway draft riggings, subject to a known sustained maximum draw-bar pull from a locomotive, said mechanism comprising: a spring resistance unit; a friction unit comprised of a plurality of elements relatively movable when said friction unit, as such, is operated, said friction unit being bodily and inactively movable relative to the spring resistance unit for a predetermined initial portion of the compression stroke of the mechanism, and thereafter the parts of said friction unit relatively movable to create friction resistance, the available free spring capacity of said spring resistance unit while said friction unit as such is inactive, being in excess of said known sustained maximum draw-bar pull to thereby freely cushion all normal shocks and pulsations within the range of the said sustained maximum draw-bar pull, said spring resistance unit having an additional capacity available in co-operation with the friction unit during the actuation of the latter in absorbing shocks in excess of the said available free spring capacity of the spring resistance unit.

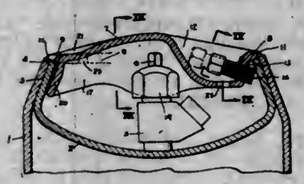
1,627,368. TRANSMISSION GEARING. CHARLES E. F. AHLM, East Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Aug. 16, 1924. Serial No. 732,386. 12 Claims. (Cl. 74—58.)

12. In a gearing, a gear member movable laterally of its axis, a cooperating gear member movable longitudinally of its axis, a movable mounting for said first named gear member, an operating member having connections with both said mounting and said second named gear member and means whereby the operating member first acts on the mounting to cause alignment between the respective gear teeth and subsequently acts on the second named gear to cause positive engagement between the gear teeth.



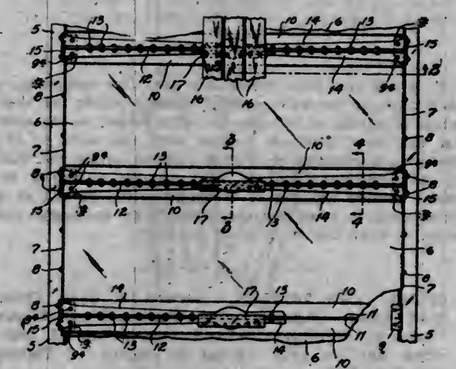
1,627,369. VEHICLE WHEEL. ERLE KING BAKER, Chicago, Ill., assignor to Baker Wheel & Rim Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 28, 1920. Serial No. 418,871. 4 Claims. (Cl. 152—21.)

4. A vehicle wheel construction embodying therein peripheral, pneumatic tire receiving means formed of an annular band having a fixed back flange, a detachable front flange, spaced tire base seats of substantially tire base diameter, and a portion intermediate said tire base seats of sufficiently less than tire base size to permit buttoning of the tire on the band when the detachable front flange is removed together with front flange receiving means of less than tire base diameter, said flange receiving means being of a diameter not greater than said portion intermediate the tire base seats.



1,627,370. BRAKE CONSTRUCTION FOR SOLE-CUTTING MACHINES. HERMAN K. BAYER and HENRY J. EPSTEIN, St. Louis, Mo. Filed Apr. 11, 1925. Serial No. 22,304. 6 Claims. (Cl. 188—83.)

4. In combination with a rotatable brake drum, brake mechanism for arresting the motion of the same comprising a slidable support, a pair of semi-cylindrical brake shoes substantially surrounding said brake drum and pivotally mounted at adjoining end portions on said support in a manner to permit the adjacent ends thereof to move toward and from each other, means operable at will for separating the opposite adjoining end portions of said



brake shoes to effect disengagement thereof from the drum, and automatic means for returning the brake shoes into engagement with said drum.

1,627,371. AMMONIA-CYLINDER CAP. HARRY C. BIERMAN, New Rochelle, and GEORGE W. SPEIRS, Glendale, N. Y., assignors to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Oct. 10, 1925. Serial No. 61,702. 11 Claims. (Cl. 220—55.)

1. In combination with a container having an inwardly curved end rim, a closure therefor comprising a body, ledges integral therewith adapted to rest on the top of said rim, a lug adapted to contact with the inner surface of said rim, and a screw passing through the top of said body adapted to impinge upon the inner surface of said rim.

1,627,372. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed June 21, 1926. Serial No. 117,330. 9 Claims. (Cl. 108—5.4.)

1. A car roof comprising side plates and self supporting roof sheets extending from side plate to side

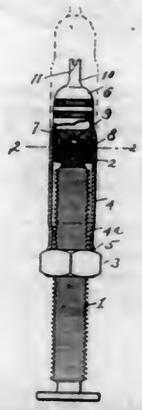


plate and rigidly secured thereto, said roof sheets being provided along their adjacent margins with raised panels having upstanding flanges at their edges that are rigidly secured together in direct contact with each other.

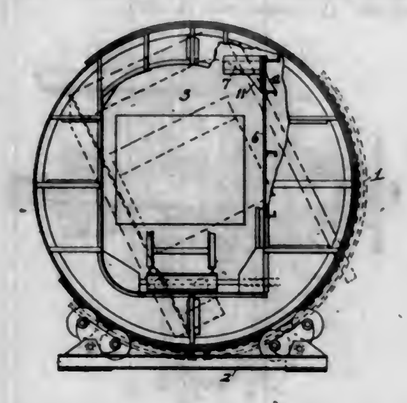
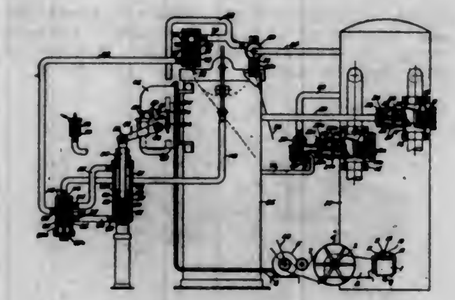
1,627,373. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed June 21, 1926. Serial No. 117,331. 11 Claims. (Cl. 108—5.)

1. A flexible car roof comprising roof sheets arranged on the car side by side, a seam cover covering adjacent margins of said sheets, and means on the marginal portions of said seam covers cooperating with means on said roof sheets for permitting sliding movement of said roof sheets transversely of said seam covers and sluing movement of said roof sheets on said seam covers in substantially all positions of such sliding movement.



1,627,374. DUST-CAP CONSTRUCTION. ADELBERT E. BRONSON, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 18, 1920. Serial No. 359,746. 5 Claims. (Cl. 152—12.)

1. A cap for valve stems and the like comprising a shell to cover the valve stem, a member within the shell which is capable of being moved with respect to the shell but has close frictional contact with the walls of the shell and is retained in a given position within the shell by said frictional contact, said member having a recessed portion adapted to cooperate with the end of a valve stem to close the end thereof and to engage the stem to hold the shell upon the stem.

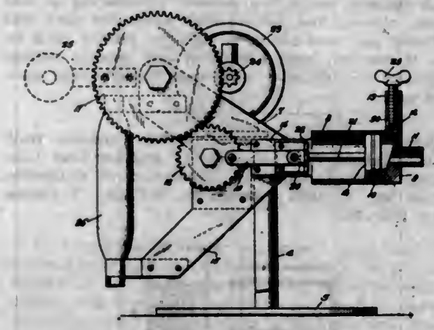


1,627,375. CAR DUMPER. ARTHUR F. CASE, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 13, 1925. Serial No. 29,911. 7 Claims. (Cl. 214—52.)

1. A rotatably supported car dumping cradle having means for holding a car thereon, an imperforate apron carried by the cradle over which the material is discharged from the car when the cradle is turned to dump

the car, and means carried by the apron at the discharge end thereof for retaining thereon lumps of material which are larger than a predetermined size.

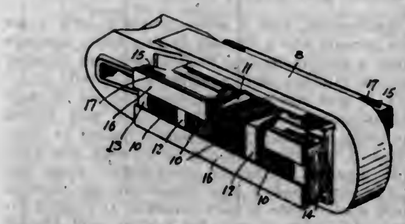
1,627,376. PUMP-CONTROL MECHANISM. RUDOLPH CONRADES, Erie, Pa. Filed June 26, 1924. Serial No. 722,594. 74 Claims. (Cl. 230—24.)



1. In a pump control mechanism, the combination of a pump; an electric motor actuating the pump; a starting switch having a starting and a running position at opposite sides of a neutral position; and fluid actuated means responsive to conditions of fluid pressure subjected to the action of the pump actuating switch.

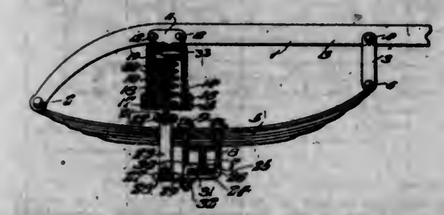
26. In a pump control mechanism, the combination of a pump; an electric motor driving the pump; means controlling the motor comprising a fluid storage chamber; control devices stopping the motor and charging the chamber with certain fluid pressure conditions; mechanism actuated by the chamber fluid pressure starting the motor with certain other fluid pressure conditions; and an unloader for the pump actuated by chamber fluid pressure.

1,627,377. BREATHER PUMP. CHARLES DANNA, New Orleans, La. Filed Mar. 13, 1925. Serial No. 15,292. 6 Claims. (Cl. 230—27.)



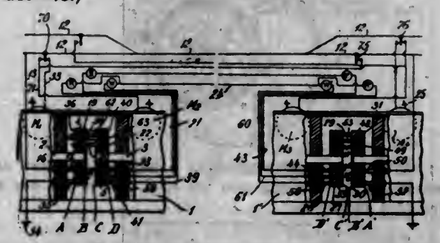
1. A breather pump including a cylinder provided with a valveless inlet port and an independent outlet port, said inlet port being relatively small in diameter

than the bore of the cylinder, and a piston mounted in said cylinder and operable to cause suction through both the inlet and outlet ports on the suction stroke of



the piston and expulsion of the cylinder contents through both of said ports on the compression stroke of the piston.

1,627,378. DRAFT GEAR. LOUIS E. ENDSLEY, Pittsburgh, Pa., assignor to Waugh Equipment Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 21, 1925. Serial No. 24,796. 3 Claims. (Cl. 213—30.)



1. Draft gear structure comprising follower blocks, spring plates disposed between said blocks, channel-like cover members disposed against opposite edges of said blocks and spring plates, and pin and slot connection between said cover members and said follower blocks for maintaining all of said parts in assembled relation, the said connection limiting expansible movement of said follower blocks to a degree that spring pressure will at all times be exerted thereon.

1,627,379. AUTOMOBILE REBOUND-CHECKING DEVICE. CLARK O. FOUNTAIN, Moorestown, N. J. Filed Aug. 24, 1926. Serial No. 131,167. 1 Claim. (Cl. 267—28.)

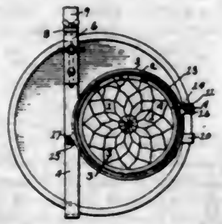
An automobile rebound checking device comprising a housing, having an upper terminal apertured flange therein, whereby said housing may be rigidly secured to the chassis of the automobile, and having a lower threaded terminal portion, a lower terminal cap-threadedly secured to the lower threaded terminal portion of said housing, having a central opening therethrough, a plunger rod extending through said central opening and having an upper terminal disc secured to the upper end thereof, fitting snugly within said housing, and having a terminal strap socket at its lower end, a helical compression spring operatively interposed between said upper terminal disc of the pulnger rod and the lower terminal cap of said housing, a horisontal bracket having a terminal clamping member and a second clamping member extending therethrough, adapted to engage the flanges of the automobile axle, and a flexible strap intermediate said upper socket and said lower socket.

1,627,380. AUTOMATIC SIGNAL SYSTEM. FRANK GILDAY and WILLIAM J. DUFFY, Mayfield, Pa. Filed Dec. 6, 1924. Serial No. 754,267. 12 Claims. (Cl. 246—78.)

1. An electrical signal system comprising signaling means at one end of a track section for indicating the presence of a car in said section during normal operation of the system and emergency signaling means inoperative during normal traffic conditions for indicating exceptional traffic conditions, within said track section.

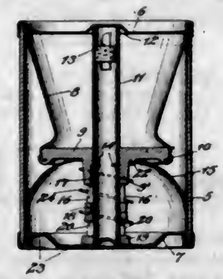
1,627,381. FUEL-THROWING VANE OR SHOVEL. LOUIS K. GILLSON, Wilmette, Ill. Filed Mar. 4, 1926. Serial No. 92,137. 9 Claims. (Cl. 110—113.)

1. A fuel projecting vane or shovel adapted to be mounted for oscillation in a horisontal path and comprising an upstanding blade, a shelf projecting forwardly from the blade and above the bottom margin thereof, and a transverse flange depending from the shelf.



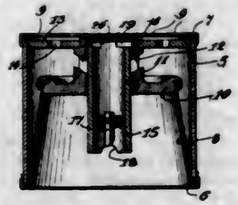
1,627,382. PROTECTIVE DEVICE FOR BOXERS. MORRIS GOLOMB, New York, N. Y., assignor to Everlast Sporting Goods Mfg. Co., New York, N. Y., a Firm composed of Morris Golomb and Jacob Golomb. Filed June 30, 1926. Serial No. 119,644. 5 Claims. (Cl. 2—18.)

1. A protective device of the character described comprising a member adapted to fit over the hand, said member including a padded covering for the back of the



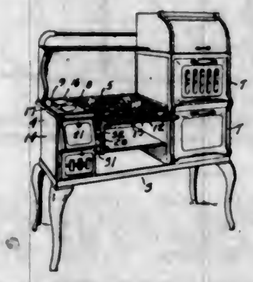
hand, flaps arranged across the upper portion of the palm, and other flaps adjacent the lower portion of the palm of the hand, leaving a gap at the intermediate portion of the palm, and a lacing for drawing said flaps toward each other to tighten the device on the hand.

1,627,383. MOP WRINGER. HERMAN E. GOTHBERG, Wyoming, N. J. Filed June 11, 1926. Serial No. 115,265. 4 Claims. (Cl. 15—263.)



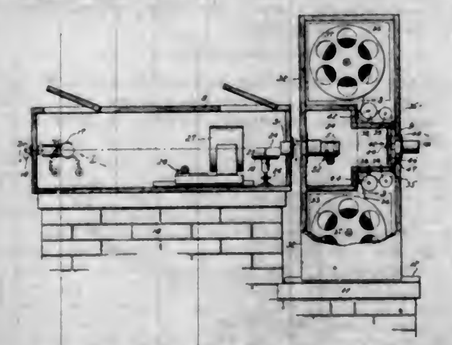
1. A mop wringer comprising a bag-like resilient net and means for securing said net to a pail or the like in distended condition.

1,627,384. SOUND-PRODUCING DEVICE. LEO J. GAUSMAN, Belle Harbor, N. Y., assignor to Voices, Incorporated, Newark, N. J., a Corporation of Delaware. Filed Dec. 17, 1924. Serial No. 756,434. 15 Claims. (Cl. 46—46.)



7. In a sound producing device, a cylindrical casing, a gravity operable, longitudinally reciprocating air compressing and expelling member in said casing, a sounding reed through which the air is expelled, and sound emission controlling means including two independently acting control parts movable as a unit with said air expelling member, and means automatically operating to effect a relative movement between said control parts during the air expelling movement of said member.

1,627,385. SOUND-PRODUCING DEVICE. LEO J. GAUSMAN, Belle Harbor, N. Y., assignor to Voices, Incorporated, Newark, N. J., a Corporation of Delaware. Filed Jan. 2, 1925. Serial No. 42. 16 Claims. (Cl. 46—46.)



4. In a sound producing device, an air receiving chamber and a weighty gravity movable member for expelling air from said chamber, a sound producing reed through which the air is expelled, and means for articulating the emission of sound produced by said reed including an apertured part carried by said weighty member, and a sound emission controlling member independent of said weighty member and cooperatively associated with said apertured part and bodily movable by gravity with respect thereto and independently of said weighty member to control the emission of sound through said apertured part.

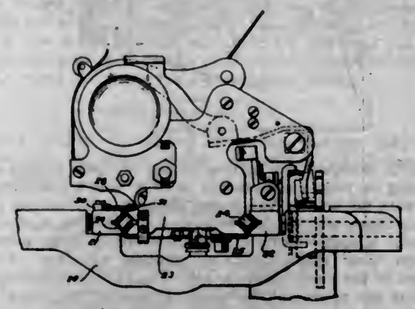
1,627,386. GAS-KINDLING BURNER. GEORGE HAMMER, Oakland, Calif., assignor to Hammer-Bray Company, Oakland, Calif., a Corporation of California. Filed May 1, 1922. Serial No. 557,519. 7 Claims. (Cl. 126—36.)

1. In combination with a stove provided with a set of top gas burners and a fire box having front openings and a grate, a gas kindler pipe fixed outside and adjacent a side wall of said box and extending horizontally thereabout, jets on said pipe extending into said box through said wall and arranged to discharge into said firebox above the plane of said grate, a hood arranged to cover the portions of the jets which extend through said wall, a gas-feed manifold extending horizontally along the front of the stove, and a pipe connecting the forward end of said kindler pipe to said manifold at a point lying at the same side of said fire box as said kindler pipe.

1,627,387. MEANS FOR PHOTOGRAPHICALLY RECORDING SOUND. RUSSELL HART, Los Angeles, Calif. Filed Apr. 9, 1923. Serial No. 630,870. 5 Claims. (Cl. 274—5.)

1. Apparatus of the character described, comprising; a luminous rectilinear filament of great tenuity; a lens for focusing an image of the filament in a plane; a target vibratile to sound in said plane for variably eclipsing the light rays forming said image to vary the length of the image; a photo-sensitized surface, movable parallel to said plane; and a second lens for projecting a secondary image of the variable first image upon the sensitized surface, transversely to its direction of motion.

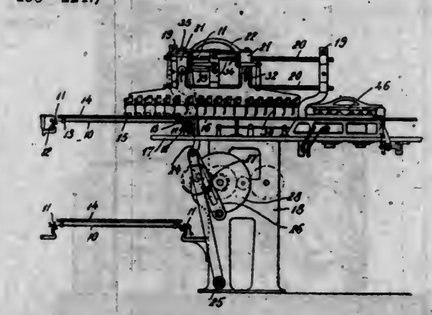
1,627,388. CHAIR. THOMAS R. HAYES, Monrovia, Calif. Filed Oct. 20, 1926. Serial No. 142,981. 9 Claims. (Cl. 155—140.)



9. A collapsible chair structure comprising rider plates having oppositely disposed terminal flanges, a seat supporting rail connecting said rider plates between said flanges, and a rotatable eccentric locking bar connecting said rider plates independently of said seat rail, and disposed between said flanges and adjacent to one of the flanges of the respective rider plates.

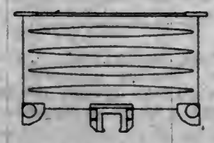
1,627,389. INSECTICIDE COMPOSITION. OSCAR F. HEDENBURG and DAVID S. PRATT, Pittsburgh, Pa., assignors to The Toledo Rex Spray Company, Toledo, Ohio, a Corporation of Ohio. Filed July 1, 1919. Serial No. 307,985. 4 Claims. (Cl. 167—6.)

1. An insecticide composition comprising lead arsenate and an emulsoid colloid, said composition, when used in admixture with lime-sulfur as a spray, being readily suspendable in water, and the resulting spray, after drying, forming an adherent film resistant to the erosive action of water.



4. An insecticide composition comprising lead arsenate, a relatively small proportion of gum arabic, lime-sulfur constituents, said composition having superior suspension qualities and forming, when used as a spray, an adherent dry film resistant to the erosive action of water.

1,627,390. REMOVABLE CARRIAGE FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Sept. 12, 1924. Serial No. 737,226. 14 Claims. (Cl. 197—60.)

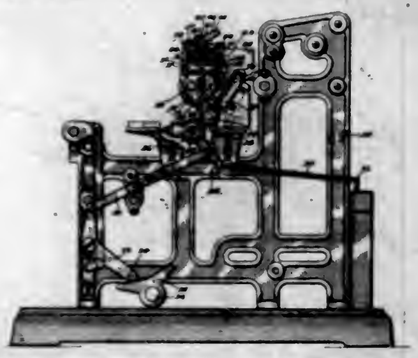


1. The combination with a typewriter frame, of guides mounted on said frame, a platen carriage slidably mounted in said guides, bearing rollers interposed between said carriage and guides, a frame for holding said rollers, racks on said typewriter frame and carriage, respectively, a pinion journaled on said roller-holding frame and meshing with said racks, said carriage being movable endwise from said guides to remove said carriage from said typewriter frame, disconnecting said racks from said pinion, and means for retaining said roller-holding frame in position on said carriage when said carriage is removed from said guides.

1,627,391. ARTICLE-HANDLING MECHANISM. HENRY ALONZO HOUSE, Bridgeport, Conn., assignor to The Shredded Wheat Company, Niagara Falls, N. Y., a Corporation of New York. Original application filed Apr. 30, 1926, Serial No. 105,683, now Patent No. 1,592,768, dated July 13, 1926. Divided and this application filed May 19, 1926. Serial No. 110,182. 10 Claims. (Cl. 198—224.)

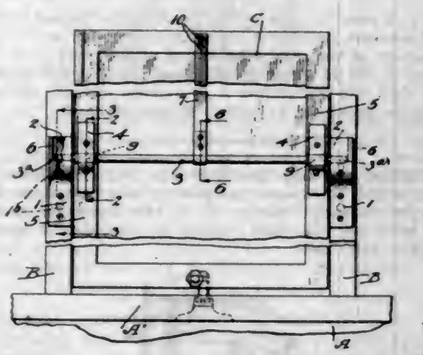
1. In apparatus of the type described, the combination of a conveyor and means for successively removing transverse rows of biscuits, each row in single file, therefrom.

1,627,392. CORRUGATED WALL PLATE. HOWARD L. INGERSOLL, White Plains, N. Y. Filed June 7, 1923. Serial No. 643,934. 2 Claims. (Cl. 105—409.)



1. A metallic plate having a corrugation formed therein of constant height and having its width vary so that the contour of the sides form two parabolas with their vertices at the middle of the beam and their bases coincident, so that said corrugation is of uniform strength throughout its length for an equally distributed load.

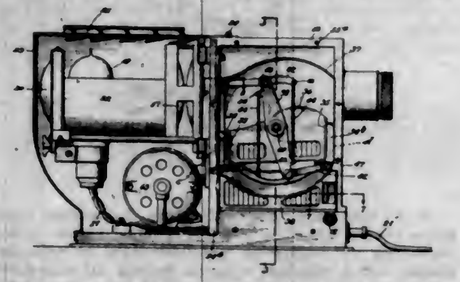
1,627,393. WALL TELEPHONE. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 28, 1924. Serial No. 688,924. 5 Claims. (Cl. 179—100.)



1. In a subscriber's telephone set, the combination with a base or back plate, of a cover hinged thereon, a bracket secured to said back plate and a rotatable screw supported thereby, an orifice in said cover and a slot extension from said orifice in alignment with said screw to permit entrance of said screw in said orifice when said cover is closed, said screw having a tapered portion adapted to engage a tapered portion of said orifice to permit the head of said screw to be depressed in said cover.

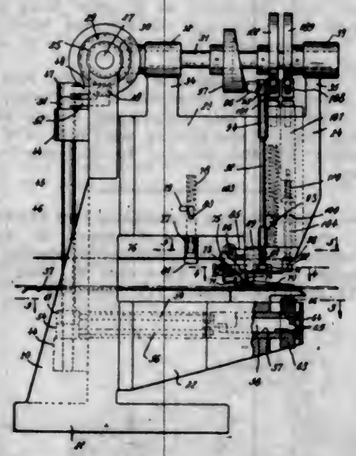
1,627,394. VARIABLE-FEED MECHANISM FOR TABULATING MACHINES. WILLIAM W. LASKER, Brooklyn, N. Y., and JOHN MUELLER, North Bergen, N. J., assignors to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 12, 1925. Serial No. 49,860. 22 Claims. (Cl. 197—114.)

1. In a machine of the character stated, the combination of an intermittently movable part, a platen, means controlled by said part for imparting a step-by-step movement to said platen, and means for periodically rendering said step-by-step means ineffective whereby the same line of said platen is held in printing position for more than one movement of said part.



1,627,395. MIRROR MOUNTING. CHARLES M. LEE, Shreveport, La. Original application filed Mar. 12, 1926, Serial No. 94,245. Divided and this application filed Mar. 12, 1926. Serial No. 94,246. 1 Claim. (Cl. 45—18.)

A mounting for mirrors comprising open socket members, a pivot bar having an angular portion for attachment to the rear of the mirror, a clip with a seat cooperating with said portion for securing the pivot bar to the mirror frame adjacent its end portions, and bracing means connected at one end to the mirror frame at the top and at its other end to the bar at an intermediate point.

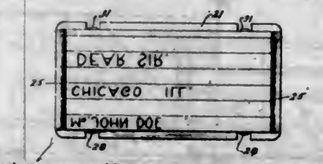


1,627,396. PROJECTING MACHINE. OTTO P. R. LEHMANN, Newark, N. J., assignor to Victor C. Thorne, New York, N. Y. Filed Sept. 1, 1923. Serial No. 660,467. 11 Claims. (Cl. 88—28.)

1. In a projecting machine, the combination of projecting means, a magazine, a plurality of framed slides standing on edge in said magazine in upright surface engagement with each other, socket members on the frames of said slides, a pair of rotatable levers, actuating means for rotating said levers, arms at the opposite ends of said levers adapted to engage the sockets of said slides and to raise a slide from said magazine into registry with

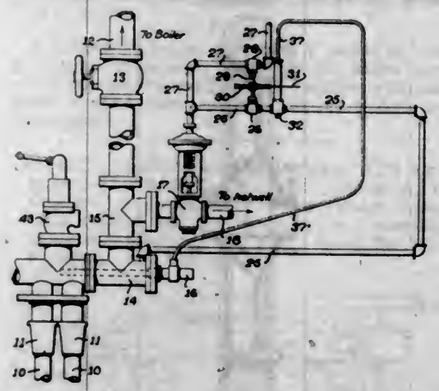
said projecting means and to coincidentally return a previously raised slide to the magazine, and means operated by said actuating means for advancing said plurality of slides in said magazine in predetermined steps to place successive slides in position to be lifted from said magazine.

1,627,397. MESH MACHINE. FRED HARRIS LYNDS, North Attleboro, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed July 2, 1925. Serial No. 41,111. 28 Claims. (Cl. 140—3.)



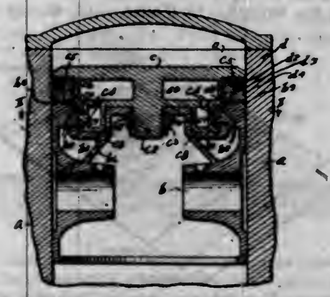
1. A machine for uniting pieces of mesh fabric consisting of rings connected by spiders, which comprises a support for holding two pieces of mesh to be united with their edges parallel but separated, means for holding a supply of spider material, tools operable to form spiders, insert their legs through a plurality of rings at the edges of the pieces of mesh, and turn the legs inwardly to secure the rings, and power-driven devices for giving the tools and the pieces of mesh a relative movement during which the pieces of mesh are maintained in a plane at all times, and for operating the tools.

1,627,398. SLUG HOLDER. ELMER G. MAGNUS and HENRY C. DOSCH, Chicago, Ill., assignors to Individualising Company of Illinois, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1924. Serial No. 720,227. 2 Claims. (Cl. 101—368.)



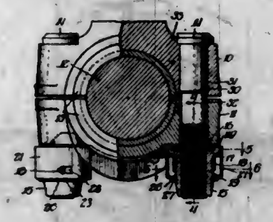
1. A grouping device for type slugs, comprising a metal plate having retaining flanges at its ends, each adapted to engage a plurality of slugs and guides at each side

integral therewith, parts bent out of the plane of the plate to form abutments adjacent one edge thereof and a plurality of notches adjacent the opposite edge providing



lugs therebetween, said lugs being adapted to be bent out of the plane of the plate into interlocking relation with a plurality of type slugs positioned thereon.

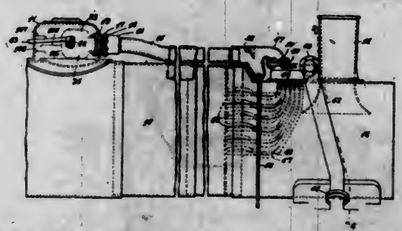
1,627,399. AUTOMATIC SAFETY SYSTEM FOR VESSELS CONTAINING LIQUID UNDER PRESSURE. CLINTON S. MEGLER, Beacon, N. Y., assignor to The Green Fuel Economizer Company, Beacon, N. Y., a Corporation of New York. Filed May 24, 1924. Serial No. 715,552. 11 Claims. (Cl. 122—412.)



1. The combination with a normally closed container for heating a liquid, of a relief valve therefor, automatic means for opening the relief valve, means for utilizing the internal pressure of the container to hold the relief valve closed in opposition to said automatic means, and temperature-controlled means operable independently of the level of the liquid in said container for disabling said pressure utilizing means when the internal temperature of the said container rises to a predetermined point.

1,627,400. PISTON. HENRY H. MEYER, Detroit, Mich. Filed Feb. 28, 1924. Serial No. 695,642. 5 Claims. (Cl. 74—108.)

1. In a piston, the combination of an upper and a lower part having adjacent ends and having a ring groove between said parts, an annular groove extending into one of said ends within its periphery, an annular projection from the other of said ends adapted to extend into said groove and engaging screw threads on said projection and wall of said groove.

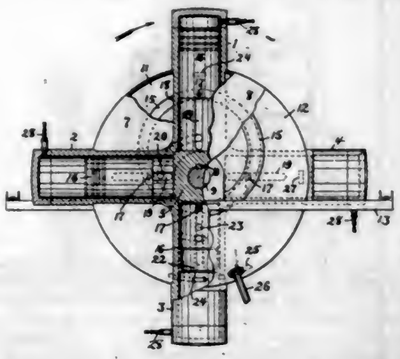


1,627,401. WEAR-COMPENSATING BOLT. GUSTAV C. MONCKMEIER, Tipton, Iowa. Filed Oct. 19, 1925. Serial No. 63,238. 9 Claims. (Cl. 85—32.)

1. In a device of the class described, a bolt, a tubular nut having an annular flange adjacent one end of the same, a coil spring encircling the tubular portion of the nut for automatically advancing the nut on the bolt, and a centrally apertured spring-encasing cup of cylindrical form positioned with the cylindrical side of the same rotatably mounted on the flange of the nut and with the apertured bottom of the same rotatably mounted on the tubular portion.

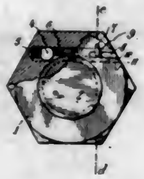
9. In a device of the class described, a bolt, a nut, and a coil spring for automatically advancing the nut on the bolt, the threading on the bolt and nut being multiple and having a lead which is from three to six times the pitch, for the purpose set forth.

1,627,402. STEAM LOCOMOTIVE. JOHN E. MUHLFELD, Scarsdale, N. Y., and AUGUST G. SANDMAN, Baltimore, Md. Filed June 6, 1919. Serial No. 302,088. 4 Claims. (Cl. 122—462.)



1. In a railway locomotive, a fire tube boiler having a smoke box at its forward end and working cylinders on opposite sides thereof, a superheater header mounted exteriorly of the smoke box, a supply pipe connection between the boiler and the superheater header arranged externally of the boiler shell, superheater elements connected with the header extending through the smoke box and into the fire tubes of the boiler, and superheated steam supply connections between the header and said working cylinders.

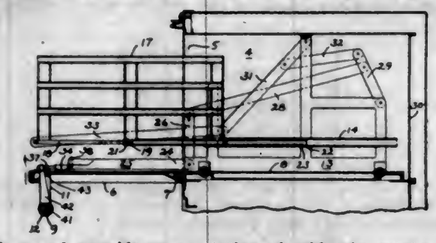
1,627,403. INTERNAL-COMBUSTION ENGINE. HENRY J. OUTCELT, Warsaw, Ind. Filed Nov. 11, 1925. Serial No. 68,282. 4 Claims. (Cl. 123—44.)



1. In an internal combustion engine, a revoluble member having cylinders radially disposed in opposite pairs, each cylinder having a longitudinal slot in each side thereof at its inner portion, and having a receiving port and exhaust port in its outer portion; a pair of stationary heads spaced apart and having bearing contact with the corresponding sides of said revoluble member, each having a circular raceway in its inner face eccentrically

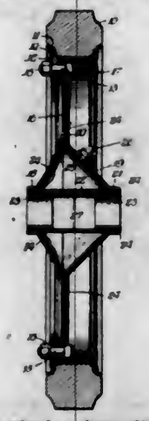
disposed, one of said heads having an intake port with which said cylinders have communication at their inner ends, and also a by-pass duct with which said cylinders have communication at their inner and outer ends, the other of said heads having an exhaust port with which said cylinders have communication at their outer ends; a shaft keyed in said revoluble member and rotatably

mounted in said heads; a piston in each cylinder having a cross-pin at the inner end thereof, the ends of which pin project through the corresponding side slots of the cylinder; a shoe on each end of each cross-pin having sliding movement in the corresponding race-way; and ignition means including a spark-plug in each of said cylinders.



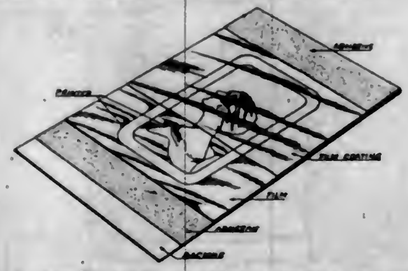
1,627,404. NUT LOCK. MARCEL OUTHIER, Paris, France, assignor to Societe Anonyme des Etablissements Kiblok, Levallois-Perret, France. Filed June 19, 1925, Serial No. 38,242, and in France Apr. 4, 1925. 1 Claim. (Cl. 151—25.)

A nut lock comprising in combination a nut having a threaded opening and a channel tangential thereto, a ball and a spring in said channel, the spring tending to hold the ball in locking position, a push bar reciprocable in the channel and provided with a lateral extending rod projecting out of the nut, the nut being formed with a groove in which said rod is adapted to slide and with a transverse recess communicating with the groove near the inner end thereof, said transverse recess being adapted to receive said rod and hold it in unlocking position.



1,627,405. SLIDING GRATE FOR OVENS. ANTOINE E. M. PRENVEILLE and DONALD E. PRENVEILLE, Oakland, Calif. Filed Aug. 4, 1924. Serial No. 729,945. 3 Claims. (Cl. 126—340.)

1. The combination with an oven and a door therefor, of a grate mounted to slide into and out of said oven, means arranged to be connected to the door and grate to cause the grate to be moved out of and into the oven upon the opening and closing movement of the door, a handle for said door comprising a bracket positioned on the outer side of the door, a grip member supported by said bracket for rotation about an axis parallel to the plane of said door, and an arm extending through the



door and movable upon rotation of said grip member to connect said means to the door or disconnect same therefrom.

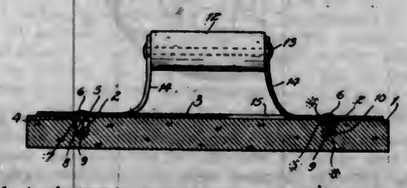
1,627,406. VEHICLE WHEEL. FRED W. RAUTER, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Jan. 29, 1926. Serial No. 84,553. 6 Claims. (Cl. 301—63.)

5. In a vehicle wheel, a front disc having an inwardly and forwardly extending central portion, a rear disc of smaller size secured to the front disc and having an inwardly and rearwardly extending central portion, a sleeve secured to the innermost extremities of the central portions of both discs, and two smaller sleeves secured within the first mentioned sleeve inwardly of the extremities of the central portions of the discs.

1,627,407. TRANSFER PRINT AND METHOD OF MAKING THE SAME. THOMAS S. REESE, Cleveland, Ohio, assignor to The Di-Noc Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 18, 1924. Serial No. 687,016. 12 Claims. (Cl. 41—33.)

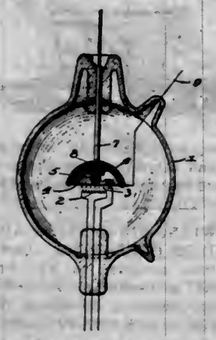
1. A transfer print comprising a backing sheet having a coating forming film thereon which is insoluble in water, said film carrying a design formed by pigments permanently impregnated in the body of the film.

1,627,408. COMB FOR HAIR CUTTING. FRED ROBERTS, Portland, Oreg. Filed June 26, 1925. Serial No. 39,831. 1 Claim. (Cl. 132—11.)



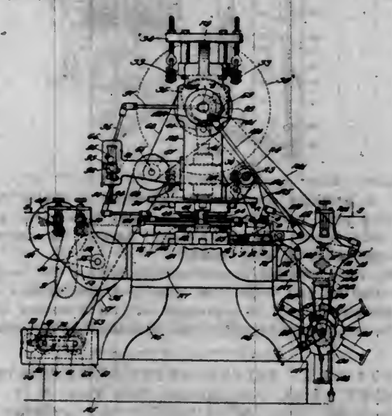
A barber's implement comprising a handle of uniform rectangular dimensions throughout its middle portion, each end having its width increased uniformly beyond the handle and its depth uniformly tapered to form operative portions.

1,627,409. METHOD AND APPARATUS FOR TRANSMITTING ELECTRIC CURRENT. JAMES A. ROSE, Lancaster, Pa., assignor to Lowell-Wintsch Automatic Train Control, Inc., Lancaster, Pa., a Corporation of Delaware. Filed July 12, 1924. Serial No. 725,663. 5 Claims. (Cl. 246—193.)



1. In combination with a pair of rails, a transformer having the terminals of one of its coils respectively connected to said rails, a vehicle having means for electrically connecting said rails, a control circuit carried by said vehicle and connected in shunt with the circuit formed by said rails, a source of current connected to the other coil of said transformer, a signal for the vehicle, and signal controlled means for varying the current in the circuit of one of said coils.

1,627,410. PLASTERER'S FLOAT. RAYMOND W. ROWLEY, St. Louis, Mo. Filed Dec. 14, 1925. Serial No. 75,233. 5 Claims. (Cl. 72—136.)

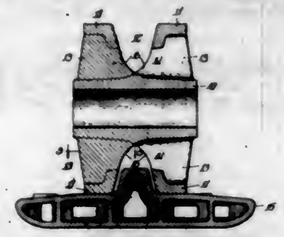


1. A plasterer's float comprising a face block having two pairs of engaging members located, respectively, near opposite ends thereof and provided with screwthreaded shanks projecting above its upper side, transverse rods passed through the body of said face block and through said engaging members, a back plate applied to the upper side of said face block and having apertures through which said shanks project, screwthreaded members applied to said shanks and screwed against said back plate, and a handle supported on said back plate.

1,627,411. ELECTRON RELAY. SAMUEL RUBEN, New York, N. Y. Filed Oct. 23, 1920, Serial No. 418,896. Renewed Sept. 22, 1926. 4 Claims. (Cl. 250—27).

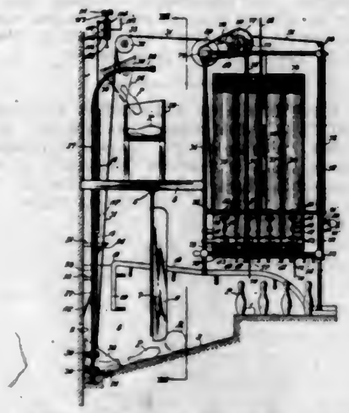
2. An electron relay comprising a vacuum tube having therein an electron emission element, a grid element and a microphone comprising two contacting members one of which functions as a plate element.

1,627,412. METHOD AND APPARATUS FOR FORMING ARTICLES FROM SHEET MATERIAL. HARRY E. RUCKERT, Philadelphia, Pa., assignor, by mesne assignments to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed July 18, 1924. Serial No. 726,863. 45 Claims. (Cl. 93—60.)



1. In a machine for forming articles from sheet material, the combination with means for supplying a plurality of sheets of said material in superposed relation, of punching and forming means movable together for first punching blanks from all of said sheets simultaneously and then forming said blanks into a corresponding number of nested articles.

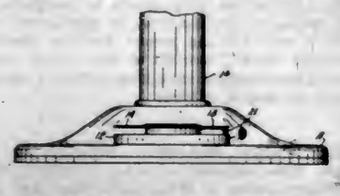
1,627,413. TRACK ROLLER. RICHARD W. RUNGE, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Apr. 5, 1924. Serial No. 704,303. 4 Claims. (Cl. 305—1.)



4. In a track roller, a hub portion, two rim portions spaced to provide a peripheral groove, and laterally tapering spokes between the hub and rim portions ar-

ranged in staggered relation with their inside faces curved laterally adjacent the hub to provide curved

discharge passages of laterally increasing size which lead inwardly and laterally from the groove throughout its circumference to the side faces of the roller.

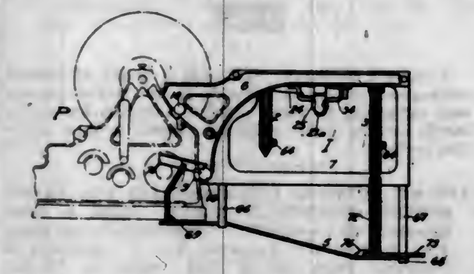


1,627,414. BOWLING-PIN-SETTING APPARATUS AND ITS METHOD OF OPERATING. LEWIS D. SCHAFFER, Cleveland, Ohio, assignor to The State Banking & Trust Company, as trustee for himself and The Singer Manufacturing Company, Cleveland, Ohio. Filed May 11, 1922. Serial No. 560,119. 92 Claims. (Cl. 273—43.)

1. A bowling apparatus comprising a device for removing pins, compressed air operated means for actuating said device and an electrical agency for controlling the operation of said means.

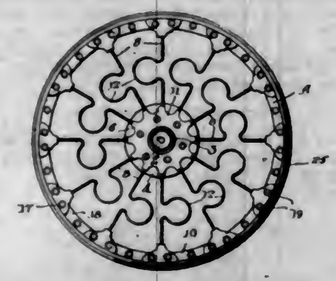
91. In a bowling apparatus, mechanism for receiving, distributing and supporting pins and mechanisms adapted simultaneously to segregate varying numbers of pins while supported by said first mentioned mechanism.

1,627,415. TELEPHONE-INSTRUMENT ATTACHMENT. ALEX. SCHLESINGER, New York, N. Y. Filed Sept. 20, 1924. Serial No. 738,885. 4 Claims. (Cl. 179—90.)



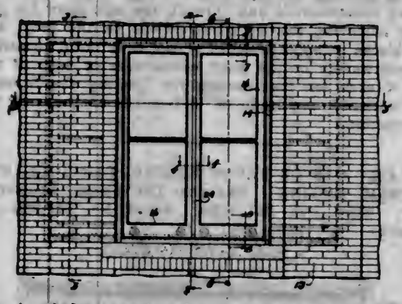
4. In a calling device having a number plate, a finger wheel movable concentrically thereto, and means associated with the latter for forming a wiping contact with the number plate.

1,627,416. SMOKING PIPE. PAUL R. SCHUMAN, Chicago, Ill. Filed Apr. 23, 1924. Serial No. 708,547. 1 Claim. (Cl. 131—12.)



A smoking pipe including a stem comprising separable parts having reduced threaded end portions, a bowl comprising separable parts carried by said stem parts and provided with threaded bearing portions, retaining means engaging said thread bearing portions, and retaining means engaging said reduced threaded end portions of the stem.

1,627,417. INTERLEAVING DEVICE. FRANK H. SHINN, Davenport, Iowa. Filed June 28, 1926. Serial No. 119,054. 11 Claims. (Cl. 34—1.)



1. In interleaving mechanism for use with printing mechanism to insert offset preventing sheets between printed sheets delivered by the printing mechanism, pendulant means to pass through perforations in and suspend the interleaving sheets above the location where the printed sheets are dropped by the printing mechanism, means to be actuated to permit said interleaving sheets to be dropped, one at a time, and means to actuate the last named means to cause the dropping of said sheets.

1,627,418. RESILIENT WHEEL. ROBERT JULIUS STARR, Briercrest, Saskatchewan, Canada. Filed Apr. 3, 1923. Serial No. 629,666. 1 Claim. (Cl. 152—49.)

A resilient vehicle wheel for motor cars and the like comprising a rim and a hub, an auxiliary hub provided with stub spokes, a plurality of spring spokes formed with a centrally disposed open loop and stub ends, a plurality of radial slots in the rim and auxiliary hub having a plurality of recesses at right angles thereto and communicating therewith adapted to receive the stub ends of the spokes and retain the spokes at compression or tension, and cover means to retain the spokes in the wheel.

1,627,419. WINDOW CONSTRUCTION. HARRY B. STEIN, Chicago, Ill. Filed Oct. 19, 1926. Serial No. 142,584. 9 Claims. (Cl. 20—52.1.)

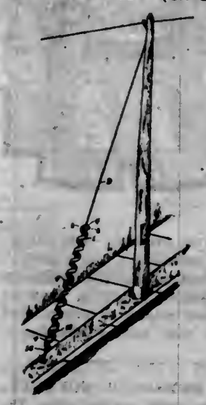
1. A window construction comprising housing means consisting of frame members and connecting panels therebetween placeable in the wall and forming part of the window frame, there being a slot in said frame part, and track means with spring strips for sliding the window sash through said slot into said housing means.

1,627,420. REVERSIBLE DOOR LATCH AND LOCK. ALBERT JACKSON THOMAS, Clinton, Ind. Filed May 21, 1924. Serial No. 714,777. 3 Claims. (Cl. 70—14.)

1. A door latch and lock including a tubular case having a front plate on one end and a plug in the opposite end thereof, the front plate having an aperture therein, a beveled latch bolt and a lock bolt arranged together and guided in said aperture for relatively independent longitudinal movement, the latch bolt being provided on its inner end with a yoke having gear teeth, a spindle rotatively guided in the tubular case and having gear teeth engaging the gear teeth on the yoke, a coil spring seated on said plug and the yoke, and a key to engage and move the lock bolt.

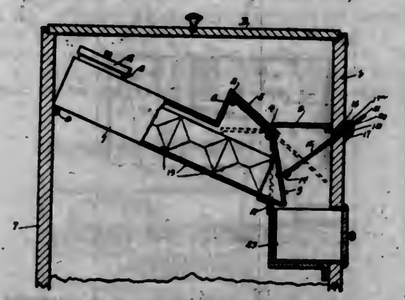
1,627,421. CONFECTION MOLD. JOSEPH WATKINS, Marysville, Pa. Filed Oct. 9, 1926. Serial No. 140,565. 1 Claim. (Cl. 53—6.)

A baking pan having a bracket connected to a part of its exterior wall, an upright removably seated in the said bracket, a substantially egg-shaped member adapted to be pressed into the material in the pan to form a recess in the top of the baked product, and a rod connected with the said member and hingedly connected with the upright.



1,627,422. ROTARY RAKE. WILLIAM LINCOLN WIKE, Riverside, Calif., assignor of fifty-one per cent to Herbert Richmond, Riverside, Calif. Filed Apr. 13, 1926. Serial No. 22,835. 2 Claims. (Cl. 97—41.)

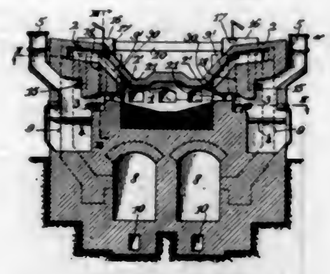
1. In a lawn rake, the combination of a frame mounted so as to be propelled over the ground, a transverse shaft rotatably mounted in the frame, means for driving said shaft, a series of radially projecting teeth supported by said shaft and adapted to penetrate the ground in the lower part of their orbit, the front portion of each tooth



being in the form of a sharpened blade with a lateral trend, and a deflector secured to the frame and cooperating with the teeth to cast the detached material toward one side.

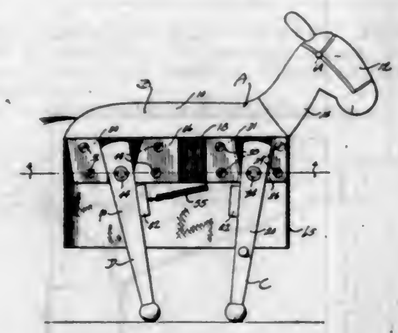
1,627,423. GUARD FOR GUYS AND THE LIKE. FRED N. BIERCE, Cincinnati, Ohio. Filed Oct. 9, 1924. Serial No. 742,625. 6 Claims. (Cl. 189—82.)

1. A guy wire protector comprising a spiral member and means for securing said member to the guy.



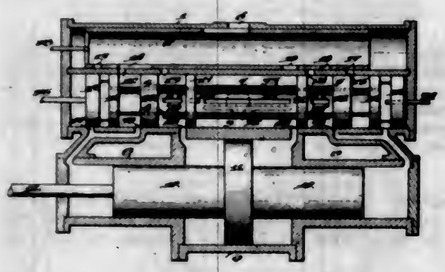
1,627,424. BRICK-ICE-CREAM CONTAINER. CHRISTIAN BINDER, Pittsburgh, Pa. Filed July 25, 1923. Serial No. 653,811. 1 Claim. (Cl. 211—8.)

In combination with a cabinet having an opening formed in a wall thereof, a casing mounted within the cabinet, a drawer slidably mounted in the lower portion of the casing, a container supported at an inclination to the cabinet and having its lower end portion positioned within the casing above the drawer, a door normally



closing the lower end portion of the container, an angularly shaped arm operable on one of several objects within the container inwardly of the door when said door is open to permit discharge of the lowermost of one of said objects for holding the other objects against downward movement during discharge of said lowermost one of the objects, a locking member pivotally connected to the door and having a portion projecting through the opening, said locking member including an angular projection formed in its body, and a member carried by the wall of the cabinet defining the opening and provided with a longitudinally extending channel for the accommodation of the angular projection, said member having a vertical slot formed therein for the passage of said angular projection to permit opening of said door, substantially as described.

1,627,425. OPEN-HEARTH FURNACE. EDWIN BOSSHARDT, Berlin-Tempelhof, Germany. Filed June 30, 1924, Serial No. 723,334, and in Germany Oct. 25, 1923. 6 Claims. (Cl. 110—31.)

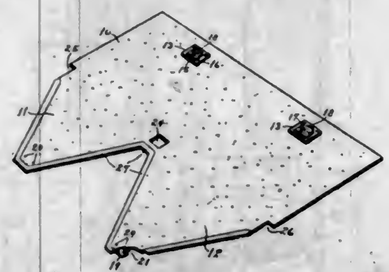


5. An open-hearth furnace, comprising two gas producers, a melting chamber, a gas passage connecting the melting chamber and one of the producers at the white heat zone of the latter, a mixing chamber forming part of said passage, and means to supply fuel gas from the other producer to said mixing chamber.

1,627,426. TOY HORSE OR NOVELTY. ARTHUR M. BRIGGS, Andrade, Calif. Filed Aug. 18, 1924. Serial No. 732,863. 4 Claims. (Cl. 272—53.)

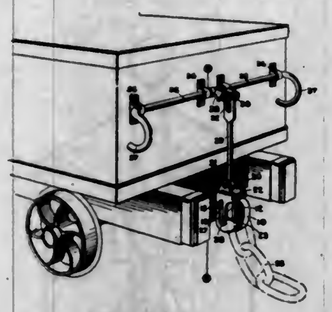
1. In a toy horse the combination of an elongated supporting body, front and rear supporting leg constructions for the body each comprising a pair of rigidly connected legs divergent from the upper ends thereof towards the lower ends thereof, the upper ends thereof being in spaced relation to receive therebetween the lower portion of the body so that the upper ends of said legs of each of the leg constructions are disposed at opposite sides of the lower portion of the body, pins extending through the upper ends of the legs of each of the leg constructions and through the said body for pivotally mounting the leg constructions on the body, and stop blocks at opposite sides of the body both forwardly and rearwardly of the pivot connections of each of the legs of each leg construction for limiting the forward and rearward amplitude of movements of the said leg constructions.

1,627,427. GAS OR VAPOR ENGINE, PARTICULARLY STEAM ENGINE. CHARLES LEE COOK, Louisville, Ky. Filed Oct. 20, 1920. Serial No. 418,293. 7 Claims. (Cl. 121—105.)



1. A gas or vapor engine comprising a compound cylinder, a compound reciprocating piston provided with piston heads of different diameters, and valve control mechanism for directing the gas or vapor either wholly into the larger diameter portions of the cylinder or wholly into the smaller diameter portions of the cylinder, said mechanism comprising a reciprocable valve adapted to be set in different positions and a reciprocating valve provided with a rotary control sleeve adapted to be set in different positions.

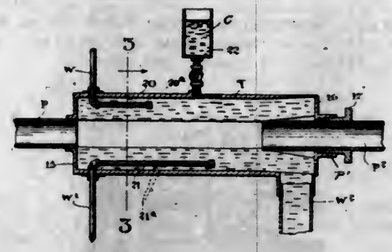
1,627,428. METHOD AND APPARATUS FOR FORMING GLASSWARE. EDWARD DANNER, Toledo, Ohio. Filed Aug. 23, 1920. Serial No. 405,822. 39 Claims. (Cl. 49—3.)



1. The method of forming sheet glass, consisting in causing molten glass to flow along a directing means and around opposite sides of a tip portion disposed at the discharge end of the means, the glass merging at the outer edge of the tip portion and flowing therefrom in single sheet form.

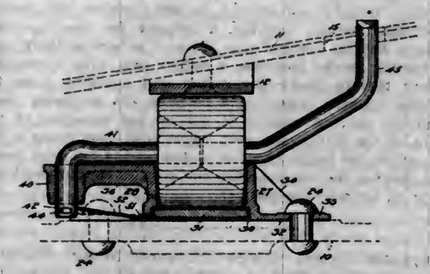
1,627,429. INTERLOCKING MULTIPLE SHINGLE. ISADORE DAVIS, Des Moines, Iowa, assignor to Interlocking Shingle Co., Des Moines, Iowa, a Corporation of Iowa. Filed May 15, 1925. Serial No. 30,638. 4 Claims. (Cl. 108—7.)

1. A shingle formed of flexible material and comprising a body and a projection on its lower margin, said body being formed with an aperture adjacent the base of said projection, a keeper clip fixed to the upper surface of said body, and a clip fixed to the lower surface of said projection and adapted to engage and interlock with the keeper clip of a subjacent shingle, which keeper clip is exposed through the body aperture of an intermediate shingle.



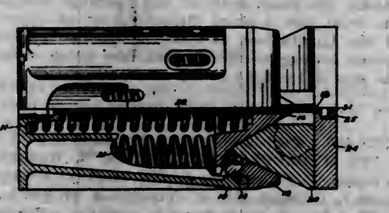
1,627,430. COUPLING FOR VEHICLES. THOMAS FRANKS, Walsall, England. Filed Aug. 24, 1926, Serial No. 131,277, and in Great Britain June 11, 1926. 3 Claims. (Cl. 213—178.)

1. In a vehicle coupling, the combination of a hook for receiving a coupling member, a locking member mounted on the hook, said locking member being movable into a lowered position in which the mouth of the hook is barred and into a raised position in which the mouth of the hook is left open, an extension on the locking member serving to raise the coupling member clear of the hook as the locking member moves to the raised position, a control disposed for operation from the side of the vehicle, and means for moving the locking member to the raised position and retaining it in the said position when a single movement is given to the control, said extension serving to displace the locking member from the raised position when a coupling member is placed in the mouth of the hook.



1,627,431. PROCESS OF AND APPARATUS FOR CONDENSING, TREATING, AND WASHING HYDROCARBON VAPORS. CLAUDE LESLIE FREELAND, Bristow, Okla. Filed Sept. 9, 1921. Serial No. 499,464. 5 Claims. (Cl. 196—140.)

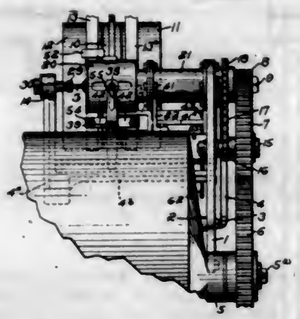
2. An apparatus of the character specified comprising a tube, means for spraying water into the tube so as to impart to the water a whirling movement spirally of the axis of the tube, means at one end of the tube for introducing hydro-carbon vapors into a hollow passage-



way formed by the whirling water, and means at the opposite end of the tube and disposed axially thereof for collecting the condensed vapors.

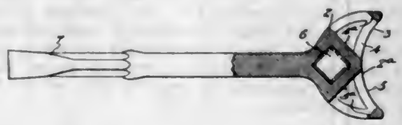
1,627,432. SIDE BEARING. ERNEST G. GOODWIN, New York, N. Y., assignor, by mesne assignments, to Goodwin Side Bearing Co., Inc., Wilmington, Del., a Corporation of Delaware. Filed Feb. 18, 1924. Serial No. 693,712. 7 Claims. (Cl. 308—226.)

1. A roller side bearing for cars of the type employing a roller positioned between the body bolster and the truck bolster, characterized by the provision of a rod passing thru the roller to position it, said rod having two parallel ends, one of which pivots the rod to one of said bolsters and the other of which is guided by the bolster, said ends lying on opposite sides of the roller and at right angles to its axis.



1,627,433. DRAFT GEAR AND METHOD OF INSTALLING SAME. ERNEST G. GOODWIN, Pelham, N. Y., assignor to Standard Coupler Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 3, 1924. Serial No. 741,408. 7 Claims. (Cl. 213—26.)

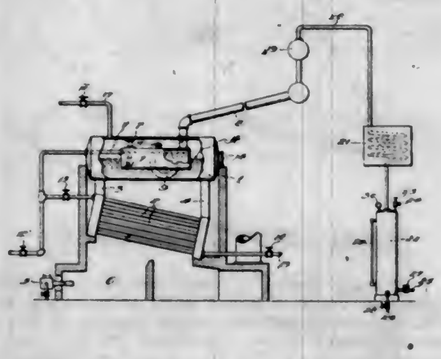
1. In a draft gear of the type having a barrel, a wedge movable relatively to the barrel, a spring between the wedge and barrel, and means adapted to engage said



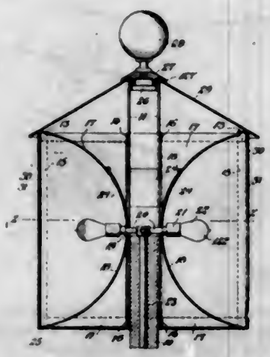
wedge to compress said spring, means held in contact with said wedge by said spring and free to fall away when said wedge moves inwardly into the barrel to compress said spring.

1,627,434. REVERSING MECHANISM. FRITZ W. A. Henrici, Boston, Mass. Filed Mar. 23, 1923. Serial No. 627,158. 11 Claims. (Cl. 64—4.)

1. Reversing means comprising a driven member, a casing therefor, a driving member above the casing, operating means therefor, a shipper for the operating means having opposed cam faces, a reversing shaft with reversing means including a hollow cam with a traveling timer therein above the casing and operated from the driven member connections between the reversing shaft and the driving member to reverse the direction of motion of the latter, and stop mechanism comprising a rod on which the shipper moves, a stud on the rod, and means for moving the rod to cause the stud to contact with the cam to actuate the shipper.



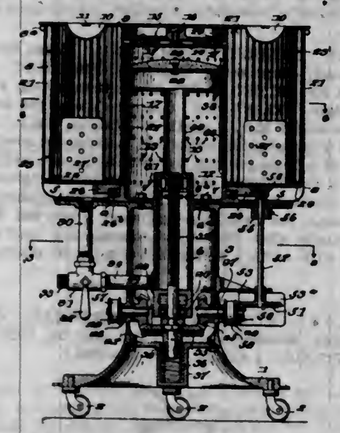
1,627,435. TOOL. JAMES AUGUSTINE HOOBEN, Taunton, Mass. Filed Sept. 2, 1924. Serial No. 735,441. 1 Claim. (Cl. 81—90.)



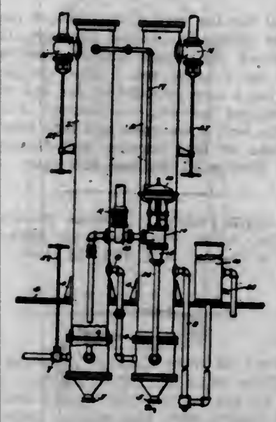
A tool of the character described comprising a handle provided at one end with a head having a curved front face provided with two rectangular openings, the inner and outer walls of the openings being inclined to and in the direction of the longitudinal axis of the handle, the inner walls of said openings terminating at the front face a short distance apart on opposite sides of the longitudinal axis of the handle and forming a central bearing surface for the face which extends from one side of the head to the other.

1,627,436. PROCESS AND APPARATUS FOR TREATING HYDROCARBON. WILLIAM R. HOWARD, Washington, D. C., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 9, 1922. Serial No. 567,034. Renewed Mar. 3, 1927. 9 Claims. (Cl. 196—48.)

3. A process of converting oils, consisting in maintaining a bulk supply in a still and heating same to a vaporizing temperature, causing the vapors to pass through a body of oil maintained in a closed shell within the still, withdrawing the uncondensed vapors from the closed shell, subjecting them to a reflux condensing action, returning the reflux condensate to the closed shell for retreatment and maintaining a superatmospheric pressure on the oil and vapors under treatment.



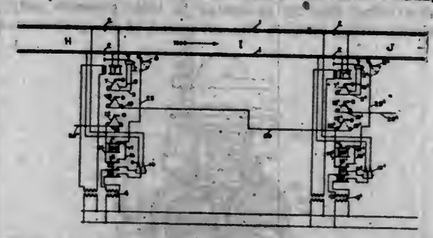
1,627,437. SIGN. ALFRED HORATIO HUMPHREY, Salem, N. Y., assignor to Grace G. Humphrey, Salem, N. Y. Filed Oct. 22, 1924. Serial No. 745,202. 8 Claims. (Cl. 40—132.)



1. In a sign structure, an elongated vertical frame and a side frame connected thereto, a sign at the front of the side frame, said elongated frame affording accommodation for the upper end of a supporting post and extending materially above the post end, reflector means disposed at the same side of the elongated frame as said side frame and connected therewith and presenting an opening at the back thereof and a closure therefor, and lighting means positioned adjacent said opening, said elongated frame affording access therethrough and through the opening in the reflector to said lighting means.

1,627,438. WASHING AND WRINGING MACHINE. JOB HUTCHINSON, Saugerties, N. Y. Filed Mar. 1, 1924. Serial No. 696,318. 19 Claims. (Cl. 68—37.)

1. A washing machine comprising an annular chamber having inner and outer walls for containing the clothes to be washed, means for causing circumferential movement of the clothes relative to the walls of said chamber, and means for simultaneously discharging radial jets of water horizontally into said chamber from the inner walls thereof.

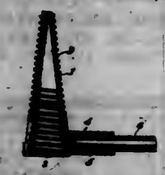


1,627,439. CARBONATING APPARATUS AND METHOD. HERBERT N. KILBY, Cleveland, Ohio. Filed Aug. 18, 1924. Serial No. 732,644. 16 Claims. (Cl. 127—12.)

1. In carbonating apparatus, separate communicating vessels, means for introducing alkaline sugar juice under a substantially constant pressure into said vessels, means for introducing a partially absorptive gas under a pressure substantially equal to that of said juice into said vessels, said gas having a variable carbonic acid content, and means operable automatically by variation in the pressure of the unabsorbed gas content remaining in one of said vessels to vary the volumetric inflow of the carbonic acid gas into the other of said vessels.

1,627,440. RAILWAY SIGNALING SYSTEM. EDWIN C. LARRY, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Dec. 14, 1925. Serial No. 75,337. 12 Claims. (Cl. 246—39.)

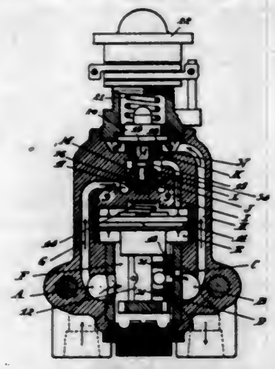
1. In a block signaling system, the combination with a track divided into blocks by insulating joints each block including a track relay and a source of energy connected to form the usual closed track circuit, a semaphore signal at the entrance to each block, and means effective if a particular semaphore signal does not assume the danger position upon the passage of a train by such signal for causing the next semaphore signal in the rear to assume its danger position.



1,627,441. WRENCH. WILLIAM S. LAWYER, Woodland, Wash. Filed Aug. 11, 1926. Serial No. 128,606. 1 Claim. (Cl. 81—60.)

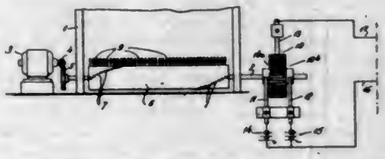
A ratchet wrench comprising a body portion provided with a projection upon its outer side, a bolt member disposed axially of the longitudinal center thereof, ratchet members disposed in end to end relation upon the opposed ends of the body portion and receiving the extremities of the bolt member within enlarged bores therein, springs carried within the bores encircling the adjacent portions of the bolt to retain the ratchet portions of the ratchet members in constant mesh with the abutting ends of the body portion, projections carried by the ratchet members, a sleeve member slidably mounted upon the body portion provided with an elongated slot receiving the projection carried by the body portion, said sleeve is further provided with cut-out portions within the opposed peripheral edges thereof adapted for alternately receiving the projections carried by the ratchet members and guided during the association thereof by the presence of the projection and slot connection between said sleeve and body portion, and a spring pressed ball carried by the body portion adapted for reception within openings in said sleeve to preserve interfitting engagement of the cut-out portions and projections.

1,627,442. BATTERY CONNECTER. JOSEPH O. LUTHY, San Antonio, Tex. Filed June 7, 1924. Serial No. 718,593. 1 Claim. (Cl. 73—259.)



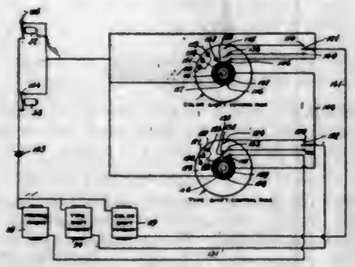
A terminal for storage battery connecters comprising a conical shell having tapered inner walls and helical projections on the tapered interior and exterior walls.

1,627,443. CHARGING VALVE. GEORGE E. MAIER, Los Angeles, Calif., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 18, 1924. Serial No. 720,772. 7 Claims. (Cl. 50—11.)



7. In a charging valve embodying a casing having inlet and outlet chambers, and a valve between said chambers,

a piston chamber in said casing, a piston in said piston chamber connected to said valve, the under side of said piston being directly presented to inlet pressure only, a communication between the upper end of the piston cham-



ber and the outlet chamber, a choked auxiliary passage leading from the inlet chamber to the upper end of the piston chamber, a regulating valve arranged in said first named communication, and a spring pressed regulating means abutting said regulating valve.

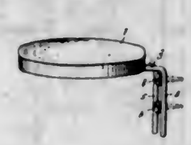
1,627,444. METHOD OF TELEGRAPHY. FOWLER McCORMICK, Chicago, Ill. Filed Dec. 10, 1925. Serial No. 74,454. 11 Claims. (Cl. 178—88.)

1. A signaling system comprising a transmitting station and a receiving station, means at said receiving station for printing received messages in plain language, said means being controllable from said transmitting station, and a color changing mechanism at said receiving station whereby any letter, word, phrase or sentence forming part of a transmitted message can be printed in a different color from that of the remainder of the message, said color changing mechanism being also controllable from said transmitting station, the arrangement being such that any desired portion or portions of a message can be transcribed in a different color from that of the remainder of the message at the will of the transmitting operator.

1,627,445. PRINTING TELEGRAPHY. FOWLER McCORMICK, Chicago, Ill. Filed July 16, 1926. Serial No. 122,806. 2 Claims. (Cl. 178—40.)

2. In telegraphy, the method of clearly setting off the sentences of received messages which consists in inscribing alternate sentences with one style of type and inscribing the other sentences with a distinctly different style of type.

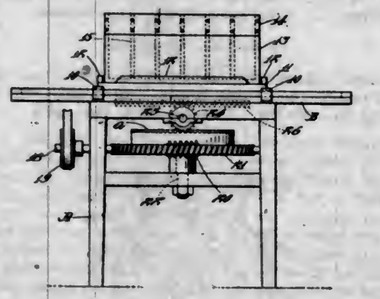
1,627,446. DETERSIVE COMPOUND. JAMES FREDERICK MOSELEY, Manchester, England. Filed Sept. 1, 1921, Serial No. 497,667, and in Great Britain Oct. 16, 1919. 3 Claims. (Cl. 87—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. As a composition of matter, a detergent product consisting of a homogeneous, smooth, aqueous emulsion containing a saponaceous substance, water, an organic grease solvent undissolved by the water, and an aluminium silicate having the hydratable colloidal properties of bentonite, namely that by simply stirring the said colloidal silicate with water a homogeneous colloidal solution is obtained.

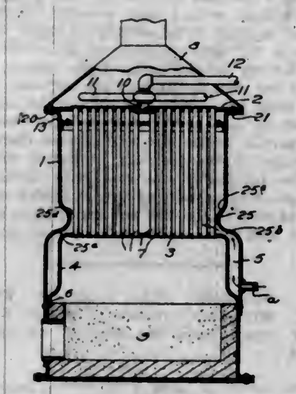
1,627,447. COMBINATION TERMINAL. JOHN J MUCHER, Brooklyn, N. Y. Filed July 23, 1924. Serial No. 727,812. 1 Claim. (Cl. 73—259.)

A terminal for the carbon electrode of dry cells comprising a cap having two spaced and oppositely arranged elongated struck up tongues and a struck up eyelet at one end of the tongues and a wire clamping terminal member having a base provided at one end with an opening and arranged between the tongues of the cap, the tongues being bent down upon and into firm engagement with the base of said member and the eyelet passed through the opening of said base and upset.



1,627,448. BIRD PERCH. CHARLES WILLIAM MUELLER, Jersey City, N. J. Filed Sept. 23, 1924. Serial No. 739,398. 2 Claims. (Cl. 119—26.)

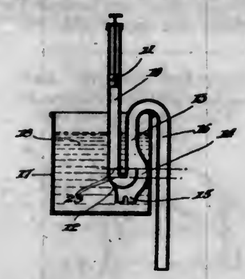
1. A perch, comprising a platform, an angle bracket consisting of a double run of parallel integral members connected at one end and constituting a horizontal and a vertical depending bifurcated portion integral with one end of the horizontal portion, said horizontal portion secured at its end to the under face of the platform devices securing each run of the wire to the platform at a point removed from the free end of said horizontal portion, and said vertical depending bifurcated portion adapted to engage a pair of headed devices secured to a wall, said platform adapted at one end to fit against the wall.



1,627,449. BOXING MACHINE. WILLIAM NOBLE, Northampton, Mass., assignor, by mesne assignments, to Pro-phy-lac-tic Brush Company, Northampton, Mass., a Corporation of Massachusetts. Filed May 18, 1923. Serial No. 639,989. 9 Claims. (Cl. 226—2.)

1. A machine for delivering elongated articles and arranging them in parallel relation comprising, in combination, means for delivering said articles in the direction of their length, a box arranged to receive said articles and having partitions disposed substantially parallel to

the direction of delivery thereof, and means for moving said box in a direction transverse to said direction of delivery as said articles are delivered thereto.

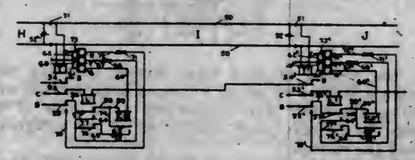


1,627,450. STEAM GENERATOR. JOHN FRANCIS OTIS, Oswego, N. Y. Filed June 28, 1920, Serial No. 392,402. Renewed Feb. 21, 1927. 2 Claims. (Cl. 122—126.)

1. A steam generator having a water leg provided with the feed water inlet, and embodying upper and lower tube sheets, fire tubes joining said sheets, and an enclosing single-section shell joining said tube sheets, said shell formed with an intermediate inward annular bulge closely approaching the tubes without contacting the same and extending inwardly over the water leg and over and approaching the bottom flue sheet to cooperate therewith forming the water leg with an annular contracted top mouth opening inwardly above the bottom sheet to maintain a flow of water from the leg inwardly on the flue sheet, the upper side of said bulge arranged to direct water flowing down above the bulge inwardly among the tubes, said bulge forming the shell with an intermediate longitudinally expansible portion.

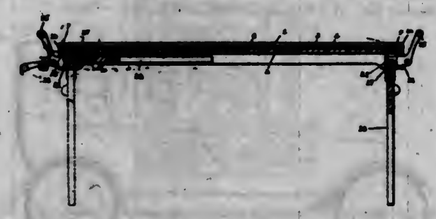
1,627,451. SIPHON. JOHN HAMMOND PALMER, Rossland, British Columbia, Canada. Filed Aug. 16, 1926. Serial No. 129,513. 1 Claim. (Cl. 137—20.)

A device of the character described and in combination, a single length of tube bent twice on itself to form the long limb and the short limb of a siphon, a third limb integral with the short limb, a bulbous enlargement formed on the short limb, a partitioning element integral with the third limb and extending into the enlargement and conforming to the contour thereof to divide the en-



largement into two passageways communicating directly with the short limb and the third limb respectively, and a port in the enlargement.

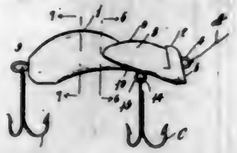
1,627,452. PROCESS FOR MAKING FATTY ACIDS FROM HYDROCARBONS. WALTHER CORNELIUS HARRY PATAKY, The Hague, and FREDERIK JAN NELLENSTEIJN, Delft, Netherlands. Filed Aug. 24, 1925, Serial No. 52,226, and in Germany Aug. 27, 1924. 31 Claims. (Cl. 260—116.)



1. The process of making fatty acids from hydrocarbons, said process consisting in acting on the hydrocarbons in the liquid phase with an oxidizing agent and distilling off the fatty acids immediately upon their production.

1,627,453. CONTROL MEANS FOR LIGHT SIGNALS. JAMES A. PEABODY, Evanston, Ill., assignor to General Railway Signal Company. Original application filed Jan. 24, 1924, Serial No. 688,238. Divided and this application filed Oct. 19, 1925. Serial No. 63,376. 18 Claims. (Cl. 246—41.)

16. A multiple aspect light signal for railroads having lamps controlled according to traffic conditions ahead, and automatic means independent of traffic conditions, for lighting a second lamp after a first lamp fails and traffic conditions are such that the first lamp should be lighted.



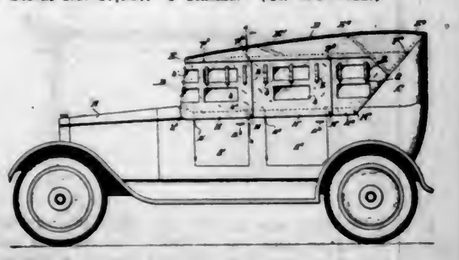
1,627,454. COMBINED TRAY AND TABLE. LILIAN A. PHALON, Rochester, N. Y. Filed Mar. 29, 1926. Serial No. 98,072. 4 Claims. (Cl. 45—11.)

2. In a combined serving tray and table, the combination of a tray or table top, a handle for carrying said tray or table top pivoted at each end thereof, a supporting leg pivoted at each end of said tray or table top, a locking member provided on each of said legs and a locking member provided on each of said handles, said

locking members being adapted to cooperate with each other to hold said legs in either a vertical or horizontal position on said tray when said handles are placed in a position for carrying said tray or table top.

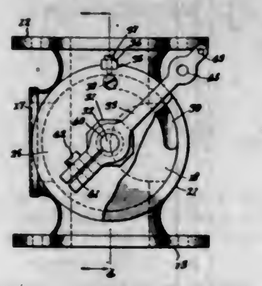
1,627,455. ARTIFICIAL FISHING BAIT. OSCAR W. PETERSON, Cadillac, Mich. Filed Aug. 26, 1926. Serial No. 131,694. 2 Claims. (Cl. 43—46.)

1. An artificial fishing bait, comprising a body portion, a head on said body portion, a portion at the rear of said head having its sides inclined laterally and rearwardly forming planes at the two sides of the body portion, the upper and under sides of said planes tapered on curved planes rearwardly, the rear of the head formed V-shaped with downwardly and rearwardly inclined surfaces, means to secure a fishing line to the head, and means to attach a hook to the body portion.



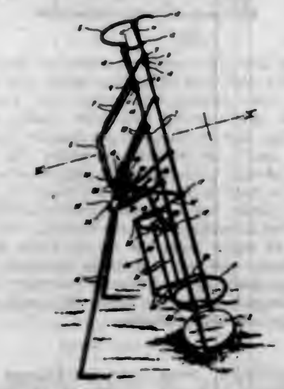
1,627,456. METHOD OF SAND-BLAST RELIEF CARVING. GEORGE RANNIE PHILIP, Northfield, Vt., assignor to Cross Bros. Company, Northfield, Vt., a Corporation of Vermont. Filed Sept. 1, 1926, Serial No. 133,074. Renewed Feb. 24, 1927. 9 Claims. (Cl. 41—39.)

4. The method of sand blast carving including sand blasting a sinkage to secure a desired configuration, sand blasting a vertical wall around the outer edge of the sinkage, and finally sand blasting all of the background around the sinkage.



5. A sand blast carving having a background, and a design formed thereupon in relief and having the face thereof formed with a sinkage, the side walls of said design being substantially perpendicular to the background to produce sharp edge around the design, said side walls extending to the base of a depression cut into the background and following the contour of said relief-design.

1,627,457. AUTOMOBILE CURTAIN. WILLIAM H. PRITCHETT, San Diego, Calif. Filed Aug. 3, 1925. Serial No. 47,947. 3 Claims. (Cl. 296—141.)

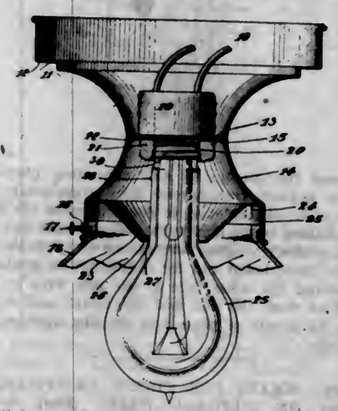


1. An automobile curtain arrangement comprising a side curtain suspended from the upper portion of the vehicle and adapted to swing outwards at the bottom, a rod secured along the lower edge of said curtain, and a snap fastener connecting a lower corner of said curtain to the frame of the car adjacent the opening edge of a swinging door, and adapted to be automatically disengaged when the door strikes said rod incident to the operation of opening the door, substantially as described.

1,627,458. GASOLINE REGULATOR. WILLIAM HENRY PRITCHETT, San Diego, Calif. Filed May 17, 1926. Serial No. 109,732. 1 Claim. (Cl. 251—91.)

A fuel regulator for intake pipes of internal combustion engines, comprising a valve casing in the intake pipe having a through port and a lateral port opening into the through port, a core mounted to turn in the casing and having corresponding through and lateral ports, means for turning the core to adjust the ports thereof relatively to the ports of the casing, a disk on one end of the core overlapping the adjacent end of the casing to close the casing and retain the core therein, said end of the core having a curved slot therein facing the outer portion of the disk and covered thereby, a stop screw mounted in the disk and projecting into the slot to limit the turning of the core, said casing and disk having registering sockets at the periphery of the disk, and a key secured to the disk and engaging in said sockets to hold the disk from turning relatively to the casing.

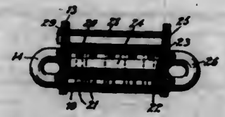
1,627,459. HOLDER AND CARRIER FOR GOLF CLUBS. WILLIAM C. RANNEY, Elbridge, N. Y. Filed Feb. 15, 1926. Serial No. 88,479. 10 Claims. (Cl. 150—1.5.)



1. In a holder and carrier for golf clubs, the combination of a frame in which the clubs may be set, movable rigid confining arms for holding the clubs in the frame, manually operated means by which the arms may be set to open or to closing position, as desired.

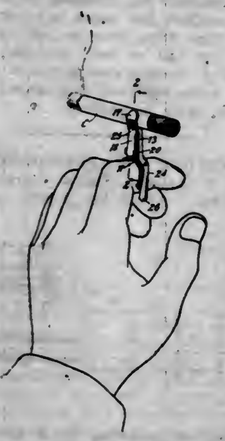
1,627,460. CUFF LINK. WILLIAM ELLSWORTH ROBERTS, Kenosha, Wis. Filed July 21, 1926. Serial No. 124,003. 2 Claims. (Cl. 24—102.)

1. A cuff link of the character described comprising separable parts each including a head, a shank extending from the head, a flange formed on the shank and cooperating with the head for receiving a cuff, a link for each part and being provided with an enlarged portion secured between said head and shank, a restricted portion formed on each link adjacent its enlarged end and being bent away from the head to accommodate a fold of the cuff, means for securing the links in pivoted association and additional means for detachably clamping said parts together.



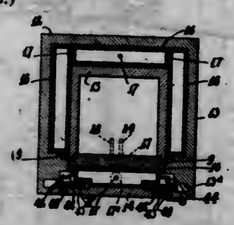
1,627,461. LIGHTING FIXTURE. GROSVENOR P. ROBINSON, Summit, and WILLIAM T. BLACKWELL, Westfield, N. J.; said Robinson, assignor, by mesne assignments, to said William T. Blackwell. Filed June 7, 1924. Serial No. 718,449. 1 Claim. (Cl. 240—78.)

In a lighting fixture comprising a canopy having an inwardly turned annular flange at its bottom, a shell having an inwardly turned annular flange at its top in contact with and corresponding with the flange on the canopy, a lamp receptacle seated upon the flange on the canopy and having a threaded metallic member extending below the flange on the top of said shell, a ring of non-conducting material screwed upon said threaded member, a lamp stop secured within the shell below said receptacle at a predetermined distance therefrom and provided with an opening in alignment with the lamp receptacle, an incandescent lamp the neck of which passes through such opening and into connection with said receptacle, said lamp stop permitting only of such connection where the neck of the lamp bulb is of a predetermined length.



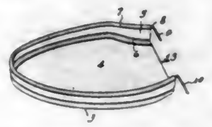
1,627,462. COMBINATION LOCK. FRANK DANIEL ROHMER, Lackawanna, N. Y. Filed Jan. 6, 1926. Serial No. 79,622. 1 Claim. (Cl. 70—19.)

In a combination lock, a spindle section including a spindle having a longitudinally extending groove therein, a key section including a bolt received in the groove and formed with a notched edge projecting laterally beyond the groove, discs rotatable on the spindle, including inwardly presented flanges accommodated in the notches, and having cutouts adapted to register with the projecting edge of the bolt to permit retraction of the latter, abutment plates at the ends of the bolt and spindle, and a bracing member carried by one abutment plate and



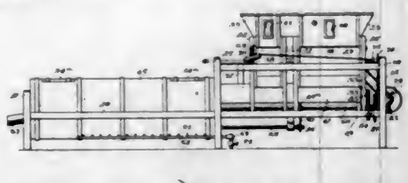
having its end received in a slot in the other abutment plate, said brace being arcuate in cross section and relatively wide to permit the attachment of an escutcheon plate.

1,627,463. CIGARETTE HOLDER. MICHAEL J. RUSSAK, New York, N. Y. Filed Nov. 28, 1925. Serial No. 71,984. 1 Claim. (Cl. 131—51.)



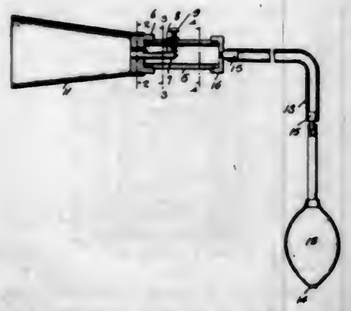
A cigarette holder comprising a substantially U-shaped spring clip for supporting the holder on a finger of a hand, a member having a jaw integral with the clip, a member having a jaw pivotally connected to said first member, means acting on the pivoted member constantly urging the jaw thereon toward the jaw on the other member, and lever means carried by the clip for effecting the movement of the pivoted member to move its jaw away from the other jaw.

1,627,464. SAFE. MATYAS SALAMON, Brooklyn, N. Y. Filed Apr. 13, 1926. Serial No. 101,610. 6 Claims. (Cl. 109—8.)



1. The combination, in a safe having its walls formed to present a number of air tight chambers, of a door, a main chamber therein, auxiliary side air boxes having flexible pipes communicating with said main chamber, and laterally slidable in groves in the door proper, and manual means to project said auxiliary air boxes outwards, or inward to present a larger target for burglars attempting to drill the safe.

1,627,465. REMOVABLE HALFSOLE FOR SHOES. ANDREW S. SIMKO, Passaic, N. J. Filed Apr. 22, 1926. Serial No. 103,940. 1 Claim. (Cl. 36—15.)

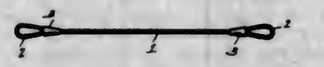


The combination with a shoe having openings in the sole near the instep, of a removable half sole adapted to fit over the front part of the sole of said shoe and extend to a position substantially over said openings, said removable half sole including a flexible member extending from the edge over the edges of the sole of the shoe, a wire tension member mounted in one edge for the full length of said flexible member and extending through said openings for clamping the edge of the flexible member against the upper part of said sole, the ends of said wire being bent to rest against said sole and beneath the end of said half-sole, and fastening means extending through said half sole near the instep and acting to clamp said half sole against said bent ends for locking the same in position.

1,627,466. METHOD OF PREPARING FOOD SUBSTANCES. WILLIAM A. SMITH, Clarkson, N. Y. Filed Jan. 15, 1925. Serial No. 2,489. 3 Claims. (Cl. 99—11.)

1. A method of preparing apple sauce consisting in cutting up the apples, mixing the same with sugar in proper relative proportions to coat the apple pieces with a sugar film, and moving the compound in an unbeaten state through a flow of free steam to moisten and cook the same.

1,627,467. PNEUMATIC HORN. GUY V. SPARLIN, Tampa, Fla. Filed Oct. 24, 1925. Serial No. 64,609. 1 Claim. (Cl. 116—139.)



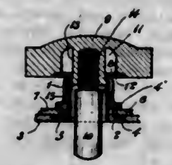
A horn of the character described comprising a sound amplifier having a constricted end, a cap body comprising a cylindrical member having external threads throughout substantially half its length and designed to connect the body to the constricted end of the amplifier, said cap having a pair of concentrically arranged longitudinally extending aligned bores, one of greater diameter than the other and each provided with screw threads, throughout its length, the bore of smaller diameter being in that end of the body having the external threads thereon, said bore of smaller diameter opening into the aligned other bore, a reed tube having one end threaded into said small bore, a reed carried by said tube and having one end fixed thereto, the other end being directed toward the forward end of the tube, an elongated tubular body encasing the projecting portion of said reed and having one end journaled into the bore of greater diameter, a cap member threaded upon the other end of said tubular body, and means for forcing air through said cap member, substantially for the purpose set forth.

1,627,468. PICTURE. CHARLES MONROE STITT, Los Angeles, Calif., assignor of one-third to Alfred McDonald, Los Angeles, Calif., and one-third to William J. Reiter, Santa Monica, Calif. Filed June 29, 1925. Serial No. 40,228. 2 Claims. (Cl. 41—21.)

1. Means for preserving and exhibiting photographic prints on flexible, transparent films, comprising a sheet of clear glass dimensioned to conform with the film and for disposition in contact with and covering one face of the film, a sheet of glass having one of its faces frosted, similarly dimensioned and for disposition in contact with and covering the other face of the film with its frosted face spaced from the film and outermost, and means for holding the sheets of glass and the film against relative movements.

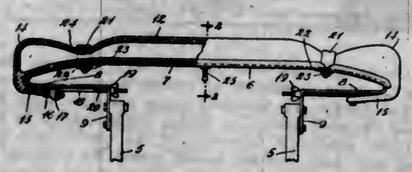
1,627,469. MEANS FOR FIXING ARTIFICIAL HAIR DRESS ON NATURAL HAIR. EMIL SYPTROTH, Schwab-Gmund, Germany, assignor to Gustav Sattler, New York, N. Y. Filed Dec. 21, 1925, Serial No. 76,874, and in Germany Oct. 10, 1925. 5 Claims. (Cl. 132—54.)

1. Means for securing an artificial hair dress on natural hair comprising a spiral fastening member having convolutions of slight pitch, adjacent convolutions being adapted to clamp natural hair therebetween, said fastening member being adapted to support the artificial hair dress.



1,627,470. SAFETY HOOK. SAMUEL K. TIBBENS, Harrisburg, Pa., assignor of one-half to William F. Martin, Harrisburg, Pa. Filed Dec. 30, 1926. Serial No. 157,997. 3 Claims. (Cl. 24—232.)

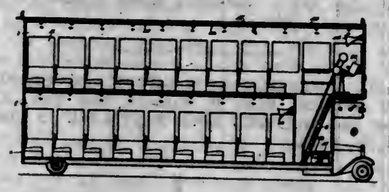
1. A device of the class described comprising a shank having a return bend at one end providing a hook whose bill extends toward the other end of the shank, said shank having a shoulder opposite said bill facing laterally away from the latter, a second shank pivoted between its ends to said other end of the first named shank and normally disposed substantially in alinement therewith, said second shank having an inner end which then abuts said shoulder, and limits the movement of said inner end toward said bill, and a guard finger integral with the inner end portion of the second shank and normally



abutting the edge of the aforesaid bill disposed toward the two shanks, the outer end of said second shank having means facilitating its connection with an extraenous member.

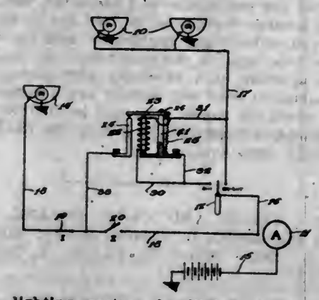
1,627,471. DUSTPROOF GUARD. ARTHUR W. WADSWORTH, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Mar. 12, 1925. Serial No. 14,947. 7 Claims. (Cl. 58—90.)

5. In a dust-proof guard, a crown having a boss, a tubular flanged guard in which said boss is slidably mounted, and means for preventing detachment of said crown from said guard.



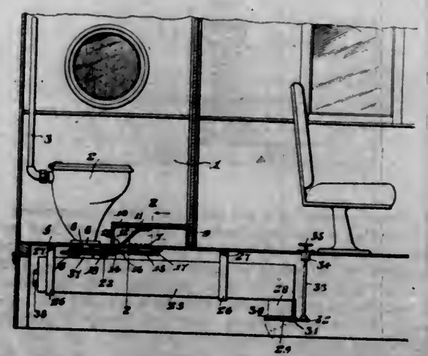
1,627,472. PNEUMATIC BUMPER. EDWARD P. WATSON, Floral Park, N. Y. Filed Nov. 26, 1926. Serial No. 150,782. 10 Claims. (Cl. 293—55.)

1. The combination with a spring bumper, of an inflatable body mounted upon the outer face of said bumper, said body being of greater width and length than the front plate of said bumper, means for retaining said body against displacement from said bumper, said means including keepers, and adjustable members coupled with the ends of said body.



1,627,473. PASSENGER AND MOVING-PICTURE ADVERTISING BUS. ABRAHAM ZILBERSHER, New York, N. Y. Filed June 2, 1926. Serial No. 113,196. 1 Claim. (Cl. 296—21.)

In a bus a body provided with a roof having an opening therein, a moving picture screen hingedly connected to the body at the rear end, a bracing link pivotally connected with the screen, said bracing link having at its free end a hook, a bracket secured to said roof, said bracket being bifurcated, a pin carried by the bracket for receiving said hook, a clamping member for squeezing the parts of the bracket together for clamping said



hook and thereby prevent accidental disengagement thereof, and a projecting machine carried by said body adapted to project pictures through said opening onto said screen.

1,627,474. LIGHT-CONTROL SYSTEM. EARL W. ARCHER, Cambridge, Ohio. Filed Mar. 1, 1926. Serial No. 91,630. 5 Claims. (Cl. 171—97.)

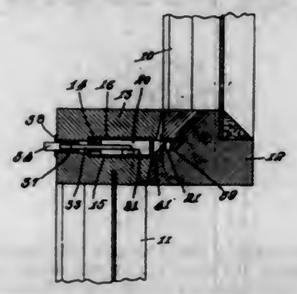
1. In a lighting system, headlights, a primary circuit for said headlights, a secondary circuit for said headlights including a relay coil, a spotlight in a shunt circuit connected with said primary circuit and controlled by said relay coil, and a switch movable to one position for closing the primary circuit and to another position for closing said secondary circuit.

1,627,475. LAVATORY. GARLAND I. BARBOUR, Akron, Ohio. Filed Dec. 2, 1926. Serial No. 152,207. 1 Claim. (Cl. 4—8.)

A lavatory for a travelling vehicle comprising an excrement storage tank adapted to be suspended from the bottom of the vehicle and having a normally closed inlet and a normally closed discharge opening, a shiftable, spring controlled apertured slide valve arranged over said inlet for normally closing it, a vertically movable,

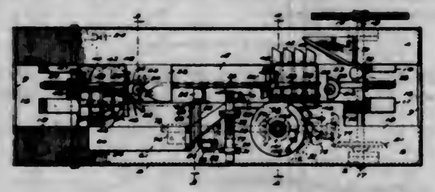
pressure operated, spring controlled platform connected with said valve for shifting it to open said inlet, when the platform is depressed, for the passage of excrement to the tank, and a controlling spring common to said slide valve and platform.

1,627,476. STATIONARY-WASHTUB COVER-HOLDING DEVICE. JOHN H. BARRETT, New York, N. Y. Filed Dec. 18, 1926. Serial No. 155,701. 2 Claims. (Cl. 24—230.5.)



1. A device for holding a flanged washtub cover in open elevated position, comprising a flexible element anchored at one end to the wall above the washtub, and a hooked member carried by the free end of the flexible element and embracingly engageable with the flange at the outer free edge of the washtub cover, said hooked member consisting of a relatively wide element having a right-angularly bent end portion and a reversely bent terminal overlying, spaced from and parallel to the body of the member to embracingly engage the flange over a substantially wide area.

1,627,477. VALVE AND CAGE PULLER. HENRY BLUME and GEORGE B. STREITZ, Jordan, Minn. Filed Aug. 31, 1925. Serial No. 53,615. 1 Claim. (Cl. 29—86.3.)

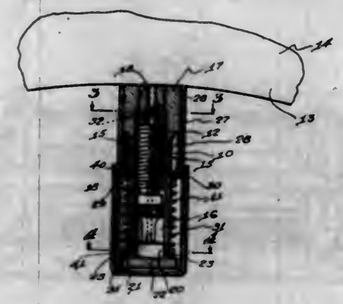


A removing tool for an overhead valve comprising a shank having a knocking head at its upper end and provided at its lower end with a pair of laterally spaced longitudinally extending integral legs parallel to and offset from said shank at their junction with the shank and adapted to straddle the valve stem cap and the upper portion of the valve spring, said legs being of different lengths and having inwardly turned hooks at their extremities to engage under diametrically opposite portions of a convolution of the valve spring, and an impulse member slidably mounted on the shank for co-action with said knocking head in producing upward impulses on the tool, which impulses are yieldably imparted to the valve assembly by the engagement of the hooks with the spring of said assembly.

1,627,478. SASH LATCH. EDGAR H. BOONE and JOHN W. COOK, Santa Rita, N. Mex. Filed Apr. 15, 1925. Serial No. 23,367. 1 Claim. (Cl. 292—166.)

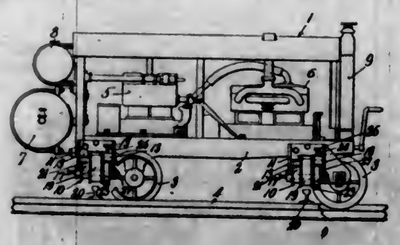
In a window sash latch, a casing adapted to be embedded in the upper rail of the sash, a sliding bolt arranged within the casing and adapted to project through one wall thereof and having a notch in one edge, a spring for normally holding the bolt in projected position, a lever pivoted between its ends within the casing and having one end positioned within said notch, said lever having a longitudinal slot adjacent its other end, a pin slidable through the wall of the casing opposite the bolt and having its inner end turned downwardly and received by said slot, said pin having a longitudinal series of openings adjacent its other end, a slotted handle adjustable on said pin and having openings adapted to register with one of the openings in the pin, whereby said handle can be properly arranged with relation to any particular sash and a fastening element passed through said openings for holding the handle fixed on the pin.

1,627,479. SHRIMP-SHELLING MACHINE. FRANK C. BUCKNAM, New Orleans, La. Filed Feb. 19, 1927. Serial No. 169,593. 20 Claims. (Cl. 17—3.)



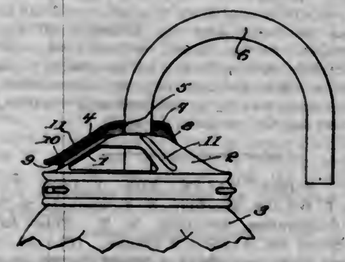
1. A machine for separating the meat from the shell of a Crustacea comprising an endless conveyor, a carrier secured thereto and including means for detachably fastening the shell thereto, a holder bodily carried by the conveyor, positioned forwardly of the carrier and provided with head severing means, means for scraping off the fins and feelers during the travel of the carrier, a revoluble meat picker element for removing the meat from the shell during the travel of the carrier, and means for shifting said fastener means to and from fastening position with respect to the shell.

1,627,480. COMBINATION DUST CAP AND LOCK NUT. ARTHUR T. CHRISTIAN, Glenview, Ill. Filed May 21, 1926. Serial No. 110,763. 3 Claims. (Cl. 152—12.)



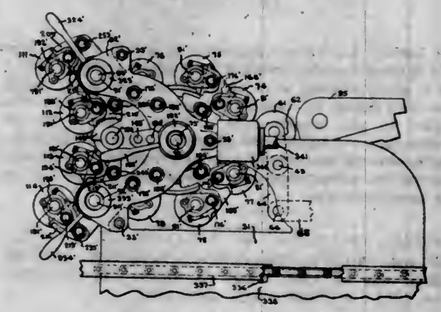
1. The combination with a pneumatic tire valve structure, of two clamping members each substantially semicircular in cross section defining a passage adapted to receive the valve structure and defining corresponding enlarged portions providing a bearing head, means pivotally connecting the opposite corresponding end portions of the two members together to permit said members to pivot toward and away from each other, a member movable relative to the two members adapted when disposed over the

enlarged portions to restrict pivotal movement of the two members away from each other and when disposed over the remaining portions of the two members to permit



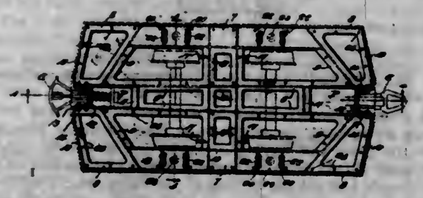
pivotal movement of the two members away from each other, and yieldable means for moving the member into position over the enlarged portions of the two members.

1,627,481. LIFTING MECHANISM FOR RAILWAY CARS. LEWIS J. CLAPP, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 1, 1926. Serial No. 139,006. 8 Claims. (Cl. 105—177.)



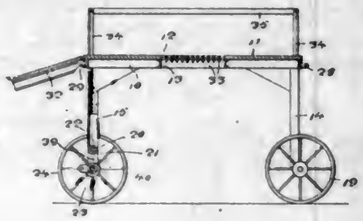
2. In a portable railway compressor outfit, the combination with a supporting frame and track wheels carried thereby, of brackets attached to said frame each carrying a shaft, lifting eccentrics rotatably mounted on said shafts, auxiliary wheels journaled on said eccentrics, and lever operated means for rotating said eccentrics to raise of lower said auxiliary wheels.

1,627,482. SMOKE SHIELD. LE ROY B. CLARK, Waterbury, Conn. Filed May 8, 1926. Serial No. 107,777. 1 Claim. (Cl. 240—120.)



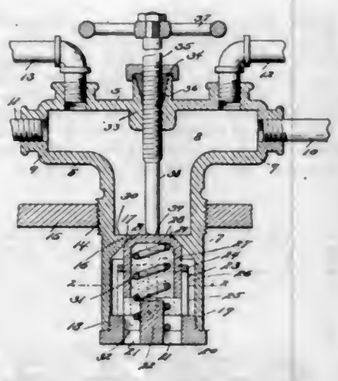
In combination with a burner pipe, its globe and globe supporting member, the globe supporting member having openings therethrough, radially disposed ribs on the upper surface of said supporting member, a shield extending over the openings in the supporting member to deflect the smoking gases passing through said openings, said shield having a part in its peripheral edge omitted to form a recess and shield provided with an opening centrally of the shield through which the burner pipe passes, supporting legs extending downwardly from the edges of the shield and having recesses in their lower ends to receive the ribs on the supporting member.

1,627,483. INKING MECHANISM FOR PRINTING MACHINERY. LESLIE W. CLAYBOURN, Milwaukee, Wis. Filed Oct. 21, 1925. Serial No. 63,973. 54 Claims. (Cl. 101—351.)



1. In inking mechanism for a printing press, the combination with the printing form, of form rollers, coacting rollers, means whereby to move said form rollers about the outer peripheries of said coacting rollers with which said form rollers have contact for distance relation of said form rollers with said printing form, and means for moving said form rollers for distance relation relation with said coacting rollers, said two named means operative for effecting said two movements in sequence.

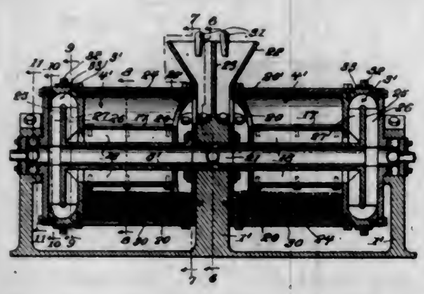
1,627,484. CAR UNDERFRAME. THOMAS R. COOK, Scranton, Pa. Filed Dec. 23, 1926. Serial No. 156,654. 5 Claims. (Cl. 105—415.)



1. A one-piece car-length underframe comprising two inner substantially parallel longitudinal members, two outer longitudinal members laterally spaced from said inner members and having narrowed end portions, transverse members extending obliquely from the end portions of the inner members to the outer members and joined to the relatively wide body portions of the latter at their juncture with said narrowed end portions, said transverse members converging toward the ends of the frame, relatively weak end members connecting the ends of said inner members with the outer extremities of said narrowed end portions, and additional transverse members connecting said inner members with each other.

1,627,485. LOADING MACHINE. WILLIAM D. COOPER, Palmyra, Mo. Filed Oct. 17, 1925. Serial No. 63,120. 1 Claim. (Cl. 214—41.)

A loading apparatus comprising a frame, a supporting floor carried thereby having a rectangular opening including a grate therein, bars of different lengths depending from said frame, an axle having wheels mounted thereon carried by the longers bars, a bolster carried by the shorter bars, a sub-bolster pivotally mounted upon the aforementioned bolster, an axle and wheels therefor carried by the sub-bolster, and a draw bar carried by the last mentioned axle.



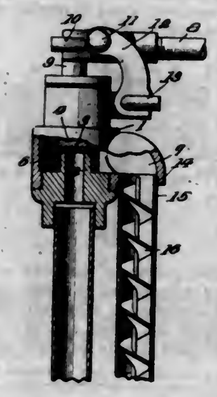
1,627,486. VALVE. FRANK S. CRAVENS, Olive Hill, Ky. Filed May 19, 1925, Serial No. 31,424. Renewed Mar. 14, 1927. 5 Claims. (Cl. 251—140.)

5. The combination with a valve casing having a chamber with a valve seat therein and an inlet and an outlet, of a plug removably fitted in a part of the casing and having an opening therethrough, a cage integrally formed with the plug and having a guide rim, a hollow valve fully open at one end and sealed at the opposite end by a flat closure and shaped to engage the valve seat, a spring mounted in the said valve and having one extremity engaging the inner portion of the flat closure and the opposite extremity associated with a portion of the plug, and a valve stem shiftably mounted in a portion of the casing and having a round free extremity to contact with the flat closure of the valve to open the latter simply by pressure, the valve stem being structurally independent and separable from the said valve.

1,627,487. BALL MILL. PAUL L. CROWE, Baltimore, Md. Filed Sept. 30, 1925. Serial No. 59,541. 3 Claims. (Cl. 83—9.)

1. A means for pulverizing coal or other fuel, comprising a hollow body having hollow shafts on the sides thereof, bearings for the shafts, said body being divided by a screen into compartments, impeller blades in said compartments, attrition balls in one of said compartments, means for delivering fuel into said compartment,

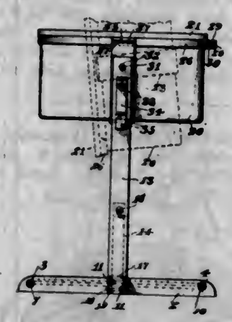
a hot air and an atmospheric air pipe communicating with the last mentioned compartment, and a burner tube connected to the hollow shaft of the adjacent compartment, all as and for the purpose set forth.



1,627,488. BALL MILL. PAUL L. CROWE, Baltimore, Md. Filed Sept. 30, 1925. Serial No. 59,542. 5 Claims. (Cl. 83—9.)

1. A ball mill for pulverizing coal and like combustible material and for delivering the powdered material to a burner, comprising a plurality of mill chambers, a hollow shaft for the mills, bearings for the shaft, weighted balls in each mill chamber, a screen in each mill chamber, hoppers communicating with the chambers outward of the screens and through which the material is introduced, an impeller chamber in each mill, impellers in the chambers comprising oppositely directed curved fan blades, a partition associated with the hollow shaft and arranged between the fan blades, the outer series of fan blades communicating with the hollow shaft, oppositely directed tubes communicating with the hollow shaft, and means for simultaneously or independently revolving the mills, as and for the purpose set forth.

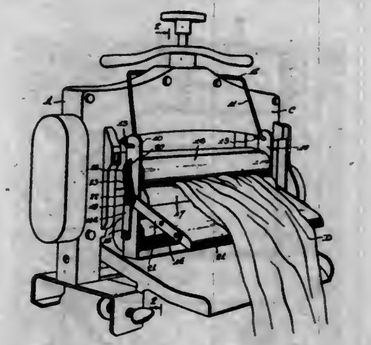
1,627,489. FLOAT VALVE FOR FLUSH TANKS. EDWARD L. DELANY, Brooklyn, N. Y., assignor to Delany Realty Corporation, Brooklyn, N. Y. Filed July 8, 1925. Serial No. 41,352. 3 Claims. (Cl. 137—104.)



3. A float valve comprising a casing having an inlet, a raised seat around the inlet, a valve within the casing and cooperating with the seat, said casing having a large space entirely surrounding the valve and seat and above and below the seat, a discharge passage from the casing

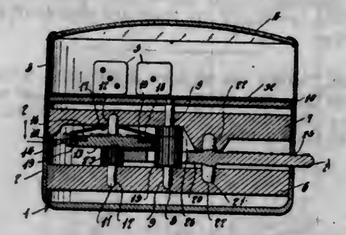
and communicating with the space surrounding the seat, and a pipe removably connected within the discharge and having baffles detachably mounted therein to cause a back

pressure in the space around the valve to prevent hissing during the last part of the closing operation of the valve.



1,627,490. TILTING STAND FOR CROCKS. JOSEPH DISIBIO, Detroit, Mich. Filed Feb. 20, 1926. Serial No. 89,732. 3 Claims. (Cl. 248—58.)

1. A tilting stand for a vessel comprising a pair of standards, a base common thereto, a vessel holder pivotally supported from and extending above said standards and including a U-shaped slotted body portion, the slots in said body portion arranged above the pivot means for the holder, a split annulus positioned within the upper part of said body portion and having means coacting with the slots of the latter to provide a slidable supporting connection between the annulus and the holder, and means for adjustably connecting the split ends of the annulus together.

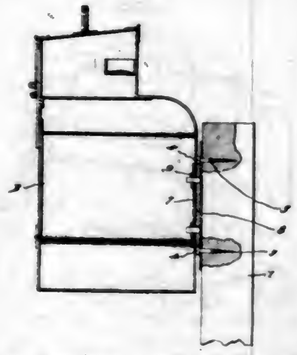


1,627,491. SAFETY FEED MEANS. WILLIAM DOBLLNER, Jersey City, N. J. Filed Sept. 30, 1926. Serial No. 138,757. 3 Claims. (Cl. 68—32.)

1. In a safety feed means for directing articles through rollers, a frame, means to swingably mount said frame adjacent to the rollers to be fed, feed rollers in said frame, a drive roller for the feed rollers also mounted

in said frame, means to move the feed rollers into close relation and means to throw said drive roller into driving engagement with one of the first mentioned rollers.

1,627,492. DICE SHAKING OR THROWING DEVICE. WILLIAM H. DROGE, Detroit, Mich. Filed Aug. 12, 1926. Serial No. 128,866. 3 Claims. (Cl. 273—145.)



2. A dice shaking or throwing device comprising a casing having a transparent top, a table rotatably supported within the casing and upon which the dice rest, a pinion fixed to the table, a disk rotatably supported within the casing, a ring gear loosely mounted on the disk and meshing with the pinion, means adapted to lock the gear to the disk when the latter is rotated in one direction, a pinion fixed to the disk, a manually operable sector gear meshing with the pinion fixed to the disk, and a spring secured to the casing and sector gear.

1,627,493. ELECTRICAL CONDENSER. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 28, 1925. Serial No. 12,276. 7 Claims. (Cl. 175—41.)

1. An electrical condenser comprising elements to be of different potential, said elements having such physical characteristics that they can be caused by the use of force while the condenser is in the course of manufacture, to expand into the desired operative relations and maintain such relations when the force is removed.

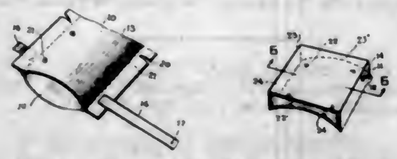
1,627,494. BRACKET HANGER. WILLARD B. DWYER, Bennington, Vt. Filed Feb. 5, 1926. Serial No. 86,288. 1 Claim. (Cl. 232—39.)

A means for supporting a rural mail box on a post, comprising a plate secured on the post by screws, the heads of the screws being square or rectangular, apertured studs projecting from the plate and disposed in a line with the heads of the screws, reinforcing strips arranged respectively on the inner and outer faces of the back of the mail box, the outer strip adapted to be received against the post and to have its ends contacted by the heads of the screws, said strips and the back of the box having openings for the studs, and cotter pins passing through the openings in the studs and contacting with the inner strip.

1,627,495. BUSH OR PLANT SUPPORT. MICHAEL P. EFFLEY, Lowville, N. Y., assignor of one-half to E. H. Barnes, Lowville, N. Y. Filed Mar. 18, 1926. Serial No. 95,744. 2 Claims. (Cl. 47—47.)

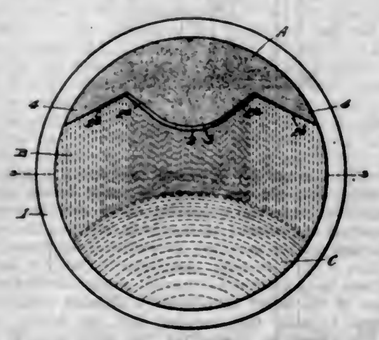
1. A plant support, comprising a post, a ring for enclosing a plant, said ring having a portion thereof surrounding and slidably mounted on the post, a hook on said ring, and means on said post to engage said hook to hold the ring.

2. A plant support, comprising a post, a ring for enclosing a plant slidably mounted on the post, said ring having a loop formed therein by crossing the material of the ring and adapted to embrace the post, a hook formed from said loop, and the post provided with means to engage the hook to hold the ring in position thereon.



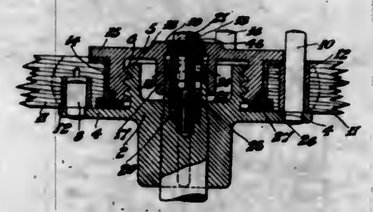
1,627,496. HAND BAG. EDWARD ELIAS, Brooklyn, N. Y. Filed Nov. 8, 1926. Serial No. 147,068. 7 Claims. (Cl. 150—30.)

1. An envelope hand bag including a front section and a rear section connected at their lower edges, gussets connecting the lateral edges of said sections and co-operating therewith to form a pocket, a flap attached to the upper edge of the rear section and adapted to be folded over the face of, and secured to the front section, the upper ends of said gussets being extended to block the passage of small articles from the upper corners of the pocket under the flap, said extended upper end of the gusset folding inwardly along diverging fold lines and outwardly on a central fold line.



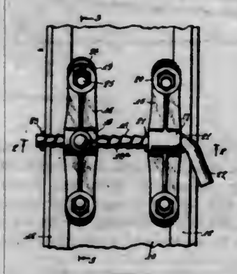
6. In a foldable container including a gusset, means for directing and determining the lines along which the gusset folds, comprising a relatively stiff reinforcing member laid against the gusset and having slots therein on which the member breaks or folds as the gusset is collapsed.

1,627,497. KNEE-PROTECTING DEVICE. BARTOLO GAMINO, Pigeon, Mich. Filed Apr. 22, 1926. Serial No. 103,729. 3 Claims. (Cl. 2—24.)



1. A knee pad comprising an inflatable bag of oval cross section, a cover enclosing said bag, and an inflatable member adapted to be detachably secured to said pad comprising a flat rigid upper surface adapted to provide a supporting platform on the knee of the wearer.

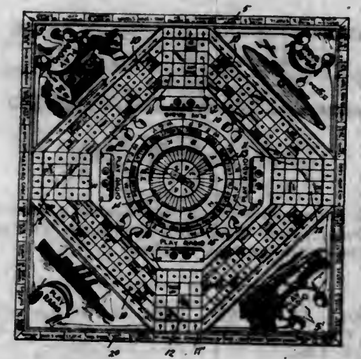
1,627,498. HEADLIGHT LENS. ADELBERT R. GIBSON, Los Angeles, Calif., and HERMAN E. SCHORR, New York, N. Y. Filed Dec. 7, 1922. Serial No. 605,407. 2 Claims. (Cl. 240—48.4.)



1. A lens comprising a plurality of zones, one of said zones extending from side to side through the central portion of the lens, comprising substantially half of its area, being provided with vertical prisms upon its interior side to distribute the light laterally, and a lower zone comprising a plurality of curved sections having prisms of varying sizes to distribute the light forward upon the roadway.

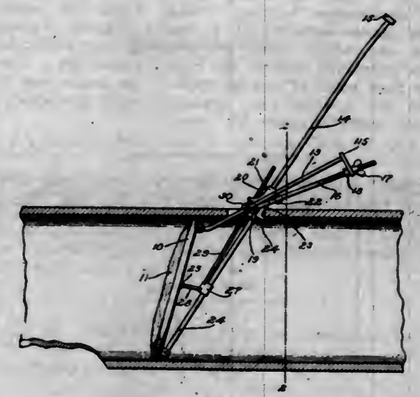
1,627,499. DETACHABLE WHEEL MECHANISM. WALTER VILLA GILBERT, Westminster, London, England, assignor to Gilbert's Patents Limited, London, England, a Company. Filed June 7, 1926, Serial No. 114,342, and in Great Britain Feb. 25, 1926. 9 Claims. (Cl. 301—9.)

6. In combination, an axle, a hub comprising a pair of concentrically arranged members one of which is mounted on said axle, and the other being detachable from the first named member and arranged for relative rotary movement with respect thereto, said members being provided with coacting means to secure said members together when in one relative position and to disconnect said members and permit the detachment of the second named member when said members are in another relative position, and a locking member to prevent casual relative rotary movement of said hub members, said locking member being mounted on said axle and movable into and out of engagement with said detachable hub member and a spring to normally hold said locking member in locking position.



1,627,500. TIRE SPREADER. VERNON R. GOELLER, Boonton, N. J. Filed Jan. 19, 1927. Serial No. 162,110. 3 Claims. (Cl. 152—27.)

1. A tire spreading tool including a shank formed with a buttress thread, a pair of parallel arms including hubs through which the shank extends, both arms being free for rotary movement relatively to the shank and one of said arms being free for sliding movement on the shank, tire bead engaging rollers carried by the ends of the arms, a spring pressed dog working through the hub of the slidable arm and engaged with the buttress thread, whereby when the arms are engaged with opposite beads of a tire, rotation of the shank will effect separation of the arms to spread the tire.

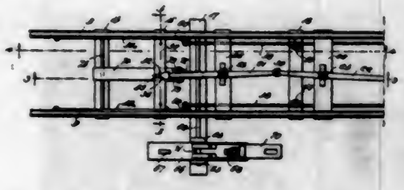


1,627,501. GAME. JACK J. GOLDTHORPE, Albany, N. Y. Filed Apr. 13, 1925, Serial No. 22,775. Renewed Mar. 25, 1927. 3 Claims. (Cl. 273—134.)

1. A game of the character described comprising a playing surface having a series of squared playing surfaces, means for selecting a combination of letters, counters to be arranged at the beginning of the playing

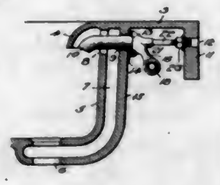
surfaces corresponding to the selected letters, and a chance device for indicating the move of such counters over the squared surfaces.

1,627,502. GAS-MAIN STOPPER. PATRICK GOODMAN, Brooklyn, N. Y. Filed Oct. 26, 1926. Serial No. 144,340. 4 Claims. (Cl. 137—76.)



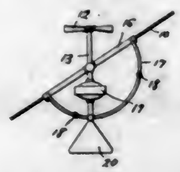
1. A gas main stopper including an expansible frame, means on the frame to effect the stoppage of the main, handle bars on the frame, means to cause expansion of the frame by a longitudinal movement of one handle-bar, a sleeve adjustable along one handle bar and a bracing connection between said sleeve and said frame, said bracing connection being additional to said expansion means.

1,627,503. RAILWAY-SWITCH LOCKING AND OPERATING MEANS. DINNEY F. GRIFFEY, Red Jacket, W. Va., assignor of one-half to Robert N. Cox, Red Jacket, W. Va. Filed Oct. 7, 1926. Serial No. 140,093. 7 Claims. (Cl. 246—323.)



1. A mechanism of the class described comprising a train-actuated switch-throwing member between the track rails and shiftable toward and from the same, a locking member for said switch-throwing member mounted for vertical movement and extending under the latter,

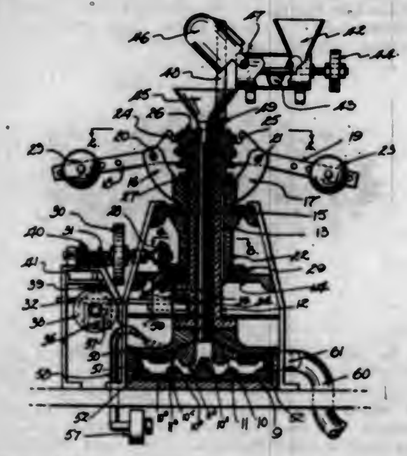
yieldable means for normally sustaining said locking member in a raised position in which it engages and locks said switch-throwing member, and a train-de-



pressed rail connected with said locking member to depress and release the latter, permitting the train to shift the switch-throwing member.

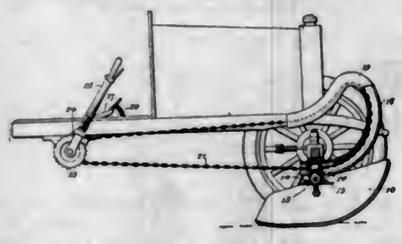
1,627,504. LAVATORY. DAVID E. GULICK, Chicago, Ill. Filed Oct. 10, 1925. Serial No. 61,695. 6 Claims. (Cl. 4—195.)

1. In a concealed nozzle lavatory the combination with an overflow opening through which the supply nozzle makes delivery, of a second opening through which said nozzle enters the lavatory, and adjustable means interposed between the supply nozzle and a relatively fixed point of support whereby the nozzle may be forced into a water tight connection with the opening through which it enters the lavatory.



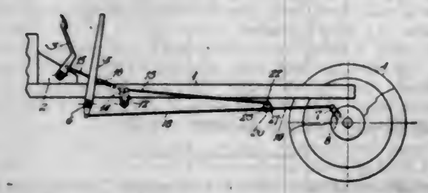
1,627,505. ADVERTISING DEVICE. CHAUNCEY GUYMON, Los Angeles, Calif. Filed July 24, 1925. Serial No. 45,925. 1 Claim. (Cl. 40—127.)

An advertising device of the character described comprising an electrically charged cable having a plurality of balloons arranged at spaced intervals throughout the length thereof, an advertising novelty suspended from the cable, a plurality of guide frames arranged at spaced intervals upon the cable, and electrically operated fans pivotally mounted upon and guided by the frames and having their force of propulsion transmitted from the electrically charged cable.



1,627,506. CRUSHING AND GRINDING MACHINE. AMOS CAMPBELL HAMEY, North Sydney, New South Wales, Australia. Filed Feb. 13, 1926, Serial No. 88,028, and in Australia Feb. 19, 1925. 5 Claims. (Cl. 83—10.)

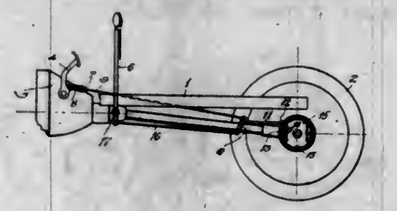
1. In crushing and grinding machines, the combination with a base, and a rotatable and vertically reciprocable muller, of a plate supported on the base, said plate being conical centrally and provided with a circum-



ferential groove or grooves, the working face of the muller having a correspondingly opposite ridge or ridges to said groove or grooves substantially as described.

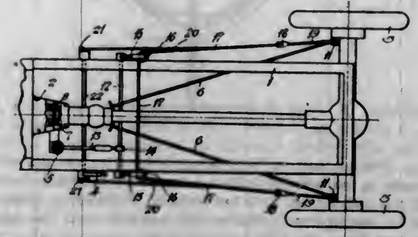
1,627,507. RUNNER FOR AUTOMOBILE WHEELS. JASPER H. HAYNES, Bangor, Me. Filed May 18, 1926. Serial No. 109,955. 2 Claims. (Cl. 280—10.)

1. In combination with an automotive vehicle having a front wheel, a tubular track associated with the front wheel, a runner associated with the track and means operated from the driver's seat and connected to the runner and the track for moving the runner in the track to apply it and to remove it from the wheel.



1,627,508. BRAKING MECHANISM, MORE PARTICULARLY FOR MOTOR VEHICLES. GLENN R. HOFFMAN, Springfield, Ill. Filed May 29, 1926. Serial No. 112,651. 5 Claims. (Cl. 188—106.)

1. A braking mechanism comprising a foot-lever operated "transmission" brake, a lever operated emergency wheel-brake, and means connecting both levers with the

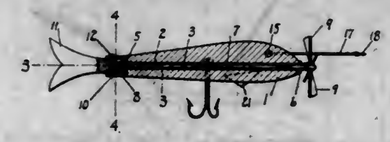


emergency wheel-brake, said means including a "floating" coupling member operable from the "transmission" brake lever for joint application of the transmission and the emergency brakes and from the emergency lever to apply the emergency-brake independently of the transmission brake.

1,627,509. BRAKING MECHANISM, MORE PARTICULARLY FOR MOTOR VEHICLES. GLENN R. HOFFMAN, Springfield, Ill. Filed May 29, 1926. Serial No. 112,652. 2 Claims. (Cl. 188—106.)

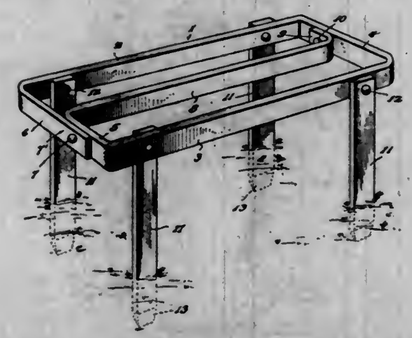
1. A braking mechanism comprising a foot-lever operated "transmission" brake, an emergency wheel-brake, an emergency brake lever, a power transmitting cable leading from the foot-lever, a power transmitting rod leading from the emergency lever, a rocking lever connecting the foot-lever cable and emergency lever rod, and a link connection between the rocking lever and emergency brake, whereby on actuation of the foot-lever both the transmission and the emergency brakes are applied, and on actuation of the emergency lever the emergency brake, alone, is applied.

1,627,510. BRAKING MECHANISM, MORE PARTICULARLY FOR MOTOR VEHICLES. GLENN R. HOFFMAN, Springfield, Ill. Filed May 29, 1926. Serial No. 112,653. 2 Claims. (Cl. 188—106.)



1. A braking mechanism comprising a lever operated "transmission" brake, an emergency wheel-brake, an emergency brake lever, a crank-shaft operatively connected with the "transmission" brake lever and having a cable connected with its opposite ends and extended rearwardly in the direction of the emergency wheel brakes, rods extending from the emergency lever and connected with the cable, and links connecting the cable with the emergency wheel-brakes, whereby on actuation of the "transmission" brake lever the transmission brake and both emergency wheel brakes will be applied and on actuation of the emergency lever the emergency wheel brakes, alone, will be applied.

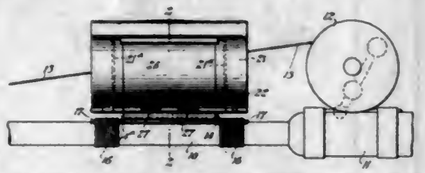
1,627,511. DOLL HEAD. RUDOLPH ALDRIDGE HOPF, New York, N. Y., assignor to Averill Mfg Co., New York, N. Y., a Corporation of New York. Filed Sept. 17, 1926. Serial No. 136,184. 1 Claim. (Cl. 46—40.)



In combination with a doll head having a series of openings therein, of tufts projected through the openings into the interior of the head and secured in said head, said tufts spaced apart and said head having surface ornamentation representing hair, the tufts representing bunched portions of the hair.

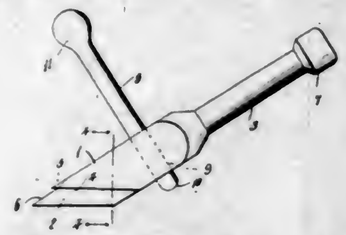
1,627,512. ARTIFICIAL BAIT. CHARLES H. HUGHES and BERNARD E. KOTHE, Cincinnati, Ohio. Filed Aug. 3, 1925. Serial No. 47,840. 1 Claim. (Cl. 43—47.)

An artificial bait made in imitation of a fish and provided with empaling means and having a pivotally mounted tail, means to oscillate said tail, said bait having a transverse hole extending therethrough near its forward end and a bail having a loop at one part and hooks on its ends whereby when the hooked ends of said bait are inserted in said hole, said hooks will interengage and lock, substantially as set forth.



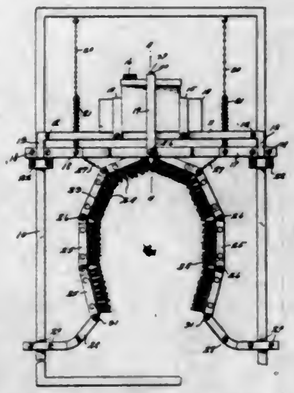
1,627,513. CAMP STOVE. THOR JOHNSON, Rolette, N. Dak. Filed Oct. 18, 1926. Serial No. 142,381. 3 Claims. (Cl. 126—30.)

1. A device of the class described, comprising a grid frame, consisting of side bars, a bar connecting one of the ends thereof, the other ends of the side bars having



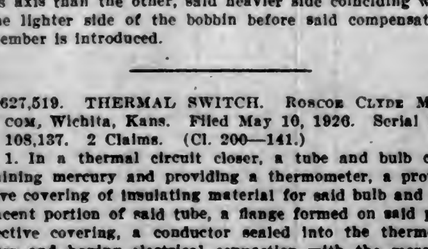
terminal sections disposed in overlapped relation, and constituting an end bar, one of said sections terminating in a center bar, said center bar having its terminal connected to the first named end bar.

1,627,514. LINE-DRYING ATTACHMENT FOR FISHING RODS. LOUIS KRAEMER, Yonkers, N. Y. Filed Oct. 16, 1926. Serial No. 142,043. 8 Claims. (Cl. 43—25.)



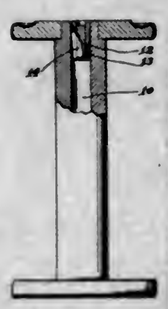
1. An attachment for fishing rods including a housing formed of two sections, one pivoted relatively to the other, means for guiding a line through the housing and a sponge in the housing over which the line is adapted to be drawn as it is reeled in, the guiding means including pairs of spaced guide wires between which the line runs.

1,627,515. REEFING IRON. CARL L. LAIRD, Galveston, Tex. Filed May 18, 1926. Serial No. 109,913. 3 Claims. (Cl. 114—224.)



1. A reefing iron comprising a head, a blade carried by the head, a shank carried by the head, and an adjustable handle carried by the head.

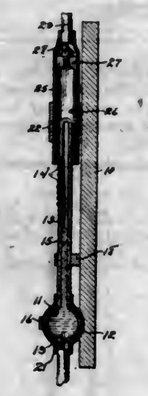
1,627,516. AUTOMATIC CURRIER AND OILER. ERICK LARSON, Paullina, Iowa. Filed July 24, 1926. Serial No. 124,670. 8 Claims. (Cl. 119—157.)



1. In a currier of the character described, a supporting frame, brush supporting members slidably mounted upon the frame, a brush operatively connected to the supporting members, an oil tank mounted upon the supporting frame, and means acting to cause the discharge of oil from the tank onto the brush when the brush is raised including a vertical discharge pipe within the tank, a lever pivoted within the tank, a cup carried by the lever, and means operatively connected to the supporting members for causing the lifting of the cup to discharge its contents into the pipe when the brush supporting members are lifted.

1,627,517. INDOOR GAME. JOHN S. LITTLEFORD, Jr., Fort Thomas, Ky. Filed Nov. 9, 1926. Serial No. 147,351. 8 Claims. (Cl. 273—87.)

1. In a game of the character described, including a miniature golf course, a ball, a driver having a curved or rocker-shaped bottom with a curved spring mounted thereon and having a depression to engage the ball, substantially as set forth and for the purposes specified.



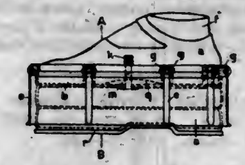
1,627,518. METHOD OF BALANCING BOBBINS AND THE LIKE. JACK LOCK, Lowell, Mass. Filed Apr. 16, 1926. Serial No. 102,512. 3 Claims. (Cl. 242—118.)

2. The method of balancing bobbins or the like, consisting in introducing into a bore coinciding with the axis of the bobbin, a member axially coinciding with the bobbin but in itself permanently heavier upon one side of its axis than the other, said heavier side coinciding with the lighter side of the bobbin before said compensating member is introduced.

1,627,519. THERMAL SWITCH. ROSCOE CLYDE MALCOM, Wichita, Kans. Filed May 10, 1926. Serial No. 108,137. 2 Claims. (Cl. 200—141.)

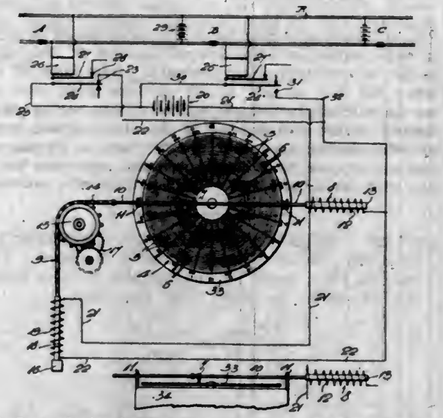
1. In a thermal circuit closer, a tube and bulb containing mercury and providing a thermometer, a protective covering of insulating material for said bulb and adjacent portion of said tube, a flange formed on said protective covering, a conductor sealed into the thermometer and having electrical connection with the mercury therein at all times, said conductor having an insulated portion received in said flange, a plurality of contacts sealed into the tube and adapted to have contact with the mercury therein when the latter rises under the influence of heat, a conducting member adapted to be brought into engagement with a selected one of said last mentioned contacts, said conducting member consisting of

a headed cylindrical metallic shell slidably mounted about the tube, a supporting bracket, a covering of insulating material for the shell member and being slidably arranged within said supporting bracket, and a conductor fixed to said head.



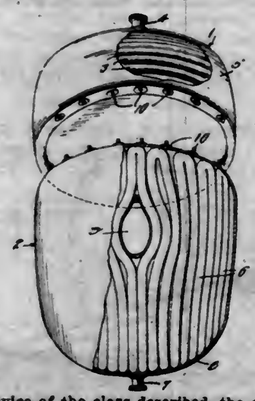
1,627,520. TIMER FOR INTERNAL-COMBUSTION ENGINES. STEPHEN P. MCDONNELL and PAUL A. VILLARS, Dallas, Tex. Filed Mar. 29, 1926. Serial No. 98,169. 1 Claim. (Cl. 200—26.)

A timer for internal combustion engines in combination with the cam shaft thereof, comprising a shell with electrical contact members, an annular toothed rim member on the interior of the shell; the cam shaft of the engine projecting into the shell and having a sleeve mounted on the shaft, said sleeve including a bracket for supporting a miniature shaft, a spur gear carried on the shaft and in mesh with the annular rim and contact points as the cam shaft rotates; said bracket having formed thereon a curved arm, a spring connected to the arm, the opposite end of the spring connected to said sleeve; said spring for the purpose of holding the spur gear in close contact with the sides of the teeth on said annular rim member and the contacts.



1,627,521. SWIMMING AND RUNNING SHOE. REINHOLD MENSCHEL, Berlin, Germany. Filed Jan. 6, 1927, Serial No. 159,476, and in Germany Dec. 9, 1926. 8 Claims. (Cl. 9—21.)

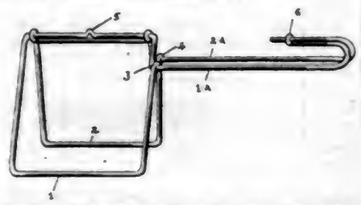
1. A swimming and running shoe, comprising, in combination, a foot support, the specific weight of which is lower than that of water, a frame attached to the upper side of said support, means for attaching said frame to a foot, stays hinged to the said frame, and a web fastened to said stays, and means for limiting the outward move-



ment of the stays with said web when these members have arrived in their proper operative position, substantially as set forth.

1,627,522. AVERAGE-SPEED-RECORDING MEANS FOR RAILWAY TRAINS. THOMAS R. MILLS, Washington, D. C. Filed Mar. 19, 1926. Serial No. 96,011. 5 Claims. (Cl. 234—29.)

5. In a device having a block of trackage with track circuit and relay controlled by said circuit; electrically-controlled average speed recording means for trains passing over said block, and switch means controlled by said relay for bringing said recording means immediately into play when the front wheels of a train enter said block and for throwing said recording means immediately out of play when said wheels leave the block.



1,627,523. FACE MASK. ADRIAN K. MORRIS, Atlanta, Ga. Filed Mar. 10, 1926. Serial No. 93,671. 4 Claims. (Cl. 128—259.)

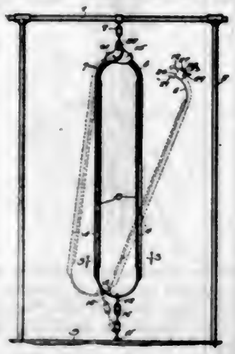
1. In a device of the class described, the combination of a pair of flexible coverings or shells one of said members being shaped in the form of a cap and the other said ele-

ments being shaped to constitute a face mask, means for releasably fastening one element to the other, each of the aforesaid elements having tubing coiled within the shell, and each also having a sealable vent in communication with the tubing in the respective shells.

1,627,524. LIFTING TONGS. EDWARD M. MORRIS, Rochester, N. Y. Filed May 29, 1926. Serial No. 112,640. 2 Claims. (Cl. 294—30.)

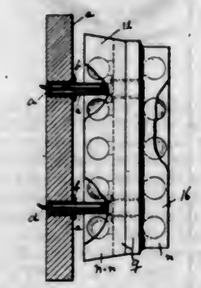
1. In a pair of lifting tongs, the combination of a pair of wire frames or loops hinged together at the top, a handle section projecting rearwardly from each of said loops, the end of said handle sections being bent forwardly with the end of one handle section having an eye formed thereon and the end of the other of said handle sections passing thru said eye to form a pivotal connection between said handle sections approximately in line with the hinged tops of said pair of wire frames.

1,627,525. DEVICE FOR CLEANING INTERDENTAL SPACES. HUGH MUNRO, Glasgow, Scotland. Filed Apr. 26, 1926, Serial No. 104,826, and in Great Britain Oct. 17, 1925. 3 Claims. (Cl. 132—92.)



1. Device for cleaning interdental spaces comprising a bow having a loop at one end and limbs extending from said loop substantially parallel to each other, the limbs thereafter being crossed by bending them towards one another, through an angle of substantially 90°, and then extended again substantially parallel to each other and to their previous directions, such that when any portion of the limbs between the loop and the crossing are pressed together the ends move apart and exert longitudinal tension on a thread attached to the tips of the bow and at an angle to them of substantially 90°.

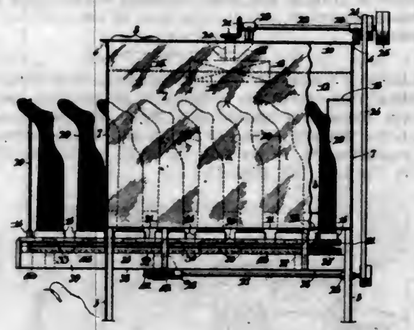
1,627,526. LIFTING JACK. LEONARD D. NILSON, Wayzata, Minn. Filed Nov. 18, 1925. Serial No. 69,851. 14 Claims. (Cl. 254—6.)



11. A jack comprising an elongated, low wheeled frame, a lifting element independently, guidingly held within the frame, said lifting member being adapted for movement from a supine position and substantially housed within the frame when in such position to a substantially vertical position, and a bar pivotally connected to said lifting member and having a pivotal and sliding connection with said frame.

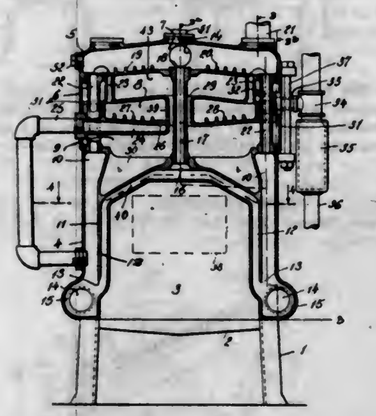
1,627,527. STANCHION. GEORGE OBELE, Cedar Falls, Iowa, assignor to Clay Equipment Corporation, Cedar Falls, Iowa, a Corporation of Iowa. Filed May 21, 1921. Serial No. 471,336. 2 Claims. (Cl. 119—149.)

1. In a stanchion, the combination of a pair of spaced side bars connected together at their lower ends, said bars made of angle iron metal having the meeting ridge exteriorly thereof, and latching means at the upper ends of said bars, and a tongue projecting from the upper end of one of the bars and in alignment with the groove formed by the legs of said angle iron, and a pair of guards extending from said grooved end, one on each side thereof, to guide said tongue into said groove.



1,627,528. SIDE-READING ILLUMINATED SIGN. ERNEST PETER VINCENT, New York, N. Y. Original application filed Apr. 20, 1917, Serial No. 163,368. Divided and this application filed Sept. 1, 1922. Serial No. 585,680. 12 Claims. (Cl. 40—30.)

1. In combination with a support, a sign character, extensible means for supporting said sign character, spaced from the support, and illuminating means on the inner side of the sign character.

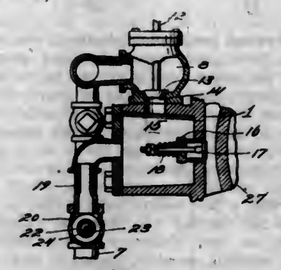


1,627,529. DRYING MACHINE. HARRY H. WIGGLESWORTH, Philadelphia, Pa., assignor to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 28, 1924. Serial No. 716,329. 4 Claims. (Cl. 34—12.)

1. A drying machine comprising an enclosure having apertured partitions and a connected diaphragm affording a vertical drying corridor, detached form carriers traversible edge-on over a zig-zag course through said corridor in sequential alignment, and a horisontally

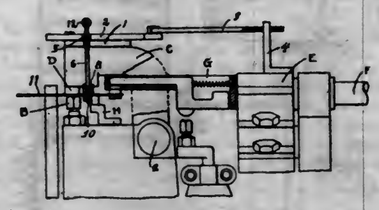
traveling conveyor for progressing said carriers through the enclosure with an interval of exterior exposure for the purposes specified.

1,627,530. SECTIONAL STEAM BOILER. CARL Z. ALEXANDER and EARL S. ALEXANDER, Newark, N. J., assignors, by mesne assignments, to Edwin C. Seward, Jersey City, N. J. Filed Oct. 5, 1921. Serial No. 505,674. 15 Claims. (Cl. 122—225.)



1. A boiler comprising a series of detachably connected vertical sections each comprising a fire box portion of water jacket construction having depending water legs of substantially the same width as the width of the fire box portion and connecting the upper parts thereof, a steam chamber portion co-operating with and connected to each fire box portion and comprising a plurality of communicating superimposed steam chambers each having elongated water channels, a substantially vertical geyser tube connecting each of the steam chamber portions with the water legs in the corresponding section and a lateral supplemental water supply connection between said upper steam chamber and the upper part of the said fire box portion to supply additional water to the steam chambers under forced firing conditions, there being a series of smoke flues adjacent said fire box water legs and below each of the steam chambers to supply heat thereto from the hot furnace gases, and furnace front and back members secured to said sections and formed with cleaning and firing doors and smoke box connections.

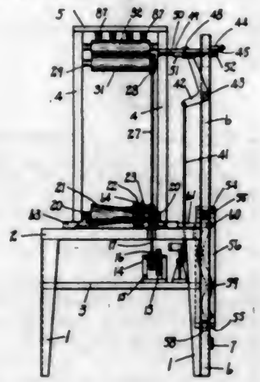
1,627,531. BUILDING CONSTRUCTION AND THE LIKE. FRANK A. BROWNE, Wayne, Pa., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Aug. 17, 1925. Serial No. 50,634. 2 Claims. (Cl. 72—17.)



1. An interior wall construction comprising, in combination with the main wall structure or studding, a covering of bitumen saturated and coated fabric, mineralized with adherent granules, secured to said wall structure; and a covering of plaster interlocked with said granules.

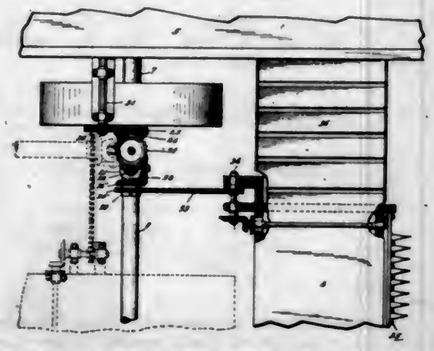
1,627,532. INTERNAL-COMBUSTION ENGINE. SAMUEL B. GOLD, Independence, Mo., assignor to Weber Engine Company, Kansas City, Mo., a Corporation of Iowa. Filed Oct. 8, 1923. Serial No. 667,219. 6 Claims. (Cl. 123—73.)

4. In an internal combustion engine, the combination of a gas reservoir for communication with the crank-case, a valve to be unseated by a vacuous condition in the crank-case, and establish communication between the latter and the reservoir, means to reseat the valve when such vacuous condition ends, a gas line connected to the reservoir, a governor-controlled valve in the gas line, a by-pass from the gas line to said reservoir, a yieldingly-seated valve normally closing the by-pass, and manually-operable means for unseating the by-pass valve.



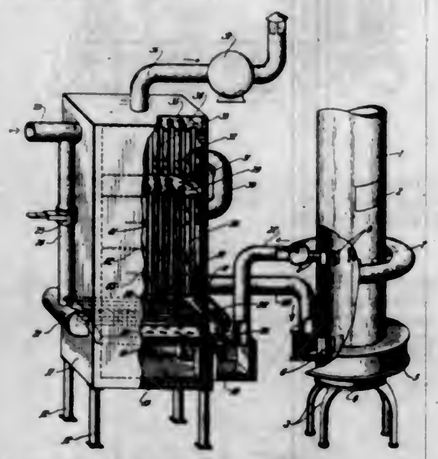
1,627,533. BALE-TIE MACHINE. ROY HEWITT, Sterling Ill. Filed Jan. 10, 1924. Serial No. 685,480. 3 Claims. (Cl. 140—73.)

1. In combination with a frame of a bale-tie machine, and a pair of wire-gripping jaws supported therein, one of which is rockably mounted with relation to the other, a wire straightening cam, movable beneath said rockable jaw, transversely thereof, a fixture supported on the



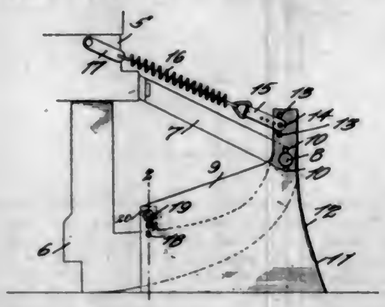
frame, in proximity to said last-named jaw, and means connected with said fixture for actuating said wire straightening cam upon said last-named jaw being suitably rocked.

1,627,534. THREAD-FEEDING ATTACHMENT FOR KNITTING MACHINES. EDWARD J. LOTTMAN, Cincinnati, Ohio, assignor of one-half to Walter B. Bassett, Cincinnati, Ohio. Filed Jan. 2, 1923. Serial No. 610,125. 3 Claims. (Cl. 66—9.)



1. In mechanism for feeding elastic thread to knitting machines, a frame, superposed elongated gripping rolls arranged at the upper portion of the frame for feeding the thread, thread guiding means arranged at the upper portion of the frame for guiding a plurality of threads relatively to the gripping rolls, oppositely disposed conical rolls rotatably mounted in the frame at a lower level than the gripping rolls, means for driving one of the feeding rolls from one of the conical rolls, a belt connecting the conical rolls, a belt shifter moving the belt along the conical rolls for varying the speed of rotation of the feeding rolls, an arm connected to the belt shifter, a rectilinearly movable member having a cam groove engaging the last mentioned arm, vertical guides arranged at one side of the frame, a carriage connected to the cam member and arranged to reciprocate in said guides, means for driving one of the conical rolls, and means for raising and lowering said carriage.

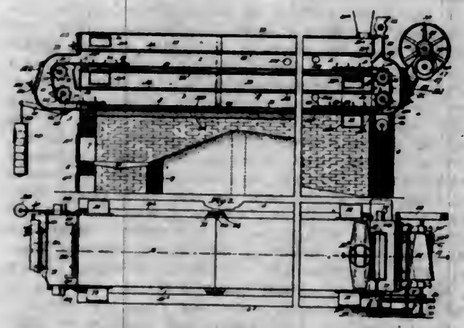
1,627,535. COMBINATION HARVESTER-THRASHER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Mar. 21, 1925. Serial No. 17,384. 11 Claims. (Cl. 74—101.)



1. In a combination harvester-thrasher, a coupling composed of two elements each comprising a sprocket, a gear rotated thereby, a gear-wheel meshing with said gear, a bearing having knuckles, a cage embodying knuckles, a gear in said cage, said knuckles being in alinement, and a pintle connecting said knuckles, gear wheel and gear, whereby the gear wheel of one of said coupling elements rotates a gear in said cage to rotate a like caged gear meshing therewith and forming part of the other of said elements.

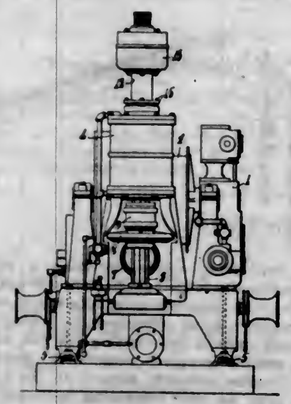
1,627,536. PROCESS OF AND APPARATUS FOR OPERATING CUPOLAS. FREDERICK K. VIAL, La Grange, and GEORGE S. EVANS, Oak Park, Ill., assignors to Griffin Wheel Company, Chicago, Ill., a Corporation of Massachusetts. Filed Jan. 19, 1925. Serial No. 3,221. 30 Claims. (Cl. 266—14.)

1. The process of operating a remelting cupola which comprises withdrawing unburned gases resulting from combustion within the cupola and burning said gases to preheat the air of combustion supplied to the cupola.



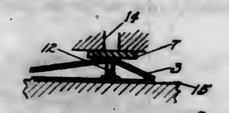
1,627,537. CORN PLANTER.. GEORGE M. YACKLEY, Avoca, Minn. Filed Aug. 27, 1926. Serial No. 131,972. 4 Claims. (Cl. 97—225.)

1. In a corn planter having a shoe, a deflecting blade positioned at the side of the shoe, means for pivotally mounting the deflecting blade in operative relation to the shoe, yieldable means connected to the shoe above the pivot for holding the shoe in normal position, and means for limiting the movement in one direction of the blade under the influence of the said yieldable means.



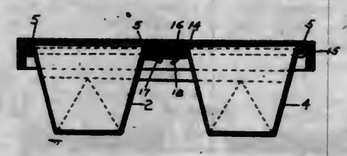
4. In a corn planter, the combination with a shoe, of a deflecting blade, means for mounting the blade for oscillation in a plane parallel to the side of the shoe, a block secured to the blade near its upper edge and having a channel in its inner surface adapted to receive the upper edge of the shoe for retaining the said blade parallel with the shoe and for limiting the movement of the blade in one direction, and yieldable means connected to the blade above the first mentioned pivot for normally holding the rear edge of the blade depressed with the block in engagement with the shoe.

1,627,538. CONTINUOUSLY-OPERATING ORE OR ORE-SHALE CONVERTING RETORT FURNACE. ARON MILLS BEAM, Denver, Colo.; Leroy J. Beam administrator of said Aron Mills Beam, deceased. Filed Feb. 26, 1924. Serial No. 695,265. 12 Claims. (Cl. 263—24.)



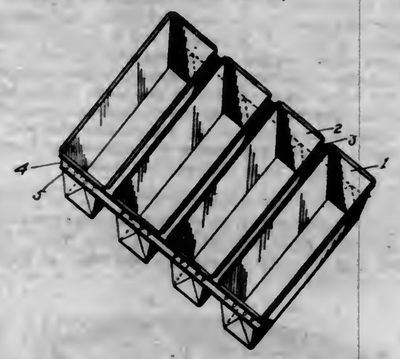
1. In a roasting furnace, a retort and flue comprising a pair of channel members so arranged that the web of one channel member cooperates with the side flanges of the second channel to provide a longitudinal passage, a plate cooperating with the flanges of said first channel to provide a second longitudinal passage, and means for delivering a material to be treated and a heating medium, respectively, to the said passages.

1,627,539. DRILLING APPARATUS. FRANK A. HALLECK, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 6, 1923. Serial No. 673,186. 23 Claims. (Cl. 255—22.)



1. In a drilling apparatus, hydraulic drill rod feeding mechanism including a cylinder, telescopically arranged tubular elements extending through said cylinder, said elements having relative longitudinal movement during feeding, and a piston movable in said cylinder and secured to one of said elements.

1,627,540. PROCESS OF MAKING CONTAINERS. ARTHUR KATZINGER, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill. Filed July 7, 1924. Serial No. 724,736. 2 Claims. (Cl. 53—6.)



2. An article of manufacture consisting of a multiple of containers fastened together by a strap riveted to the folds of the ends of said containers the rivets and the edges of the holes through which the rivets pass being arranged to make absolutely tight contact at all points.

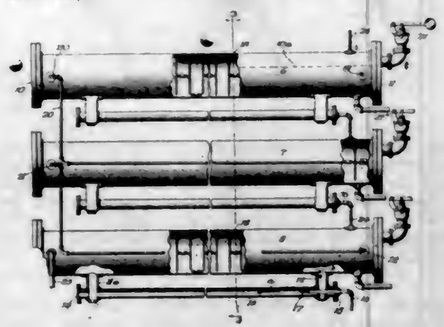
1,627,541. COVERED PAN. ARTHUR KATZINGER, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill. Filed Sept. 2, 1926. Serial No. 133,256. 2 Claims. (Cl. 53—6.)

1. A multiple of spaced pans attached together to form a unit, a reinforced resilient lip extending outwardly around the upper edges of each of said pans, a cover for said pans carrying resilient bosses attached to its inner surface and located for engagement with the adjacent edges of said pans, and vents in said cover, said vents being substantially above the spaces between adjacent pans.

1,627,542. REENFORCED BAKING PAN. ARTHUR KATZINGER, Chicago, Ill. Filed Sept. 18, 1926. Serial No. 136,312. 1 Claim. (Cl. 53—6.)

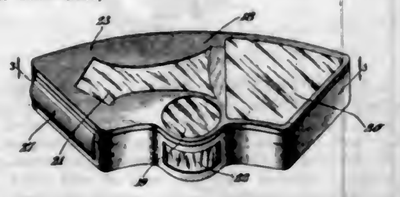
A series of baking pans having a reenforcing wire extending around the top edge of each of said pans, said pans being arranged side by side and fastened into a single unit by means of two strips riveted respectively to each of the ends of each pan, said strips consisting of a portion in contact with the ends of said pans, and another integral stiffening portion bent on an angle with said first portion and extending outward beyond and protecting the ends of said pans.

1,627,543. ORNAMENTAL FABRIC STRUCTURE. RUDOLF LOEB, Ventnor, N. J. Filed Mar. 1, 1927. Serial No. 171,855. 4 Claims. (Cl. 2—278.)



1. An edging for a body fabric comprising a ruffle structure consisting of an upper strip of material and

a lower strip of material superposed upon each other with an edge of the lower strip projecting beyond the edge of the upper strip to form a piped edge for the upper strip, the two strips being secured to each other by a line of stitching adjacent to the piped edge of the

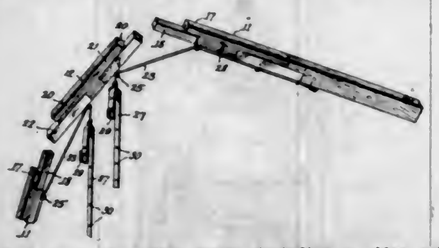


upper strip and both of the strips being ruffled along the piped edge and secured to the body fabric with the lower strip between the upper strip and the body fabric by a line of stitching spaced inwardly of the piped edge and the first line of stitching.

1,627,544. APPARATUS FOR CONDENSING VAPORS. EDWARD W. ISOM, Winnetka, Ill., and JOHN E. BELL, Brooklyn, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed June 23, 1921. Serial No. 479,796. 3 Claims. (Cl. 257—64.)

1. In apparatus of the class described, a plurality of closed condensing tanks arranged in series, each adapted to contain a body of condensate and a body of vapors above the same, cooling means arranged in each of the tanks, means including an expansion nozzle connected with the vapor space of each of the tanks in the series except the last for injecting vapor into the succeeding tank adapted to introduce the vapors into the body of condensate therein, and means for separately drawing off the condensate from each of said tanks.

1,627,545. AUTOMOBILE TRAFFIC-SIGNALING APPARATUS. BENJAMIN MEYROWITZ, New York, N. Y. Filed Aug. 17, 1926. Serial No. 129,680. 14 Claims. (Cl. 177—329.)



1. A luminous device for an automobile comprising a casing adapted to be secured in upright position upon an automobile, said casing having a source of light therein, a signal window in said casing rendered luminous by said source, said casing having a cylindrical lens disposed with its focal line substantially at the source of light and arranged with respect to said source to project a fan-shaped beam having its axis inclined with respect to the vehicle, so that a flat surface associated with the vehicle and contiguous to said window, will intensify the narrow streak of light which is the intersection of said beam with said surface.

4. A turn signal device comprising a casing adapted to be mounted near the rear of a motor vehicle, an outward, downwardly inclined cylindrical lens at an end of said casing, a lamp in said casing having its filament substantially at the principal focal line of said lens, whereby a fan-shaped beam will be projected to intercept the ground as a laterally directed streak in close proximity to the vehicle, said streak being an elongated light pattern constituting the distorted but complete image of the filament.

7. Signaling means on an automobile and of the type comprising a number of closely contiguous windows each with an associated source of light, said windows including a tail light, a stop light and a turn signal, said windows being of character such as to be easily mistaken one for the other, the combination in which the turn light signal includes a lens projecting system at the end of the corresponding casing portion, said system having a substantial converging effect in a horizontal meridian and little or no converging effect in the vertical meridian, the signal light for the turn signal being disposed substantially at the focus of said lens, said lens being arranged with respect to said light to incline the fan-shaped beam therefrom downwardly whereby there will flash simultaneously with the turn signal window a sharply defined narrow luminous streak extending on the ground transversely outwardly from the vehicle.

11. A combined turn signal and backing up light comprising a casing adapted to be mounted near the rear of a motor vehicle, said casing including a turn signal window at the face thereof and having a laterally and downwardly directed converging light projecting system therein, including a lateral aperture in said casing and a common source of light for said projecting system and for said window, whereby in use as a turn signal a sharply defined light pattern will be flashed contiguous to the illuminated window and whereby in use as a backing up light the illuminated window will aid in lighting the road way rearwardly of the vehicle and the projected beam will afford intense illumination laterally of the vehicle.

1,627,546. COLLAPSIBLE TENT SUPPORT. WINFIELD S. RYNEARSON, Edmonds, Wash. Filed Feb. 9, 1926. Serial No. 87,158. 4 Claims. (Cl. 135—15.)

4. A tent supporting means including a ridge pole and upright poles, the ridge pole including a plurality of sections having the adjacent ends bifurcated vertically, the lower furcations being telescopically jointed and the upper furcations adapted for abutting relation, means for guiding the user in properly associating the sections, consisting of flexible elements secured to the outer sections, guide eyes on the remaining sections through which the flexible elements are trained and enlargements on the inner ends of the flexible elements for permitting of disjointing of the sections while preventing their complete separation, and retaining means for holding the sections in jointed relation connected with the inner ends of the flexible elements and engageable in keepers on the sides of certain of said sections.

Patents Nos. 1,627,547 to 1,628,637.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 358—No. 2. TUESDAY, MAY 10, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Classification.

Order No. 3,007, April 23, 1927, directs:

In *class 28, Textiles* (Division 21), establish the following subclass and definition, the patents contained in this subclass having been taken from class 28, subclass 29, Warp preparation, Pattern setting:

55.5 Pile tufting, pattern setting.

55.5. PILE TUFTING, PATTERN SETTING. Setting or winding colored tuft-pile threads into arrangements suitable for weaving Axminster carpets and the like.

Search this class, subclass 29, for similar inventions for use with tapestry warp threads.

In *class 28, Textiles* (Division 21), subclass 29, Warp preparation, Pattern setting, in the second line of the definition cancel the words "or pile" and add to the definition the following note:

Search this class, subclass 55.5, for similar inventions for use with Axminster tuft material.

In *class 137, Water Distribution* (Division 39), abolish the following subclass, the patents formerly contained therein having been placed for the most part in class 225, Dispensing Beverages:

Cocks and faucets
27 Tank.

In *class 139, Textiles, Weaving* (Division 21), establish the following subclass and definition, the patents contained in this subclass having been taken for the most part from class 139, subclasses 384, Fabrics, Special shape, and 386, Fabrics, Special shape, Curved:

Fabrics
Special shape
385.5 Collar.

385.5. FABRICS, SPECIAL SHAPE, COLLAR. Which are designed for use as collars for human apparel.

In *class 139, Textiles, Weaving* (Division 21), subclass 384, Fabrics, Special shape, add to the definition the following:

or stock peculiarly adapted for producing structures of this nature.

Drawings.

Attention is called to paragraphs *g* and *i* of Rule 52 of the Rules of Practice of the Patent Office, and inventors and attorneys are directed to omit from the space outside of the marginal line of the drawings any marks of identification, inasmuch as the space referred to is reserved for the use of the Patent Office. Such identifying-marks should be placed upon the back of the drawings.

TIME LIMITS FOR ACTIONS.

Completing applications	6 mos.
Responding to official actions:	
If dated prior to May 2, 1927	1 yr.
If dated on or after May 2, 1927	6 mos.
Renewal of applications:	
If allowed prior to May 2, 1927	2 yrs.
If allowed on or after May 2, 1927	1 yr.

(See act of March 2, 1927, 357 O. G. 5.)

This act affects all applications pending before this Office, irrespective of their filing dates.

Condition of Applications Under Examination at Close of Business April 29, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 59,212; Trade-Mark Division, 1,960. Oldest new case, Sept. 16, 1926; oldest amended, Sept. 16, 1926. The dates given are 1926 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders	†Feb. 21	†Mar. 1	509
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	†Jan. 3	†Jan. 12	738

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

CONRADSON *v.* DRAKE AND HUBBELL *v.* MORGAN.

Decided September 11, 1926.

INTERFERENCE—MOTION TO DISSOLVE BY PATENTEE—PATENTABILITY OF THE ISSUE.

A motion to dissolve which denies the patentability of the counts of the issue will not be set for hearing where the moving party is a patentee.

ON PETITION.

In re Interference No. 53,010.

GRINDING MACHINE.

Mr. Geo. E. Tew for Conradson.

Mr. Geo. H. Kennedy, jr., for Drake and Hubbell.

Messrs. Southgate, Fay & Hawley for Morgan.

ROBERTSON, *Commissioner:*

The party Conradson seeks a review of the order of the Law Examiner refusing to set ground 1 of his motion to dissolve for hearing. Ground 1 denies the patentability of the four counts of the issue in view of the state of the art. The moving party being a patentee, transmission was refused under the well-known practice under *Manson* v. *Hutchison*, 201 O. G. 569, and *Fend* v. *Miggett*, 223 O. G. 649. The moving party frankly states that he desires full consideration of the question with a view to reestablishing the practice that prevailed prior to these decisions.

The decisions of Commissioner Ewing were made with full knowledge of the prior decisions and should not be disturbed without the best of reasons. Substantially every point involved in this case was passed upon in *Manson* v. *Hutchison* or *Fend* v. *Miggett* or on rehearing in the former case. Whether a patentee shall be permitted to deny the patentability of his claims is largely a matter of policy. The present practice was adopted a number of years ago and has not heretofore been seriously opposed. There are perhaps objections to either the present practice or that which it superseded, but the objections to the existing rule are not sufficient to justify its reversal. A patentee who moves to dissolve on the ground of unpatentability must of necessity take repugnant positions. He would hold onto his patent when threatened with dispossession, although he believes it invalid, in order that he may if possible destroy the rights which he has enjoyed and thus prevent their enjoyment by others. It seems more proper to disclaim that which he is convinced is not patentable or to contest priority on that which is doubtful.

The petition is denied.

EX PARTE CROWN FRUIT & EXTRACT CO., INC.

Decided February 2, 1926.

1. TRADE-MARKS — COMMONPLACE WORDS — "CROWN"—"RED CROWN"—DECEPTIVE SIMILARITY.

Where registration of the word "Crown" was refused by the Examiner on the ground that the mark is confusingly similar to the registered mark "Red Crown," for use on the same class of goods, and the applicant cited a considerable number of references in support of his view that the word "Crown" has been so widely used in connection with various classes of goods that no one is entitled to any broad protection, but only to the specific mark on the specific goods on which it is used, *Held* that since applicant sought registration of the word "Crown" alone and did not join it to other distinguishing words and the only protection which could be granted would be the right to exclude others from using the same word further confusion should not be created by registration of the word.

2. SAME—PRESERVED CHERRIES—FRUIT PRESERVES AND CANNED CHERRIES—SAME DESCRIPTIVE PROPERTIES.

Preserved cherries possess the same descriptive properties as fruit preserves and canned cherries.

ON APPEAL.

Application for registration of trade-mark for preserved cherries filed July 8, 1922, Serial No. 166,590.

Mr. C. P. Goepel for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks denying registration of the word "Crown" used on preserved cherries. The refusal of registration is based on the ground that the mark is confusingly similar to the mark "Red Crown" registered by the Acme Packing Company June 29, 1920, No. 132,602, and February 22, 1921, No. 139,748, for use on fruit preserves and canned cherries. The Examiner held the goods possessed the same descriptive properties.

The applicant urges the marks are dissimilar and the goods belong to different classes. It would seem clear these marks appearing upon the same class of goods would create confusion in trade. The goods would become known as "Crown goods," and the word "Red," appearing in the prior registered mark, would frequently not be remembered or noticed by purchasers of goods of this character.

It is believed, in consequence, the holding of the Examiner that the words are confusingly similar within the meaning of the Trade-Mark Act is sound.

[1] Applicant has cited a considerable number of registrations in support of his view that the word "Crown" has been so widely used in connection with various classes of goods that no one is entitled to any broad protection, but only to the specific mark on the specific goods on which it is used. The applicant calls attention to certain adjudicated cases in support of its view, and especially *Ex parte Mission Brewing Company*, 209 O. G. 1053, in which the word "Mission" and the words "Old Mission" were held not to be in conflict. It should be noted that the goods were different, one mark being applied to a malt tonic and the other to lager beer. Applicant's contention that since the word "Crown" has been previ-

ously widely used upon many different classes of goods only limited protection may be granted is somewhat in harmony with the holding in the case of *Pabst Brewing Co.* v. *Decatur Brewing Co. et al.*, 306 O. G. 837, 284 Fed. Rep. 110, U. S. C. C. A., 7th Cir. It must be considered, however, appellant is seeking the registration of the word "Crown" alone and has not joined it to other distinguishing words, and the only protection which could be granted would be the right to exclude others from using this same word. It is not believed, even in view of the number of previous registrations cited by the applicant, that further confusion should be created.

[2] It is not thought there can be any doubt that the goods belong in the same class, as such term has been interpreted and defined in the case of *H. Wolfe & Sons* v. *Lord & Taylor*, 202 O. G. 632, 41 App. D. C. 514, and *E-Z Waist Company* v. *Reliance Manufacturing Co.*, 311 O. G. 709, 52 App. D. C. 298. Cherries, as well as other fruits, are preserved in various ways, and among such ways are those employed by the registrant and by the applicant. The public would recognize the fruit as the same, as a relishable preserved fruit product, and would be quite likely to regard both products as having the same origin.

The decision of the Examiner of Trade-Marks is affirmed.

Court of Appeals of the District of Columbia.

IN RE SCHILLER AND WESCOTT.

No. 1,882. Decided December 6, 1926.

PATENTABILITY—METHOD—AGGREGATION.

Where it was old to elevate liquids by air pressure, and likewise old to purify air for aerating milk, *Held* that a method of transferring liquids, consisting in sterilizing air, purifying the air, and using it under pressure to force the liquid from one receptacle to another, is unpatentable as covering merely an aggregation of processes old in the art.

APPEAL from Patent Office. Affirmed.

Mr. Joshua R. H. Potts and *Mr. Geo. B. Parkinson* for Schiller et al.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

VAN ORSDEL, *J.*:

This appeal is from the disallowance of appellant's application for a patent for a device for transferring liquids by air pressure. The following claims illustrate the device:

(1) The herein described method of transferring liquids, consisting in sterilizing air, purifying the air, and using it under pressure to force the liquid from one receptacle to another.

(7) The herein described apparatus for transferring liquids, consisting of means for compressing air; means for expanding air; means for purifying the air, and means for using it under pressure to force the liquid from one receptacle to another.

It will be observed that the claims call for either a method or apparatus for forcing liquid from one receptacle to another by the means of sterilized and purified air. References are shown that it was old to elevate liquids by air pressure. It is likewise old in the art to purify air for aerating milk.

It was held in the Patent Office, and we think correctly, that the claims in issue cover merely an aggregation of processes old in the art. The elevating feature is old whether it is produced by sterilized air or not. In the light of the references shown in the record we find nothing in appellant's disclosure which would entitle him to a patent.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

IN RE SCHILLER AND WESCOTT.

No. 1,883. Decided December 6, 1926.

PATENTABILITY—METHOD UNPATENTABLE.

The process of sterilizing fluids by air compression and the sudden relief of the fluid from the compressor being old, and it also being old to extract oil from air and filter the air, *Held* that the method of purifying air, consisting in compressing, expanding, and thereby sterilizing the air, extracting any oil it may contain, and filtering the air, is unpatentable.

APPEAL from the Patent Office. Affirmed.

Mr. Joshua R. H. Potts and *Mr. Geo. B. Parkinson* for Schiller et al.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

VAN ORSDEL, *J.*:

This is a companion case to the one just decided, No. 1,882, and relates to a method for purifying and sterilizing air. The following claims are illustrative of the method:

(1) The herein described method of purifying air, consisting in compressing, expanding, and thereby sterilizing the air.

(4) The herein described method of purifying air, consisting in compressing, expanding, and thereby sterilizing the air, extracting any oil it may contain, and filtering the air.

(5) The herein described method of sterilizing air, consisting in compressing air until its temperature is about 150° F., and expanding it until the temperature drops about 80°.

It will be observed that these claims are drawn to a method of sterilizing and purifying air. Appellant's device consists of an air compressor and a pipe leading therefrom to a series of expansion tanks, gradually increasing in size, through which the air passes into an oil separator, and an air filter from which the purified air is delivered and may be used for any purpose desired.

The tribunals below relied chiefly upon a patent to Perkins, No. 440,320, January 2, 1900, covering a system for sterilizing, drying, and cooling air for use in preserving fruit or meat. His device is complicated and includes a furnace, a reheater, coolers, a low-pressure air cylinder, a high-pressure air cylinder, an intercooler, an expander, primarily for supplemental separators, and a storage or refrigerating chamber.

A patent issued to one Baldwin, No. 920,811, May 4, 1909, and one to Garpheide, No. 1,115,806, November 3, 1914, disclosed claims for apparatus for sterilizing liquids by means of pressure. Also a patent to one Larson, No. 1,517,845, December 2, 1924, which discloses apparatus for killing bacteria is described in his application as follows:

In carrying out this process I prefer to subject the bacteria in suspension in a suitable fluid to a high pressure by means of a suitable gas and then to slowly release the fluid from the container in which it is held, and thereby, as the fluid passes out of its container, to permit a sudden expansion of the gas. This produces a sudden change in the osmotic tension of the fluid whereby the bacteria are killed, the expansion of the gas causing their disruption, and the juices, toxins and protoplasm of the organism are released in a diffused state and without any chemical change therein.

It thus appears that the process of sterilizing fluids by air compression and the sudden relief of the fluid from the compressor is old in the art. Indeed Baldwin claims a process for sterilizing substances such as meat by means of pressure and the sudden removal of the pressure. It is well understood that this process explodes the bacteria in milk. Appellant's device is extensively used for the elevation, transferring, purification, and handling of milk. It is also true that there is nothing novel or new in the process of extracting the oil and filtering the air.

We are of opinion therefore that the Commissioner of Patents was right in rejecting the claims, and his decision is accordingly affirmed.

PATENT SUITS.

An interference having been declared by this Office between the application of Transo Envelope Company, 3512 North Kimball Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered August 10, 1920, No. 134,146, to The Wynne Paper Co., 318 West Thirty-ninth Street, New York, N. Y., and a notice of such declaration sent by registered mail to said The Wynne Paper Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless The Wynne Paper Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 10, 1927.

[VOL. 358. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 185,154. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) EDWIN B. STIMPSON COMPANY, Brooklyn, N. Y. Filed Aug. 29, 1923.

Particular description of goods.—Metal Angles for Box Partitions and General Use, Stamped Metal Arrows for General Use, Metal Beckets for General Purposes; Bells for Toys, Dog Collars, and General Purposes Except Electrical; Metal Binder Parts Including Strips, Slides, Wire Forms, Fasteners, Eyelets, Rivets, Etc.; Metal Burrs and Washers, Caps (Tubular Rivet, Split Rivet, Etc); Cord, Rope, and Wire Clamps; Clips for General Purposes, Metal Corners for General Purposes, Cotter Pins, Metal Disks for General Purposes, Escutcheon Pins, Keyhole Escutcheons, Metal Frames for General Purposes, Thermometer Guards, Metal Handles for General Purposes, Stamped Metal Hands for General Purposes, Metal Hangers for Calendars, Passe Partouts, Moth Bags, and General Purposes, Split-Rivet Holders, Hooks of All Kinds, Metal Knobs; Loops for Razor Strops, Belts, and General Purposes; Heel Plates, Moth-Bag Plates, Name Plates for Dog Collars, Metal Plates for General Purposes, Metal Posts for General Uses, Drawer Pulls, Metal Rods for Hanging Curtains, Draperies, Portières, Etc.; Metal Tubing Stock for the Same Purpose and Which is Commonly Called "Rods," and Stair Rods, Bathroom Rods, and Metal Rods Generally Used for Household Purposes; Metal Screens for General Purposes, Screw Eyes, Shoe Shanks, Metal Slides for General Purposes, Metal Spots for General Purposes, Metal Springs for General Purposes, Staples for General Purposes, Metal Straps for General Purposes, Metal Studs for General Purposes, Metal Tips for General Purposes, Metal Tongues for General Purposes; Metal Terminals for Ropes, Cords, Wires, and General Purposes.

Claims use since July 23, 1921.

Ser. No. 185,156. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) EDWIN B. STIMPSON COMPANY, Brooklyn, N. Y. Filed Aug. 29, 1923. Under 10-year proviso.

STIMPSON

Particular description of goods.—Metal Angles for Box Partitions and General Use, Stamped Metal Arrows for General Use, Metal Beckets for General Purposes, Bells for Toys, Dog Collars, and General Purposes Except Electrical; Metal Binder Parts Including Strips, Slides, Wire Forms, Fasteners, Eyelets, Rivets, Etc.; Metal Burrs and Washers, Caps (Tubular Rivet, Split Rivet, Etc.); Cord, Rope, and Wire Clamps; Clips for General Purposes, Metal Corners for General Purposes, Cotter Pins, Metal Disks for General Purposes, Escutcheon Pins, Keyhole Escutcheons, Metal Frames for General Purposes, Thermometer Guards, Metal Handles for General Purposes; Stamped Metal Hands for General Purposes; Metal Hangers for Calendars, Passe Partouts, Moth Bags, and General Purposes; Split-Rivet Holders, Hooks of All Kinds, Metal Knobs: Loops for Razor Strops, Belts, and General Purposes; Heel Plates, Moth-Bag Plates, Name Plates for Dog Collars, Metal Plates for General Purposes, Metal Posts for General Uses, Drawer Pulls, Metal Rods for Hanging Curtains, Draperies, Portières, Etc.; Metal Tubing Stock for the Same Purpose and Which is Commonly Called "Rods," and Stair Rods, Bathroom Rods, and Metal Rods Generally Used for Household Purposes; Metal Screens for General Purposes, Screw Eyes, Shoe Shanks; Metal Slides for General Purposes, Metal Spots for General Purposes, Metal Springs for General Purposes, Staples for General Purposes, Metal Straps for General Purposes, Metal Studs for General Purposes, Metal Tips for General Purposes, Metal Tongues for General Purposes, Metal Terminals for Ropes, Cords, Wires, and General Purposes.

Claims use since Jan. 1, 1895.

Ser. No. 209,448. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) MAXIMILIAN WEIL, doing business as Audak Company, New York, N. Y. Filed Feb. 11, 1925.

SELECTRON

Particular description of goods.—Attachment or Accessory for Phonographs by Which the Amplifier is Used Alternatively for Its Intended Purpose and As a Radio Loud Speaker.

Claims use since on or about May, 1924.

Ser. No. 211,339. (CLASS 2. RECEPTACLES.) DRY-ICE CORPORATION OF AMERICA, New York, and Long Island City, N. Y. Filed Mar. 20, 1925.

DRY ICE

Particular description of goods.—Empty Containers Adapted for Storage, Transportation, or Use of Carbon Dioxide (CO_2) in Solidified Forms, Mixtures, and Compounds.

Claims use since Mar. 3, 1925.

Ser. No. 213,001. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) CENTRAL SCIENTIFIC COMPANY, Chicago, Ill. Filed Apr. 20, 1925.

CENCO

Particular description of goods.—Aluminum Rod, Aluminum Sheet, Aluminum Wire, Brass Rod, Brass Sheet, Brass Strip, Brass Wire, Copper Rod, Copper Sheet, Copper Wire, Iron Rod, Iron Sheet, Iron Wire, Lead Sheet, Lead Wire, Nickel Sheet, Phosphor-Bronze Ribbon, Platinum Sheet and Wire, Steel Wire, Steel Rod, Tin Foil, Tin Sheet, Zinc Sheet, Zinc Wire, Anvils, Aluminum Metal, Barium Metal, Beryllium Metal, Bismuth Metal, Cadmium Metal, Calcium Metal, Chromium Metal, Cobalt Metal, Copper Metal, Gold Metal, Iron Metal Filings, Iron Metal Powder, Iron Metal Wire, Lead Metal, Lithium Metal, Magnesium Metal, Manganese Metal, Molybdenum Metal, Nickel Metal, Palladium Metal, Potassium Metal, Platinum Metal, Silicon, Silver Metal, Silenium Metal, Thorium Metal, Tin Metal, Tungsten Metal, Asbestos Palladinized, Asbestos Platinized, Uranium Metal, Zinc Metal, and Zinc Amalgam, Brass Balls (Unfinished), Copper Balls (Unfinished), Iron Balls (Unfinished), and Steel Balls (Unfinished), Mercury.

Claims use since April, 1921.

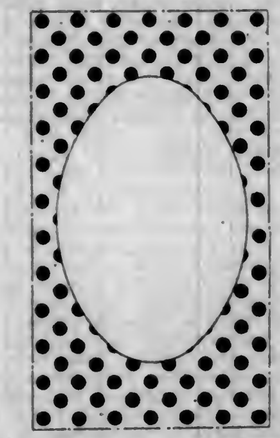
Ser. No. 218,670. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SUTTER COOPERATIVE GROWERS, San Francisco, Calif. Filed Aug. 10, 1925.

The portrait shown on the drawing is wholly fanciful.

Particular description of goods.—Canned Peaches.

Claims use since June 1, 1925.

Ser. No. 218,778. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROANOKE APPLE PRODUCTS CO., Roanoke, Va. Filed Aug. 12, 1925.



No claim is made to the word "Brand" apart from the mark shown in the drawing.

Particular description of goods.—Vinegar.

Claims use since July 24, 1925.

Ser. No. 220,832. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN STORES COMPANY, Philadelphia, Pa. Filed Sept. 26, 1925.

Particular description of goods.—Coffee, Paprika, Celery Salt, Grape Jelly, Crab-Apple Jelly, Quince Jelly, Red-Currant Jelly, Bacon, Cracker Meal, Tapioca, Peanut Butter, Canned Peaches, Evaporated Milk, Corn Flakes, Canned Apricots, Canned Asparagus, Canned Asparagus Tips, Bread Crumbs, Canned Sauerkraut, Canned Cherries, Catchup, Corn Meal, Canned Tomato Purée, Canned Tomato Concentrated, Canned Pears, Canned Tunny Fish, Canned Shrimp, Canned Pumpkins, Cocoa, Canned Raspberries, Canned Strawberries, Canned Fruit Salad, Canned Beets, Strawberry Preserves, Raspberry Preserves, Peach Preserves, Pineapple Preserves, Blackberry Preserves, Canned Pineapple, Canned Spinach, Canned Stringless Beans, Canned Peas, Canned Tomatoes, Canned Corn, Canned Lima Beans, Canned Succotash, Canned Beans with Pork and Tomato Sauce, Canned Salmon, Condensed Milk, Pancake Flour, Buckwheat Flour, Macaroni, Noodles, Cake, Farina, Cornstarch, Tea, Extract of Vanilla for Food Flavoring, Allspice, Mustard, Mustard Seed, Cloves, Celery Seed, Cinnamon, Caraway Seed, Black Pepper, White Pepper, Red Pepper, Ginger, Nutmeg, Mixed Spices, Vinegar, and a Breakfast Drink Used as a Substitute for Coffee.

Ser. No. 226,847. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) HARRY T. CRAWFORD, doing business as Doc's Auto Products Co., Lansing, Mich. Filed Feb. 4, 1926.

Doc's

Particular description of goods.—A Polish for Automobiles, Furniture, and the Like and for Surfaces Requiring a Similar Finish.

Claims use since December, 1925.

Ser. No. 227,022. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KOMMANDITBOLAGET SPIS-& KNÄCKEBRÖDSFABRIKEN KRONAN, BARTHEL KOCK, Sundyberg, Sweden. Filed Feb. 8, 1926.

Except as to the word "Kron" and "Kronan" no claim is made to the exclusive right to use the words apart from the mark shown in the drawing.

Particular description of goods.—Bread.

Claims use since Nov. 25, 1905.

Ser. No. 227,206. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) WHITE MULE, INC., Carbondale, Ill. Filed Feb. 11, 1926.

WHITE MULE

Particular description of goods.—Tire Patches.

Claims use since March, 1924.

Ser. No. 227,336. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ARENCHBACHER BROS., Covington, Ga. Filed Feb. 16, 1926.

NEWTON MAID

Particular description of goods.—Bread, Cakes, and Cookies.
Claims use since Sept. 1, 1924.

Ser. No. 227,357. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. KATEKARU, doing business as J. Katekaru Co., Brawley, Calif. Filed Feb. 16, 1926.

TOP NOTCH

Particular description of goods.—Melons—Viz, Cantaloupes and Honey Dew Melons; and for Fresh Vegetables—Viz, Peas, Lettuce, Tomatoes, and Squash.
Claims use since June 1, 1922.

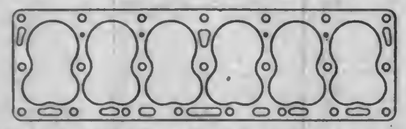
Ser. No. 227,828. (CLASS 2. RECEPTACLES.) CONTINENTAL BANK-SUPPLY COMPANY, Mexico, Mo. Filed Feb. 26, 1926.

CONTINENTAL
BANK-SUPPLY-COMPANY
MEXICO, MO.

No claim is made to the exclusive use of the words "Bank Supply Company, Mexico, Mo." apart from the mark shown.
Particular description of goods.—Bank Supplies—Namely, Coin Bags of Textile Material.
Claims use since Jan. 15, 1926.

Ser. No. 227,910. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. D. ROSZELL COMPANY, Peoria, Ill. Filed Feb. 27, 1926.

GOLD CROWN



Particular description of goods.—Pasteurized Milk.
Claims use since Apr. 28, 1925.

Ser. No. 228,111. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) K. C. B. ELECTRIC MFG. CO., Sacramento, Calif. Filed Mar. 4, 1926.

K.C.B.

Particular description of goods.—Storage Batteries, Radiobatteries, Dry Cells, Assembled Radio Receiving Sets, Electric Motors, and Electric Generators.
Claims use since Oct. 22, 1925.

Ser. No. 228,151. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) VICTOR MANUFACTURING & GASKET CO., Chicago, Ill. Filed Mar. 4, 1926.

Particular description of goods.—Sheet Asbestos.
Claims use since Feb. 1, 1926.

Ser. No. 228,152. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) VICTOR MANUFACTURING & GASKET CO., Chicago, Ill. Filed Mar. 4, 1926.

VICTOR

Particular description of goods.—Sheet Asbestos.
Claims use since Feb. 1, 1926.

Ser. No. 228,153. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) VICTOR MANUFACTURING & GASKET CO., Chicago, Ill. Filed Mar. 4, 1926.

Vicbestos

Particular description of goods.—Sheet Asbestos.
Claims use since Feb. 1, 1926.

Ser. No. 228,169. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BASS AND GOLDBERG, doing business as American Press Board Co., New York, N. Y. Filed Mar. 5, 1926.

VIKI

Particular description of goods.—Dry-Cleaning Fluid for Fabrics and Other Materials.
Claims use since about Feb. 1, 1926.

Ser. No. 228,301. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE COLSON COMPANY, Elyria, Ohio. Filed Mar. 8, 1926.

THE COLSON CO
SILVER RING
ELYRIA. OHIO. U.S.A.

The words "Elyria, Ohio, U. S. A." are disclaimed as not being a part of the trade-mark sought to be registered.
Particular description of goods.—Bicycles.
Claims use since on or about July 1, 1925.

Ser. No. 228,399. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) AMERICAN ROAD MACHINERY COMPANY, Kennett Square, Pa. Filed Mar. 10, 1926.

CHAMPION

Particular description of goods.—Distributing Wagons, Dumping Wagons, and Road Oil Distributors.
Claims use since on or about Oct. 1, 1883.

Ser. No. 228,441. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) RENO SPECIALTY COMPANY, Reno, Nevada. Filed Mar. 10, 1926.

DR. MARVEN'S POWDER
FOR CLEANSING ARTIFICIAL TEETH AND REMOVABLE BRIDGES
MANUFACTURED BY RENO SPECIALTY CO. RENO, NEV.

No claim is made to the exclusive use of the wording appearing on the drawing except in the arrangement and association shown.
Particular description of goods.—Powder for Cleaning Artificial Teeth.
Claims use since October, 1919.

Ser. No. 228,909. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Filed Mar. 20, 1926.

KELSWORTH

Particular description of goods.—Batteries, Radio Receiving Sets, and Parts Therefor.
Claims use since about Jan. 15, 1926.

Ser. No. 228,910. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS AND PARTS THEREOF.) KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Filed Mar. 20, 1926.

KELSWORTH

Particular description of goods.—Vacuum Cleaners.
Claims use since about Jan. 15, 1926.

Ser. No. 228,911. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Filed Mar. 20, 1926.

KELSWORTH

Particular description of goods.—Washing Machines.
Claims use since about Jan. 15, 1926.

Ser. No. 230,867. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) C. W. BROOS, SONS & Co., Chicago, Ill. Filed Apr. 29, 1926.

DANDRIX

Particular description of goods.—Dandruff Remover and Preventer.
Claims use since about Jan. 2, 1916.

Ser. No. 230,917. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) IRVING HALPERN, doing business as Hal Pern M'f'g Co., Brooklyn, N. Y. Filed Apr. 30, 1926.

SKEETAROUT

Particular description of goods.—Insecticide.
Claims use since about May 1, 1925.

Ser. No. 231,114. (CLASS 10. FERTILIZERS.) JULIUS LOEWITH, INC., New York, N. Y. Filed May 4, 1926.

CROP

TRADE MARK REG.

No claim is made to the words "Trade Mark Reg." apart from the mark as shown.
Particular description of goods.—Form of Peat Moss Used as a Humus or Soil Improver.
Claims use since Apr. 1, 1926.

Ser. No. 232,686. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) NATIONAL TUBE COMPANY, Pittsburgh, Pa. Filed June 3, 1926.

The mark consists of the representation of a scale and the word "Free" inclosed within a circle.
Particular description of goods.—Metal Pipes, Tubes, and Pipe Couplings.
Claims use since about May 7, 1926.

Ser. No. 232,721. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) EAGLE LEATHER GOODS COMPANY, Philadelphia, Pa. Filed June 4, 1926.

No claim is made for protection under the act for the word "Genuine" or for the expression "Borhyde" apart from the mark shown in the drawing.
Particular description of goods.—Suitcases, Fitted Cases, and Hand Bags.
Claims use since about May 10, 1926.

Ser. No. 233,926. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) FAGERSTA BRUKS AKTIEBOLAG, Fagersta, Sweden. Filed June 30, 1926.

G

Particular description of goods.—Saw-Blade Blanks, Rolled and Hammered Steel, and Drawn Steel.
Claims use since the year 1846.

Ser. No. 234,503. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) COMPAGNIE D'APPLICATIONS MÉCANIQUES, Paris, France. Filed July 14, 1926.

RAF

Particular description of goods.—Spring Pneumatic or Hydraulic Suspensions, Leaf Springs, Auto Buffer Leaf Springs, Spring Sheaths, Suspension Stabilizers, Spring Brakes, and Particularly All Types of Antivibration Shock Absorbers and Buffers, Bumpers, and Their Fastenings.
Claims use since June 8, 1923.

Ser. No. 234,809. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE "Y & B" CORPORATION, Charlotte, N. C. Filed July 20, 1926.

MECKO

The mark consists in the word "Mecko."
Particular description of goods.—Dairy Products—Viz, Milk, Butter, Ice Cream, and Buttermilk.
Claims use since 1921.

Ser. No. 235,767. (CLASS 38. PRINTS AND PUBLICATIONS.) ANTHONY G. YOUNG, New York, N. Y., assignor to Companion Publishing Company, Inc., New York, N. Y. Filed Aug. 9, 1926.

The Smokers Companion
A National Monthly For Hearth And Home

The words "A National Monthly for Hearth and Home" are disclaimed aside from the mark as shown.
Particular description of goods.—Monthly Publications.
Claims use since July 1, 1926.

Ser. No. 236,214. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) LILY FOUNDRY COMPANY, Los Angeles, Calif. Filed Aug. 20, 1926.

LILY
WHITE

The descriptive word "White" is hereby disclaimed apart from the mark shown.
Particular description of goods.—Plumbers' and Steam-Fitters' Supplies—Namely, Toilet Bowls, Basins, Bathtubs, Baby Baths, Sinks, Toilet Bowls, Lavatories, and Flush Tanks.
Claims use since Mar. 1, 1926.

Ser. No. 236,307. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE EDWARD VALVE AND MANUFACTURING CO., East Chicago, Ind. Filed Aug. 23, 1926.

FERAC

Particular description of goods.—Valves for Controlling the Flow of Fluids—Namely, Globe and Angle Stop Valves, Check Valves, Stop and Check Valves, Atmospheric Relief Valves, Nonreturn Valves, Pressure-Limiting Valves, and Blow-Off Valves.
Claims use since June 26, 1926.

Ser. No. 236,923. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MAX FEIST, INC., New York, N. Y. Filed Sept. 7, 1926.

MINUETTE

Particular description of goods.—Velvets in the Piece.
Claims use since Apr. 8, 1926.

Ser. No. 237,181. (CLASS 25. LOCKS AND SAFES.) MASTER LOCK COMPANY, Milwaukee, Wis. Filed Sept. 13, 1926.

MASTER

Particular description of goods.—Locks.
Claims use since Sept. 1, 1922.

Ser. No. 237,823. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) JOSEPH SCADRON, New York, N. Y., assignor to U. S. Bifocal Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1926.

SUPER-SITE

"Super-Site."
Particular description of goods.—Ophthalmic Lenses and Frames and Mountings Therefor.
Claims use since Feb. 2, 1916.

Ser. No. 237,995. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) JOHN WANAMAKER PHILADELPHIA, Philadelphia, Pa. Filed Sept. 30, 1926.

Tribout

Particular description of goods.—Ladies' Hand Bags.
Claims use since October, 1923.

Ser. No. 238,054. (CLASS 39. CLOTHING.) HONOR L. EAGER, doing business as Good Luck Products Company, Sheepshead Bay, Brooklyn, N. Y. Filed Oct. 2, 1926.

Good Luck

Particular description of goods.—Garters.
Claims use since October, 1921.

Ser. No. 238,622. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIMON MATTRESS MANUFACTURING CO., San Francisco, Calif. Filed Oct. 14, 1926.

SIMON

PURE

Particular description of goods.—Bedding—Namely, Bed Comforters.
Claims use since Jan. 1, 1925.

Ser. No. 238,929. (CLASS 27. HOROLOGICAL INSTRUMENTS.) WALTHAM WATCH COMPANY, Waltham, Mass. Filed Oct. 20, 1926.

Applicant is the owner of registration 82,124, effected under the 10-year proviso of the act of 1905.
Particular description of goods.—Watches and Parts Thereof.
Claims use since on or about July, 1900.

Ser. No. 239,201. (CLASS 39. CLOTHING.) MARGARET SEKEY, New York, N. Y. Filed Oct. 25, 1926.

COQUET

Particular description of goods.—Bandeaux Such as Brassières.
Claims use since Sept. 23, 1926.

Ser. No. 239,347. (CLASS 39. CLOTHING.) THE AMERICAN CELLULOSE & CHEMICAL MANUFACTURING COMPANY, LTD., New York, N. Y. Filed Oct. 28, 1926.

"LOCKNIT"

Particular description of goods.—Women's and Children's Dresses, Coats, Suits, Sweaters, Bloomers, and Vests; Men's, Women's, and Children's Underwear of Knitted Fabric and Textile Fabric, and Negligee Shirts.

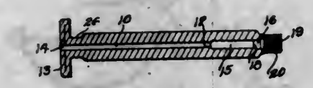
REISSUES

MAY 10, 1927.

16,617. ADJUSTING VALVE AND METHOD OF MAKING THE SAME. ANDREW GREEN, Albert Lea, Minn., assignor to American Gas Machine Company, Inc., Albert Lea, Minn., a Corporation of Minnesota. Filed Mar. 25, 1927. Serial No. 178,492. Original No. 1,613,323, dated Jan. 4, 1927, Serial No. 672,857, filed Nov. 5, 1923. 4 Claims. (Cl. 29—157.)

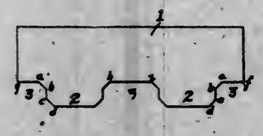


4. The method of making a combined vaporizing tube and valve for a liquid hydrocarbon stove which consists in providing a comparatively long piece of tubing, forming a solid cylindrical plug of much shorter length, forming a bore in said plug and forming a valve seat therein and forming a small bore extending from said valve seat, said first mentioned bore being of smaller diameter than the internal diameter of said tube and then welding one end of said tube and the end of said plug having the first mentioned bore therein together so as to leave the bores therein unobstructed, thus forming an integral conduit having a bore throughout the length thereof, and providing a valve stem adapted to extend through said conduit and having a valve thereon cooperating with said valve seat.

16,618. PAD HOLDER. JOHN B. KEMP, Ridgewood, N. J., assignor to Clark Loose Leaf Manufacturing Company, a Corporation of New York. Filed Mar. 17, 1927. Serial No. 176,269. Original No. 1,534,124, dated Apr. 21, 1925, Serial No. 695,217, filed Feb. 26, 1924. 10 Claims. (Cl. 129—13.)

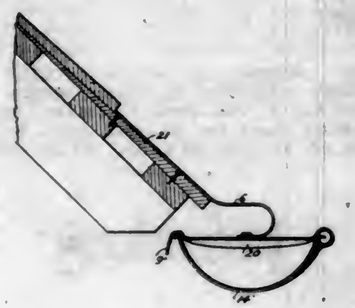
10. In a device of the character described, a base, a pad positioned on said base, said pad having spaced-apart perforations adjacent one end thereof, corresponding perforations in said base, bolts passing through the perforations of the base and the pad, and adjustable socketed retaining legs on the ends of the bolts below the base and providing securing means for the pad, and supporting means for the base, said legs being provided at the lower end with a member made of a material which will give the device a firm support and frictional contact with the support and prevent it from moving or slipping when being written upon.

16,619. METHOD OF MANUFACTURING VALVE STEMS. ALEXANDER W. LIMONT, Bridgeport, Conn. Filed Aug. 25, 1924, Serial No. 734,130. Original No. 1,446,468, dated Feb. 27, 1923, Serial No. 484,511, filed July 13, 1921. 15 Claims. (Cl. 29—157.)



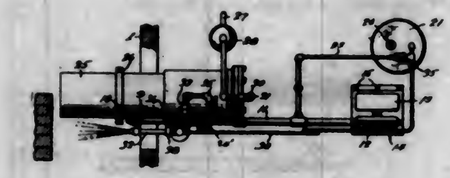
7. The process of making a tire valve stem or the like, which comprises folding over upon itself the wall of a piece of tubular stock at one end thereof to form a flat disk-like head, comprising a plurality of layers of material.

16,620. METHOD OF MAKING VALVE STEMS. ALEXANDER W. LIMONT, Bridgeport, Conn. Filed Aug. 25, 1924. Serial No. 734,132. Original No. 1,446,470, dated Feb. 27, 1923, Serial No. 514,589, filed Nov. 12, 1921. 20 Claims. (Cl. 29—157.)



11. The method of forming a valve stem from a hollow drawn metal body closed at one end, which comprises shaping the open end of the body to form a head while maintaining an opening therethrough, cutting off and reducing the diameter of the closed end and threading the last named end internally and externally.

16,621. STRIP SHINGLE. LEON BUSHA, Minneapolis, Minn., assignor to William Edwin Nelson, Minneapolis, Minn. Filed May 28, 1925. Serial No. 33,562. Original No. 1,533,969, dated Apr. 14, 1925, Serial No. 692,157, filed Feb. 11, 1924. 4 Claims. (Cl. 108—8.)

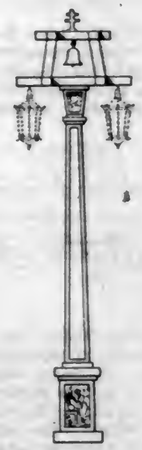


1. A strip shingle comprising a body portion and each shingle having a plurality of separated butts projecting from one edge thereof, the butts being connected with the body portion at the base by inclined lines, said butts also having vertical side edges, the ends of the butts being correspondingly shaped with adjacent separating spaces and the distance from the point where the outer inclined line of one butt joins the body portion to the end of the shingle being equal to the distance from the point where the outer inclined line of the other butt joins the body portion to the end of the shingle strip.

16,622. GUTTER HANGER. CHARLES MEUNIER, Great Neck, N. Y. Filed Mar. 30, 1927. Serial No. 179,683. Original No. 1,572,745, dated Feb. 9, 1926, Serial No. 614,879, filed Jan. 25, 1923. 3 Claims. (Cl. 108—29.)

1. A gutter hanger for use with a gutter having a beaded edge and comprising a strap having a rigid portion extending transversely between the upper edges of the gutter, said strap having a resilient arched portion at one end of said rigid portion, the resilient arched portion being designed to be bent to snugly fit around the bead of the gutter, said strap also having a cradle portion designed to underlie the gutter, the juncture of the cradle portion and the arched portion being relatively stiff and unyielding, and the cradle portion adjacent the juncture also being sufficiently stiff and unyielding to insure proper bending of the arched portion around and into snug engagement with the bead of the gutter when the cradle portion is moved up against the bottom of the gutter, the end of the cradle portion being engaged with the rigid portion.

16,623. OIL BURNER. WILLIAM WOOD, Glenrock, Wyo., assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 15, 1925. Serial No. 30,625. Original No. 1,431,074, dated Oct. 3, 1922, Serial No. 533,446, filed Feb. 1, 1922. 6 Claims. (Cl. 158—75.)

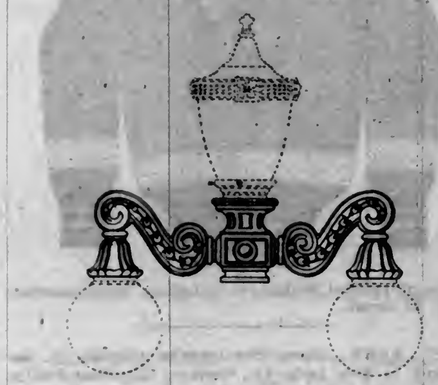


1. An oil burner comprising fuel feeding means, a main burner, a retort for supplying steam to the main burner for mixture with the fuel flowing therein, a secondary burner communicating with the fuel feeding means, and means connected to said main burner for automatically varying the proportion of the heat of the main burner flame which is applied to the retort.

DESIGNS

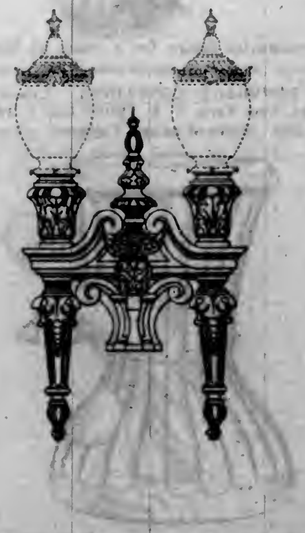
MAY 10, 1927.

72,583. LAMP-POST OR SIMILAR ARTICLE. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,423. Term of patent 14 years.



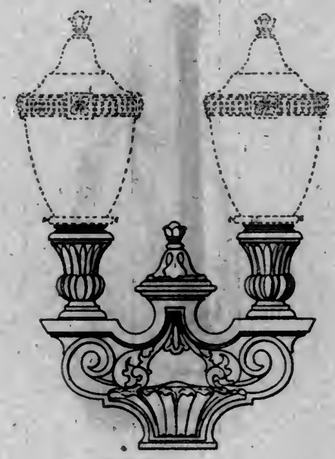
The ornamental design for a lamp post or similar article, as shown.

72,584. LIGHTING-STANDARD CAPITAL. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,424. Term of patent 14 years.



The ornamental design for a lighting standard capital, as shown.

72,585. LIGHTING-STANDARD CAPITAL. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,425. Term of patent 14 years.



The ornamental design for a lighting standard capital as shown.

72,586. LIGHTING-STANDARD CAPITAL. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,426. Term of patent 14 years.

The ornamental design for a lighting standard capital as shown.

72,587. LIGHTING-STANDARD CAPITAL. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,427. Term of patent 14 years.

The ornamental design for a lighting standard capital, as shown.

72,588. LIGHTING STANDARD. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,428. Term of patent 14 years.

The ornamental design for a lighting standard, as shown.

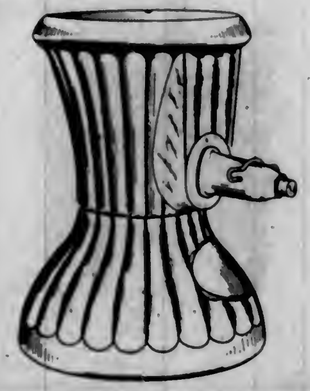
72,589. LAMP-POST OR SIMILAR ARTICLE. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,429. Term of patent 14 years.

The ornamental design for a lamp post or similar article, as shown.

72,590. COMBINATION POST AND LIGHTING STANDARD. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,431. Term of patent 14 years.

The ornamental design for a combination post and lighting standard, as shown.

72,591. KNITTED BLOUSE. SIMON BRAUNSTEIN, Brooklyn, N. Y. Filed Feb. 26, 1927. Serial No. 20,911. Term of patent 3½ years.



The ornamental design for a knitted blouse substantially as shown.

72,592. LAMP. HARRY CHRISTENSEN, Chicago, Ill., assignor to Elite Lamp Co., Chicago, Ill. Filed Feb. 1, 1926. Serial No. 16,353. Term of patent 3½ years.

The ornamental design for a lamp, as shown.

72,593. BEVERAGE CONTAINER. CHRISTOPHER M. CORDLEY, New York, N. Y. Filed July 7, 1926. Serial No. 18,265. Term of patent 7 years.

The ornamental design for a beverage container, as shown.

72,594. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,069. Term of patent 7 years.

The ornamental design for a flower holder, as shown.

72,595. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,070. Term of patent 7 years.

The ornamental design for a flower holder, as shown.

72,596. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,071. Term of patent 7 years.

The ornamental design for a flower holder, as shown.

72,597. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,072. Term of patent 7 years.

The ornamental design for a flower holder, as shown.

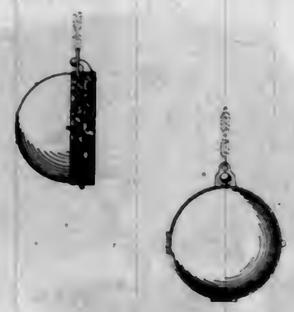
72,598. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,073. Term of patent 7 years.

The ornamental design for a flower holder, as shown.

72,599. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,074. Term of patent 7 years.

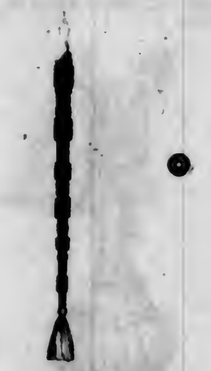
The ornamental design for a flower holder, as shown.

72,600. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,075. Term of patent 7 years.



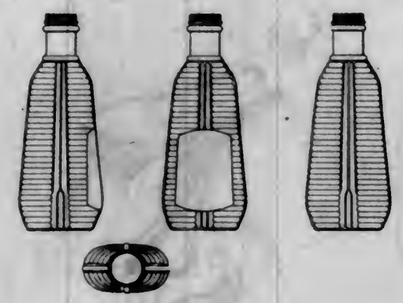
The ornamental design for a flower holder, as shown.

72,601. FLOWER HOLDER. R GUY COWAN, Lakewood, Ohio. Filed Mar. 27, 1926. Serial No. 17,076. Term of patent 7 years.



The ornamental design for a flower holder, as shown.

72,602. VANITY CASE. CLAUD L. COYLE, Clarence, Mo. Filed Mar. 14, 1927. Serial No. 21,144. Term of patent 7 years.

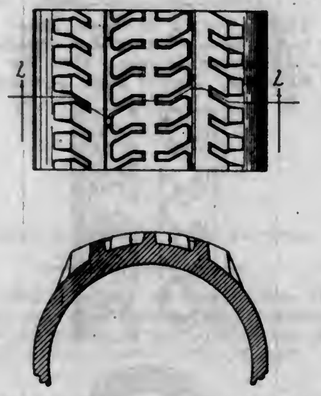


The ornamental design for a vanity case as shown.

72,603. PENHOLDER OR SIMILAR ARTICLE. FRANK DI IONNO, Millburn, N. J. Filed Feb. 19, 1927. Serial No. 20,820. Term of patent 14 years.

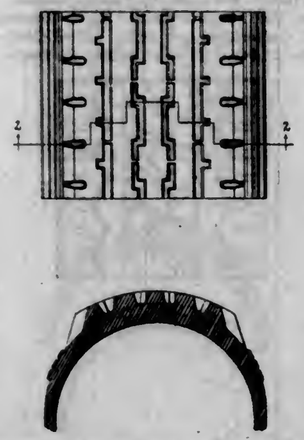
The ornamental design for a penholder or similar article, as shown.

72,604. BOTTLE. JOHN W. DISSETTE, Chicago, Ill., assignor to Ward's Products Co., Inc., Chicago, Ill. Filed Oct. 28, 1926. Serial No. 19,508. Term of patent 14 years.



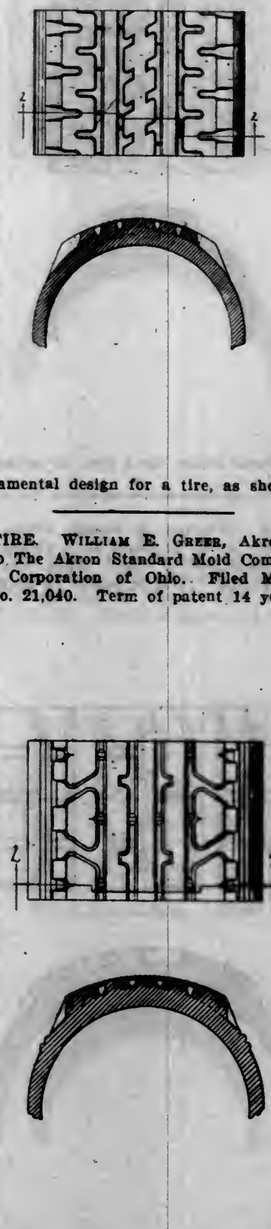
The ornamental design for a bottle as shown.

72,605. STATUETTE OR SIMILAR ARTICLE. WILLIAM H. FULPER, Flemington, N. J. Filed Jan. 17, 1923. Serial No. 4,899. Term of patent 3½ years.



The ornamental design for a statuette or similar article, as shown.

72,606. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,038. Term of patent 14 years.

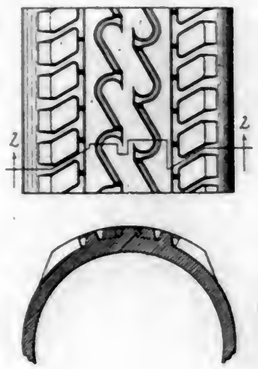


The ornamental design for a tire, as shown.

72,607. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,035. Term of patent 14 years.

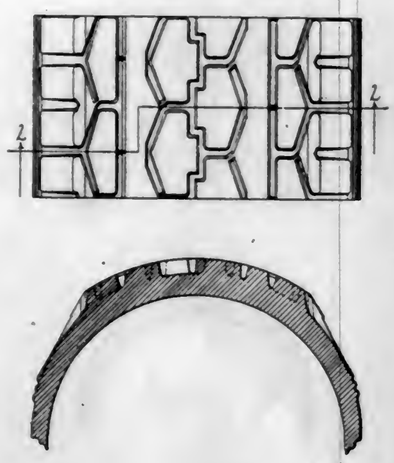
The ornamental design for a tire, as shown.

72,608. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,036. Term of patent 14 years.



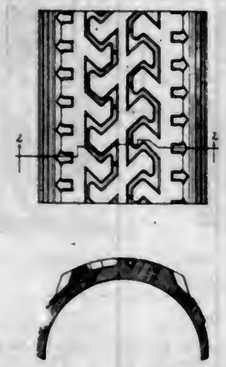
The ornamental design for a tire, as shown.

72,609. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,040. Term of patent 14 years.



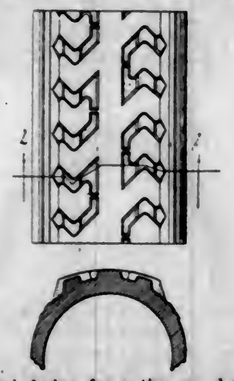
The ornamental design for a tire, as shown.

72,610. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,041. Term of patent 14 years.



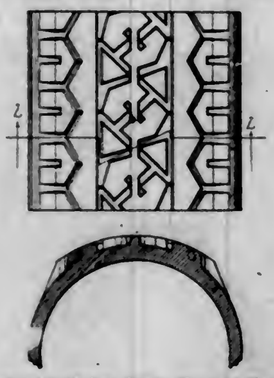
The ornamental design for a tire, as shown.

72,611. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,044. Term of patent 14 years.



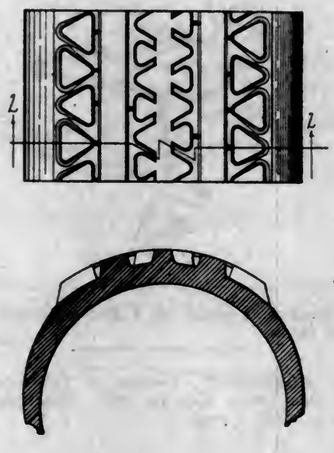
The ornamental design for a tire, as shown.

72,612. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,047. Term of patent 14 years.



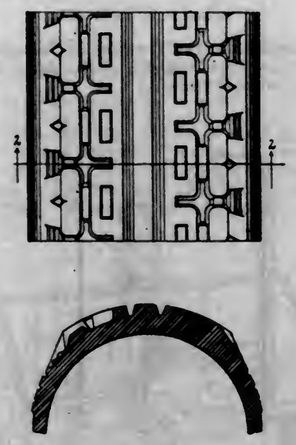
The ornamental design for a tire, as shown.

72,613. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,048. Term of patent 14 years.



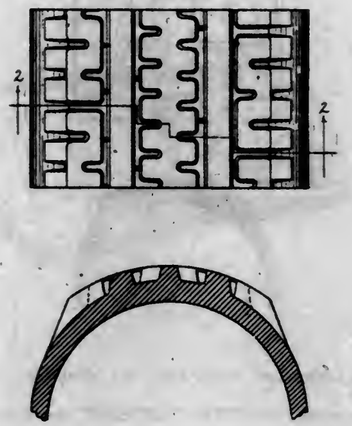
The ornamental design for a tire, as shown.

72,614. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,049. Term of patent 14 years.



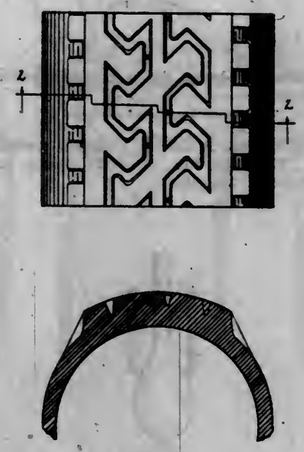
The ornamental design for a tire, as shown.

72,615. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,050. Term of patent 14 years.



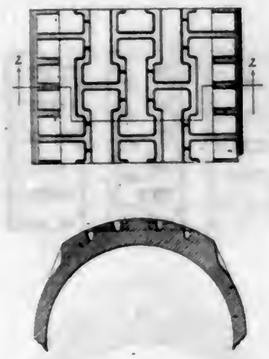
The ornamental design for a tire, as shown.

72,616. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,054. Term of patent 14 years.



The ornamental design for a tire, as shown.

72,617. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,055. Term of patent 14 years.



The ornamental design for a tire, as shown.

72,618. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,056. Term of patent 14 years.

The ornamental design for a tire, as shown.

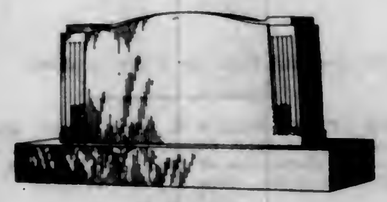
72,619. TIRE. WILLIAM E. GREER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 21,058. Term of patent 14 years.

The ornamental design for a tire, as shown.

72,620. PERFUME BOTTLE. GEORGE GRUNBERG, New York, N. Y. Filed Feb. 3, 1927. Serial No. 20,602. Term of patent 3½ years.

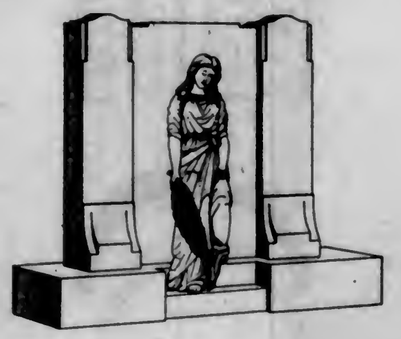
The ornamental design for a perfume bottle substantially as shown.

72,621. PERFUME BOTTLE. GEORGE GRUNBERG, New York, N. Y. Filed Feb. 3, 1927. Serial No. 20,603. Term of patent 3½ years.



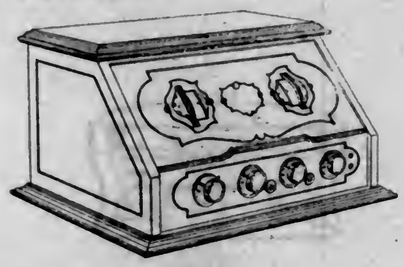
The ornamental design for a perfume bottle substantially as shown.

72,622. PERFUME BOTTLE. GEORGE GRUNBERG, New York, N. Y. Filed Feb. 3, 1927. Serial No. 20,604. Term of patent 3½ years.



The ornamental design for a perfume bottle substantially as shown.

72,623. MONUMENT. EDWARD G. LADEWICH, Mansfield, Ohio. Filed Mar. 18, 1927. Serial No. 21,200. Term of patent 7 years.

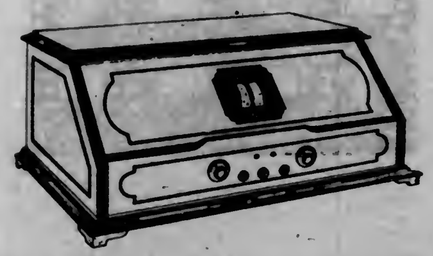


The ornamental design for a monument as shown.

72,624. MONUMENT. EDWARD G. LADEWICH, Mansfield, Ohio. Filed Mar. 18, 1927. Serial No. 21,201. Term of patent 7 years.

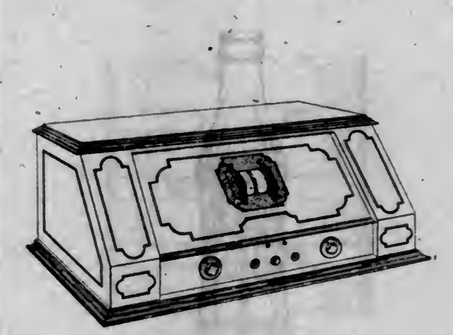
The ornamental design for a monument as shown.

72,625. RADIOCABINET. VERNON D. LANDON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1926. Serial No. 17,264. Term of patent 3½ years.



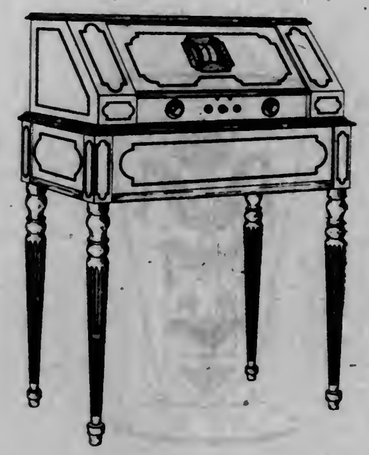
The ornamental design for a radiocabinet as shown.

72,626. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ERNEST M. MAGEE, Providence, R. I. Filed Feb. 9, 1927. Serial No. 20,664. Term of patent 3½ years.



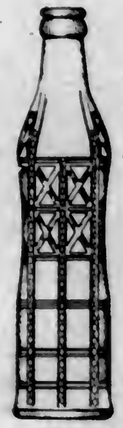
The ornamental design for a textile fabric or similar article of manufacture, as shown.

72,627. RADIOCABINET. EDWARD B. MALLORY, Tenafly, N. J., and ALBERT ROTH, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1926. Serial No. 17,028. Term of patent 3½ years.



The ornamental design for a radiocabinet as shown.

72,628. RADIOCABINET. EDWARD B. MALLORY, Tenafly, N. J., and ALBERT ROTH, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1926. Serial No. 17,030. Term of patent 3½ years.



The ornamental design for a radiocabinet as shown.

72,629. RADIOCABINET. EDWARD B. MALLORY, Tenafly, N. J., and ALBERT ROTH, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1926. Serial No. 17,032. Term of patent 3½ years.

The ornamental design for a radiocabinet as shown.

72,630. BOTTLE. JOHN CALVIN MAY, Augusta, Ga. Filed Jan. 10, 1927. Serial No. 20,328. Term of patent 3½ years.

The ornamental design for a bottle substantially as shown.

72,631. GOBLET OR SIMILAR ARTICLE. CHARLES O. NORTHWOOD, Corning, N. Y., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1926. Serial No. 19,125. Term of patent 14 years.

The ornamental design for a goblet or similar article substantially as shown and described.

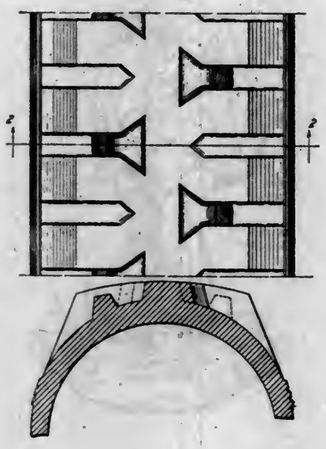
72,632. LUG FOR CASKET HANDLES. GUSTAV C. PAHLOW, Galesburg, Ill., assignor to Victor Casket Hardware Co., Galesburg, Ill. Filed Oct. 28, 1926. Serial No. 19,506. Term of patent 7 years.

The ornamental design for a lug for casket handles, as shown.

72,633. BOX COVER PAPER. ANNA PISTORIUS, Chicago, Ill., assignor to Theodore A. Schmidt Lithographing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1927. Serial No. 20,763. Term of patent 7 years.

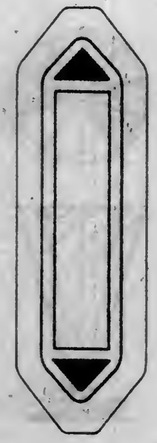
The ornamental design for a box cover paper as shown.

72,634. LAMP. THOMAS E. POWERS, New York, N. Y. Filed Feb. 16, 1927. Serial No. 20,786. Term of patent 7 years.



The ornamental design for lamp substantially as shown.

72,635. GOBLET. RICHARD I. RATNER, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 1, 1926. Serial No. 19,893. Term of patent 7 years.

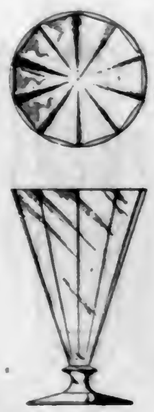


The ornamental design for a goblet, as shown.

72,636. TIRE. HAROLD D. REICHARD, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 23, 1925. Serial No. 12,131. Term of patent 14 years.

The ornamental design for a tire as shown.

72,637. TABLE SCARF. MORRIS SAVITZKY, New York, N. Y. Filed Jan. 14, 1927. Serial No. 20,881. Term of patent 7 years.



The ornamental design for a table scarf, substantially as shown.

72,638. FLOWER HOLDER. WALTER ALEXANDER SINZ, Cleveland, Ohio, assignor to R Guy Cowan, Lakewood, Ohio. Filed Mar. 29, 1926. Serial No. 17,097. Term of patent 7 years.

The ornamental design for a flower holder, as shown.

72,639. GOBLET OR THE LIKE. FERDINAND SCHMIDT, Des Moines, Iowa, assignor to Fred C. Reimer Co. Inc., New York, N. Y., a Corporation of New York. Filed Oct. 7, 1926. Serial No. 19,265. Term of patent 7 years.

The ornamental design for a goblet or the like, as shown.

72,640. DOLL. CHARLES STEIN and WILLIAM M. HELLER, Atlantic City, N. J. Filed Feb. 2, 1927. Serial No. 20,590. Term of patent 3½ years.

The ornamental design for a doll as shown.

72,641. DISH OR ANALOGOUS ARTICLE. HARRY WALLACE THOMAS, Indiana, Pa. Filed Mar. 12, 1927. Serial No. 21,121. Term of patent 7 years.

The ornamental design for a dish or analogous article, as shown.

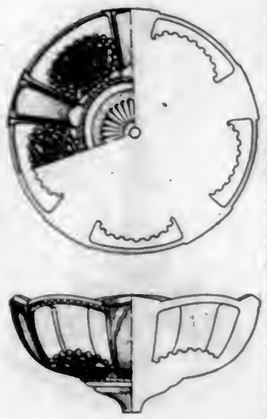
72,642. HEXAGONAL COSMETIC BOX. HELENA J. TITUS, New York, N. Y. Filed Feb. 7, 1927. Serial No. 20,641. Term of patent 7 years.

The ornamental design for a hexagonal cosmetic box, as shown and described.

72,643. CHANDELIER. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Feb. 24, 1927. Serial No. 20,880. Term of patent 3½ years.

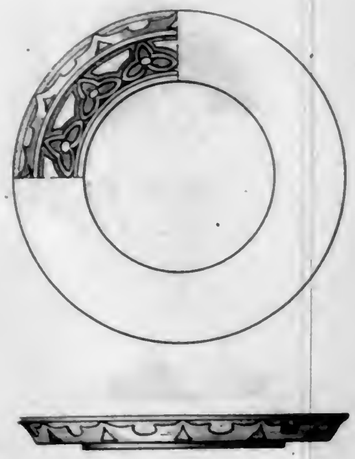
The ornamental design for a chandelier, as shown.

72,644. CHANDELIER. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Feb. 24, 1927. Serial No. 20,879. Term of patent 3½ years.



The ornamental design for a chandelier, as shown.

72,645. ADAPTER FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Feb. 24, 1927. Serial No. 20,884. Term of patent 3½ years.



The ornamental design for an adapter for lighting fixtures or similar articles, as shown.

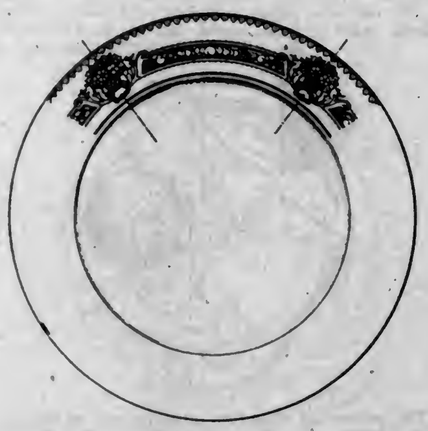
72,646. FIXTURE BODY FOR A LIGHTING FIXTURE OR SIMILAR ARTICLES. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Feb. 24, 1927. Serial No. 20,883. Term of patent 3½ years.

The ornamental design for a fixture body for a lighting fixture or similar articles, as shown.

72,647. CANOPY RING FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Feb. 24, 1927. Serial No. 20,882. Term of patent 3½ years.

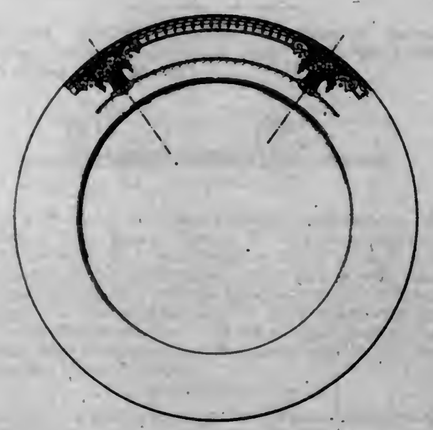
The ornamental design for a canopy ring for lighting fixtures or similar articles, as shown.

72,648. BEVERAGE CONTAINER. NATHAN WEIDNER, Brooklyn, N. Y. Filed Mar. 11, 1927. Serial No. 21,090. Term of patent 3½ years.



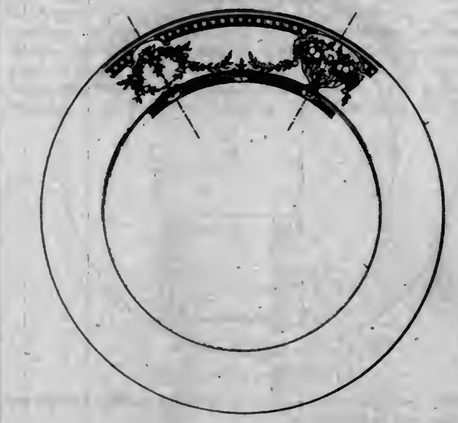
The ornamental design for a beverage container, as shown.

72,649. PLATE OR SIMILAR ARTICLE. GEORGE WEBB, New York, N. Y., assignor to Rosenthal China Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 2, 1927. Serial No. 20,579. Term of patent 3½ years.



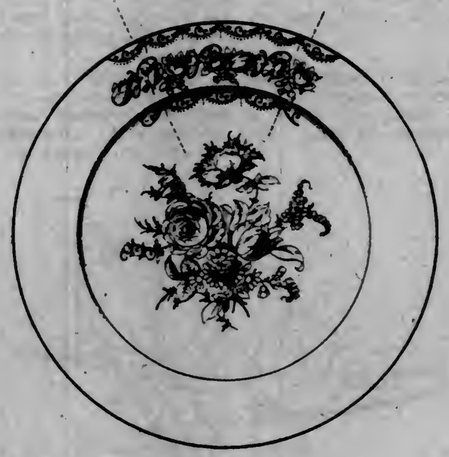
The ornamental design for a plate or similar article, as shown.

72,650. PLATE OR SIMILAR ARTICLE. GEORGE WEBB, New York, N. Y., assignor to Rosenthal China Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 2, 1927. Serial No. 20,580. Term of patent 7 years.



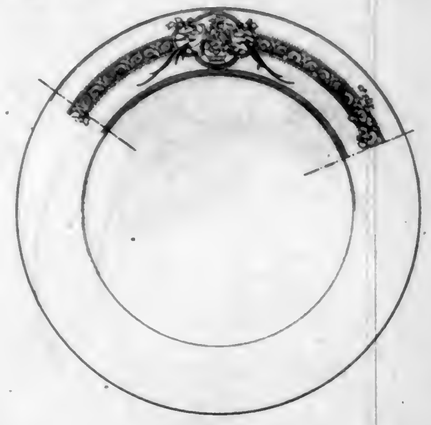
The ornamental design for a plate or similar article, as shown and described.

72,651. PLATE OR SIMILAR ARTICLE. GEORGE WEBB, New York, N. Y., assignor to Rosenthal China Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 2, 1927. Serial No. 20,581. Term of patent 3½ years.



The ornamental design for a plate or similar article, as shown and described.

72,652. PLATE OR SIMILAR ARTICLE. GEORGE WEBB, New York, N. Y., assignor to Rosenthal China Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 2, 1927. Serial No. 20,582. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

72,653. PLATE OR SIMILAR ARTICLE. GEORGE WEBB, New York, N. Y., assignor to Rosenthal China Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 2, 1927. Serial No. 20,583. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown and described.

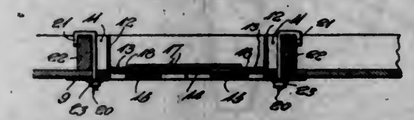
72,654. PLATE OR SIMILAR ARTICLE. GEORGE WEBB, New York, N. Y., assignor to Rosenthal China Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 2, 1927. Serial No. 20,584. Term of patent 3½ years.

The ornamental design for a plate or similar article, as shown and described.

72,655. VANITY CASE. ALBERT FRENCH, St. Louis, Mo. Filed Mar. 14, 1927. Serial No. 21,145. Term of patent 7 years.

The ornamental design for a vanity case as shown.

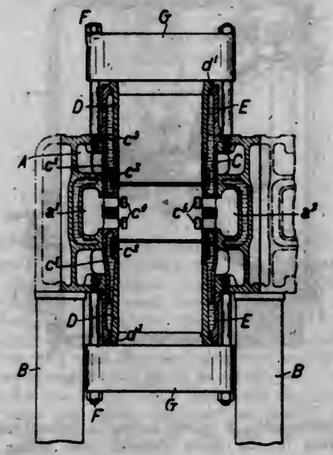
PATENTS



GRANTED MAY 10, 1927.

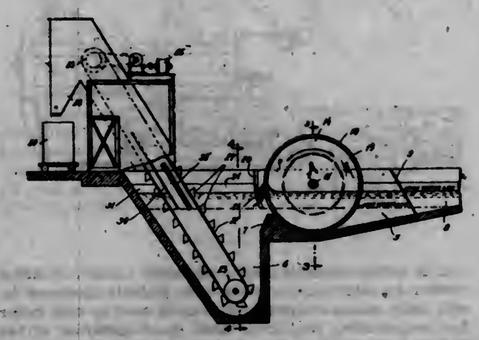
1,627,547. VENDING MACHINE. ALFRED D. ANTOINE, Chicago, and ALBERT E. GERBERT, Wilmette, Ill., assignors to Advance Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1924. Serial No. 721,446. 6 Claims. (Cl. 211—8.)

1. A rotatable commodity carrier for vending machines and the like including a body having a compartment therein having an open top and an open side, a casing in which the carrier rotates, the wall of the casing standing in close proximity to the periphery of the carrier and operating to maintain the commodity in the carrier against discharge through the open side of the carrier, said casing having a discharge opening through which the article may be delivered from the compartment at a predetermined time in the rotation of the carrier, there being an additional opening in the casing wall into register with which the compartment is movable, said opening being of a height substantially equal to the height of the compartment and of a width considerably less than the width of the compartment, and means for arresting the movement of the carrier when the said compartment is in alinement with the last recited opening.



1,627,548. GRANARY DOOR. BENEDICT S. BADURA, Lincoln, Nebr. Filed June 1, 1926. Serial No. 113,059. 3 Claims. (Cl. 20—16.)

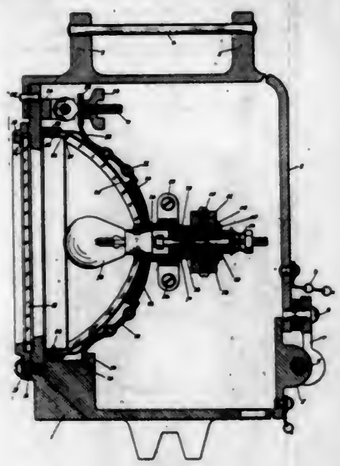
1. A device of the class described comprising a door frame, a door hinged thereto for downward and outward swinging to a position at which it projects from the lower end of said frame, and a pair of side wings hinged to said door and projectable laterally therefrom beyond the side members of the frame when said door is in its downwardly and outwardly swung position, said wings being overlapped at the inner side of the door when the latter is closed.



1,627,549. CYLINDER FOR INTERNAL-COMBUSTION ENGINES. HEINRICH BECKER, Kiel-Hassee, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed May 18, 1926, Serial No. 110,004, and in Germany June 20, 1925. 1 Claim. (Cl. 123—61.)

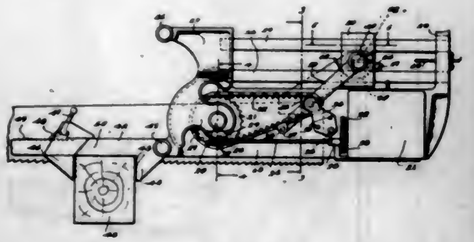
In a vertical double-acting two-stroke internal combustion engine; a cylinder, a piece supporting the cylinder, scavenging passages lodged in said supporting piece, said cylinder comprising a double-walled middle piece having ports for scavenging air corresponding to said passages of the supporting piece, the outer wall of said middle piece corresponding in length to said supporting piece, a flange connection between the upper ends of said supporting piece and said middle piece, two jackets forming a prolongation each of the outer wall of said

middle piece, two liners forming prolongations of the inner walls of said middle piece, flange connections between the outer ends of said jackets and said liners, connections between the inner ends of said liners and the inner wall of said middle piece adapted to permit free expansion of said liners with relation to said middle piece, covers abutting against the outer ends of said liners and screw bolts connecting said covers to said supporting piece.



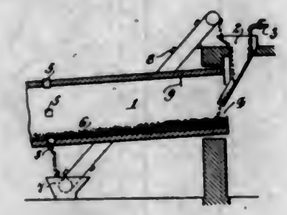
1,627,550. SEPARATION OF SOLIDS FROM LIQUIDS. FRANK BACHMANN, New York, N. Y., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 26, 1923. Serial No. 628,199. 26 Claims. (Cl. 210—196.)

1. In an apparatus for removing solid particles from liquid containing the same, the combination of a rotatable



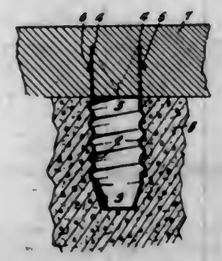
screen and means disposed outside the screen in spaced relation and cooperating therewith to prevent the accumulation of solid particles on the screen by the sweeping action of a current below the surface of the liquid.

1,627,551. ELECTRIC LAMP. LEON S. BRACH, East Orange, N. J., assignor to L. S. Brach Manufacturing Co., Newark, N. J. Filed June 5, 1925. Serial No. 35,441. 3 Claims. (Cl. 240—41.)



1. In combination, a casing having a transparent member mounted in the front thereof, said casing having at least one fixed and one adjusting anchorage means, a reflector, a shell carrying the reflector, a ring attached to the shell and having a part engaging the edge of the reflector for holding it in position within the shell, cushioning means cooperating betweeen the shell, ring and front of said casing to insure a substantially tight joint around the front part of the reflector, at least, two metal members attached to the shell, one of said members engaging said fixed anchorage and the other said adjusting anchorage on the casing, a lamp socket carried by said shell and adapted to carry a lamp within said reflector.

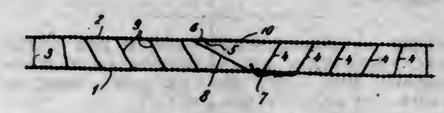
1,627,552. MOTOR-OPERATED SAW. MAYO CLODFELTER, Detroit, Mich. Filed Apr. 9, 1925. Serial No. 21,837. 3 Claims. (Cl. 143—68.)



1. A motor operated saw comprising a body, a motor carried by said body, a cross head slidably mounted on said body, means connecting said cross head to said motor for reciprocating said cross head upon operation of the motor, a shaft extending from one side of said cross head; a saw blade pivotally carried by said shaft, an electric switch carried by said body and in circuit with said electric motor, and an arm pivotally carried by said shaft and adapted to be engaged by said saw blade after the same has completed its cut for moving a portion of said arm to a position to engage said electric switch for breaking the circuit to said motor.

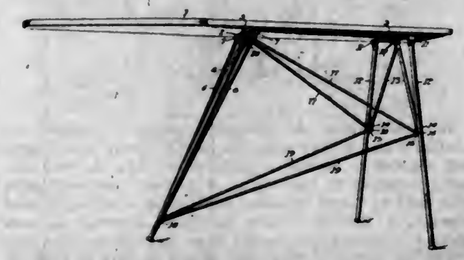
1,627,553. METHOD OF TREATING WET RAW MATERIALS IN THE MANUFACTURE OF CEMENT. JOHAN SIGISMUND FASTING, Valby, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Original application filed Nov. 30, 1923, Serial No. 677,617, and in Denmark Dec. 22, 1922. Divided and this application filed Apr. 9, 1925. Serial No. 21,790. 4 Claims. (Cl. 222—1.)

1. In the continuous process of treating wet cement-forming raw materials in a kiln by the direct action thereon of a current of products of combustion maintained through the kiln in a direction towards its inlet end so as to create therein a highly heated zone, utilizing the waste heat of the kiln to heat heat-transmitting bodies, mingling the heat-transmitting bodies so heated with the wet raw material to evaporate the moisture therefrom before it is subjected to the heat of said highly heated zone and delivering the dried and raw material to said hightly heated zone, the heat transmitting bodies being again subjected to the waste heat.



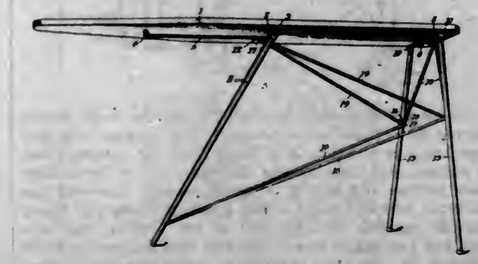
1,627,554. SOCKET OR RECEPTACLE FOR CONCRETE WORK. ALVIN S. FISHEL and ELI I. GOULDER, Cleveland, Ohio. Filed June 19, 1925. Serial No. 38,148. 11 Claims. (Cl. 72—105.)

7. A socket or receptacle for the purpose set forth comprising a hollow body having a thread therein for the reception of the thread of a bolt or screw, there being one or more prongs projecting from one end of said body, the opposite end of said body being provided with a frusto-conical head.



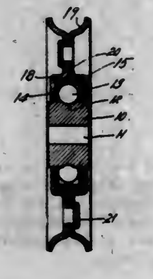
1,627,555. TIRE CHAIN. FREDERICK TAYLOR GAUGE, Wilmington, Del. Filed Apr. 24, 1925. Serial No. 25,472. 4 Claims. (Cl. 152—14.)

2. A tire chain comprising side chains, connections for closing the chain in operative position upon the tire, and cross chains extending between said side chains, the cross chains at one end of the tire chain being slanted in a common direction out of a perpendicular line between said side chains whereby relative lengthwise movement of the side chains at that end of the chain, to bring its



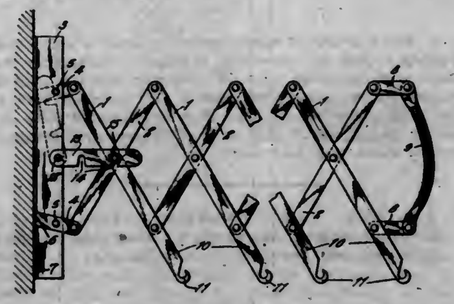
connecting means into accessible position, is possible without decreasing the distance between the side chains at that point.

1,627,556. FOLDING TABLE. HENRY J. GILBERT, Saginaw, Mich. Filed Oct. 15, 1924. Serial No. 743,657. 5 Claims. (Cl. 68—10.)



1. In a folding ironing table or the like, a board, a centrally arranged front leg pivotally connected to the board, a pair of rear legs pivotally connected to the board, connecting rod means pivoted to said front leg and also pivotally connected with said rear legs, and a locking rod member pivotally connected with said rear legs intermediate their ends and slidingly connected with said front leg.

1,627,557. FOLDING TABLE. HENRY J. GILBERT, Saginaw, Mich. Filed Oct. 15, 1924. Serial No. 743,658. 5 Claims. (Cl. 68—10.)

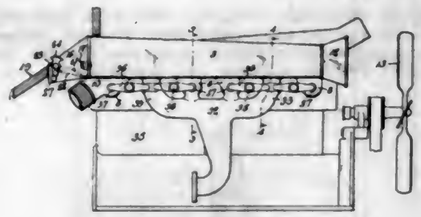


1. A folding table comprising a board equipped with front and rear pivot bearing members, the rear bearing members being arranged in spaced converging relation, a centrally arranged front leg structure pivoted in said front pivot bearing members, a pair of rear legs pivoted in said rear pivot bearing members and adapted to spread outwardly when unfolded, a pair of connecting rods pivoted to said front leg structure near its foot and also pivoted to said rear legs at points intermediate their ends, and a pair of locking truss rods pivoted at one end to said rear legs at said intermediate points, said locking truss rods meeting at their other ends and being equipped with a common connecting member, and a stationary member carried by the table top, said stationary member being disposed adjacent the longitudinal center line of the table top and adjacent the axis of the front leg bearing members and said connecting member being arranged to make interlocked engagement with said stationary member when the legs are in extended position.

1,627,558. SHEAVE. ALBERT C. GRUNWALD, River Forest, Ill., assignor to Precision Metal Workers, Chicago, Ill., a Corporation of Illinois. Filed Mar. 27, 1924. Serial No. 702,277. 1 Claim. (Cl. 308—190.)

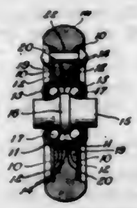
A split wheel or sheave comprising a pair of similarly conformed plates, a hub and a rim for said wheel formed in said plates, said plates having laterally juxtaposed web portions between said hub and rim, the web portion of each plate being provided with a hollow boss having a closed end, said bosses being struck inwardly from said plates, and each plate being further provided with a hole therethrough, the boss on each plate extending through the hole in the other plate, and the outer closed end of each boss being deformed to overlie the other plate at the outer edges of the hole for holding the plates together.

1,627,559. GARMENT HANGER. ROBERT J. HAUL, St. Louis, Mo. Filed May 31, 1924. Serial No. 716,987. 2 Claims. (Cl. 211—17.)



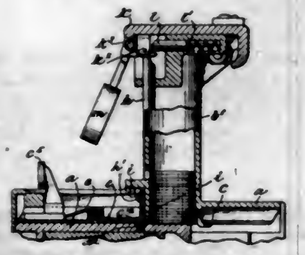
1. A garment rack, comprising, a support adapted for mounting on a wall, and a lazy-tongs having pivotal connections with said support, certain members of said lazy-tongs being extended beyond others and provided with suspension means, whereby the weight of the suspended articles tends to retract said lazy-tongs.

1,627,560. CAR HEATER. HENRY HELLWIG, Milwaukee, Wis., assignor to Helsen Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 17, 1924. Serial No. 686,893. 6 Claims. (Cl. 257—241.)



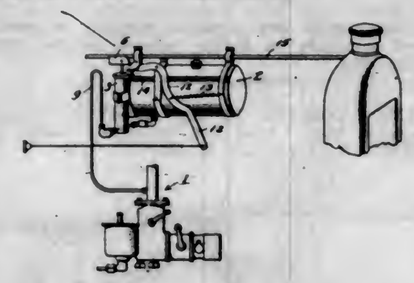
1. A device of the character described comprising an exhaust manifold having a longitudinal exhaust gas passage and an air-heating passage adjoining the exhaust

gas passage and having an intake at the front end and an outlet at the rear end to provide for the flow of air through said device in a direction longitudinally thereof, means for controlling the flow of air through said heating passage, and an intake manifold formed integrally with



the exhaust manifold which is adapted to impart heat by conduction to the fuel supplied through the intake manifold to an engine modified by air flowing through the air-heating passage, said air-heating passage being partitioned from and out of communication with said exhaust and intake manifolds.

1,627,561. ROLLER. PLINY N. JOSLIN, De Kalb, Ill. Filed Jan. 4, 1924. Serial No. 684,462. 23 Claims. (Cl. 301—63.)



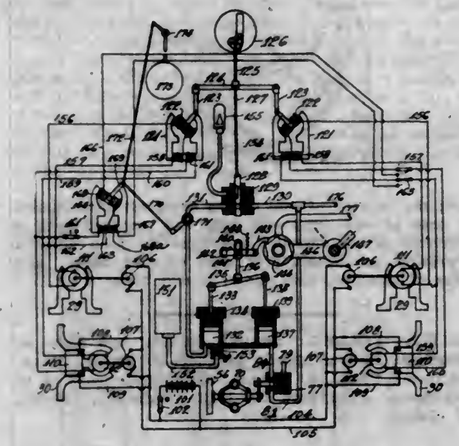
4. As an article of manufacture, a wheel or roller comprising a pair of oppositely arranged substantially flat disks each provided with an inwardly directed annular flange concentric with the disk, a tire provided with an inwardly projecting rib extending between said disks and fitting snugly about and on said flanges, and fastening means connecting said disks.

1,627,562. CHANGE-MAKING DEVICE. FRANCIS KINGSLEY, Pelham Manor, N. Y. Filed Jan. 13, 1925. Serial No. 2,077. 4 Claims. (Cl. 133—1.)

2. In a coin changing device, a support therefor, a plurality of containers for coins, means to eject the coins selectively, a cover for said containers and means movable by the cover upon closing to lock said coin ejecting means and to lock said coin changing device to its support.

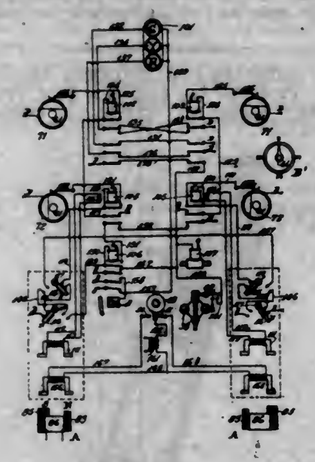
1,627,563. AUXILIARY-FUEL DEVICE FOR INTERNAL-COMBUSTION ENGINES. RUDOLPH H. KNAPP, Saginaw, Mich. Filed Mar. 18, 1925. Serial No. 16,405. 1 Claim. (Cl. 123—187.5.)

In combination, an internal combustion engine, an auxiliary fuel supply chamber located above said engine and adapted to contain a liquid other than the fuel normally supplied to the engine, a cylinder communicating with said auxiliary chamber and having a spring-pressed plunger, a tiltable tripper pivotally mounted on said plunger, a manually actuated lever adapted to raise said tripper by sliding engagement therewith and to slide off from and thereby suddenly release said tripper, a valve-controlled pipe connecting said auxiliary chamber and said cylinder, and a second valve-controlled pipe connecting said cylinder and the intake of said engine, a part of said second pipe formed with a loop extending higher than said chamber, for the purposes set forth.



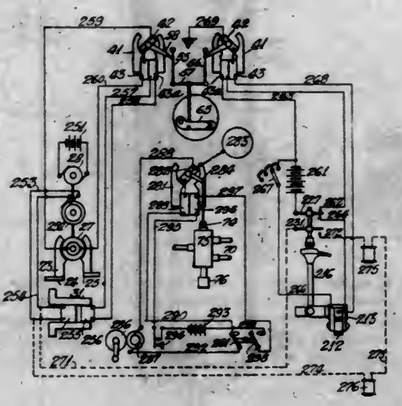
1,627,564. ELECTRIC HEATER FOR CRANK CASES. J. H. LOPER, Lincoln, Nebr. Filed Mar. 27, 1925. Serial No. 18,814. 1 Claim. (Cl. 219—38.)

An electrical heater comprising a tubular body portion having its opposite ends threaded, said tubular body portion being provided with a flange near one threaded end, a contact cap engaging one threaded end of the tubular body portion and having electrical contact therewith and provided with a conical recess, a tubular coupling engaging the opposite threaded end of the tubular body portion and adapted to clamp the same to a support arranged between it and said flange, a bushing having screw-threaded engagement within the outer end of the coupling and longitudinally adjustable therein, a tubular insulator carried within the bushing, a contact element arranged within the tubular insulator and having a conical recess, and a carbon resistance element extending longitudinally within the tubular body portion and having conical ends engaging within the conical recess.



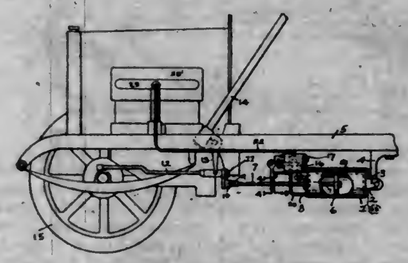
1,627,565. RAILWAY SIGNAL AND TRAIN-CONTROL SYSTEM. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed July 22, 1922. Serial No. 576,822. 79 Claims. (Cl. 246—63.)

1. In a train control system, the combination of a track with a vehicle thereon, magnets located on said track at intervals for inductively operating a device on said vehicle, said magnets comprising elongated poles



with energizing coils between said poles, said magnets being clamped to the rail of said track and one of said poles being supported by a non-magnetic bracket.

1,627,566. RAILWAY-TRAFFIC-CONTROLLING SYSTEM. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed Feb. 9, 1923. Serial No. 618,156. 121 Claims. (Cl. 246—33.)

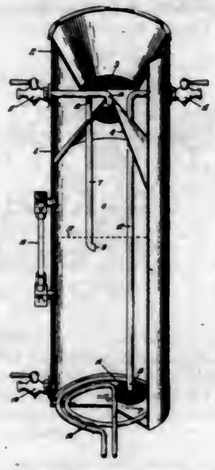


1. In a system of the class described, the combination of a track with a vehicle thereon having a controlling mechanism, means on said track affecting the control of said mechanism, said mechanism comprising a rotating element driven by the movement of said vehicle on the track and a device having a limited movement operated by friction for causing said element to move in one direction when said vehicle runs in either direction.

1,627,567. RAILWAY-TRAFFIC-CONTROLLING SYSTEM AND APPARATUS. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed Mar. 23, 1923. Serial No. 627,214. 71 Claims. (Cl. 246—33.)

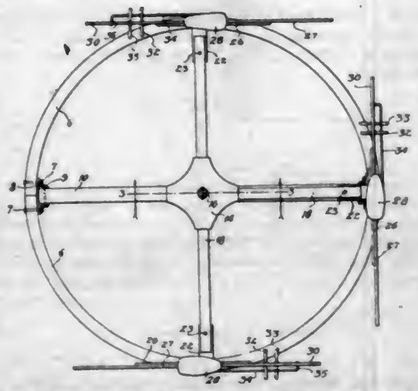
1. In a railway traffic controlling system, the combination of a track with a vehicle thereon, a magnet on said track having a pair of poles clamped to one rail of said track, a device on said vehicle responsive to said magnet, the terminals of a circuit supported by said rail and a member supported by a pole of said magnet for controlling said circuit.

1,627,568. PNEUMATIC STEERING DEVICE FOR VEHICLES. BETHEL J. MARTIN, San Francisco, Calif. Filed May 4, 1925. Serial No. 27,697. 5 Claims. (Cl. 180—80.)



1. A vehicle steering apparatus comprising a cylinder, having a gaseous pressure actuated plunger therein; means to connect said plunger to the vehicle steering apparatus; manual means to start movement of said plunger; and a valve actuated by movement of the plunger to regulate the flow of the gaseous medium to the cylinder to effect continued movement of the plunger.

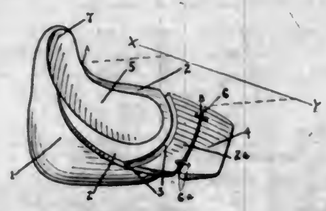
1,627,569. OIL SEPARATOR. THOMAS KITCHIN MARSICKS, Brakpan, Transvaal, South Africa. Filed Jan. 29, 1925. Serial No. 5,448. 1 Claim. (Cl. 210—43.)



An oil separator comprising a vessel, a conical partition dividing said vessel into an upper receiver and a lower separating chamber, a conduit whereby liquid in the receiver passes into the chamber and places the latter under hydraulic head, the upper end of the conduit being elevated above the lower portion of the conical partition whereby the lower part of the receiver forms a settlement space for solid sediment, an oil outlet from the chamber leading from the upper part of the conical

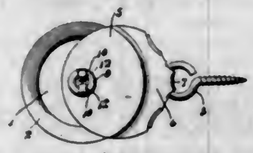
partition, a water outlet from the lower part of the chamber, both said outlets terminating at about the level of the upper end of the conduit, and means for regulat-

ing the flow through said outlets, the lower end of the conduit being spaced substantially below the oil outlet and substantially above the water outlet.



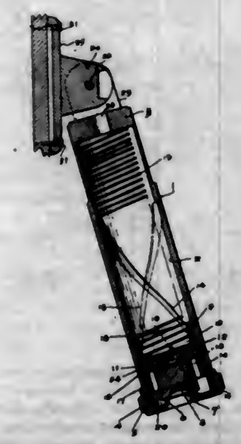
1,627,570. MERRY-GO-ROUND. LEE W. MELCHER, West Depere, Wis. Filed Jan. 20, 1923. Serial No. 613,892. 4 Claims. (Cl. 272—33.)

1. In a merry-go-round, the combination of a circular track composed of substantially semi-circular sections, a cross-bar, pivotal connections between the sections and the cross-bar, a standard on the cross-bar, a carrier or support provided with a wheel adapted to run on said track, and an arm between the standard and said carrier.



1,627,571. BEDPAN. MABEL E. NORTHROP, Pasadena, Calif. Filed June 24, 1925. Serial No. 39,263. 1 Claim. (Cl. 4—112.)

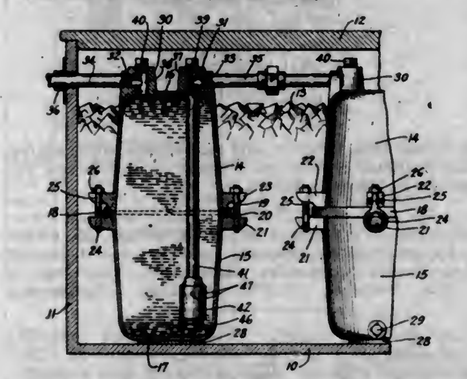
A bed pan of the character disclosed comprising a receptacle body substantially circular in form with a flat base; the rear, front and side walls being rolled upwardly and inwardly at varying heights from said base to form a pear shaped opening from above into said receptacle; the rear wall projecting upwardly to terminate in a horn with concave forward aspect, the edges of the same forming part of the boundaries of the aforesaid opening; the forward end and side walls being turned sharply outward to form flanges or bearing surfaces of varying widths, said bearing surfaces forming a varying degree of incline upward from front to rear of said receptacle, adapted to conform to proper anatomical



lines; the forward of said flanges being extended beyond the base of said receptacle body and provided with a transverse groove therein; a detachable apron adapted to provide an extension of said forward flange, and means of attaching said apron to said flange.

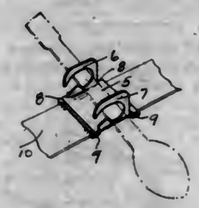
1,627,572. PULLEY. THOMAS OLINGER and FRED G. BRENDEL, Holland, Mich., assignors to Federal Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Sept. 20, 1926. Serial No. 136,492. 4 Claims. (Cl. 254—192.)

1. In combination with a pulley housing having spaced apart sides, of a pulley having a central opening therethrough, and a cylindrical journal having tangs extending from each end thereof passing through the opening in the pulley, the ends of the journal bearing against the inner sides of the sides of the housing and said tangs passing through the sides of the housing and bent against the outer sides of said sides of the housing.



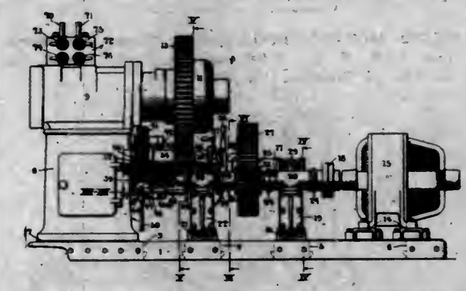
1,627,573. BILLIARD-CUE-CHALKING DEVICE. ARTHUR R. PETERSON, San Francisco, Calif. Filed Nov. 30, 1925. Serial No. 72,077. 2 Claims. (Cl. 273—19.)

1. A billiard-cue chalker comprising a barrel, a supporting bracket therefor comprising a member adapted for hinged connection to said barrel, a bore extending



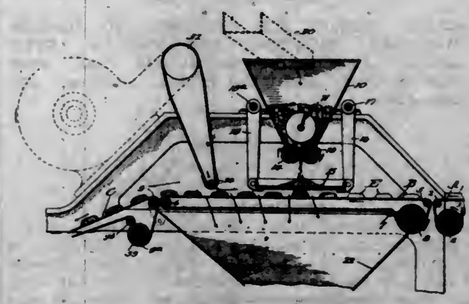
longitudinally of said barrel and provided with a pair of reversely arranged rifles or grooves and of diametrically opposite disposition, a follower adapted for longitudinal and rotary movement in said barrel bore and provided with peripherally placed lugs adapted to fit and travel in said grooves, a spring in said bore between the inner end of the barrel and said follower and adapted to normally hold said follower in the outer end of the barrel bore, a recess in the outer end of the follower adapted to hold a piece of cue chalk, a peripheral groove carried by said follower adapted to engage a screw borne by the barrel wall for preventing the complete ejectment of said follower from the barrel bore, and means for normally holding said follower and chalk slightly within the end of the end of the barrel bore.

1,627,574. WATER COOLER. FRANK A. PHILLIPPI, Pottstown, Pa. Filed Dec. 16, 1922. Serial No. 607,271. 5 Claims. (Cl. 137—21.)



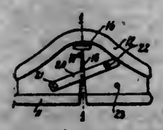
1. A cooler unit comprising two substantially equal, hollow conical elements having respectively tenon and socket interengaging surfaces at their base edges, paired lugs extending laterally from their adjacent outstanding edges, one of each pair of lugs being forked and the other cylindrical, eye bolts engaging circumferentially around the cylindrical lugs and adjustable within forks of the mating lug, means for the inlet and outlet of water to said units, and means for discharging the contents of said unit formed in one of said sections.

1,627,575. CUTLERY HOLDER FOR COOKING RECEPTACLES. AUGUST ROVELLI, San Francisco, Calif. Filed May 4, 1925. Serial No. 27,780. 1 Claim. (Cl. 65—65.)



A cutlery holder for a cooking receptacle, comprised of a plate having a pair of jaws struck up from the face of the plate to extend substantially parallel to a surface of the plate and in spaced relation thereto, to support an article of cutlery, the edge of each jaw facing the plate and the matching portion of the plate having a hook shaped cavity therein to detachably hold the article of cutlery; and clamp members on the plate to detachably engage a cooking receptacle.

1,627,576. GEARING MECHANISM FOR TUBING MACHINES. VERNON ROYLE, Paterson, N. J. Filed Oct. 17, 1919. Serial No. 331,395. 31 Claims. (Cl. 18—14.)



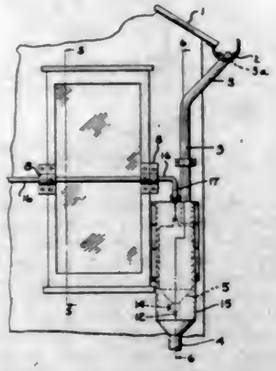
1. Apparatus of the character described comprising, a screw, a main gear for actuating the screw, a drive shaft, a plurality of sets of change speed gears, and a pinion slidably mounted for engaging the drive shaft with the main gear or with either set of change speed gears.

1,627,577. MACHINE FOR APPLYING TOP COATINGS OF COMMINUTED MATERIALS TO CONFECTION-COATED WAFERS. FERDINANDO G. SALERNO, Chicago, Ill. Filed May 16, 1923. Serial No. 639,283. 9 Claims. (Cl. 107—1.)

1. In a machine of the character described, a supply hopper equipped with feeding means arranged to discharge a regulated supply of comminuted material, a meshed conveyor belt arranged to transfer wafers laterally under said hopper, a vibrating screen between said supply hopper and conveyor belt arranged to receive the material discharged from such hopper and sprinkle it upon the wafers on the belt, a collecting hopper arranged vertically beneath said screen including inclined sides converging downwardly and terminating in a transverse conveyor trough, and an elevator mechanism arranged to receive material from said trough and deliver it to said supply hopper.

1,627,578. EXPANSIBLE EYECUP. HARRY F. SHINDEL, Reading, Pa., assignor to Willson Goggles Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Aug. 10, 1923. Serial No. 656,678. 1 Claim. (Cl. 2—14.)

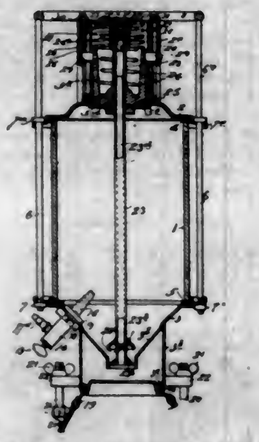
An eye cup having a non-expansible face-contacting rim and an expansible wall portion of varying depth



with a lens-clamping rim; said wall having a split extending outwardly through said lens-clamping rim and being provided with pivotally movable means for locking the latter to retain an engaged lens.

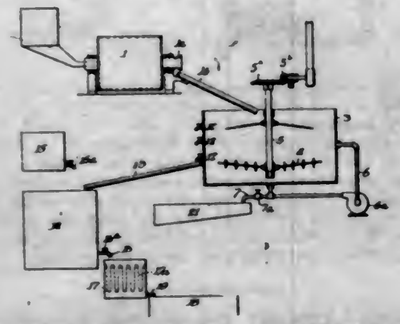
1,627,579. MOVABLE DOOR PANEL. HARRY P. STEVENS, New York, N. Y. Filed Sept. 4, 1924. Serial No. 735,835. 5 Claims. (Cl. 296—48.)

1. A movable closure for the upper portion of vehicle doors and similar structures having a recessed body portion, comprising a movable plate adapted to be contained therein, slidable guide members adapted to reciprocate in channels in said body portion, means connected with the lower end of said plate for guiding the same within said recessed portion, and means for locking said guide members in position independently of said plate.



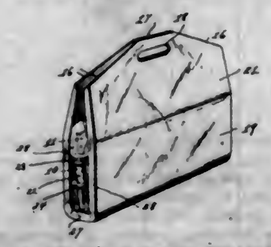
1,627,580. DEVICE FOR OPENING AND CLOSING WINDOWS, SHUTTERS, AND SIMILAR APPLIANCES. JOHN L. STOWERS, Habana, Cuba. Filed July 26, 1924. Serial No. 728,514. 1 Claim. (Cl. 268—123.)

A device for opening and closing windows, shutters, and similar appliances, consisting of a vertically movable liquid-holding container installed in the drain leader pipe of a building, said container being secured to a lever arm attached to a horizontally pivoted window, shutter, etc., said container having near its bottom a controlled discharging outlet.



1,627,581. PORTABLE ACETYLENE GENERATOR. WILLIS C. SWIFT, West Alexandria, Ohio. Filed Jan. 22, 1925. Serial No. 3,997. 9 Claims. (Cl. 48—53.3.)

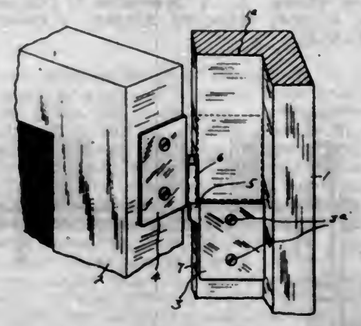
1. In an acetylene gas generating apparatus, a transparent open-ended container for the carbid, a flexible diaphragm forming a closure for one end of the carbid container, a cone-shaped cover member for the other end of the container, said cover member having a central restricted opening therethrough, a rod extending longitudinally through the center of said container and into said restricted opening and secured at one end to the diaphragm, a pair of valves spaced apart and mounted on said rod at its other end, one of said valves being fixed to move with said rod and the other mounted for free



movement along said rod, said valves operating to control said restricted opening and a spring exterior to said diaphragm and bearing thereon.

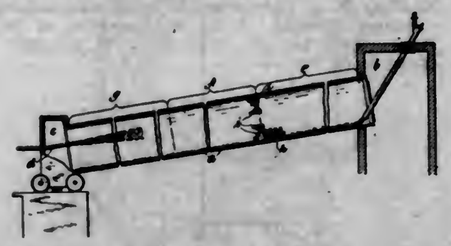
1,627,582. PROCESS FOR TREATMENT OF ORES. JOSEPH T. TERRY, Leadville, Colo., assignor of one-half to Thomas H. Sheridan, Chicago, Ill. Filed Sept. 7, 1922. Serial No. 586,561. 13 Claims. (Cl. 75—18.)

1. A process of the class described, consisting in subjecting ground ore to the action of a solution containing a metal ammonium salt and an alkali-hyposulphite, and precipitating the dissolved metals.



1,627,583. CONE CARRIER. GEORGE E. THUM, Elizabeth, N. J. Filed Oct. 23, 1925. Serial No. 64,307. 2 Claims. (Cl. 224—45.)

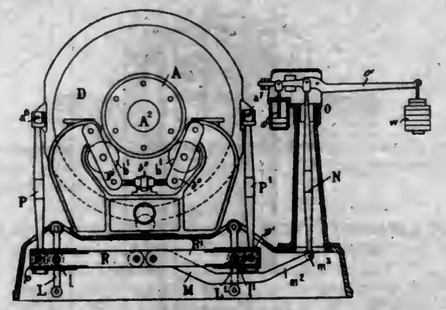
1. A cone carrier comprising a sack having a trough shaped bottom and convergent raised upper side portions containing handle openings near the top, said sack being



of integral construction, integral right angle flanges of uniform width extending the full length of the end edges of said sack, and in reaching spaced apart shelves extending from end to end of the sack, said shelves being perforated in register to receive cones.

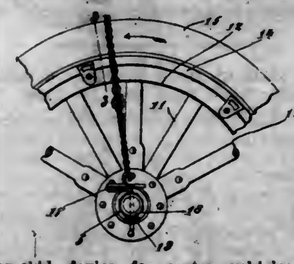
1,627,584. HINGE. PAUL TISHKEN, Detroit, Mich. Filed June 5, 1925. Serial No. 35,051. 2 Claims. (Cl. 86—128.)

1. A hinge comprising a leaf integrally formed with a barrel terminating substantially flush with an end of said leaf, and a second leaf having a tongue projecting beyond an end of said leaf to engage in said barrel, and having its base portion shouldered at a point slightly beyond said end of the leaf to establish a clearance between the barrel carrying leaf and the tongue carrying leaf whereby said leaves may swing freely into endwise registration.



1,627,585. TREATMENT OF CEMENT RAW MATERIALS IN ROTARY KILNS. MIKAEL VOGEL-JORGENSEN, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Apr. 25, 1925, Serial No. 25,724, and in Denmark May 10, 1924. 3 Claims. (Cl. 222—7.)

2. In a continuous process of treating wet cement material, introducing wet raw material into a rotating kiln, subjecting it to the action of heat and the rotating movement of the kiln to drive off the moisture without calcination and to advance the material bodily, mechanically reducing in size within the kiln, the larger nodules formed by the heat and movement of the material, then subjecting the dried material so treated to heat sufficiently high to effect its calcination, and eventually clinkering the calcined material.

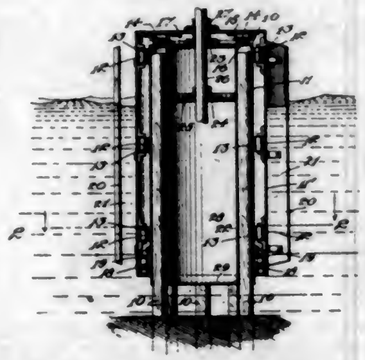


1,627,586. ABSORPTION BRAKE DYNAMOMETER. GEORGE HENRY WALKER, Worcester, England, assignor to Heenan and Froude Limited, Worcester, England. Filed Nov. 8, 1926. Serial No. 66,671, and in Great Britain Nov. 12, 1924. 1 Claim. (Cl. 265—24.)

An absorption brake dynamometer for measuring the power developed by rotating shafts comprising a rotor, a stator surrounding the rotor, anti-friction bearings upon which the stator is mounted, a turnbuckle for adjusting the position of the anti-friction bearings, two pivot pins on the stator arranged diametrically opposite each other, levers in the base plate, links pivotally supporting said levers, links connecting the short ends of the levers to the pivot pins on the stator, a further lever

connecting the longer ends of the two first levers together and extending beyond the side of the stator, a balance arm and a link connecting the free end of this further lever thereto.

1,627,587. NONSKID CHAIN. CHARLES A. WARE and ALWIN DEICHMILLER, Pasadena, Md. Filed Jan. 8, 1926. Serial No. 80,070. 4 Claims. (Cl. 152—14.)

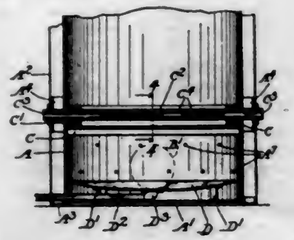


1. A non-skid device for motor vehicles consisting of a plurality of separate units, each unit comprising a separate chain having a loop at one end adapted to encircle the hub and an eye at the other end of a size to pass the chain, the loop in connection with each unit being separate from the loops of the other units and means for holding said loops on the hub.

1,627,588. SKIRT GAUGE. JOEL B. WELLS, Philadelphia, Pa. Filed Mar. 29, 1922. Serial No. 547,597. 5 Claims. (Cl. 33—9.)

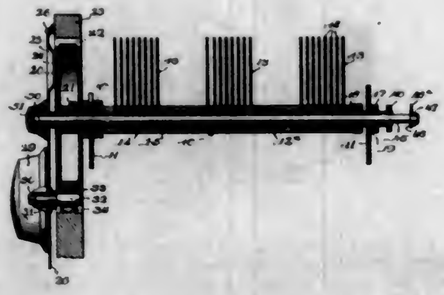
1. In a device of the character described, the combination of a standard and a device adjustably secured thereto comprising in a single structure a chalk holder and a horizontal and substantially rectangular crease forming extension.

1,627,589. CURRENT MOTOR. ALEXANDER WHITTLE, Kearny, N. J. Filed Feb. 10, 1926. Serial No. 87,247. 3 Claims. (Cl. 170—100.)



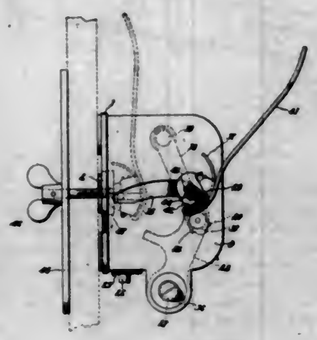
1. A current motor comprising a circular set of piles, a cylinder secured on the piles and enclosing them, a rotatable cylinder surrounding the fixed cylinder and having rollers disposed so as to permit only rotary movement of the rotatable cylinder, and tangential blades secured on the outside of the rotatable cylinder.

1,627,590. MARCEL HAIR WAVER. ELNORA E. BALDWIN, Rand, Colo. Filed May 13, 1926. Serial No. 108,901. 7 Claims. (Cl. 132—40.)



1. A hair waver comprising a bar, arms extending in one direction from the bar, other arms extending in the opposite direction from the bar, resilient hooks carried by certain of said arms, and clasps carried by the remaining arms.

1,627,591. FURNACE. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1926. Serial No. 81,659. 6 Claims. (Cl. 110—22.)

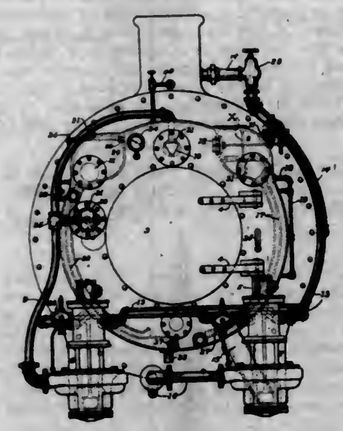


A furnace for the burning of liquid and solid fuels, an upwardly concave liquid fuel receptacle positioned in the lower portion thereof and a fuel supply line extending thereto, the wall of the furnace being penetrated by a plurality of spaced air inlet apertures, a plurality of grate bar members mounted in said furnace and overlying said fuel receptacle, said bars being provided with air inlet apertures, and with air outlet apertures located within the furnace.

1,627,592. RADIO APPARATUS AND CURRENT-CONTROL DEVICE THEREFOR. PAUL A. CHAMBERLAIN, Chicago, Ill., assignor to Mohawk Corporation of Illinois, Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1926. Serial No. 152,682. 4 Claims. (Cl. 175—41.5.)

1. In radio apparatus, the combination of a control panel, a rotative tuning unit including a frame and a rotor shaft, a dial for said rotor shaft visible from the exterior of said panel, a current control switch mounted on said frame including a control shaft extending coaxially through said rotor shaft, manual control means for said switch control shaft in front of said dial, and a control knob for said rotor shaft disposed eccentrically thereof and operatively connected with the latter.

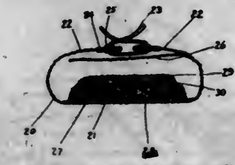
1,627,593. MOTOR CONTROLLER. DANIEL H. CHASON, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 12, 1923. Serial No. 612,259. 5 Claims. (Cl. 201—48.)



5. A convertible foot or knee-operated motor-controller comprising a casing including a base adapted to rest upon the floor or be secured to a sewing machine stand, a variable circuit controller element housed within said casing, an L-shaped spring-pressed pedal-lever having one of its arms connected to operate said element, and a knee-shift extension detachably connected to the other arm of said pedal-lever to increase the effective length of the power-arm thereof for knee-shift operation.

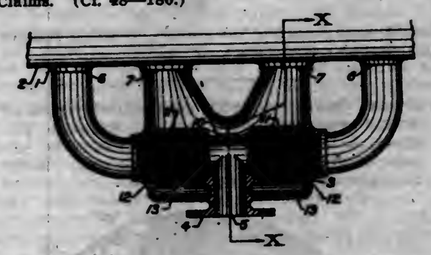
1,627,594. ELECTRIC PLUG. WENDELL H. CLARK, Chicago, Ill. Filed Apr. 3, 1922. Serial No. 549,218. 2 Claims. (Cl. 173—360.)

1. As an improved article of manufacture, an electric plug comprising a body of insulating material having a peripheral groove and guard flange, a one-piece metallic shell with a plurality of resilient sections extending lengthwise of the body and spaced therefrom with their ends freely movably received within said groove with limited freedom of movement toward and from said flange, the other end of the shell having a central opening and an annular flange integral with said sections, said flange resting upon the end of the plug body with interengaging recess and portion of the shell adjacent said flange, and a disc over the top of said shell and fastened to the plug, said plug body having bores for the circuit wires extended therethrough, and means securing said disc to the body and serving for securing said disc in place and an attachment for one of said wires.



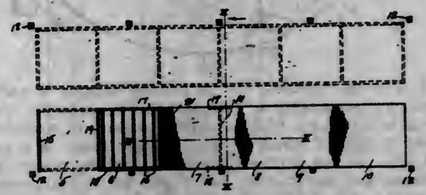
1,627,595. FEED-WATER HEATER. MILLARD F. COX, Louisville, Ky. Filed June 13, 1922. Serial No. 567,990. 28 Claims. (Cl. 122—442.)

1. In a locomotive feed water heater, an annular body adapted to be inserted in the front of a locomotive boiler shell and having a vertical front wall and a rearwardly and downwardly inclined rear wall whereby the lower portion of the body extends rearwardly of the smoke box beyond the upper portion of the body, and feedwater pumps carried by said heater on the lower portion of said front wall and connected to the interior of said heater.



1,627,596. ATHLETIC ARCH SUPPORT. FRANK T. CUTSHAW, Indianapolis, Ind., assignor to Otto Schellert. Filed Aug. 29, 1921, Serial No. 496,448. Renewed July 23, 1925. 1 Claim. (Cl. 36—71.)

An adjustable arch support including a fabric strip, a pocket positioned on said fabric intermediate the ends thereof for supporting the arch of the foot, felted pad means in said pocket for reinforcing the arch, lacing means for securing the ends of the fabric strip together in band formation and in compression upon the foot, and a tongue secured to one end of the fabric and

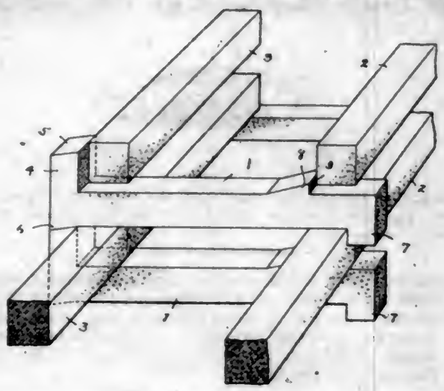


extending beyond the same and the other end to protect the foot from the lacing and the gap between the fabric ends.

1,627,597. FUEL SEPARATOR AND VAPORIZER FOR THE MANIFOLDS OF INTERNAL-COMBUSTION ENGINES. GEORGE R. DAVENPORT, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Feb. 27, 1922. Serial No. 539,551. 10 Claims. (Cl. 48—180.)

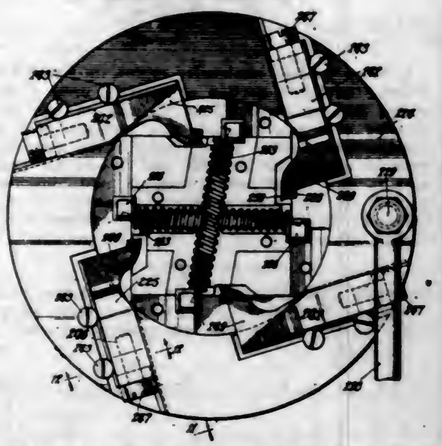
2. In an internal combustion engine, an intake passage therefor having a portion of enlarged area, a broken-walled member supported by its ends in said passage bridging over said enlarged area and having a single passage therethrough of substantially the same normal area as said intake passage, and means for applying heat to any liquid passing through said broken-walled member into the space around said member whereby the liquid will be vaporized and returned through the openings in said member and into the intake passage.

1,627,598. BRICK-KILN CONSTRUCTION. WILLIAM WALLACE DICKINSON, Jr., Little Rock, Ark. Filed May 28, 1926. Serial No. 112,227. 6 Claims. (Cl. 25—134.)



1. A plurality of adjacent units made up of brick placed for burning, having a division wall initially of unburned brick, between each two thereof, said wall being of less height than the said units, thereby providing initially a passage-way above said wall for gases of combustion between said units, and as burning and shrinkage of said wall progresses, providing additional direct passageways through said wall.

1,627,599. CONCRETE CRIBBING. ELBERT H. DRESSER, Duluth, Minn. Filed Aug. 13, 1926. Serial No. 128,963. 3 Claims. (Cl. 61—47.)

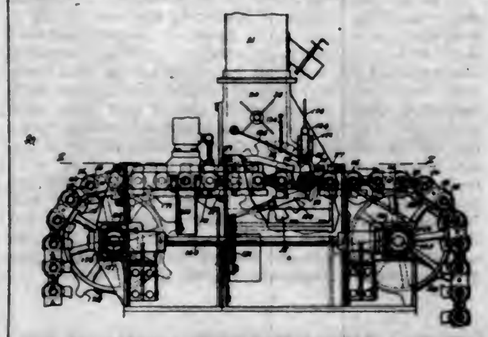


1. A concrete cribbing comprising in combination straight rectangularly shaped stretchers, headers for over-

lapping engagement with the stretchers at both ends and horizontal holding engagement with each other, said

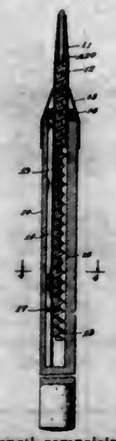
holding engagement of the headers occurring outboard of the outermost stretchers.

1,627,600. MANUFACTURE OF COMPOUND HELICAL WIRE SPRINGS. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed June 26, 1922. Serial No. 570,980. 35 Claims. (Cl. 140—3.)



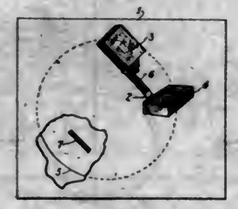
1. The improvement in the art of making a spring structure comprising a pair of helicals mutually interlaced in cruciform relation, which consists in simultaneously forming a length of wire into the shape of a helical coil, the end portion of said coil forming one of said helicals, and screwing the end of said helical transversely through spaces between turns of the other helical.

7. The improvement in the art of making helical springs which consists in positioning the end of a helical, bending the same to form a hook thereon, and while said helical is still positioned, bending the end of said hook to contact the same.



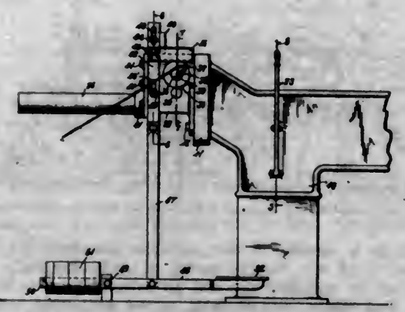
1,627,601. APPARATUS FOR COMPACTING GRANULAR MATERIAL. GEORGE GOEBEL, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Aug. 18, 1922. Serial No. 582,834. 48 Claims. (Cl. 18—5.)

5. In apparatus of the class described, and in combination, a hopper for containing a mass of material, a drum having a plurality of mold grooves for receiving charges of material from said hopper, means for giving said drum an intermittent rotation whereby the grooves are successively moved past the material in the hopper, a plunger movable into a groove along the length thereof for compressing the charge into a desired cross section, means for operating said plunger during a period of rest of the drum, a conveyor chain, a plurality of carrier molds conveyed thereby, means for operating said chain to position intermittently a carrier mold in alinement with the compressed charge, a ram movable through the drum grooves for transferring the charge to the positioned carrier mold, and means for operating said ram during said period of rest of the drum.



10. In apparatus of the class described, and in combination, a conveyor, a plurality of carrier molds conveyed thereby, a container for holding a charge of material of a diameter to fit said molds, means for moving the conveyor to position a carrier mold in alinement with the container, a ram for transferring a charge of material from the container to a carrier mold, means for reciprocating the ram, shutters for the entrance ends of the carrier molds, a shutter closer including a fluid pressure unit, a valve for controlling the admission of pressure fluid to said unit, and means for operating said valve.

1,627,602. MECHANICAL PENCIL. BYRON B. GOLDSMITH, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,359. 4 Claims. (Cl. 120—18.)



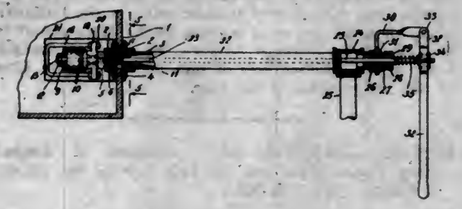
1. A mechanical pencil comprising a hollow cylindrical casing, a revolubly mounted lead-holding tip extending partly within and partly without said casing, and having a shoulder abutting against the forward end of said casing and a shell having a cylindrical portion fitting over the end of the casing and a conical portion enclosing said shoulder and fitting, at its narrow end, the lead holding tip.

1,627,603. DEVICE FOR PRODUCING AN OPTICAL ILLUSION. EUGEN HABERFELD, Berlin-Halensee, Germany, assignor to Latham Litho & Printing Co., New York, N. Y., a Corporation of New York. Filed Mar. 18, 1926. Serial No. 95,522. 5 Claims. (Cl. 40—126.)

1. The combination of a stationary surface having an opening, a movable surface disposed back of said stationary surface and carrying the picture of some article, or the like arranged to move across said opening at certain time intervals, and means for setting said movable surface into motion said movable surface and said stationary surface being similarly colored.

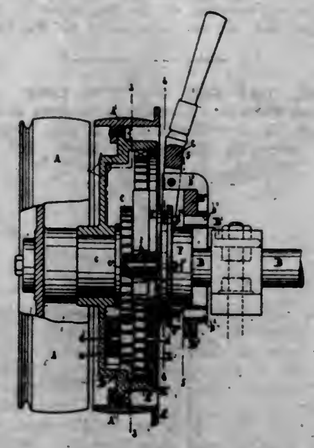
1,627,604. SPRING-WINDING MACHINE. JAMES ARTHUR HITTLE, Indianapolis, Ind., assignor to Robert H. Hassler, Indianapolis, Ind. Filed Jan. 7, 1926. Serial No. 79,907. 8 Claims. (Cl. 153—64.)

1. In a machine of the type described, a winding mandrel comprising a boss adapted for rotation about the transverse axis, means on said boss for engaging a strip to be wound, means for rotating said boss, a member adapted to exert pressure on said strip transversely to the axis of said boss, means for normally holding said member in operative position, and means for bringing said member into pressure exerting relation to said strip.



1,627,605. PIPE. WALTER A. HOMAN, Denver, Colo., assignor to The Bronco Buster Pipe Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 25, 1926. Serial No. 97,267. 5 Claims. (Cl. 131—12.)

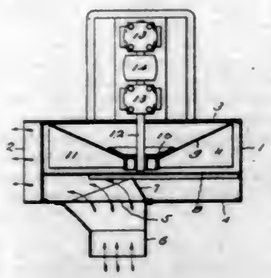
2. A pipe provided with a bowl having a metal bottom plate and a metal stem secured to said plate.



5. A pipe provided with a bowl having a liner made of carbon and means for reinforcing said carbon liner to prevent the same being cut from the bowl.

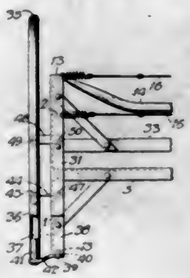
1,627,606. DRAIN VALVE. JOSEPH L. HUTCHINGS, Olean, N. Y. Filed Jan. 15, 1926. Serial No. 81,595. 4 Claims. (Cl. 251—134.)

1. A drain valve comprising, a stationary member having an axial passage therethrough, a slidable imperforate cup-shaped member operatively connected to said stationary member, a vent leading to the axial passage of said stationary member, means responsive to the application of a force for moving the slidable member relatively to the stationary member to open the vent including a slidable-member-stem attached to the closed end of the slidable cup-shaped member which stem extends into the axial passage of the stationary member and a cooperating stationary-member-stem leading from the outside of the stationary member into the axial passage of the stationary member, said stems being in axial alignment so as to make ready contact with one another, means responsive to the removal of said force for moving the slidable member relatively to the stationary member to close the vent.



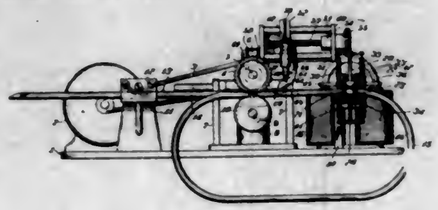
1,627,607. DRIVING AND REVERSING GEAR. JAMES JOLLEY, Manchester, England. Filed June 1, 1926, Serial No. 113,091, and in Great Britain Aug. 22, 1925. 2 Claims. (Cl. 74—34.)

1. An epicyclic reversing gear for carding engines comprising a driven shaft, a bearing carrying the driven shaft, a sun wheel keyed on the driven shaft, a boss on said sun wheel, a driving pulley loosely mounted on said boss, crown teeth formed on the inner periphery of the loose pulley, a plate having holes therein loosely mounted on said driven shaft, a stud mounted on the plate, a pinion mounted on the stud and gearing with



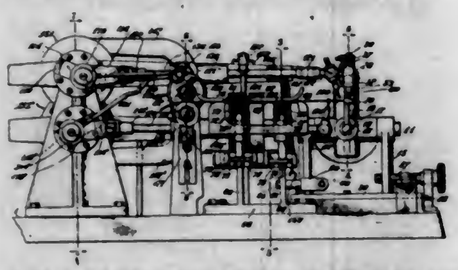
the crown teeth on the periphery of the loose pulley, a second pinion mounted on the stud and gearing with the sun wheel, a stationary plate having holes therein affixed to the bearing, a sliding disc mounted between the loose plate and the stationary plate, pins on one face thereof to enter the holes in the loose plate when the disc is in position at one end of its movement and pins on the other face thereof to enter holes in the stationary plate when the disc is in position at the other end of its movement, the distance between the ends of the pins being such that both sets of pins may be free to allow of the free rotation of the gear.

1,627,608. EXHAUST FAN. CHARLES H. KEENEY, Avon, Conn. Filed Aug. 10, 1926. Serial No. 128,442. 7 Claims. (Cl. 302—23.)



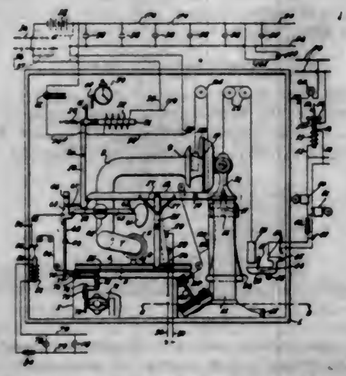
1. An exhaust fan comprising a substantially circular casing, a fan wheel rotatable within the casing, said casing having a tangential discharge opening and an inlet opening through one side eccentric to the fan wheel axis and adajcent to the discharge opening, and means fixed within the casing for deflecting material from the inlet to the discharge, whereby material drawn into the casing by the rotation of the fan wheel is immediately discharged and not carried around by the fan wheel.

1,627,609. DAY BED AND THE LIKE. SAMUEL J. LAVEZZI, Chicago, Ill., assignor to Herz Bed Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1921. Serial No. 471,448. 7 Claims. (Cl. 5—53.)



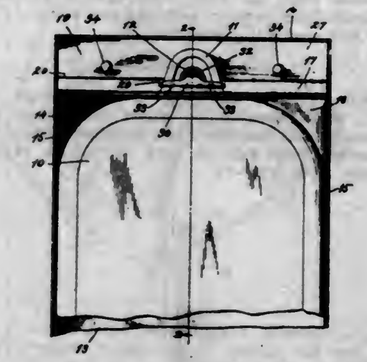
1. A device of the class described comprising a stationary frame section and a movable frame section pivoted thereon, and bed ends having corner posts, and inwardly and upwardly projecting members on the lower ends of said posts upon which the stationary frame section is detachably supported.

1,627,610. LACE-THREADING MACHINE. HANS LUNDQUIST, Chicago, Ill., assignor to United States Specialty Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1921, Serial No. 463,828. Renewed Jan. 14, 1927. 18 Claims. (Cl. 223—38.)



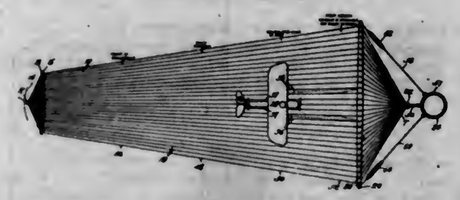
2. In an apparatus of the character described, the combination of a threading needle, a gripping device for lace, means for feeding the lace to the needle, an electromagnet and means actuated by the electro-magnet for rapidly oscillating said gripping device.

1,627,611. LACE-THREADING MACHINE. HANS LUNDQUIST, Chicago, Ill., assignor to United States Specialty Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 30, 1921, Serial No. 518,915. Renewed Jan. 14, 1927. 27 Claims. (Cl. 223—38.)



1. In a machine of the character described, the combination of lace feeding means, a needle floatingly supported in the machine, and on which the lace is fed by said means, and movable means projecting through the needle for preventing axial displacement of the same.

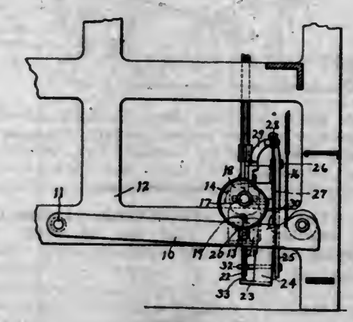
1,627,612. ALARM SYSTEM. WILLIAM J. LUSK, New York, N. Y. Filed Dec. 13, 1922. Serial No. 606,655. 46 Claims. (Cl. 179—5.)



1. Alarm system embodying a dial telephone, means for dialing said telephone, means cooperating with the transmitter of the telephone for sounding an alarm in the vicinity of the transmitter of the telephone, means for normally maintaining the alarm means and the dialing means in restraint, and means for releasing the alarm means and dialing means.

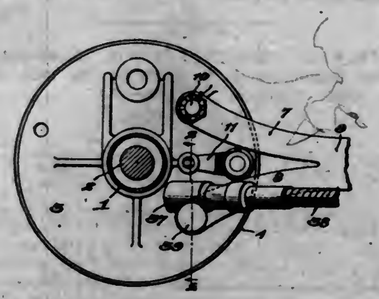
1,627,613. PACKING RECEPTACLE. CHARLES E. MANDERBACH, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1925. Serial No. 24,956. 9 Claims. (Cl. 206—69.)

3. A packing box having a partition formed by a piece of material folded V-shaped, the sides of which are provided with base-forming extensions secured to each other and to the bottom of the box, one of said extensions lying between the other and the box bottom.



1,627,614. AERIAL LANDING HARP FOR AEROPLANES. NEWTON A. MCCULLY, Anderson, S. C. Filed Oct. 14, 1925. Serial No. 62,358. 13 Claims. (Cl. 244—2.)

1. An aerial landing harp for aeroplanes comprising a unitary hammock shaped device consisting of a series of cables, each of said cables being secured at their respective ends to single elements, means for supporting and spacing said cables one from the other situated near the forward and rear ends thereof respectively, means on said supports to engage and hold the cables, the cable engaging means on the forward support being spaced at greater intervals than the cable engaging means on the after support, the engaged cables diverging from said after to said forward support, and means for anchoring the respective ends of the harp to fixed supports to hold the harp in suspension.

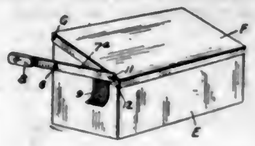


9. An aerial landing harp for aeroplanes comprising a unitary hammock shaped device consisting of a series of spaced, taut, cables each diverging forwardly from the other, and an aeroplane having depending inwardly curved hooks to engage and deflect any pair of non-adjacent cables of the series as said aeroplane moves forwardly thereover and thereupon.

1,627,615. BUNCH-BUILDING MECHANISM FOR SPINNING FRAMES. WILLIAM T. MORGAN, New Bedford, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Sept. 20, 1926. Serial No. 136,533. 4 Claims. (Cl. 242—43.7.)

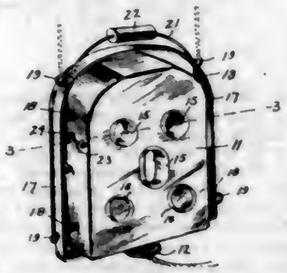
1. A bunch builder mechanism for spinning frames, in combination, a swinging builder lever, a shaft rotatable in bearings fixedly connected to the frame of the machine, a cam fixed to said shaft for normally operating the builder lever for effecting the main winding of the yarn on the bobbin, a supplementary cam also fixed to said shaft effects the preliminary winding of the yarn on the bobbin, a device slidably mounted in a stationary part of the machine in a coacting engagement between the builder lever and said supplementary cam, and means for disengaging said device from its coacting engagements.

1,627,616. SPEEDOMETER DRIVE. DAVID H. NASH, Petersburg, Va. Filed Sept. 28, 1925. Serial No. 59,217. 2 Claims. (Cl. 74—7.)



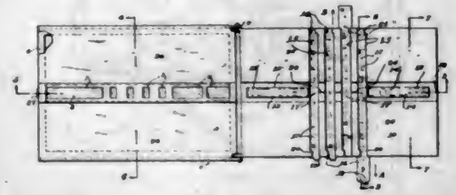
1. In combination with a vehicle having a wheel, a dead axle, a brake-drum carried by said wheel, and a plate carried by said axle and closing the inner side of said brake-drum; a driving gear fixed to said wheel within the brake-drum; a driven gear enclosed within the brake-drum and meshing with the driving gear; a gear-housing supported by said plate; and angle-gearing, in said housing, connected with and actuated by said driven gear and adapted for connection with an instrument to be driven.

1,627,617. MAIL-BOX SIGNAL. JOHN NORDIN, Monticello, Minn. Filed Nov. 27, 1925. Serial No. 71,641. 1 Claim. (Cl. 232—35.)



A mail box having a hingedly secured door, a stop member projecting laterally from the door, a lever piv-

oted to the side of the box and having freedom for complete rotating movement, said lever having a relatively long signal carrying end for releasable engagement with



said stop, and a relatively short, weighted end adapted to be passed by the stop without abutting the same when the door is closed.

1,627,618. BODY APPLICATOR. JENNIE HENRY PAUL, Amarillo, Tex. Filed Dec. 28, 1925. Serial No. 77,903. 9 Claims. (Cl. 128—254.)

1. A body applicator comprising a mask and a casing spaced apart to provide room for a heating means, and having supplemental surfaces of a conformation to fit other parts of the body than the face, there being a concave extension below the chin portion of the mask for the last named purpose.

1,627,619. CHECK PROTECTOR. EMMANUEL REUBENS, Washington, D. C. Filed Jan. 20, 1925. Serial No. 3,665. 5 Claims. (Cl. 101—19.)

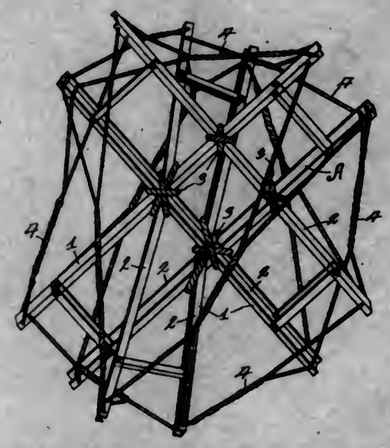
1. In a device of the class described in combination, a base, bent over portions on said base, a hinge, an upper cover or plate, grooves in said plates, slides in the said grooves, notches at the sides of the said slides, a spring co-operating with the said notches, a pin at one end, and a projection at the other end of the said slides, extensions arranged to contact with the said pin, and projections, and a fastener for keeping the said base and the said top plate or cover in a closed position.

1,627,620. FLEXIBLE METALLIC PACKING. HAMPTON PRATT RHODES, Houston, Tex. Filed July 18, 1925. Serial No. 44,448. 3 Claims. (Cl. 154—45.5.)

1. A flexible metallic packing comprising a central core of asbestos, a heavy layer of metal foil compressed in interlocked position around said core, a plurality of smaller threads of asbestos extending longitudinally of the metal foil, a layer of asbestos on one side of the

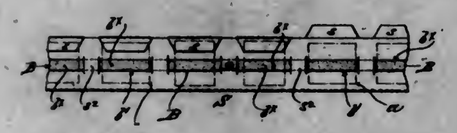
compressed metal foil, and a covering of flexible material surrounding said packing, said core and asbestos threads being saturated with lubricant.

1,627,621. TENNIS RACKET. CARL SCHINDLER, Brookline, Mass., assignor, by direct and mesne assignments, to Carl Schindler, Inc., a Corporation of Massachusetts. Filed Feb. 10, 1926. Serial No. 87,378. 2 Claims. (Cl. 273—73.)



1. In a racket, comprising a handle and a head, having side and end rims; a multiplicity of pairs of apertures through the rim from the inside to the outside of the rim one aperture of each pair slanting from the inside in the direction of stringing and the other from the outside in the direction of stringing; an unyielding hard abutment laid along the outerside of the rim; strings crossing the head back and forth from rim to rim, through the rim apertures and around the abutment.

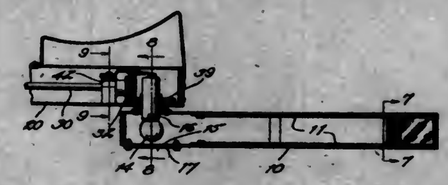
1,627,622. SAW. JOHN SCHREINER, Chicago, Ill., a signor to Paul W. Koch & Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 21, 1925. Serial No. 76,623. 2 Claims. (Cl. 145—31.)



2. In a tool of the class described, a pair of parallel saw blades, a pair of elements for spacing the blades a given distance apart, means for fastening the blades to the elements, said elements comprising means adapted to be gripped manually to actuate the saw blades, and a rib associated with an edge of each of the blades, each of said ribs having each end provided with a cut away portion to permit of the corresponding spacing element to abut the side of the associated blades, said blades being reversible to vary the distance separating them, said ribs being adapted to be used to increase the said distance when said blades are reversed.

1,627,623. STREAM DEFLECTOR AND RIVER-BANK PROTECTOR. HARRY M. SMITH, Valley, Nebr. Filed Oct. 23, 1925. Serial No. 64,371. 2 Claims. (Cl. 61—3.)

2. A stream deflector comprising a plurality of elongated rectangular shaped frames having end and side bars, said frames being in crossed relation, one of said frames being centrally restricted and extending through one of the other frames, said frames being proportioned whereby when the device rests on any side or portion thereof, one bar of each frame will form part of a tripodal support for the deflector.



1,627,624. EXHIBIT MOUNT FOR STAMPS, ETC. ALEXANDER S. TRAUB, Yonkers, N. Y. Filed Nov. 8, 1926. Serial No. 147,100. 2 Claims. (Cl. 229—69.)

1. As an article of manufacture, a plural envelope strip of the character designated, comprising a slitted and folded blank of transparent material, and a retaining band woven through the slits, one side of said band being adhesive for the purpose set forth.

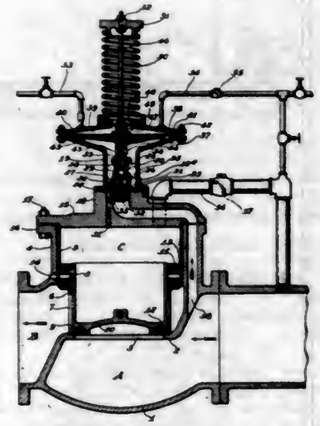
1,627,625. SIGNAL. HENRY G. TUTHILL, Los Angeles, Calif. Filed Feb. 16, 1925. Serial No. 9,602. 1 Claim. (Cl. 177—329.)

An automobile direction signal comprising a casing adapted to project horizontally from the side of the vehicle, a signaling member of hollow formation, means for mounting said signaling member on said casing with the signaling member normally lying at one side and parallel with said casing, an electric light socket carried by said casing, said socket serving as a pivot shaft for said signaling member, an electric light bulb arranged in said socket and also positioned within said signaling member, means for controlling the movement of said signaling member, whereby the latter may be swung outwardly to different angular positions with relation to said casing, a switch arranged in a normally open circuit and including a contact pin arranged centrally of said pivot, a resilient contact arm, a block of insulating material carried by said arm, a cam on one end of the light socket for engaging said block of insulating material for normally holding said resilient contact spaced from said pin, and allowing said contact to engage the pin when the signaling member is swung to its active position.

1,627,626. CHILLED-IRON ROLL. HARRY E. WALTERS, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 23, 1927. Serial No. 177,836. 10 Claims. (Cl. 75—1.)

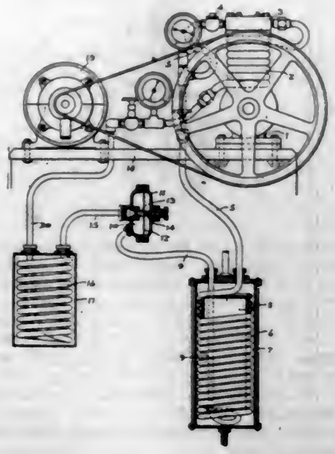
1. As a new article of manufacture, a chilled cast iron roll containing total carbon about 3.00 to 3.75 per cent, chromium about .70 to 1.25 per cent, molybdenum about .15 to .50 per cent, phosphorus not over about .06 per cent, sulphur not over about .08 per cent, silicon about .75 to 2.50 per cent, and manganese about .20 to .80 per cent, and having a close grained white iron primary chill and a secondary chill having no distinct line of demarcation between it and the primary chill and having a grain structure resembling that of the primary chill.

1,627,627. REATOMIZING DEVICE FOR INTERNAL-COMBUSTION ENGINES. WALTER MILO WILLY, Pukwana, S. Dak. Filed Jan. 12, 1926. Serial No. 80,768. 5 Claims. (Cl. 48—180.)



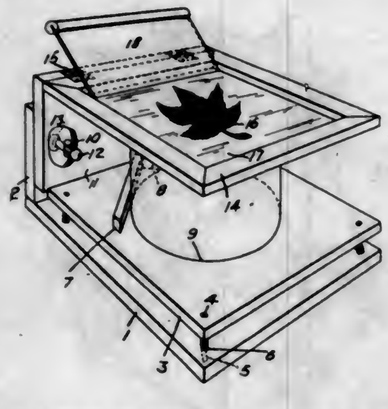
1. A reatomising device for internal combustion engines comprising a head piece formed with an opening communicating with the intake manifold of the engine, a bowl suspended from said member and closed thereby, a baffle carried by said member and extending partly across said opening at the lower portion thereof and providing means for arresting heavier particles of gasoline, said head piece provided with means for discharging said heavier particles into said bowl, a siphoning tube leading from a point within and in proximity to the bottom of said bowl to said opening for directing the gasoline from the bowl in a reatomised state into the combustible charge as the latter travels through said opening, and a semi-circular flange carried by said member and arranged above said baffle.

1,627,628. AUTOMATIC CONTROL VALVE. EDWARD V. ANDERSON, Belle Vernon, Pa., assignor of one-half to Charles E. Golden, Crafton, Pa. Filed Jan. 8, 1927. Serial No. 158,496. 10 Claims. (Cl. 137—139.)



1. A valve mechanism comprising a casing having a passage therethrough, a valve controlling the passage

and adapted to seat by movement in a direction opposed to that of normal flow of fluid through the passage, means responsive to increase of pressure on one side of said



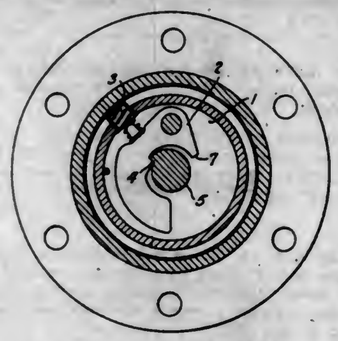
valve for automatically seating said valve, and means responsive to failure of pressure on the other side of said valve for automatically unseating said valve.

1,627,629. REFRIGERATING DEVICE. JOHN W. ANDERSON, Hamilton, Ontario, Canada. Filed Apr. 14, 1926. Serial No. 102,042. 1 Claim. (Cl. 62—115.)

In a refrigerating device containing a fluid refrigerating medium, the combination of a compressor; a condenser connected with the compressor; an expansion valve connected with the condenser; a cooling coil connected with the expansion valve; and a tubular coil encircling the compressor cylinder and in heat exchange relation therewith, one end of said coil being in communication with the cooling coil and its other end in communication with the compressor.

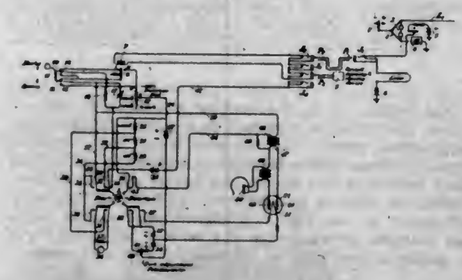
1,627,630. DEVICE FOR ICING CAKES. HUBERT CARTER, Toronto, Ontario, Canada. Filed Nov. 14, 1925. Serial No. 69,047. 2 Claims. (Cl. 91—3.)

1. In a device for icing cakes, a resiliently supported base upon which the cake to be iced is adapted to rest, a supporting standard, a frame secured to the standard and extending over the base and spaced apart therefrom to permit the insertion of the cake, a wire mesh secured to the frame and extending over the open portion thereof, a stencil sheet laid upon the mesh through which and the mesh the icing liquid is adapted to be forced onto the cake top, and means for permitting the vertical adjustment of the frame in relation to the base.



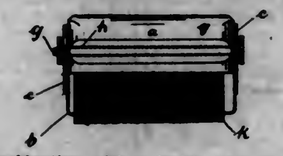
1,627,631. ELECTRIC-LAMP SOCKET. WILLIAM GEORGE CHIZLETT, Oroville, Calif. Filed July 23, 1926. Serial No. 124,415. 3 Claims. (Cl. 173—340.)

1. In an electric lamp socket for attachment to a pair of spaced conducting wires, a socket member, a cap movably associated with said socket member and between which the wires are to be disposed, an electric bulb securing shell slidable within the socket member and operatively connected to the cap for drawing the cap toward the socket member when a bulb is inserted in the shell, means for piercing the wire, and means for completing the circuits between the wires and the bulb disposed in the shell.



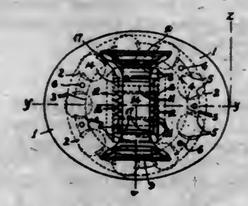
1,627,632. MEANS FOR ADVANCING AND RETARDING A DRIVEN SHAFT RELATIVELY TO A DRIVING SHAFT. GEORGE CONSTANTINESCO, Weybridge, England. Filed Mar. 28, 1925, Serial No. 19,116, and in Great Britain Apr. 10, 1924. 2 Claims. (Cl. 192—103.)

1. Means for changing the phase relation of a driving and a driven shaft irrespective of the power transmitted when the speed of the driving shaft reaches certain values, comprising centrifugally operated pawl mechanism carried by the driving shaft, two or more driving portions on the said pawl mechanism, and means on the driven shaft for engaging said driving portions which are



adapted to come successively into operation on the said engaging means by centrifugal action when the speed of the driving shaft reaches certain predetermined values.

1,627,633. TELEGRAPH DISTORTION-MEASURING SYSTEM. SAMUEL I. COBY, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 22, 1925, Serial No. 77,087. Renewed Sept. 30, 1926. 5 Claims. (Cl. 178—69.)

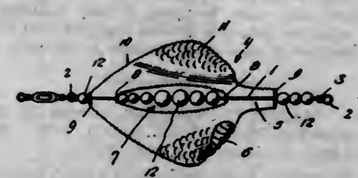


1. In a system for measuring total distortion of telegraph signaling impulses, the combination with a source of signal comprising a mark and a space, of a relay responsive to the said signal, a condenser, a source of potential adapted to charge the condenser during a spacing interval, and means to discharge the condenser during a marking interval.

1,627,634. BRUSH. ALBERT EDWARD COYNE, Sheffield, England, assignor to Andrew Page, Leeds, England. Filed June 9, 1925, Serial No. 35,921, and in Great Britain June 18, 1924. 6 Claims. (Cl. 15—169.)

1. The combination with a brush, of a guard having teeth adapted to enter spaces between the bristles of the brush, and means connecting the guard with the brush and permitting bodily movement of the guard to and from the brush back and also movement of the guard teeth into and from spaces between the bristles of the brush.

1,627,635. DEVICE FOR SUPPORTING THE HAND WHILE WRITING. CHARLES CRAIG, Boksburg, Transvaal, South Africa. Filed Feb. 19, 1925, Serial No. 10,411; and in the Union of South Africa Aug. 2, 1924. 3 Claims. (Cl. 120—54.)



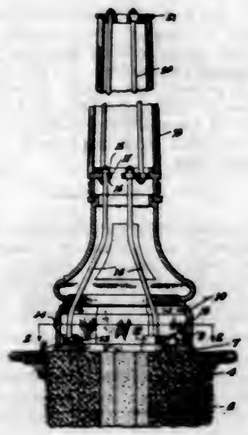
1. A device of the kind described, comprising a hand-supporting member provided on the underside with a ball bearing and having shaped catches engaging the sides of the hand for securing the device to the hand, and means for automatically moving said catches outwardly to disengage them from the hand when the hand is resting in the member, and for automatically moving them inwardly to engage with the hand when the hand is raised above the member, as set forth.

1,627,636. VULCANIZATION OF RUBBER. CECIL JOHN TURRELL CRONSHAW and WILLIAM JOHNSON SMITH NAUNTON, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed June 28, 1926, Serial No. 119,265, and in Great Britain Sept. 9, 1924. 3 Claims. (Cl. 18—53.)

2. In the vulcanization of rubber, the process which comprises adding to the mixture to be vulcanized a small proportion of tetra-methyl-diamino-diphenyl-guanidine and then vulcanizing.

1,627,637. FISHING LURE. ERNEST A. DAHLQUIST, Long Beach, Calif. Filed Oct. 30, 1926. Serial No. 145,284. 1 Claim. (Cl. 43—45.)

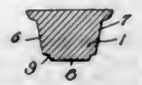
A contrivance of the class described comprising a carrier wire having its ends bent to form eyes, a spinner body having apertured ears at its ends and provided intermediate its ends with a slot and ears projecting from the body at the ends of the slot and having apertures in alinement with the first mentioned ears, said wire extending through the apertures of said ears, bearings on said wire between the second mentioned ears, and bearings between each first mentioned ear and the adjacent eye.



1,627,638. PROCESS OF MAKING A SMOKELESS EXPLOSIVE POWDER. FRANCIS I. DU PONT and ERNEST DU PONT, Wilmington, Del., assignors to U. S. F. Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 10, 1925. Serial No. 68,224. 12 Claims. (Cl. 52—20.)

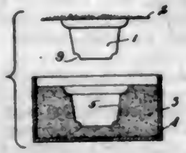
1. In the manufacture of a flashless, smokeless propellant powder, the process which comprises mechanically mixing and blending nitrocellulose and a flame propagating agent, blending being performed in the presence of a liquid having utility in colloiding nitrocellulose but effecting no colloiding during mixing, and afterwards completely colloiding the nitrocellulose.

1,627,639. FLASHLESS CANNON POWDER. FRANCIS I. DU PONT and ERNEST DU PONT, Wilmington, Del., assignors to U. S. F. Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 13, 1926. Serial No. 148,313. 5 Claims. (Cl. 52—11.)



1. As a flashless powder, colloided nitrocellulose containing distributed grains of a mixture composed of charcoal and a nitrate and free of sulfur.

1,627,640. BASE FOR LAMP STANDARDS. GEORGE F. EBEL and FREDERICK M. ZINK, Canton, Ohio, assignors, by mesne assignments, to The Union Metal Manufacturing Company, a Corporation of Ohio. Filed Sept. 16, 1925. Serial No. 56,751. 3 Claims. (Cl. 189—28.)

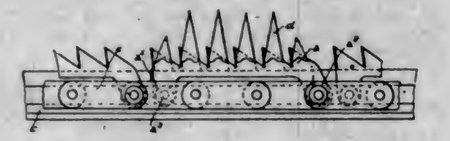


3. A standard including a base ring, means for anchoring the ring, a shoulder spaced from the edge of the ring, slotted lugs upon the ring, a base engaging the shoulder upon the ring and tie-rods engaging said slotted lugs for detachably connecting the base to the ring.

1,627,641. COATED CONFECTION. DEANE M. FREEMAN, Brookline, Mass. Filed Dec. 9, 1924. Serial No. 754,759. 3 Claims. (Cl. 99—16.)

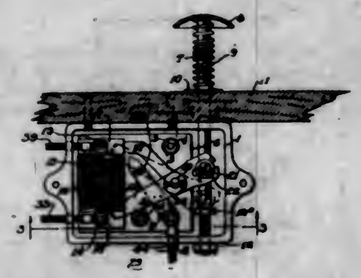
1. A center for coated candies comprising a body having a bottom wall and a peripheral wall cut away adjacent said bottom wall.

1,627,642. IMPLEMENT FOR MAKING COATED CONFECTIONS. DEANE M. FREEMAN, Brookline, Mass. Original application filed Dec. 9, 1924, Serial No. 754,759. Divided and this application filed Mar. 12, 1926. Serial No. 94,161. 2 Claims. (Cl. 107—3.)



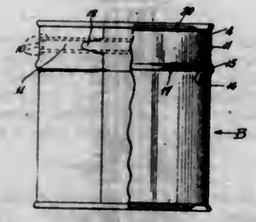
1. An implement for forming cavities in suitable material to receive the filling for a confection, said implement comprising a solid having a peripheral surface and a bottom surface, the peripheral surface and the edges of said bottom surface being cut away to provide an undercut.

1,627,643. LINE GUIDE FOR FISHING RODS. PAUL A. HABERL, Denver, Colo. Filed July 30, 1926. Serial No. 125,991. 6 Claims. (Cl. 43—24.)



1. A line guide for fishing rods comprising a supporting member having means for attachment thereof to the rod and having opposed upstanding portions, seats in said portions adapted to engage an eyelet and an eyelet positioned in said seats.

1,627,644. CUTTING DEVICE FOR REAPING, MOWING, AND LIKE MACHINES. VÁCLAV HEJMA, Brno, Czechoslovakia. Filed Apr. 25, 1925, Serial No. 25,864, and in Czechoslovakia Feb. 11, 1924. 3 Claims. (Cl. 56—245.)



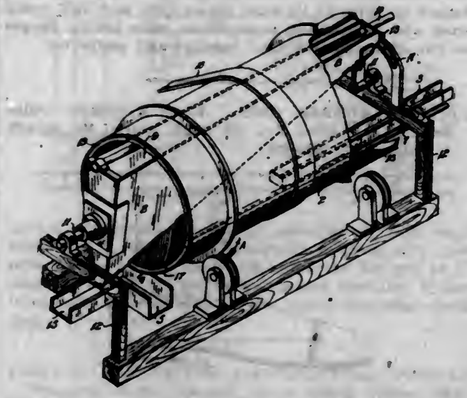
1. A cutting device for reaping, mowing and like machines, comprising in combination a hollow casing having longitudinal grooves in opposed inner walls thereof, stationary finger pieces fastened to said casing, an endless chain traversing said casing, and having pins for slidably guiding the same in said grooves, and knife sections each articulated at one end to a pin of said endless chain and provided at the other end with a pin adapted to be guided in said grooves independently of said chain.

1,627,645. COMBINATION HEADLIGHT-DIMMING AND SPOTLIGHT-CONTROLLING MEANS. GROVER H. HEMPHILL, Cincinnati, Ohio. Filed Oct. 6, 1925. Serial No. 60,812. 5 Claims. (Cl. 201—48.)

4. A dimmer rheostat comprising a casing, a flat insulating member secured therein, a helical resistance winding on said flat insulating member, a contact arm pivoted within the casing for circular travel with its free end in engagement with said winding, a longitudinally movable rod to which said contact arm is pivotally secured, for turning the latter, and a spring contact arm fixedly secured at one end within the casing, with its other end projecting upwardly for automatic engagement by the first contact arm when the latter is at a desired point on the resistance winding.

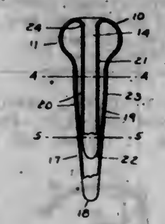
1,627,646. RIP-STRIP CAN. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed June 30, 1926. Serial No. 119,611. 5 Claims. (Cl. 220—53.)

2. A can structure including a collar having its upper and lower margins doubled and having its ends connected by co-operation of one end portion with said doubled formations, the inner face of the collar at the joint being smooth and flat.



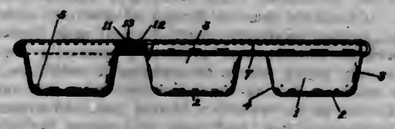
1,627,647. DISPENSING DEVICE. GUSTAV A. HULTENIUS, Newport, R. I. Filed June 21, 1926. Serial No. 117,487. 7 Claims. (Cl. 211—8.)

1. A device of the character described comprising a container, a rotatable dispensing device arranged in the lower portion of said container, said dispensing device being provided with an article receiving recess, said container being provided in its lower portion with an opening through which articles are adapted to be dispensed from said recess when said dispensing device is rotated to operative position, means for limiting the turning movement of said dispensing device to operative position for dispensing the articles, an operating handle for said dispensing device and means adapted to engage said handle with said dispensing device during partial rotation thereof and to permit rotation of said handle independently of said dispensing device after said dispensing device has reached operative position.



1,627,648. CONCENTRATOR. EDWARD HENRY JOHNSON and ARTHUR HENRY WINTERTON, East Rand, Transvaal, South Africa. Filed Oct. 21, 1925, Serial No. 63,913, and in the Union of South Africa Oct. 22, 1924. 1 Claim. (Cl. 209—451.)

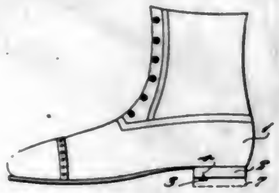
In a concentrator, the combination of a rotatable drum, means to rotate the same in one direction, means to pass material to be treated into the drum at one end, the material being discharged from the other end of the drum, the internal surface of the drum having riffles



inclined inwardly and upwardly from the intake end of the drum on the rising side thereof, and means to collect concentrate from the surface of the drum.

1,627,649. FLOWER HOLDER. MICHAEL KARABIN, JOHN SKOCZLEK, and KARL F. MANDL, New Britain, Conn. Filed Aug. 21, 1926. Serial No. 130,692. 1 Claim. (Cl. 47—41.)

A flower holder in the form of a double-walled structure made of glass, comprising an inner well in the form of an elongated tubular structure, an exterior wall connected by its upper end to said well and having the portion that is adjacent said upper end of relatively enlarged form, and a tip of rounded form at the lower end, and said exterior wall serving as a supporting wall in cooperation with a supporting bracket.

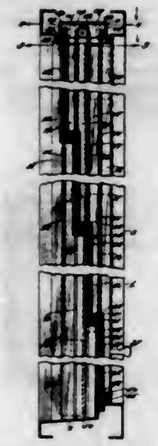


1,627,650. REENFORCED DRAWN BAKING PAN. ARTHUR KATZINGER, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill. Filed Sept. 2, 1926. Serial No. 133,257. 2 Claims. (Cl. 53—6.)

1. A series of drawn seamless baking pans, each formed from a single sheet of tin plate without seam or joint, and with large radii at each corner, said pans

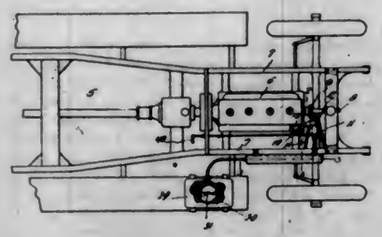
being formed into a set and arranged side by side, each of said pans having a continuous integral flange on all four sides, a half round strap surrounding the series of pans, and arranged with the flat side adjacent the pans, each of the ends of the series of pans having flanges on three of its sides drawn over said half round strap and each of the intermediate pans having flanges on two of its sides riveted together and perforated.

1,627,651. RUBBER HEEL. KURT KAUTZSCH, Philadelphia, Pa. Filed Jan. 13, 1926. Serial No. 80,937. 1 Claim. (Cl. 36—36.)



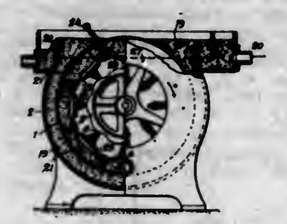
In combination a shoe the conventional heel of which has attached laterally across the underside thereof at its forward portion a long, narrow metal strap having spaced tongue receiving openings entirely thereacross, a heel of rubber having vulcanized therein a metal plate of thin metal having its central portion cut away to lighten construction and having spaced forwardly extended end fingers and a central finger to provide anchors at the heel front, and projected from which plate through the upper face of said rubber heel are a pair of spaced tongues one upon each side of said central finger for engaging said strap openings, and means penetrating the rubber heel and plate at the rear and engaging the shoe heel to interlock said parts.

1,627,652. DISPLAY STAND. ARNOLD KOANICKER and GEORGE ENGEL, New York, N. Y. Filed Sept. 23, 1925. Serial No. 58,163. 2 Claims. (Cl. 211—24.)



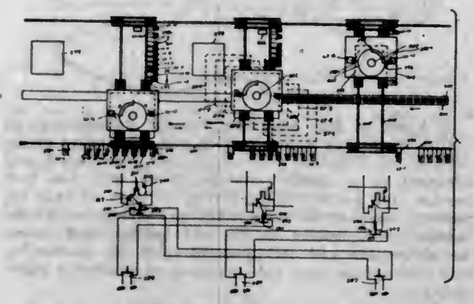
1. A device of the character described, comprising a substantially flat base having an opening therein and a depending peripheral flange forming a support for the base, an L-shaped member formed of relatively wide flat metal having relatively short vertical and horizontal arms, said vertical arm projecting upwardly through and snugly fitting within the opening in said base, said horizontal arm having its upper face lying flat against and secured to the lower face of said base, and supporting means arranged over said base, said means including a hollow standard corresponding in cross sectional shape to and adapted to frictionally receive the upper end of the vertical arm of the said L-shaped member, the lower end of said standard contacting with said base.

1,627,653. SHEET-METAL WINDOW AND BALANCING SHEET-METAL SASHES. GEORGE W. LANCASTER, Richmond, Va. Filed Apr. 14, 1924, Serial No. 706,392. Renewed Mar. 26, 1927. 20 Claims. (Cl. 189—72.)



1. In a window and sashes therefor, a casement comprising a lintel, a sill and stiles connecting the ends of the lintel and the sill, a plurality of sashes provided with guide flanges, sash chains connecting certain of the sashes and counterbalancing them, weights including sash chains connected to the other sashes, channel guides for the reception of the extension guide flanges of the sashes and receiving the sash chains, and means for insuring guiding the sashes and retaining the chains in the channel guides to prevent binding and buckling movement from the channel guides.

1,627,654. VEHICLE ATTACHED AND OPERATED TIRE PUMP. RAYMOND O. LEWIS, Ainsworth, Nebr. Filed Oct. 16, 1926. Serial No. 142,042. 1 Claim. (Cl. 230—27.)

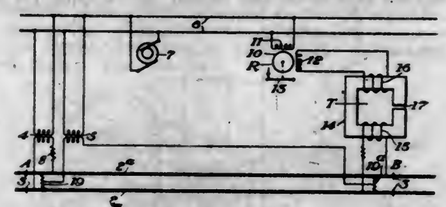


In a tire pump structure for automobiles, an elongated housing, means for rigidly disposing the housing upon one frame bar of the automobile, an air pump mounted within the casing on one end wall thereof, a train of gears mounted between the side walls of the casing, means operatively connecting one end of the train of gears with the air pump, a shaft having a spline association with the other end of the train of gears, said shaft being slidable through an opening in one side of the casing, means for sliding the shaft, driving means for said shaft, said means being engageable and disengageable by the sliding of said shaft.

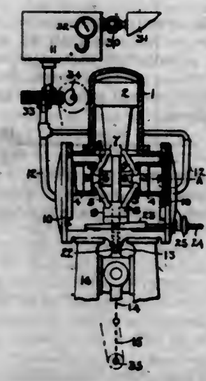
1,627,655. ROTARY SCREEN FOR SCREENING PULP AND PAPER STOCK. ERNEST W. LINDQUIST, Helsingfors, Finland. Filed July 6, 1925. Serial No. 41,641. 7 Claims. (Cl. 92—36.)

1. A rotary cylindrical pulp screen divided into a plurality of sections and each section forming the outer wall of a chamber; in combination with imperforate flexible diaphragms each closing a chamber corresponding to a screen section, means for vibrating the diaphragms and a pulp outlet for each chamber.

1,627,656. HACKING MACHINE. GRAFTON E. LUCE, Chicago, Ill. Filed Feb. 23, 1926. Serial No. 90,172. 174 Claims. (Cl. 214—89.)



1. The combination of a brick supporting belt, a brick receiver, and a brick handling machine comprising mechanism for picking up brick, other mechanism for segregating the same and automatically controlled by the first-mentioned mechanism and other mechanism for depositing the segregated brick in said receiver.

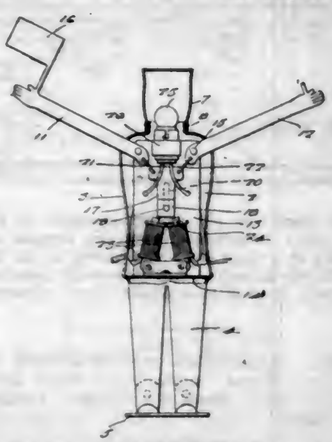


134. In a hacking machine, the combination of a supporting framework, a support movably supported thereby a member movably supported by said support for movement transverse to the plane of movement of the support upon said framework, a controller automatically operable in the movement of said support upon said framework and including a plurality of controls arranged in successive relation, a similar number of controls arranged in superposed relation, said superpositioned spacing being proportional to predetermined distances for securing selective levels of the member, power means for moving said member from one level to another, and connections between the controls of said controller and the superposed controls for controlling said power means to position automatically said member at a predetermined level.

1,627,657. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1923. Serial No. 659,506. 9 Claims. (Cl. 246—34.)

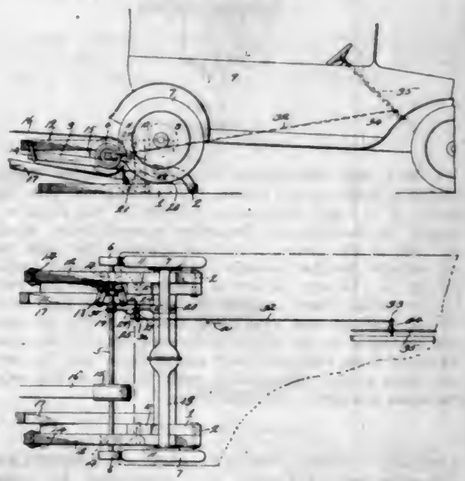
1. Trackway apparatus for an automatic train control system on a railway of which one track rail is divided to form track sections, comprising a source of alternating track circuit current connected across the rails of a section, a track relay operated by track circuit energy received from the rails of said section, a source of alternating local current connected with two points in the divided rail of said section and capable under abnormal conditions of causing operation of said track relay, and a transformer interposed between said track rails and said track relay and having an air gap in its magnetic circuit and serving to prevent operation of said track relay by said local current under abnormal conditions.

1,627,658. BALANCING SINGLE-ACTING PISTONS. WILHELM MAUBS, Durban, Natal, South Africa. Filed Sept. 2, 1924. Serial No. 735,487. 8 Claims. (Cl. 121—118.)



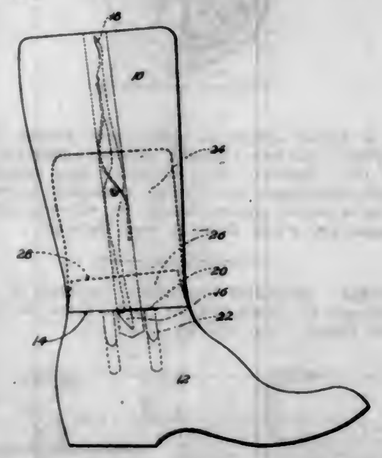
1. In a high compression internal combustion engine having a single acting piston, the combination with the piston of a toggle mechanism comprising four links arranged in quadrilateral formation symmetrically about the axis of the piston, a pair of opposite link ends being movable together towards and from one another transversely to the axis, means to apply inwardly and constantly acting force to each of said pair of link ends, another pair of link ends being movable along the axis and connected to the piston to transmit thereto the force resultant from the constantly acting force and the several links always maintaining, with respect to the axis, the same angularity as each other.

1,627,659. STOP SIGNAL FOR AUTOMOBILES. GEORGE MAY, Oil City, La. Filed Nov. 15, 1924. Serial No. 750,101. 1 Claim. (Cl. 177—329.)



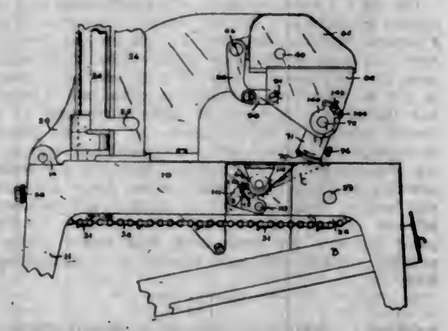
A stop signal comprising a vertical supporting bracket, the lower end portion thereof being disposed laterally, a pair of laterally swinging arms, the inner ends of said arms being pivotally secured to the upper portion of the bracket and being normally disposed vertically, the intermediate portion of the bracket being provided with the longitudinally extending slot, a substantially T-shaped plate, a laterally projecting pin carried by the leg portion of said T-shaped member and operable in said longitudinally extending slot whereby the T-shaped plate

is adapted for vertical sliding movement on the bracket, links connecting the inner ends of the laterally swinging arms to the adjacent arms of the T-shaped plate, an armature carried by the leg portion of the T-shaped plate, and magnetic means supported on the laterally disposed portion of said bracket and adapted for co-



operation with the armature whereby the laterally swinging arms may be moved outwardly to an operative position when the armature is attracted by said magnetic means, said laterally swinging arms being adapted to be returned to their normal poistions when the magnetic means is deenergized.

1,627,660. GOVERNOR FOR POWER ATTACHMENTS. GEORGE B. MAXWELL, Potosi, Mo. Filed Feb. 24, 1926. Serial No. 90,315. 2 Claims. (Cl. 180—53.)

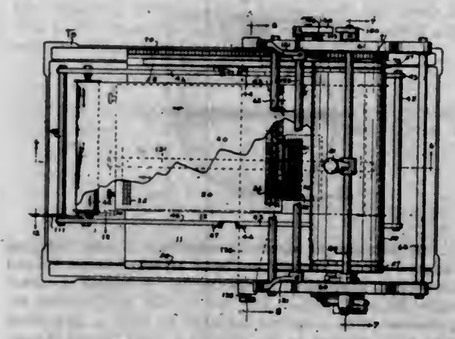


1. The combination with the driven shaft of an auxiliary power device driven by the rear wheels of an automobile supported on the device, a gasoline control lever for the engine of the automobile, of control means for said gasoline control lever, said control means comprising a bell crank lever adjacent the driven shaft, said bell crank lever being rockably mounted in a vertical longitudinal plane and pivotally movable in a transverse plane, a governor carried by the driven shaft and controlling the movement of the bell crank lever, a connecting rod connected to the gasoline control lever, a sleeve threaded on said connecting rod, said sleeve being provided with a pin, said pin being disposed in an aperture of one of the arms of the bell crank lever.

1,627,661. LAST. CHARLES H. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 18, 1920. Serial No. 417,712. 5 Claims. (Cl. 18—46.)

1. A set of last apparatus for the manufacture of arctics comprising a foot portion and a plurality of leg portions of different vertical profiles constructed and arranged to co-operate interchangeably with the foot portion, the surface of separation of each of said leg portions being of the same shape and dimensions as the surface of separation of the foot portion, and means for detachably and rigidly securing a leg portion to said foot portion with their surfaces of separation registering.

1,627,662. ADDRESSING MACHINE. LAWRENCE H. MOSER, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 30, 1925. Serial No. 65,725. 57 Claims. (Cl. 101—52.)



1. The combination of a printing member, a platen, means for revolving the platen continuously, and means for moving the axis of revolution in a single plane to cause the platen to roll across the printing member.

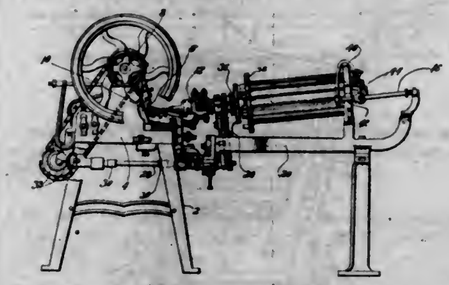
31. In a printing machine, the combination of a flat form, a revoluble platen adapted to coact therewith, means for revolving the platen continuously about an axis, and means for reciprocating said axis in a single plane parallel with the form, one stroke of said reciprocation being while the platen is in contact with the form.

41. In a printing machine, the combination with means for holding the form, a platen mounted to revolve about an axis, a driving device, a train of spur gearing connecting the driving device with the platen, and means for shifting the axis of the platen while preserving the meshing of said gearing.

1,627,663. PRINTING MACHINE WITH CHANGEABLE FORM. LAWRENCE H. MORSE, Cleveland, Ohio, assignor to The American Multigraph Company, a Corporation of Ohio. Filed Jan. 7, 1926. Serial No. 79,731. 27 Claims. (Cl. 101—274.)

1. In a printing machine, the combination of means for supporting a printing form, a cooperating platen, two pivoted frames each adapted to carry a ribbon spool between which a ribbon may extend over the form, and mechanism acting on one of the spools adapted to wind in the ribbon step by step.

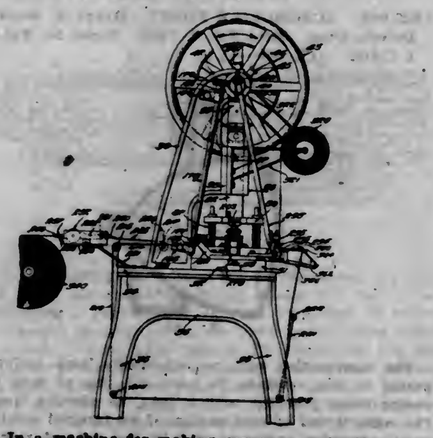
1,627,664. SAFETY-RAZOR-BLADE HOLDER. HENRY S. NODDINGS, Springfield, Mass. Filed Nov. 5, 1924, Serial No. 747,886. Renewed Oct. 12, 1926. 1 Claim. (Cl. 30—25.)



The combination, in a safety-razor-blade holder, with a sheet-metal jaw having lugs punched out intermediate of the ends of the same, and provided with inserted studs, and a second sheet-metal jaw having lugs punched out intermediate of the ends of the same, and perforated to form openings to receive said studs, both of said jaws having blade-gripping parts, of a rod extending through all of said lugs, and an approximately V-shaped spring, the free terminals of which extend outwardly, mounted with its heel on said rod and with the free end portions only of said terminals engaging the rear terminal portions of said jaws adjacent to the rear edges thereof.

1,627,665. ROOF. FREDERICK O. OVERBURY, Hillsdale, N. J., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 8, 1921. Serial No. 513,664. 19 Claims. (Cl. 108—8.)

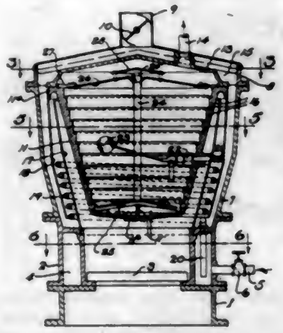
1. A roof composed of overlapping courses of material, the exposed surface portions of each course lying adjacent the edge of the overlying courses being depressed below the normal level of the remaining surface portions, and the portions beneath said overlying course being at the normal level.



1,627,666. NAIL-MAKING MACHINE. MERTON D. PHELAN, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 21, 1921. Serial No. 446,656. 44 Claims. (Cl. 10—174.)

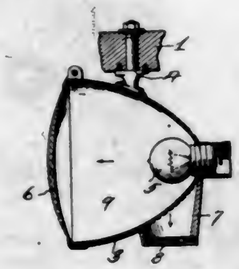
9. A machine of the class described having, in combination, means for operating upon elongated blanks, a rotary carrier for presenting the blanks to the operating means, a lever fulcrumed upon the carrier, a feed dog fixedly carried by the lever, a second feed dog movably carried by the lever, and means for oscillating the lever arranged to shift the movable feed dog into engagement with a blank to grip the blank between the dogs during the feeding movement of the lever and to permit the release of the movable dog from gripping engagement with the blank during the return movement of the lever.

30. Blank feeding mechanism having, in combination, a blank carrier, means for feeding blanks thereto, a feeler arranged normally to contact with a blank in said carrier and displaced upon movement of a blank out of contact therewith, means for supplying blanks to said carrier, a pair of wipers arranged in the path of movement of a portion of said feeler when in its displaced condition, first to initiate the operation of said blank supplying means and second to restrain operation thereof after a single blank supplying movement, the second wiper being arranged to move said portion of the feeler so that the first wiper is no longer in the path thereof.



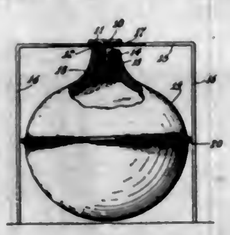
1,627,667. MACHINE FOR MAKING CORNER MOUNTS. LESTER S. RILEY, Reading, Mass. Filed June 17, 1924, Serial No. 720,540. Renewed Nov. 29, 1926. 60 Claims. (Cl. 93—1.)

11. In a machine for making corner mounts, the combination of means for feeding a continuous strip of ad-



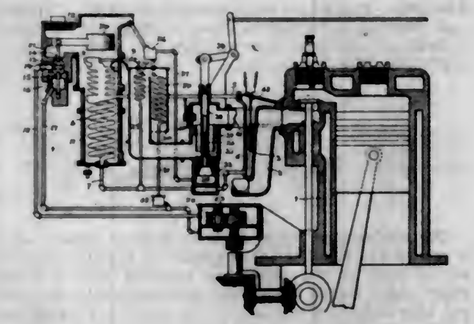
hesive coated material, means for turning over two edges of said strip into a contiguous right-angled relation to each other and means for applying a cap to said turned over edges to form a corner receiving pocket.

1,627,668. STEAM GENERATOR. METER ROBBINS, Malden, Mass. Filed Jan. 23, 1924. Serial No. 687,057. 5 Claims. (Cl. 122—39.)



1. A steam generator comprising a water-jacketed fire box section, and an outside casing having a flue connection, an inverted frusto-conical shell mounted within and spaced from said casing and having a closed bottom disposed directly over the fire-box and a cover provided with a steam outlet, said shell and cover constituting a steam chamber, a pair of spaced shells disposed within the space separating said steam chamber shell from the casing and defining with said parts an upwardly and downwardly directed passage for the circulation of heat from the fire-box, a pre-heating coil disposed in the space between said pair of heat circulating shells and connecting at one end with said water jacket of the fire-box section and at its other end delivering into said steam chamber shell, a float regulating the passage of water from said coil into said shell, and a tube arranged axially within said shell, a vacuum check valve closing the upper end of said pipe, and deflectors at either end of said pipe for directing the water into said pipe from below and downwardly back into the shell from above whereby the water is given a traversing movement of the shell alternately in opposite directions.

1,627,669. AUTOMOBILE LIGHT. HARRY R. SHEARER, Dorena, Oreg. Filed Feb. 7, 1923. Serial No. 617,522. 1 Claim. (Cl. 240—41.)



The combination with an automobile lamp casing tapering in size towards its rear end, one of said lamp casing being provided with a lens, an electric lamp in the reduced end of said casing, of an integral relatively small extension casing carried by the reduced rear end of the lamp casing at a right angle to the axis of the lamp casing relatively close to the electric lamp and in a position whereby light rays from the lamp will pass outwardly therefrom at a right angle to the axis of the lamp, a lens carried by the outer end of the auxiliary casing and a supporting member carried by the casing at the opposite side thereof to the auxiliary extension casing and in the plane of the extension casing.

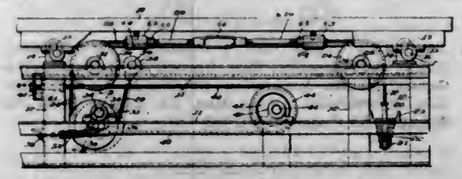
1,627,670. ATTACHMENT DEVICE. FLORAIN J. SHOOK, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 669,743. 3 Claims. (Cl. 206—65.)

1. An attachment device comprising a part adapted to engage one of the members to be attached and a hooked wire portion adapted to be sprung into a female threaded member by axial thrust, the end of said wire portion being formed with a corner adapted to have a cam-latch action with relation to the threads of said female threaded member.

1,627,671. FUEL VAPORIZER. WILLIAM E. SHOBE, Staten Island, N. Y. Filed Feb. 8, 1924. Serial No. 691,502. 6 Claims. (Cl. 123—133.)

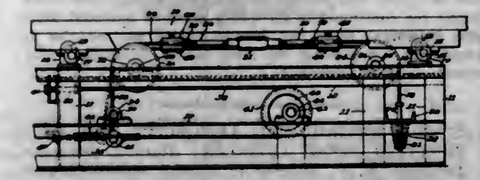
1. In a fuel vaporiser, the combination with an engine exhaust having a chamber manifold adapted to contain a heat absorbing fluid, of a closed fuel chamber, a hollow heat distributing member arranged within said fuel chamber and connected with said fluid chamber and adapted to circulate said heat absorbing fluid in a closed cycle, a carbureter having an air intake, means for feeding the vapor produced in the fuel chamber to said carbureter, and means for maintaining a supply of fuel in the fuel chamber at a predetermined level.

1,627,672. SOUND AMPLIFIER FOR RADIOTRANSMISSION. CHARLES O. SNYDER, Richmond, Ind. Filed June 19, 1922. Serial No. 569,408. 1 Claim. (Cl. 181—27.)



A sound amplifier for radio transmission comprising in combination, a concave reflector forming the body of

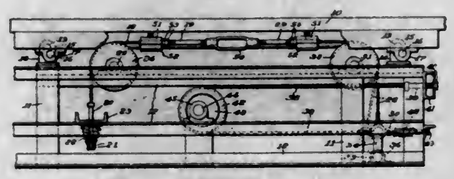
the device, a tubular conductor located inside the reflector with one end of the conductor directed inward toward the vortex of the reflector, the inner portion of



the conductor being formed flaring, and the lower portion of the conductor being cut away and forming a bottom therefor, all substantially as set forth.

1,627,673. OPERATING MEANS, ALBERT H. STEBBINS, Los Angeles, Calif. Filed Feb. 6, 1926. Serial No. 86,533. 9 Claims. (Cl. 74—14.)

1. In combination with a frame supported for back and forth movement, operating means for imparting a progressive, vibratory movement to the frame, comprising a sheave, a cable looped about the sheave and having one end anchored and its other end secured to said frame, a rocking support for said sheave constructed to move the sheave bodily to and from a dead centre position with respect to said cable, and means for rocking said support thru a limited angle lying near said dead centre position.

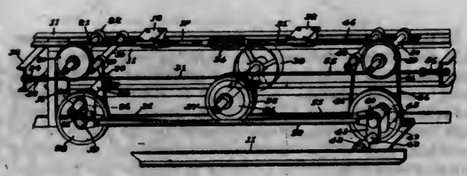


1,627,674. OPERATING MEANS. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Feb. 6, 1926. Serial No. 86,618. 4 Claims. (Cl. 74—14.)

1. In combination with a frame supported for back and forth movement, operating means for the frame, comprising a crank arm that extends from its axis of rotation in the direction of the cable take-up movement, a cable having one end connected to said frame and its other end secured to the crank arm, means for rocking said arm through a limited angle to tighten and slack off the cable, and adjustable means for varying the position of the arc through which the crank arm swings.

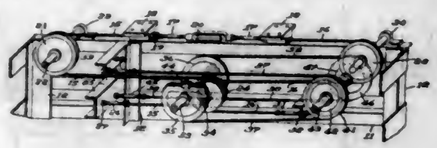
1,627,675. OPERATING MEANS. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Feb. 6, 1926. Serial No. 86,534. 8 Claims. (Cl. 74—14.)

1. In combination with a frame supported for back and forth movement, operating means for the frame, comprising a rocking element or arm supported to extend from its axis of rotation in the direction of cable let-off movement, a cable extending from the arm to the frame, and means for rocking the element or arm through



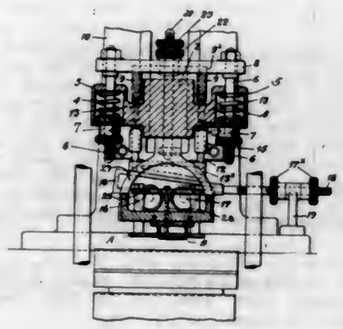
a small angle to and from its dead centre position with respect to the cable to thereby tighten and slack off the cable.

1,627,676. OPERATING MEANS. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 13, 1926. Serial No. 101,722. 24 Claims. (Cl. 74—14.)



1. In combination with a frame supported for back and forth movement, operating means for the frame, comprising a rocking arm supported to extend from its axis of rotation in the direction of cable let-off movement, a cable extending from the arm to the frame, a second rocking arm supported to extend from its axis of rotation in the direction of cable take-up movement, a cable extending from said second arm to the frame, and power means for rocking said arms to positively move the frame back and forth with a progressive movement.

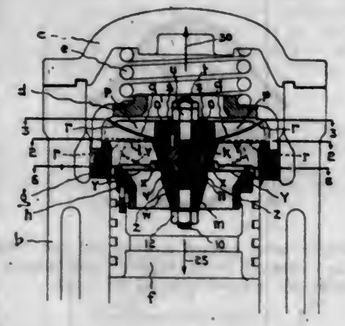
1,627,677. OPERATING MEANS. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 13, 1926. Serial No. 101,723. 16 Claims. (Cl. 74—14.)



1. In combination with a frame supported for back and forth movement, operating means for the frame, comprising a pair of rocking arms supported to extend in opposite directions from the pivot points about which they rock, a connection between the frame and one arm to move the frame in one direction, a connection between the frame and other arm to move the frame in the opposite direction, a connection for transmitting the movement of one arm in either direction to the other, and means for rocking said arms.

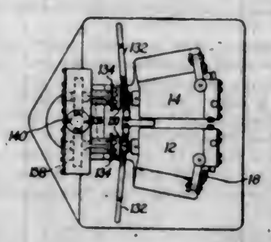
1,627,678. OPERATING MEANS. ALBERT H. STEBBINS, Los Angeles, Calif. Filed May 14, 1926. Serial No. 109,183. 15 Claims. (Cl. 74—14.)

1. In combination with a frame supported for back and forth movement, operating means for the frame comprising a shaft having a cable actuating portion off-set from the axis of the shaft in the direction in which one of the cables connected to said portion extends from the same, a pair of cables extending in opposite directions from said portion to the frame, and means for rocking said portion through a limited angle to and from the maximum left-off position of one of said cables to thereby actuate the cables so that they pull the frame back and forth with a progressive movement.



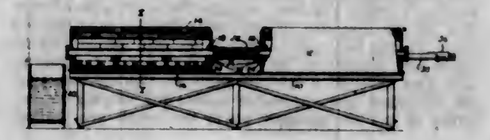
1,627,679. BISCUIT OR LIKE EMBOSSING AND CUTTING MACHINE. THOMAS VICARS and EDWARD LYNTON VICARS, Earlestown, England. Filed Dec. 22, 1920, Serial No. 432,588, and in Great Britain June 30, 1919. 5 Claims. (Cl. 107—26.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

5. In a biscuit embossing and cutting machine, a movable cross head, ejectors, bars carrying said ejectors and adapted to be operated in the movement of the cross head, tension springs providing a yielding connection between said bars and cross head, stops connected with said bars, cooperating stops movable in the frame of the machine, and wedge members arranged in cooperating pairs at each side of the machine to actuate the cooperating stops to limit the descent of the bars, each pair of wedge members being independently adjustable to thereby vary the descent of each side of the ejectors at will to regulate the level of the ejectors.



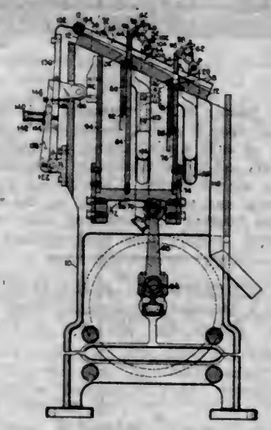
1,627,680. VALVE FOR GAS COMPRESSORS. CARL W. VOLLMANN, Montreal, Quebec, Canada. Filed Nov. 8, 1923. Serial No. 673,484. 3 Claims. (Cl. 251—119.)

1. In a compressor, the combination with a valve cage, of a valve seat having a hub presenting a flat face, spring steel valves having their inner ends located within the area of the hub and turned or bent at right angle to their main length, and a chambered device for accom-



modating the turned ends of the spring valves, and means coacting with the chambered device for clamping the turned ends of the valves in place.

1,627,681. WINDING MACHINE AND METHOD. HENRY S. WOODRUFF, East Orange, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 14, 1924. Serial No. 699,234. 39 Claims. (Cl. 153—67.)



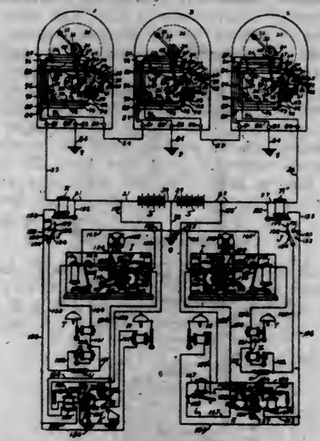
1. In a machine of the character described, a member fixed against rotation and having a reduced end, the portion of larger size having an end face of helicoidal form, means for continuously feeding a strip of material along said helicoidal face, and means spaced around the reduced end for bending the strip into a continuous coil; substantially as described.

1,627,682. METHOD AND APPARATUS FOR HEAT TREATING STEEL ARTICLES. JOHN F. WYZALEK, Arlington, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 14, 1924. Serial No. 699,235. 9 Claims. (Cl. 266—5.)

1. Apparatus for heat treating steel articles, having, in combination, a furnace having a tube extending through the heating chamber, a second furnace spaced from the first and having a tube extending through the heating chamber, and an unheated tube section joining said furnace tubes; substantially as described.

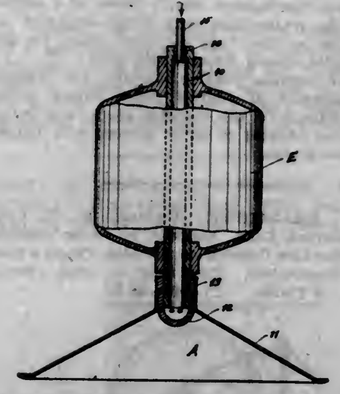
1,627,683. GAUGING MACHINE. JOSEPH G. AYERS and WILLIAM H. CHAPMAN, Montclair, and MAX E. BERLOWITZ, Belleville, N. J., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 7, 1924. Serial No. 704,692. 35 Claims. (Cl. 209—73.)

1. In a gauging machine, a support having a series of slots, with opposite gauging surfaces successively further spaced from each other at the succeeding slots, and means for pressing an article against the gauging surfaces; substantially as described.



1,627,684. LATCH FOR EMBOSSING MACHINES. ALBERT H. BATES, Shaker Heights, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 9, 1925. Serial No. 67,784. 46 Claims. (Cl. 197—6.2.)

1. The combination of a keyboard having finger keys, stopping members operated thereby respectively, a device shiftable transversely of said stopping members, a member shiftable with said device and adapted to coact with said key operated member, and a locking device normally out of position to engage said key operated member but under the control of said movable member moved into position to engage said key operated member.

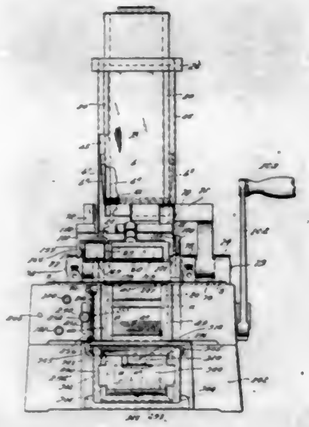


1,627,685. SIGNALING SYSTEM. CLARENCE B. BRACH, Binghamton, N. Y., assignor to The Gamewell Company, Newton, Mass., a Corporation of Massachusetts. Filed Oct. 23, 1923. Serial No. 670,339. 32 Claims. (Cl. 177—364.)

30. In a signaling system, a signaling circuit, means connected in said circuit for selectively formulating two classes of impulses therein, two signal manifesting devices, one of which includes means for connecting it to said circuit to respond to all impulses therein, selective means responsive to only one of the classes of impulses to connect the other of said signal manifesting devices to said circuit to make it responsive to all impulses therein and means responsive to each impulse to condition the selective means for response to impulses of the proper class until the expiration of a time longer than

the longest interval between the impulses of any signal during which time no signal impulses are formulated in said circuit.

1,627,686. HUMIDIFIER. RAGNAR CARLSTEDT, Stockholm, Sweden, assignor to Midwest Air Filters, Incorporated, a Corporation of New York. Filed July 2, 1924. Serial No. 723,850. 1 Claim. (Cl. 299—63.)

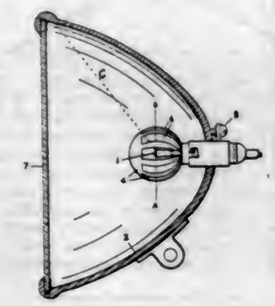


A humidifier comprising an electric motor, the shaft of said motor being hollow to provide a fluid passageway therethrough, and having a restriction at one end thereof, a fluid supply pipe extending into said hollow shaft through and beyond said restriction, the other end of the hollow shaft having a perforated cap secured thereto, and a funnel-shaped spreader secured at its smaller end to said cap, the perforations in the cap being positioned to direct the liquid from the hollow shaft along the surface of the spreader remote from the motor, said spreader having a reversely curved peripheral rim.

1,627,687. ADDRESSING MACHINE. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 9, 1922. Serial No. 593,215. 36 Claims. (Cl. 101—57.)

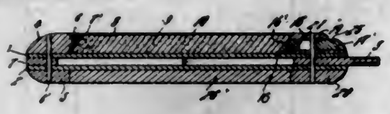
1. In an addressing machine, the combination of means for feeding address plates, an impression platen, an op-

erating lever, mechanism connecting the lever with the plate feeding means, and a cam connection between the lever and the platen adapted to move the platen to a definite position irrespective of the force applied to the lever.



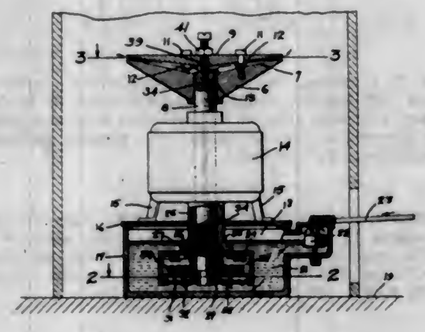
10. In the plate feeding mechanism of an address printing machine, the combination of a reciprocating feed bar having a notched edge and a pawl having a tongue movably occupying the notch and a spring between the edge of the bar and pawl.

22. In a restacking mechanism for address printing machines the combination with a frame of a supporting strip for the plates, said strip being supported at one end and free at the other end, and means for guiding an open ended drawer beneath said strip.



33. In an address printing machine, the combination with a magazine of address plates having projecting tongues adjacent to the opposite edges, and means in the magazine adapted to enter between said tongues to position said plates.

1,627,688. HEADLIGHT. CHARLES R. B. CLAFLIN, East Hartford, Conn., assignor, by mesne assignments, to The Siko-Lite Corporation, Meriden, Conn., a Corporation of Connecticut. Filed Sept. 18, 1924. Serial No. 738,551. 6 Claims. (Cl. 240—48.6.)



4. In a headlight the combination of a bulb and a reflector, a reflector coating applied as a disk to the forward end of the bulb, said disk having reflecting arms extending back therefrom parallel to the longitudinal axis of the bulb, said arms ending at points diametrically opposite the outer edge of said disk.

1,627,689. KNIFE. JAMES J. CORBETT CULVER, Camden on Gauley, W. Va. Filed May 27, 1925, Serial No. 33,226. Renewed Mar. 29, 1927. 3 Claims. (Cl. 7—11.)

1. A knife handle of the character described comprising a pair of spaced plates, butts and a handle plate fixed to one of said spaced plates, a housing including outer side and end walls removably associated with the other of said spaced plates, a sharpening stone received in said housing, and tongues formed on the side and end walls of said housing for retaining said stone in the housing.

1,627,690. CENTRIFUGAL FLUID-FUEL BURNER. FREDERICK S. DENISON, Minneapolis, Minn. Filed Mar. 10, 1924. Serial No. 698,109. 4 Claims. (Cl. 158—77.)

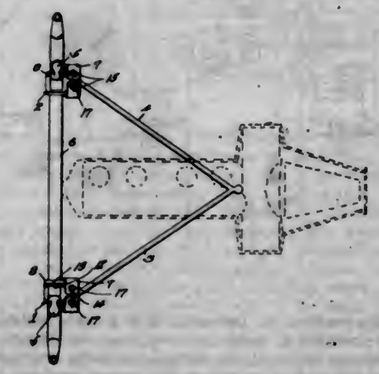
1. A reservoir as a base, a motor housing upon the top wall of said reservoir having a cylindrical extension within the reservoir, said extension having a terminal chamber, a motor within the housing having a shaft journaled in said extension, said shaft having an axial passage, a disk-pump within said chamber supported thereby and by said shaft, and adapted to discharge into said axial passage, and a centrifugal burner head upon said shaft above the motor, adapted to receive oil from said axial passage and distribute the same in sheet form horizontally.

1,627,691. SMOKELESS EXPLOSIVE POWDER AND PROCESS OF MAKING SAME. FRANCIS I. DU PONT and ERNEST DU PONT, Wilmington, Del., assignors, by mesne assignments, to U. S. F. Powder Company, Wilmington, Del., a Corporation of Delaware. Original application filed June 12, 1918, Serial No. 239,531. Renewed Apr. 5, 1921, Serial No. 458,694, renewed Oct. 19, 1921, Serial No. 508,831. This application filed May 3, 1922. Serial No. 558,251. 11 Claims. (Cl. 52—11.)

1. An improved granular smokeless powder containing nitrocellulose and also an explosive ingredient having a substantially higher content of oxygen than nitrocellulose, the grains having perforations which give the powder a density of loading at least fifteen per cent less than that required for smokeless powder composed substantially wholly of nitrocellulose.

1,627,692. SMOKELESS EXPLOSIVE POWDER AND PROCESS OF MAKING SAME. FRANCIS I. DU PONT and ERNEST DU PONT, Wilmington, Del., assignors, by mesne assignments, to U. S. F. Powder Company, Wilmington, Del., a Corporation of Delaware. Original application filed Jan. 24, 1919, Serial No. 272,857. Renewed Apr. 5, 1921, Serial No. 458,695, renewed Oct. 19, 1921, Serial No. 508,832. This application filed May 3, 1922. Serial No. 558,252. 7 Claims. (Cl. 52—37.)

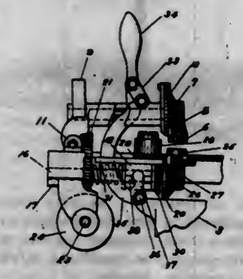
1. The process of making "flashless" smokeless propellant powder which comprises adding to and thoroughly incorporating barium nitrate and potassium nitrate with soluble nitrocellulose, and afterward completely colloiding said nitrocellulose with ether and alcohol to produce a homogeneous body retaining the said barium nitrate and potassium nitrate distributed through the finished explosive.



1,627,693. SMOKELESS EXPLOSIVE POWDER AND PROCESS OF MAKING SAME. FRANCIS I. DU PONT and ERNEST DU PONT, Wilmington, Del., assignors, by mesne assignments, to U. S. F. Powder Company, Wilmington, Del., a Corporation of Delaware. Original application filed Jan. 24, 1919, Serial No. 272,857. Divided and application filed Apr. 24, 1920, Serial No. 376,267. Renewed Jan. 24, 1921, Serial No. 439,689. This application filed Aug. 8, 1921. Serial No. 490,728. 21 Claims. (Cl. 52—10.)

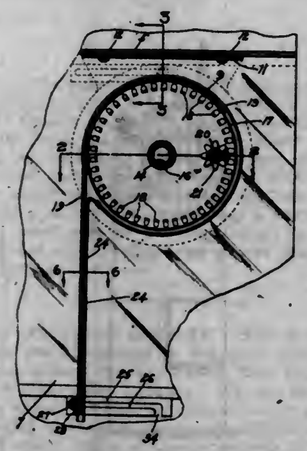
1. The process of making "flashless" smokeless propellant powder with a progressively increasing rate of burning which comprises adding to and thoroughly incorporating with soluble nitrocellulose a flame propagating agent, and afterward completely colloiding with ether and alcohol and retaining the flame propagating agent in the finished explosive.

1,627,694. SMOKELESS EXPLOSIVE POWDER. FRANCIS I. DU PONT and ERNEST DU PONT, Wilmington, Del., assignors to U. S. F. Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 23, 1921. Serial No. 447,229. 5 Claims. (Cl. 52—7.)



2. A "flashless" smokeless propellent powder which comprises a preponderating proportion of colloided nitrocellulose containing a relatively small proportion of potassium bichromate and charcoal distributed throughout the mass of the nitrocellulose.

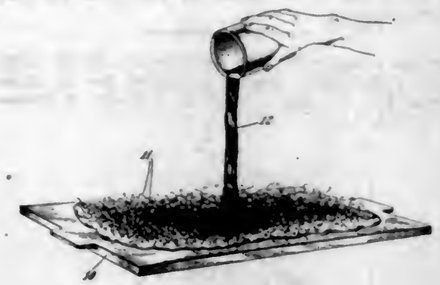
1,627,695. RADIUS-ROD CLAMP. SAMUEL C. EWENS, Springhill, La. Filed Mar. 15, 1924. Serial No. 699,585. 5 Claims. (Cl. 267—66.)



1. A staying device for the front end portion of a radius rod of an automobile having a front axle formed with a horizontal flange at its upper side, said staying member comprising a body having a supporting portion and a hook-shaped attaching portion adapted to extend across the front axle and having a bill engageable with the forward edge portion of the flange at the upper side of the front axle, and a substantially U-shaped hanger member having the arms thereof secured to said supporting portion of the body and depending at opposite sides of the front portion of an adjacent radius rod, said hanger member having the bend portion thereof disposed underneath and at the sides of the front portion of the adjacent radius rod for preventing downward movement of the front portion of the radius rod relatively to the axle, said hanger member being open between its arms from the upper side of said portion of the radius rod to the supporting portion of the body of the device.

1,627,696. MACHINE FOR OPERATING UPON CASTING PATTERNS. EDWARD E. FOSTER, Beverly, Mass. Filed Nov. 22, 1922. Serial No. 602,602. 9 Claims. (Cl. 154—1.)

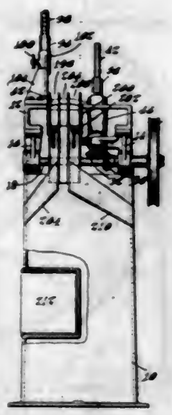
1. A machine for operating upon a casting pattern having a marginal flange, having, in combination, a pair of rolls arranged to engage the top and bottom faces of the pattern, respectively, a roll arranged to engage the outside face of the flange, and a single means for relatively moving two of the rolls in two directions.



1,627,697. WINDOW-RAISING DEVICE. WALTER F. FREDERICKS, Minneapolis, Minn. Filed Jan. 28, 1924. Serial No. 689,007. 6 Claims. (Cl. 268—129.)

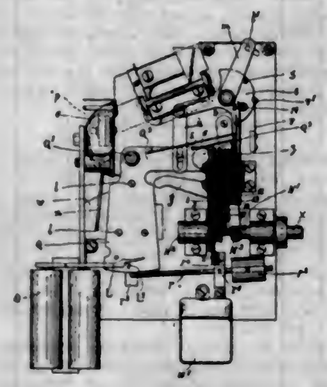
1. A wall having a sash well therein, a sill fitting over said well and having a slot therein, a sash vertically slidable in said slot, a drum secured to the under

side of said sill and depending therefrom, a crank-operated mechanism supported by and nested within said drum and a ribbon slidably supported against a buckling and operatively connected to said crank-operated mechanism and to said sash.



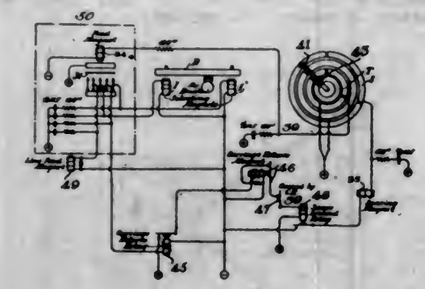
1,627,698. PACKING AND METHOD OF MAKING THE SAME. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1924. Serial No. 690,964. 5 Claims. (Cl. 154—2.)

1. The method of making a packing member which comprises mixing metal in fine, attenuated strips with a solution of curable rubber, evaporating the solvent, and molding and vulcanizing the resultant mixture in the form of a finished packing member.



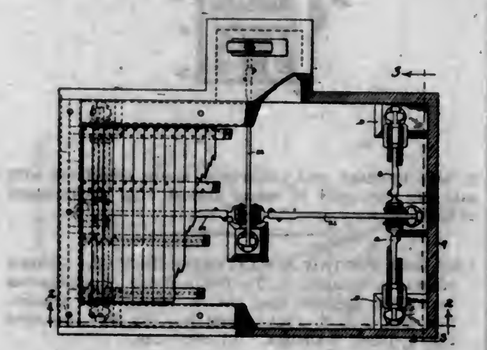
5. The method of making a packing member which comprises forming a sheeted mixture of curable rubber and metal floss, cutting a strip from the sheet, wrapping said strip about an annular core of curable rubber, and molding and vulcanizing the assembled strip and core.

1,627,699. GAUGING MACHINE. FRED C. GRISWOLD, Newark, and WILLIAM H. CHAPMAN, Montclair, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 27, 1924. Serial No. 734,369. 31 Claims. (Cl. 209—90.)



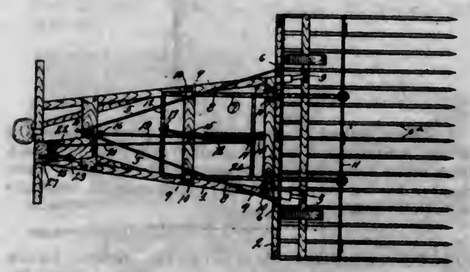
1. In apparatus of the character described, a gauge plate, means for moving articles along said gauge plate, and a gauge blade movable parallel to said gauge plate at a predetermined distance therefrom to expel articles that exceed a predetermined dimension; substantially as described.

1,627,700. COIN-COLLECTING APPARATUS FOR TELEPHONE SERVICES. FREDERICK WILLIAM HALL, London, England. Filed Nov. 28, 1924, Serial No. 752,732, and in Great Britain Aug. 23, 1924. 35 Claims. (Cl. 179—6.5.)



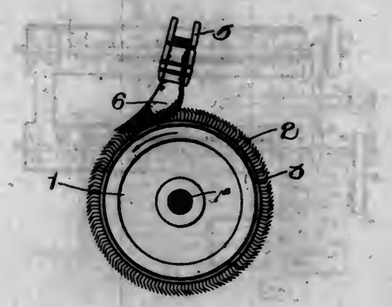
1. In coin collecting apparatus for telephone services the combination of a coin chute, an automatic movable device for projecting coins into said chute, an automatic locking device for restraining said coin projector from projecting coins into said chute adapted to move by gravity to deposit the coins, and electrically actuated means for releasing said coin projector.

1,627,701. SYSTEM FOR TRANSMITTING AND REPRODUCING PICTURES. MERTON C. HALL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 20, 1923. Serial No. 681,850. 10 Claims. (Cl. 178—18.)



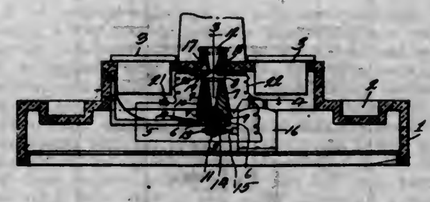
1. The method of transmitting a picture which consists in making a record in code form corresponding to the characteristics of the picture elements, transmitting current impulses to reproduce said record, applying coloring material to a surface at the receiving end, and electrically governing said application by the reproduced record.

1,627,702. PLATFORM LEVER MECHANISM FOR SCALES. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 25, 1920. Serial No. 361,251. 29 Claims. (Cl. 265—71.)



1. In a scale, in combination, a plurality of levers, a load pivot on each lever, platform supports swingingly carried by said load pivots, and a platform structure hinged on said supports.

1,627,703. HAY-SWEEP LOAD REMOVER. BERNARD G. HEYWOOD, Scribner, Nebr. Filed Dec. 13, 1924. Serial No. 755,717. 1 Claim. (Cl. 56—395.)

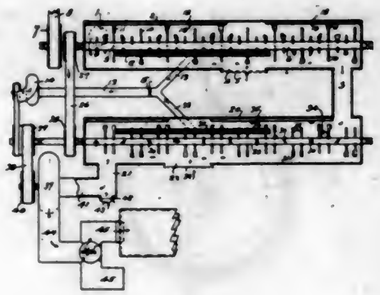


A sweep rake comprising a main frame, a tooth frame pivotally connected to the main frame at its forward end, means for assisting in discharging the load from the tooth frame, said means comprising a horizontally disposed U-shaped frame slidably mounted in bearings of the main frame, a transversely disposed hay engaging member carried by the forward end of the U-shaped frame above the toothed frame, a coiled spring anchored to the forward end of the main frame and extending rearwardly, a cable anchored adjacent the rear end of the main frame and extending forwardly under the U-shaped frame, a pulley carried by the rear end of said spring, said cable extending upwardly through said pulley and rearwardly and anchored to the rear end of the U-shaped frame and a rotatable drum adjacent the rear end of the main frame, a cable connected to the U-shaped frame and the drum and forming means whereby said frame may be forced rearwardly against the action of the coiled spring.

1,627,704. BRISTLE-POINTING DEVICE. RIICHIRO IZAWA, Kyoto, Japan. Filed Dec. 29, 1925, Serial No. 78,178, and in Japan Feb. 2, 1925. 4 Claims. (Cl. 300—1.)

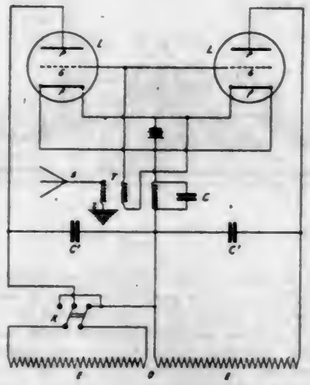
1. A bristle-pointing device, comprising a rotatable wheel, a plurality of pins extending radially from the periphery of said wheel, and an abrading material secured to the surfaces of said pins.

1,627,705. DESK SET AND PENCIL SHARPENER. KIRK A. JOHNSON, Omaha, Nebr., assignor of one-half to Riley F. Beach, Douglas County, Nebr. Filed Jan. 23, 1923. Serial No. 614,403. 1 Claim. (Cl. 120—96.)



A pencil sharpener comprising spaced vertically disposed sharpening cones in parallel relation to each other, a support beneath said cones, gears carried by the lower ends of the cones and smaller than the lower ends of the cones, a gear disposed between the cone gears in the plane thereof and meshing therewith, a shaft carried by said last named gear, means for rotating said shaft, said cones having their lower ends spaced whereby upon inserting a pencil between the cones it will be limited in its downward movement by engagement with the gear disposed between the cones.

1,627,706. FLUFFING MACHINE. PERRY E. KRONLUND, Tacoma, Wash., assignor of forty-nine one-hundredths to Anton Ohlson, Tacoma, Wash. Filed July 13, 1926. Serial No. 122,105. 5 Claims. (Cl. 19—90.)



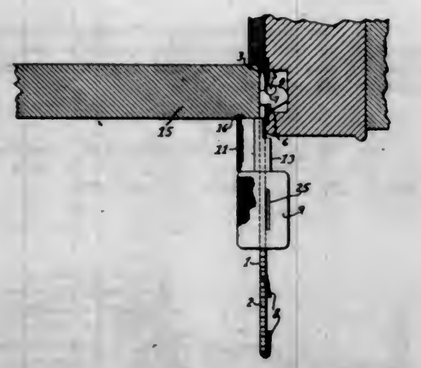
1. In a fluffing machine, the combination of a horisontal drum, having a receiving opening at one end, adapted to admit air and a supply of fibrous material to be cleaned and fluffed, a discharge opening at the other end, and an intermediate opening, formed in the shell thereof; a notched baffle plate secured within the drum and extending inward therein; a rapidly rotating shaft axially mounted in said drum; a plurality of radial rods mounted

thereon and extending therethrough, whereby the fibrous material is beaten and disentangled and the refuse matter separated therefrom; and an adjustable slide mounted

on said drum and adapted to partially close said intermediate opening, whereby the supply of air therethrough is controlled.

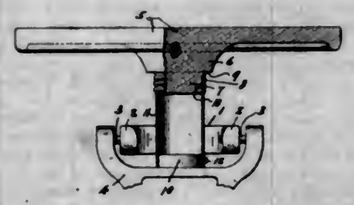
1,627,707. RADIO SIGNALING SYSTEM. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 19, 1921, Serial No. 493,664, and in France Aug. 16, 1915. 19 Claims. (Cl. 256—36.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a radio signaling system, the combination of two vacuum tubes each having an anode and a cathode, an alternating current source having a tone frequency, a coil connected in shunt to the terminals of the alternating current source and a connection from a mid point of said coil to said cathodes, said plates being connected to said coil at opposite sides of said mid point.



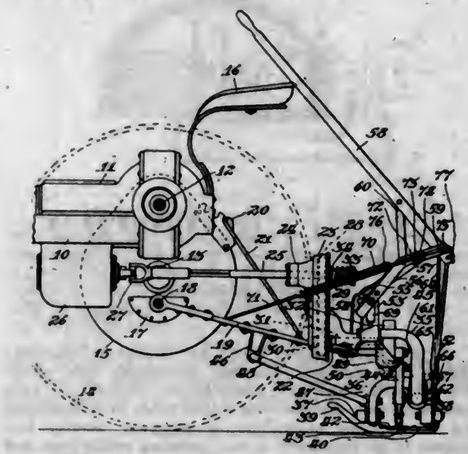
1,627,708. PUMP JACK. JOHN AUGUST LUND, Batavia, Ill., assignor to Challenge Company, Batavia, Ill., a Corporation of Illinois. Filed Oct. 18, 1926. Serial No. 142,326. 2 Claims. (Cl. 74—14.)

1. The combination with a pump jack comprising a reciprocable member, driving gears operatively connected to said member, a standard for supporting said gears, a shaft fixed in said standard, said gears being mounted on said shaft on either side of said standard, a clip fixed



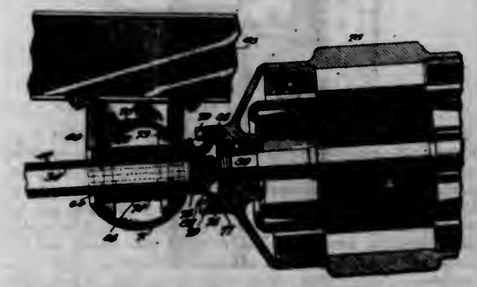
to said standard, and cooperating means associated with said clip and gears to insure against axial displacement of said gears.

1,627,709. PORTABLE FASTENING DEVICE. JOSEPH MENCHEN, Summit, N. J. Continuation of application Serial No. 328,736, filed Oct. 6, 1919. This application filed July 9, 1921, Serial No. 483,408. Renewed Oct. 8, 1926. 5 Claims. (Cl. 292—289.)



1. As an article of manufacture, a portable fastening device comprising a shank having ears near one end, teeth along both edges, a sliding member, and a revoluble member having partial helices at both ends to cooperate with said teeth.

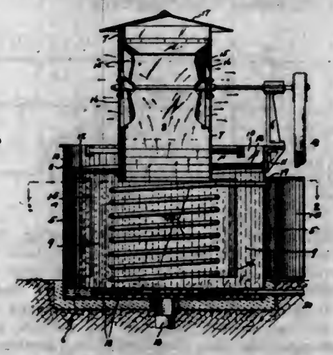
1,627,710. WEIGHING-SCALE PLATE. GUSTAV OHAUS, Maplewood, N. J. Filed Aug. 6, 1926. Serial No. 127,516. 3 Claims. (Cl. 265—27.)



1. A platform or pan for weighing scales, comprising a molded body of glass, having integrally formed in connection with its under side a centrally disposed downwardly directed externally threaded shank for the purposes described.

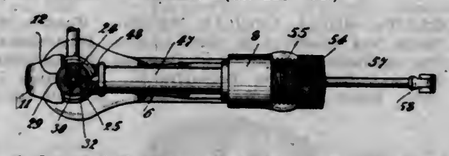
1,627,711. LIFTING DEVICE FOR TRACTOR MOWERS. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 15, 1923. Serial No. 674,804. 27 Claims. (Cl. 56—25.)

1. The combination with a tractor draft bar, of a mower attachment for said draft bar including a base member mounted on the draft bar, a coupling frame member rockably connected to the base member, a cutter bar carried by the coupling frame member, a lever fulcrumed on said base member, and means connecting the lever and cutter bar whereby the same may be adjusted to a raised position.



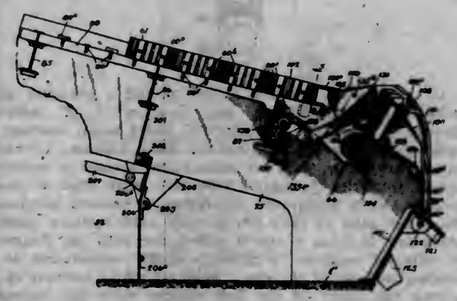
1,627,712. POWER TRANSMISSION FOR VEHICLES. JACOB H. SCHUACH, Philadelphia, Pa., assignor of one-half to William H. Heise, Los Angeles, Calif. Filed Dec. 10, 1923. Serial No. 679,647. 25 Claims. (Cl. 180—73.)

1. In a device of the character stated, the combination of a motor, a motor casing, a supporting structure, a train of gearing, connections common to said motor and gearing and a universal joint surrounding said structure and positioned between said motor casing and gearing and serving as a support for said connections and motor, whereby the latter is adapted to counterbalance the gearing and its adjuncts.



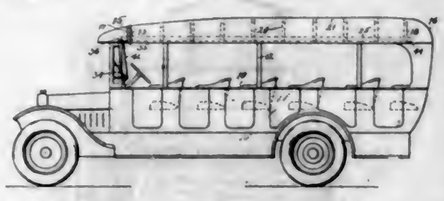
1,627,713. HEAT-TRANSFER APPARATUS. JAMES M. SEYMOUR, Newark, N. J. Filed July 16, 1926. Serial No. 122,799. 4 Claims. (Cl. 257—58.)

1. In an apparatus of the kind described, a vertical substantially cylindrical housing having a central air discharge means communicating with its upper end, means for delivering air tangentially into said housing for gyration about the vertical axis thereof and final ejection through said air discharge means, means for showering water downwardly through the gyrating body of air circulated through said housing, and a cooling pipe system through which may be circulated a medium



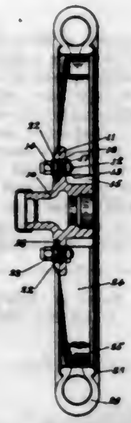
to be relieved of heat, said cooling pipe system being located in the path of the water shower and so as to be subject to the frictional contact of said gyrating body of air.

1,627,714. SURGICAL APPARATUS. ANGELO L. SORESI, New York, N. Y. Filed Nov. 30, 1925. Serial No. 72,366. 7 Claims. (Cl. 128—14.)



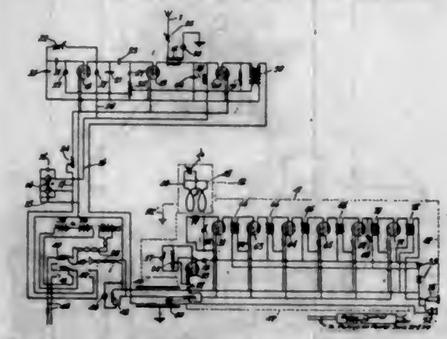
1. In surgical apparatus, a fluid flow controller including a body member having a longitudinal bore therethrough and longitudinally spaced valve seats and stops at the opposite ends of said bore, ball valves arranged between said spaced valve seats and stops and normally seating by gravity on the seats and adapted to be moved under pressure from such normal positions into engagement with the stops and said stops having fluid passages at the opposite sides thereof whereby the fluid may have ingress to and egress from said bore around the valve balls, each of said stops presenting a single annular line of contact with the surface of the valve ball.

1,627,715. STOKER. LOYD R. STOWE, St. Louis, Mo. Filed July 7, 1922. Serial No. 573,303. 26 Claims. (Cl. 110—40.)



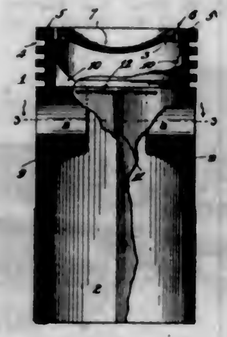
8. In combination, a stoker comprising endless moving spaced grate chains, supporting blocks located between said chains, and sealing members extending between and supported by said blocks.

1,627,716. FOLDING TOP FOR VEHICLES. JOHN HOWARD TEACHOUT, Cleveland Heights, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 14, 1921. Serial No. 461,210. 2 Claims. (Cl. 296—105.)



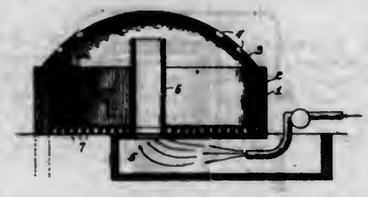
2. A folding top for vehicles, comprising, in combination, a skeleton frame having two side bars, a fixed front top portion, a fixed rear top portion, rails secured to said side bars, bows, wheels mounted on their ends adapted to ride on said rails, a flexible canopy secured to the bows, and to the fixed rear top portion, sprocket wheels mounted in the fixed rear top portion, other sprocket wheels mounted in the front top portion, sprocket chains trained over said sprocket wheels and extending directly above the bars centrally thereof, said bows having holes through them through which the upper runs of said sprocket chains pass, means connecting the front bow with the upper runs of said sprocket chains, and flexible devices connecting said bows together in series.

1,627,717. METAL VEHICLE WHEEL. WALTER M. TROUT and CLARENCE B. DES JARDINS, Philadelphia, Pa., assignors to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 7, 1921. Serial No. 520,674. 11 Claims. (Cl. 301—64.)



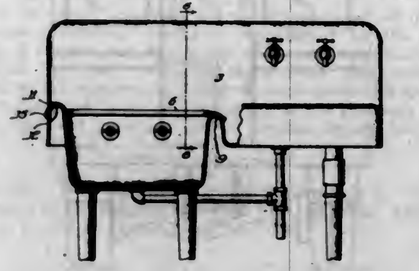
10. A wheel comprising a hub having a plurality of radially-extending flanges and a plurality of radial grooves, a plurality of segmental, sheet metal sections, each section having an inclined body portion, lateral flanges projecting from the sides of the section, a curved flange projecting laterally from the outer edge of the section and a perforated depression positioned between the inner ends of said side flanges, said sections being assembled to form a dished wheel disc with the flanges of adjacent sections in contact, rigidly united and extending radially of the disc, the sheet metal sections engaging the front of the hub flanges with the lateral flanges extending between the hub flanges and seating in said grooves, threaded studs carried by said hub flanges, ball nuts screwed on said studs and seating in said perforated depressions, and a rim rigidly secured to said curved flanges.

1,627,718. RADIOTELEPHONY. PAUL WARE, New York, N. Y., assignor to Ware Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 3, 1921. Serial No. 498,339. 17 Claims. (Cl. 250—6.)



1. In duplex radio telephony, relatively powerful means for radiating outgoing oscillations and means for receiving incoming oscillations located in such proximity that the receiving means tends to be paralyzed by the outgoing oscillations, a telephone receiver connected to be responsive to the incoming oscillations and an adjacent telephone transmitter connected to control the outgoing oscillations, means for supplying power to operate the sending and receiving systems, said receiving means including an antenna provided with an open circuited metallic shield.

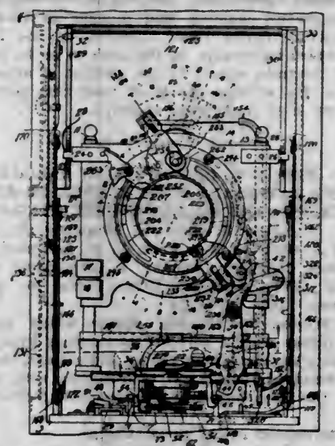
1,627,719. PISTON FOR INTERNAL-COMBUSTION ENGINES. DURWARD EARLE WILLIS, Springfield, Ill. Filed May 21, 1923. Serial No. 640,572. 14 Claims. (Cl. 74—108.)



1. A piston for an internal combustion engine including a head of a metal of a low heat conductivity, a barrel or body and its skirt of a metal of high heat conductivity, those portions of the skirt having the piston-pin bosses being separated into zones extending substantially parallel to the axis of the piston by a slit lying at each side of the bosses cutting through the walls of the said skirt and terminating in spaced relation to that part of the piston carrying the piston rings, the said zones conducting away the heat from said bosses in a direct path toward the open end of the piston substantially parallel to the axis of the latter, there being a circumferentially disposed slot severing the walls of the piston immediately below the piston-ring zone and at diametrically opposite sides of said piston above the portion lying between the zones having said bosses, said slots terminating in a spaced relation to the slits creating the last named zones.

1,627,720. SINGLE-FIRE-BOX KILN. WILLIAM E. WILSON, Mason City, Iowa, and HENRY G. LYKKEN, Minneapolis, Minn. Filed Feb. 25, 1921. Serial No. 447,661. 2 Claims. (Cl. 25—136.)

1. In a kiln having a roof and a floor, a single fire box beneath the floor, said floor having an aperture connecting the fire box with the interior of the kiln and a plurality of apertures surrounding the first named aperture and communicating with the interior of the kiln, a plurality of passageways beneath the floor of the kiln with which the apertures in said floor communicate, and a common duct communicating with all of said passageways and connected with an exhaust duct so that the waste products of combustion may be withdrawn through the floor of the kiln.

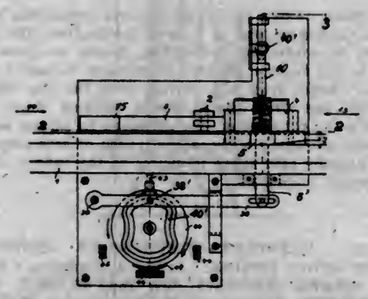


1,627,721. PORTABLE DRAIN BOARD. LOUIS WOLFF, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 9, 1925. Serial No. 1,363. 1 Claim. (Cl. 141—11.)

A portable drain board for sinks, comprising a body portion adapted to receive articles thereon, a portion adapted to fit over a sink end edge and having a downwardly projecting flange extending at least to the plane of the bottom of the board, and a downwardly directed drain edge extending at least to the plane of the bottom of the board and adapted to engage the adjacent sink end edge to thereby support the board over the sink, said flange and drain edge being substantially coextensive downwardly to thereby support the drain board as a substantially level tray when the same is disposed on a level surface.

1,627,722. PHOTOGRAPHIC CAMERA. CLYDE C. BALSTON, New York, N. Y. Filed Nov. 9, 1917, Serial No. 201,059. Renewed Dec. 8, 1926. 34 Claims. (Cl. 95—82.)

1. A camera having a lens and a diaphragm, means to set the diaphragm automatically to various sized apertures according to the various focal positions of the lens, the said diaphragm setting means comprising a member having a plurality of surfaces disposed at various positions, and a movable member adapted to engage said surfaces and to movably engage said diaphragm, the positions of certain of the surfaces of said first member corresponding to the focal positions of the lens, and the position of certain other of the surfaces of said first member corresponding to the various aperture sizes of the diaphragm, the said surfaces comprising steps



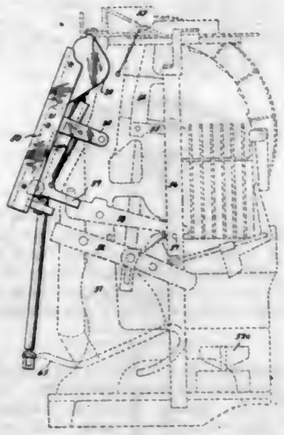
disposed along a body constituting said first member, the said member being secured to a part of the camera extension means.

1,627,723. TUFTED-MATTRESS BUTTON. PERCIVAL P. BERRY, West Roxbury, Mass., assignor to Englander Spring Bed Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 22, 1925. Serial No. 64,089. 15 Claims. (Cl. 24—106.)

1. A tufted mattress button having formed as a part thereof a shank-forming bowed tongue for receiving a thread loop of a mattress, said tongue being struck out from and located wholly within the margin of the lower side of the button, said tongue having struck out therefrom an inwardly projecting thread loop retaining portion.

1,627,724 DEVICE FOR STOPPING RAILWAY TRAINS INDEPENDENTLY OF THE DRIVER. PAUL BILDSTEIN and EMIL SEIDEL, Elberfeld, Germany. Filed June 20, 1925, Serial No. 38,539, and in Germany Mar. 7, 1925. 9 Claims. (Cl. 246—177.)

1. In a device for stopping railway trains independently of the driver, the combination with a track apparatus comprising a double-arm d lever arranged on the track

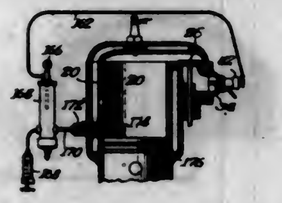


so as to be rocked by the wheels of a passing train, of a plunger arranged on the train so as to be actuated by said lever when thus rocked, a self-acting brake applying device, means preventing said device normally from operating, means enabling said plunger to release the brake applying device when actuated by the lever, a block arranged adjustably on the lever so as to take the thrust of the train wheels in one position of adjustment, and means for shifting the block from this position to prevent the lever from being operated.

1,627,725. PROCESS FOR COMBINING HALOGEN-CONTAINING MATERIALS WITH RUBBER OR SIMILAR SUBSTANCES AND PRODUCTS RESULTING THEREFROM. CHARLES E. BRADLEY, Montclair, N. J., and WILLIS A. GIBBONS, New York, N. Y., assignors to The Naugatuck Chemical Company, a Corporation of Connecticut. Filed June 20, 1921. Serial No. 479,100. 23 Claims. (Cl. 106—23.)

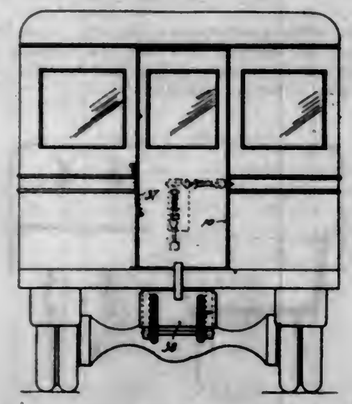
10. A process for treating rubber which comprises treating rubber with a solvent, introducing hydrochloric acid gas into the mixture of rubber and solvent, chlorinating the combined rubber and hydrochloric acid, and recovering the combined-hydrochloric-acid-and-chlorinated-rubber.

22. Chlorinated rubber hydrochloride.



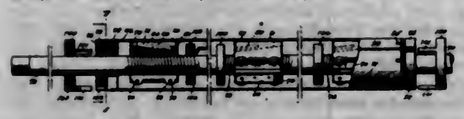
1,627,726. SLUG DETECTOR FOR CHECK-CONTROLLED MACHINES. ADOLPH A. CAILLE, Detroit, Mich. Filed Dec. 30, 1925. Serial No. 78,316. 6 Claims. (Cl. 194—98.)

1. A check or coin controlled machine comprising a substantially upright tray to receive checks from the check operated or controlled mechanism, means to guide said checks to the bottom thereof, an elevator in said tray to lift said checks from the bottom over the top edge of said tray and drop them into a suitable chute, said elevator being constructed and arranged to require several operations to convey a check the length of said tray, and means whereby said check is visible to the outside during said several operations.



1,627,727. CONSTANT-COMPRESSION INTERNAL-COMBUSTION ENGINE. JAMES A. CHARTER, Chicago, Ill. Original application filed Jan. 29, 1923, Serial No. 615,687. Divided and this application filed June 15, 1925. Serial No. 37,087. 5 Claims. (Cl. 123—33.)

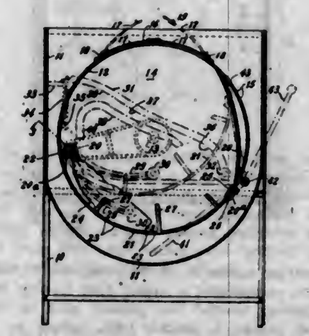
1. In mechanism of the class described, in combination with the combustion space of an internal combustion engine provided with an air intake passage, a fuel nozzle adapted to deliver oil, an independent motive fluid, such as air, nozzle adapted to take oil from the fuel nozzle to the combustion space, a compressed motive fluid tank,



delivering motive fluid to said second nozzle, means whereby the proper pressure is maintained in said tank by motive fluid delivered to it from said combustion space of the engine, and independent means for creating pressure in the tank when the engine is not running.

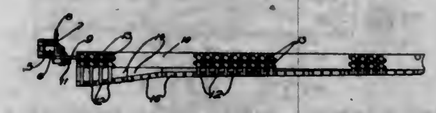
1,627,728. EMERGENCY-DOOR APPARATUS FOR VEHICLES. ROSCOE D. CONKLIN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Apr. 18, 1925. Serial No. 24,043. 5 Claims. (Cl. 292—164.)

1. In an emergency lock device, the combination of a lock bolt and door to be locked, means for tensioning said lock bolt in opening position, lock bolt opposing means normally positioned in the path of the lock bolt to prevent said tensioning means to be effective, and means operated by gravity for permitting said lock bolt opposing means to be displaced to permit the tensioning means to become effective.



1,627,729. EXPANSIBLE AND CONTRACTIBLE MANDREL. GEORGE W. DINGEE, Utica, N. Y. Original application filed June 8, 1922, Serial No. 566,831. Divided and this application filed Dec. 7, 1922. Serial No. 605,385. 16 Claims. (Cl. 242—72.)

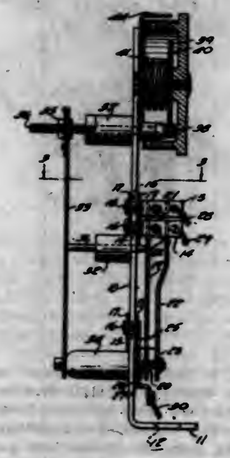
1. An expansible mandrel having a cylindrical shell longitudinally split into segments, a shaft, means controlled by the rotation of the shaft for expanding and contracting the shell, a device having members, means for preventing longitudinal movement of the shell along the shaft during expansion and contraction, and means



for non-rotatably fastening said device to the shaft in a position whereby said members will co-operate with said means for preventing longitudinal movement of the shell to prevent collapsing of the mandrel.

1,627,730. WASHING MACHINE. FREDERIC H. EHNTS, Germantown, Pa., assignor, by mesne assignments, to H. W. Butterworth & Sons Company, a Corporation of Pennsylvania. Original application filed Mar. 23, 1921, Serial No. 454,744. Divided and this application filed June 16, 1925. Serial No. 37,417. 17 Claims. (Cl. 68—18.)

14. A rotary receiver drum for machines of the character described, having a compartment for the reception of stock and an opening in the periphery thereof leading into said compartment, a stock manipulator mounted for movement within said compartment and when in one position lying in said opening in the periphery of the drum and forming a part of the wall for the latter.



1,627,731. SUBGRADE TEMPLATE. ARTHUR G. FITZNER, Chicago Heights, Ill. Filed Sept. 12, 1925. Serial No. 55,950. 8 Claims. (Cl. 94—45.)

1. A sub-grade template comprising a beam, roller supports adjustable on the ends thereof adapted to track over forms on the side of the road to hold the beams supported in position, guide rollers for guiding the sub-grade template along said forms and over the grade, a plurality of teeth adjustably carried directly on the advanced side of the beam, and a template carried on the rear side of the beam, said teeth being set to conform to the contour of said template.

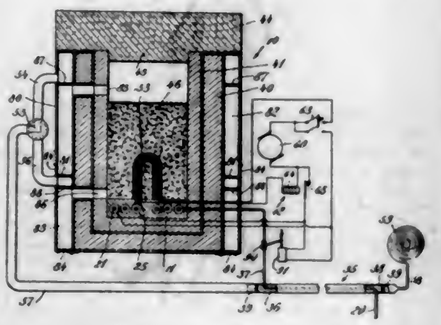
1,627,732. THERMOSTATIC CONTROL FOR ELECTRIC OVENS AND THE LIKE. EDWARD L. FONSECA, Newark, N. J., assignor, by mesne assignments, to The Wilcolator Company, Newark, N. J., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 737,049. 9 Claims. (Cl. 200—138.)

1. In a thermostatic control mechanism, the combination of a fixed contact, a movable contact spaced therefrom, a movable arm carrying a contact which lies between said spaced contacts, a thermostatic element pivotally mounted to swing, this element having a portion which is movable to different positions as the element is exposed to different temperatures, means engaging the

element to limit its swinging movement, means for adjusting the position of the limiting means, and a connection between the said movable portion of the element and the said arm.

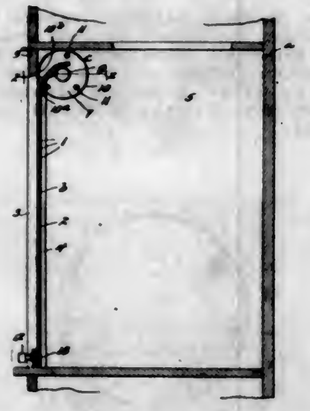
1,627,733. SUCKER-ROD HANGER. GEORGE E. FRITTS, Taft, Calif., assignor, by mesne assignments, to F. A. Keefover and Daisy Keefover. Filed May 2, 1923. Serial No. 636,107. 2 Claims. (Cl. 255—1.)

1. In a sucker rod hanger, the combination of: a cross bar secured to the derrick structure at an elevated point; a plurality of suspension members secured at their upper ends to the cross bar; clamp members secured to the lower ends of said suspension members for gripping stands of sucker rods; a platform situated adjacent to



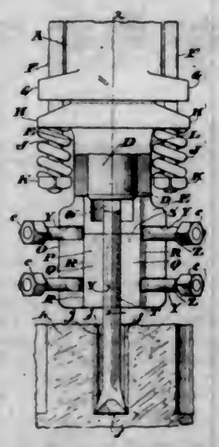
the lower ends of said suspension member; and an inwardly projecting arm having a rest at the inner end thereof for receiving the shank of a sucker rod while the elevator is being adjusted thereupon.

1,627,734. SIPHON HOLDER. GEORGE V. GAVAZA, Quincy, Mass. Filed Aug. 11, 1926. Serial No. 128,586. 1 Claim. (Cl. 248—28.)



A holder for a flexible siphon tube, comprising an elongated helical spring adapted to receive a portion of the tube, and provided with an open hook at one end, and a resilient yoke composed of end portions constituting container-grasping jaws, one of said end portions having an eye engaged with the opposite end of the spring, and a bowed neck resiliently connecting the jaws and normally pressing them toward each other, so that they are adapted to yieldingly grasp a container wall, the neck being formed to loosely and separably engage the spring hook, the arrangement being such that the spring is practically straight when disengaged from the yoke, so that it may slide freely on the tube, the engagement of the hook with the yoke flexing the spring and the portion of the tube enclosed thereby, and causing the spring and tube portion to conform to the portion of the yoke, between the eye and the midlength of the yoke neck.

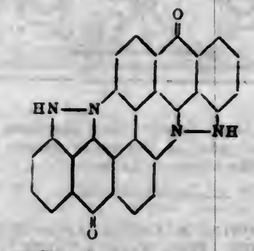
1,627,735. METHOD AND APPARATUS FOR GENERATING AND CONTROLLING HEAT. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed Dec. 16, 1921. Serial No. 522,948. 53 Claims. (Cl. 110—1.)



1. The method of initiating and maintaining combustion, which consists of passing an oxygen carrying medium into a fuel at a temperature higher than the ignition point of the fuel, and passing the products of combustion through a heat exchange member to cause them to give up their heat to incoming medium.

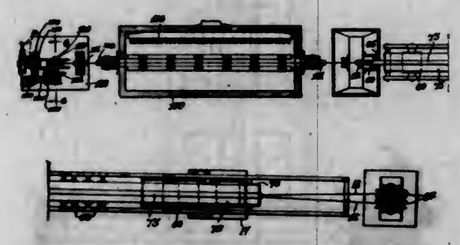
1,627,736. SUPPORT FOR FLEXIBLE DOORS OF KITCHEN CABINETS. AXEL I. S. HALVORSEN, Albany, Ind., assignor to McCormick Bros. Company, Albany, Ind., a Corporation of Indiana. Filed May 14, 1926. Serial No. 109,083. 6 Claims. (Cl. 45—16.)

6. Supporting means for doors composed of flexibly connected slats, comprising a metal disk having an arcuate flange extending around the greater part of its circumference and having a central boss, struck up from the body of the disk, spaced from the flange a sufficient distance to permit the edge of the door to be coiled between the boss and the flange.



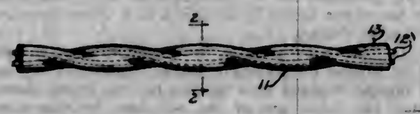
1,627,737. BROACHING ATTACHMENT. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 14, 1926. Serial No. 109,032. 3 Claims. (Cl. 121—32.)

1. A broaching attachment for a rock drill, comprising a front head adapted to be secured to the rock drill, an extension on the front head having laterally diverging surfaces, a guide block having laterally diverging surfaces to cooperate with the surfaces on the extension to form a guideway with flared sides for guiding a flat rectangular tool and to permit such tool to oscillate about its longitudinal axis, and means for clamping the guide block to the extension.



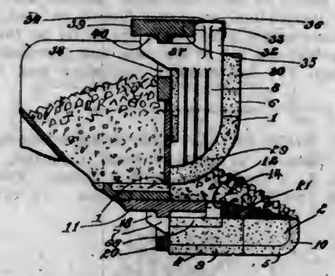
1,627,738. VAT DYESTUFFS OF THE ANTHRAQUINONE SERIES. ALFRED HOLL, Offenbach-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 8, 1925, Serial No. 74,172, and in Germany Dec. 22, 1924. 4 Claims. (Cl. 260—45.)

1. As new products, vat dyestuffs of the antraquinone series fast to alkali, which are reaction products of formaldehyde upon pyrazolanthron yellow compounds, to which the literature assigns the general formula:



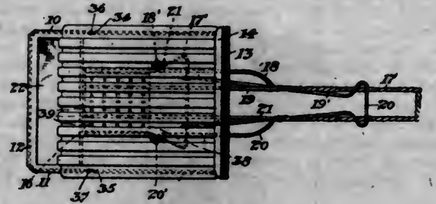
in which the anthraquinone nucleus may be further substituted, which dyestuffs in a dry pulverized form are greenish yellow to orange yellow, soluble in sulfuric acid giving red colored solutions and in boiling hot nitrobensol giving orange yellow colored solutions and which dye cotton from blue hydrosulfite vats reddish to greenish yellow tints which are fast to alkali.

1,627,739. METHOD OF COATING STRANDS. WILLIAM FULLER HOSFORD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1924. Serial No. 743,159. 22 Claims. (Cl. 92—55.)



1. The method of coating strands, consisting in applying a common, continuous, integral and substantially homogeneous coating to a plurality of strands, and twisting one strand around another.

1,627,740. COATED STRANDS. WILLIAM FULLER HOSFORD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1924, Serial No. 742,160. Renewed Feb. 25, 1927. 11 Claims. (Cl. 92—55.)



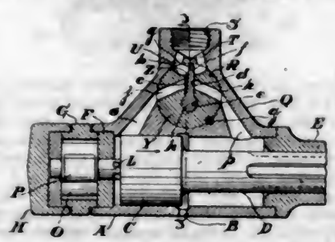
1. A new article of manufacture comprising a plurality of intertwined strands separated from each other and covered by an integral, continuous and substantially homogeneous body.

1,627,741. FURNACE-ARCH AND COKING-SHELF STRUCTURE. CHARLES J. HUBER, Baltimore, Md. Filed June 5, 1924. Serial No. 717,939. 9 Claims. (Cl. 110—99.)

1. In a furnace, a structure for coking shelves, arches, baffles and the like, consisting of a series of bricks having the opposite side walls in downwardly converging relation to a point near the bottom where the lateral dimension is increased, forming a lateral projection, said latered projection extending along each bottom edge, and as to some of the bricks said projecting portion extending upward along the end surface, the bricks being placed side by side with the inclined surfaces opposite and the projecting portions substantially in contact, the bricks having the projecting portions extending along the end surface being placed toward the fire, and supports for the bricks occupying the tapering spaces thus formed between the bricks, the supports being correspondingly tapered, said supports being protected at the bottom and end by said projecting portions, each support having an upwardly projecting shank and forwardly extending arm, the furnace being provided with a transverse support and the shank having means engaging said support from above, and the forwardly extending arm engaging the support from beneath.

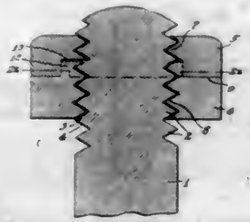
1,627,742. BROILER. JAMES J. JONES, New York, N. Y. Filed June 7, 1924. Serial No. 718,436. 2 Claims. (Cl. 53—5.)

1. In a broiler, a frame, and a broiler member comprising a sheet of corrugated material, each corrugation having a flattened top and downwardly converging walls connecting the next succeeding corrugation and in which connecting walls there is a plurality of openings.



1,627,743. RAIL LOCK. WILLIAM KUPKE, Chicago, Ill. Filed June 14, 1926. Serial No. 115,862. 8 Claims. (Cl. 238—192.)

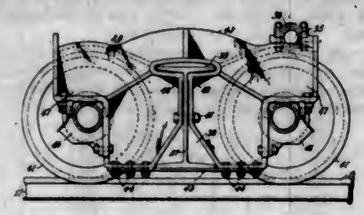
1. A device of the class described comprising two complementary parts, each part comprising a base plate to rest under a rail and a side plate spanning the gap be-



tween adjacent rail ends; lateral enlargements connecting the base plate and side plate and contacting with the ball and web of the rail to reenforce the latter at the point of connection of a pair of rail sections, bolts securing said side plates to said rail webs, substantially as described, a longitudinal extension formed on each of the lateral enlargements offset from the latter so that they will lie against the web of the rails, and fastenings passing through the longitudinal extensions and railway webs.

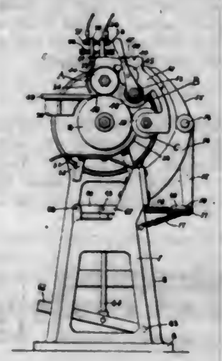
1,627,744. ROCK DRILL. EARL B. LEAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 17, 1925. Serial No. 76,043. 5 Claims. (Cl. 121—22.)

1. In a fluid actuated rock drill, the combination of a cylinder having a free exhaust port, a valve chest having a cylindrical bore closed at one end, a cylindrical valve block insertable through the open end of the bore, a slot in the valve block in constant communication with live pressure fluid, said slot having parallel walls, a longitudinal bore at one end of the slot, passages leading from the slot to the ends of the cylinder, a valve oscillating between the parallel walls for controlling the passages, and a trunnion on one end of the valve to cooperate with the bore for forming a pivot for said valve.

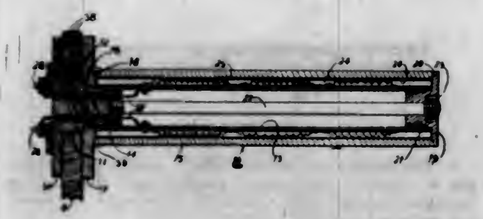


1,627,745. LOCK NUT. JOHN MADDEN, Detroit, Mich. Filed Oct. 30, 1924. Serial No. 746,767. 2 Claims. (Cl. 151—19.)

1. A lock nut comprising a pair of threaded members, one member having an eccentric recess around the bore thereof, a cam carried by the other member and adapted to fit into said recess, said cam being also threaded internally in continuation of the threads in the member by which it is carried, said members being so threaded that their threads are mutually continuous when the cam is entered to its normal limit in said recess.



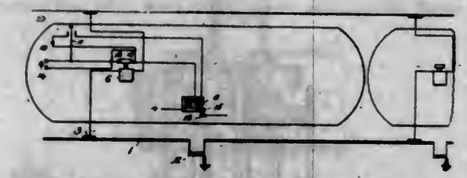
1,627,746. TROLLEY CONSTRUCTION FOR CRANES. GEORGE EDWARD MOORE, Muskegon, Mich., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed May 8, 1924. Serial No. 711,788. 14 Claims. (Cl. 105—163.)



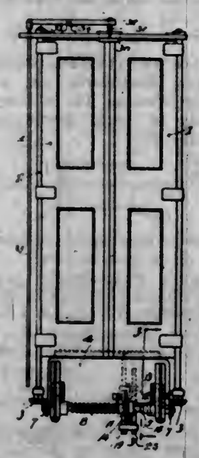
1. A trolley frame construction including a frame provided with oppositely projecting extensions at opposed sides thereof, said extensions having upper and lower flanges and a connecting web, truck frames each formed as a truss with an opening transversely therethrough for the passage of one of said extensions, said

truck frames being formed with shoulders to contact with the under sides of the upper flanges of said extensions near the plane of the web.

1,627,747. IRONING MACHINE. ANTON M. RASMUSSEN, Rockford, Ill. Filed June 4, 1926. Serial No. 113,598. 9 Claims. (Cl. 68—9.)



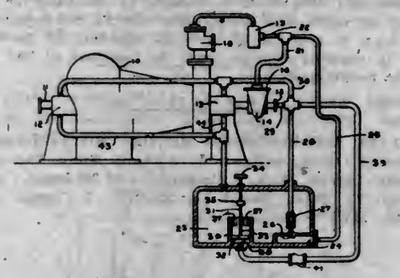
1. In an ironing machine, an ironing roll, a plurality of rolls alongside the same serving to feed the work in contact therewith, certain of said rolls having a permanent drive connection with a power source to turn at about the same peripheral speed as the ironing roll, a remaining roll being normally arranged to operate at about the same peripheral speed as the ironing roll but having provision for a disengageable drive connection with the power source to be driven at a lower peripheral speed when desired.



9. In an ironing machine the combination of a frame and an ironing roll having a journal portion at only one end thereof received in a bearing in said frame thereby leaving the other end of the roll free, bearing means at the supported end of the roll assuming the thrust against opposite sides of said frame adjacent the journal bearing, and gear teeth on the periphery of one of said last mentioned bearing elements for rotating the journal and with it the ironing roll carried thereby.

1,627,748. SAFETY SYSTEM FOR RAILWAY CARS. HAROLD ROWNTREE, New York, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Mar. 25, 1922. Serial No. 546,844. 18 Claims. (Cl. 246—182.)

1. In a railway system, a plurality of trains, an unbroken electrical conductor, means for establishing an electrical circuit between each train and said conductor, an electrical device on each train including in said circuit, a safety circuit controlled by said device, and means for varying the current passing through said device by and in accordance with variation in the distance between the train on which said device is located and the preceding train, the current passing through said device increasing with increase of distance between the trains, a signal, and means for operating said signal before said safety circuit is operated.

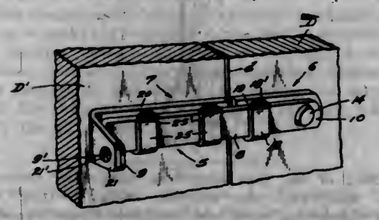


1,627,749. MANUALLY-OPERABLE DOOR AND STEP. HAROLD ROWNTREE, Scarsdale, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Jan. 10, 1925. Serial No. 1,572. 15 Claims. (Cl. 105—341.)

1. In an assembly of the character described, the combination with a door and a hinged step adapted to be manually operated and connected for conjoint operation, of means for locking the door in closed and the step in raised positions, said locking means being releasable through conjoint acts of a passenger and the attendant.

1,627,750. LUBRICATING SYSTEM. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 24, 1924. Serial No. 688,292. 10 Claims. (Cl. 184—6.)

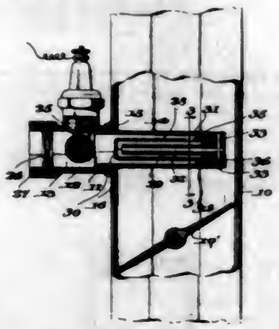
1. In a liquid pressure system for a steam turbine having a part requiring liquid under pressure whenever the turbine is in operation, means for supplying liquid under pressure to said part including a centrifugal pump having its impeller directly connected to the turbine rotor to move as a unit therewith, a supply reservoir, and an injector located below said pump and motivated by liquid received from the discharge side of the pump



for entraining liquid from the reservoir and for supplying both the entrained and motive liquid to the inlet of the pump.

1,627,751. ADVERTISING STAND. GEORGE A. SHERMAN, Pasadena, Calif. Filed Sept. 2, 1925. Serial No. 54,146. 2 Claims. (Cl. 40—86.)

1. In an advertising device, a casing open at its front and back, doors movable into and out of position to close the front and back of said casing, the front door being provided with a sight opening and a transparent pane for the sight opening, guide rollers rotatably mounted in said casing adjacent its front and disposed above and below the sight opening of said front door, winding rollers rotatably mounted in said casing and having trunnions projecting through side walls of the casing and adapted for engagement by turning means, one winding roller having its trunnions mounted in slots formed in the side walls and opening through the rear edges thereof, and closed when the rear door is shut, and an advertising strip having its end portions wound upon said winding rollers and an intermediate portion engaged with said guide rollers and extending between the same and adapted to be viewed through the sight opening.

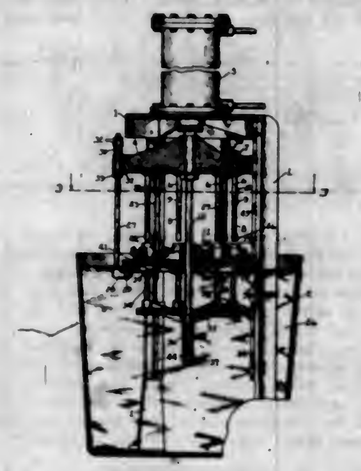


1,627,752. DOOR FASTENER. SYLVESTER J. SMALL, Seattle, Wash. Filed Sept. 22, 1925. Serial No. 57,832. 1 Claim. (Cl. 292—281.)

A fastener for a pair of doors comprising, in combination, a backing plate and a receiving member adapted to be secured to the respective doors, said member having at one end thereof a forwardly directed arm provided

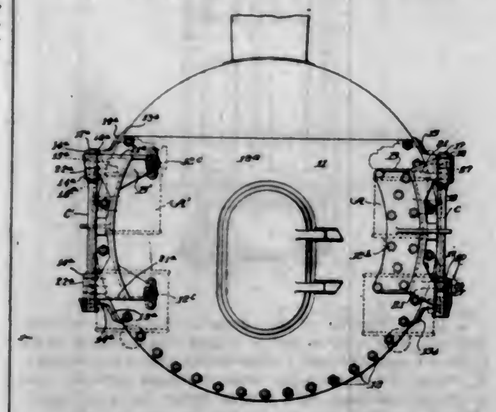
with an aperture, a hasp, a pivot connecting the hasp at one of its ends with said plate, said hasp having at its other end a forwardly directed arm element provided with an aperture, a keeper provided upon the receiving member and adapted to be engaged by the hasp for coupling the doors, said keeper also serving for supporting the hasp in position to have the aperture of the hasp arm in opposed relation with the aperture of the arm of the receiving member.

1,627,753. HYDROCARBON MOTOR. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 27, 1919. Serial No. 326,922. 7 Claims. (Cl. 123—122.)



1. A heater plug comprising a combustion chamber and an inlet conduit, a screen in said inlet conduit, and a disk in said conduit spaced from the screen and provided with a small inlet opening constituting the sole mixture passage to the chamber.

1,627,754. MOLD FOR FOOTINGS. OTTO H. TOWNSEND, Detroit, Mich., assignor to Walker & Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 8, 1926. Serial No. 93,118. 1 Claim. (Cl. 25—118.)



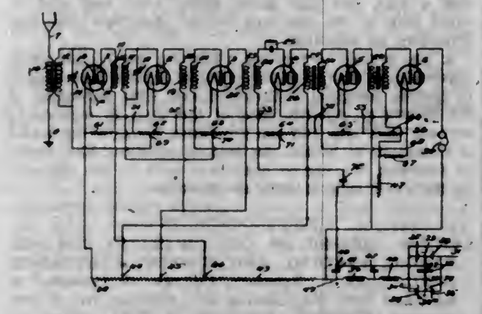
A mold of the type described, comprising semi-cylindrical, filler and base sections having bottom walls, hinges connecting said base sections, hinges connecting said semi-cylindrical sections, and alining with the hinges of said base sections, said filler sections connecting said semi-cylindrical section to said base sections, and latches and keepers adapted to hold said sections closed to receive plastic material.

1,627,755. BROACHING MACHINE. BERTIS H. UNSCHEL, Bowling Green, Ohio. Filed June 23, 1924. Serial No. 721,610. 13 Claims. (Cl. 90—33.)

1. In a broaching machine, a broach head, a plurality of broaches secured to the broach head, a work supporting table rotatably supported below the broaches and means for rotating the table relative to the broaches, a centering plate, a plurality of centering pins secured to the plate for engaging the ends of the broaches and moving with the broaches while the broaches are operating on the object.

1,627,756. LOCOMOTIVE-FRONT-END SUPPORT. HARRY VISBERING, Kenilworth, Ill., assignor to The Okadee Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1924. Serial No. 726,334. 30 Claims. (Cl. 105—37.)

1. In combination, a boiler having an opening, a closure for said opening, a member supported in front of and in part only by said closure, and means whereby said member may be moved away from said closure to permit said closure to be moved.

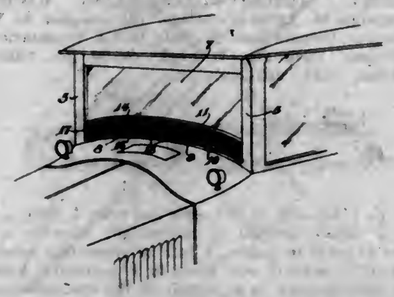


1,627,757. COMBINED BAKING PAN, COOKING UTENSIL, AND MOLD. WILLIAM VON ELM, Brooklyn, N. Y. Filed May 18, 1926. Serial No. 109,992. 1 Claim. (Cl. 53—6.)

A cooking utensil comprising an outer cylindrical wall section of sheet material having an annular flange extending inwardly therefrom, and integral therewith to provide a circular opening concentric with the cylindrical wall section, a seamless frusto-conical receptacle inserted in said opening with its bottom projecting beyond the edge of said wall section remote from said flange, the contacting edges of said flange and said receptacle being turned over each other at an obtuse angle to the flange

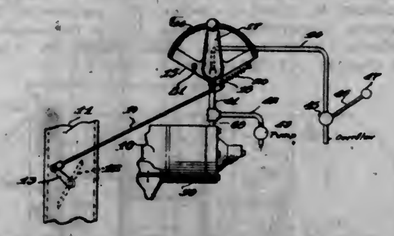
and receptacle wall, respectively, to form a hook joint and lock the receptacle to the flange, the turned over edge of said receptacle extending outwardly from the receptacle and said flange being dished toward the circular opening therein to hold the open end of said receptacle in the same plane as the edge formed by the intersection of a said wall section and said flange.

1,627,758. RADIO RECEIVING APPARATUS. MARCEL WALLACE, New York, N. Y., assignor to Electro-Laboratories, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1925. Serial No. 26,207. 23 Claims. (Cl. 250—27.)



17. A radio receiving apparatus arranged to operate universally from a direct as well as an alternating current power supply comprising a plurality of electron tubes each having cathode and anode circuits, a power supply system and a chemical rectifier interposed between said circuits and said power supply system for supplying current to said circuits independently of the character of said power supply system.

1,627,759. MANIFOLD HEATER. ORVIL WAUHOB, Sioux City, Iowa. Filed Oct. 29, 1925. Serial No. 65,627. 1 Claim. (Cl. 257—241.)



In a manifold heater, a casing member having an outer side wall and having upper and lower walls adapted to bear against the side of an engine block and to form therewith an enclosed air passage in either of two vertically spaced positions, and a delivery pipe having an upper wall provided with a partially detached portion, said delivery pipe being receivable between the outer wall of the casing and the side of the engine block, and said partially detached portion being bendable upwardly to close a gap existing between the upper wall of the casing and the upper wall of the delivery pipe when the casing is in its upper position, said partially detached portion being also bendable to conform with the upper wall of a manifold when the casing is in its lower position on a different type of manifold.

1,627,760. WINDSHIELD SCREEN. PAUL GEORGE WOOD, Hilliards, Ohio. Filed July 25, 1925. Serial No. 46,127. 1 Claim. (Cl. 296—94.)

A windshield screen comprising a frame made up of two sections in end to end relation, hinges connecting the two sections, the ends of the screen frame, when the latter is straightened, being adapted to fit into the guideways at the ends of the windshield frame, said screen frame sections having upper and lower metal rails shaped so as to engage the adjacent edges of the windshield and windshield frame respectively throughout their length, the lower rail having opposed lugs secured thereto and shaped to engage the opposed faces of the adjacent edge portions to hold the screen in position.

1,627,761. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 16, 1922. Serial No. 582,265. 15 Claims. (Cl. 123—108.)

1. The combination with an internal combustion engine, of a manually operable device for controlling the speed thereof, spring means for moving said device to low speed position, oil pressure controlled means connected directly to said device for holding the latter in any of its adjusted positions, and a governor adapted to vary the oil pressure.

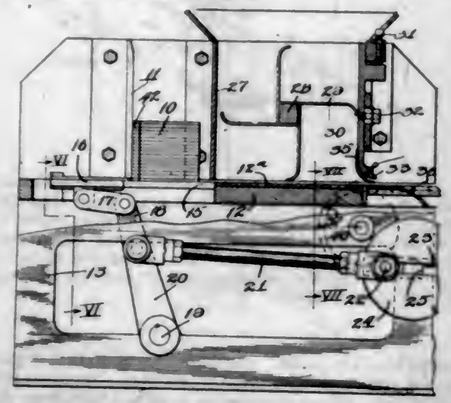
1,627,762. CLOSURE. CHARLES A. ZABORSKY, Cleveland, Ohio, assignor to The Simplex Cap Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 13, 1926. Serial No. 135,647. 10 Claims. (Cl. 220—40.)

1. For use with a tube provided with locking means of the bayonet joint type, a closure comprising a locking member comprising a depressed central section, at least

two arm sections extending outwardly from said central section into position to cooperatively engage said locking means, and spaced securing sections extending from

said central section intermediate said arm sections upwardly and then generally parallel to said central section.

1,627,763. BATTERY-PLATE FILLING MACHINE. CHESTER M. ANGELL, Chicago, Ill., assignor to Vesta Battery Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 7, 1925. Serial No. 7,490. 8 Claims. (Cl. 226—39.)

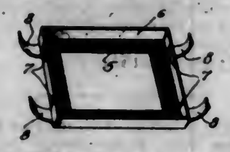


1. In a machine of the class described a table, a conveying means adapted to individually advance a plurality of grids in unison, a pair of supporting conveyors adapted to support said grids in a horizontal position, said grids adapted to be moved off the first conveyor by the conveying means and delivered thereby to the second conveyor in a reversed position.

3. In a machine for handling plate grids, a platform, a stacking means for the grids, a paste box above said platform, means normally restraining the lowermost grid in said stacking means, means adapted to release said restraining means and remove aid lowermost grid, and means for advancing the grids through the paste box.

5. In a machine of the class described, a conveyor belt adapted to advance individual grids, a paste box positioned above said conveyor, a slice on the rear edge of said box adapted to compress and remove excess paste from said grids and a roll positioned beneath said conveyor in line with the rear edge of said paste box to support the conveyor against the downward pressure of said slice.

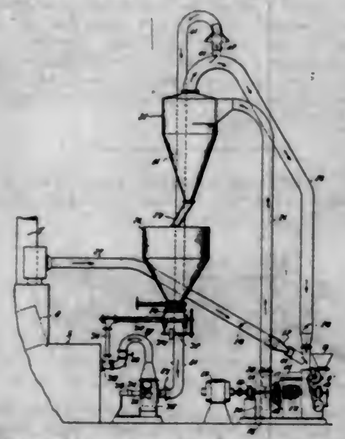
1,627,764. BATTERY-PLATE-PASTING MACHINE. CHESTER M. ANGELL, Chicago, Ill., assignor to Vesta Battery Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1926. Serial No. 116,295. 11 Claims. (Cl. 226—39.)



1. In a machine of the class described, a table, means for feeding grids over said table in a continuous line, means for forcing an excess of paste through said grids as they pass over the edge of the table, means for turning said grids over, and soft surfaced rolls adapted to compress the excess paste back into the interstices of the grids.

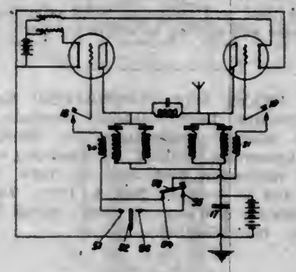
3. In a machine of the class described, a stack of grids, a reciprocating ram adapted to engage and advance said grids one at a time, and means for varying the length of stroke of said ram to care for varying sizes of grids.

7. In a machine of the class described, a paste box, means for feeding grids beneath said box, and a trowel associated with the rear wall of said box and forming a yielding lower edge therefor.



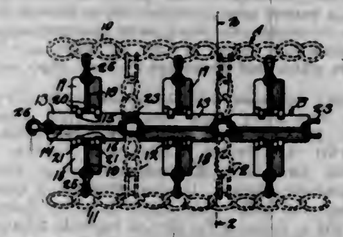
1,627,765. WATCHCASE AND PROCESS OF MAKING SAME. GEORGE T. BATES, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Oct. 8, 1926. Serial No. 140,349. 4 Claims. (Cl. 29—177.)

1. As a new article of manufacture, a sheet metal watch case having integral clips extending outwardly from its ends, each cooperating with the case to provide a seat, and lugs fitted within each seat and secured both to the case and to the associated clip, substantially as described.



4. The process of forming a bracelet watch case which consists in drawing the side edges of a sheet metal blank to provide marginal flanges and also clips outwardly of the flanges at opposite ends of the case, in positioning between each clip and the proximate flange a lug which is shaped to fit within the seat so provided, and finally in soldering the lug so positioned both to the clip and to the case, substantially as described.

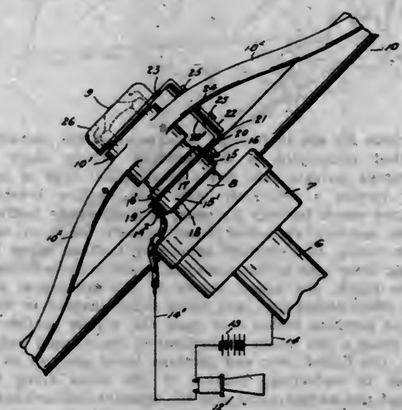
1,627,766. METHOD OF AND APPARATUS FOR PREPARING, FEEDING, AND BURNING PULVERIZED FUEL. LARS H. BERGMAN, Chicago, Ill., assignor to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1924. Serial No. 706,416. 22 Claims. (Cl. 110—106.)



20. The method of preparing, feeding and burning fuel which comprises pulverizing and drying the fuel by carrying it through a pulverizing apparatus by flotation upon a stream of hot gases circulating through the apparatus, eliminating from the stream a portion of the moisture and adding hot gases to the stream.

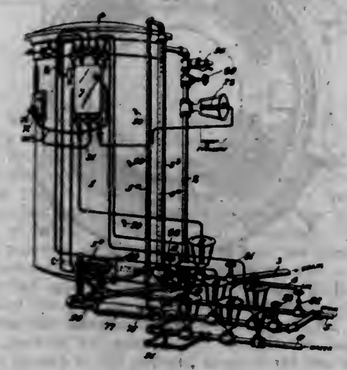
1,627,767. TRANSMISSION BY ELECTRIC OSCILLATIONS. LÉON NICOLAS BRILLOUIN and EMILE MARIE FRANÇOIS FROMY, Paris, France. Filed Aug 10, 1925, Serial No. 49,394, and in France Nov. 10, 1924. 4 Claims. (Cl. 250—10.)

1. In arrangement for radiocommunication a compound circuit comprising a number of distinct plug circuits tuned to different wavelengths whereby the waves pass through the compound circuit in a given direction according to which plug circuit is tuned to them, and secondary circuits coupled with the plug circuits and tuned each to one of the said plug circuits, the direction of the windings in the couplings being determined so as to provide the addition of the effects produced by one of the waves and the substantial cancellation of the effects produced by the others, the aerial being moreover connected with the compound circuit at those points where the potentials due to the different waves are the most different.



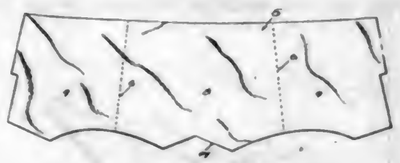
1,627,768. SKIDDING-PREVENTING DEVICE. LUCENIUS MARION CREWS, Fairburn, S. Dak. Filed Aug. 20, 1925. Serial No. 51,417. 3 Claims. (Cl. 152—14.)

3. The combination with an anti-skid chain for the wheels of motor vehicles including tire chains and transverse chains, of an anti-skid attachment therefor including a plurality of elongated plates provided with ribs extending circumferentially of the wheel, means for connecting said plates together, a plurality of side plates connected to the longitudinal edges of the first named plates, and provided with ribs extending transversely of the wheel, and means carried by the side plates for connection with the side chains for securing the device thereto.



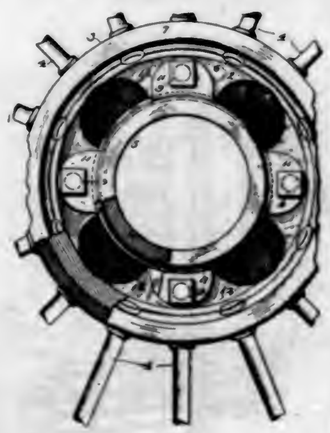
1,627,769. HORN BUTTON FOR STEERING POSTS. JAMES H. DENNIS, Seattle, Wash. Filed Dec. 19, 1921. Serial No. 523,460. 3 Claims. (Cl. 200—59.)

1. In a device of the type described, the combination with an immovable housing of an automobile steering mechanism, the movable steering post projecting therefrom, and the steering wheel mounted upon the projecting portion of the post, of a contact arm bodily movably supported by the housing and projecting between the spokes of the wheel for selective electric contact with the wheel hub, and means for insulating the arm from



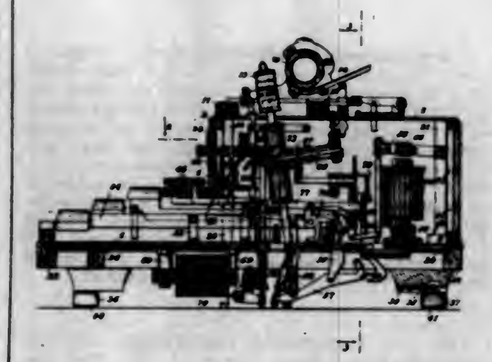
the housing and the wheel spokes, whereby the contact arm will be moved upon its rigid supporting housing when the wheel and post are turned.

1,627,770. APPARATUS FOR PROCESSING FOODSTUFFS AND THE LIKE. CHAUNCEY H. DURKEE, Bronx, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Aug. 30, 1924. Serial No. 735,066. 26 Claims. (Cl. 99—2.)



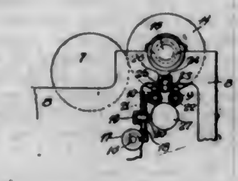
26. An apparatus for processing food stuffs and the like comprising a retort, means to automatically regulate the temperature and pressure within said retort, and clock actuated mechanism to progressively adjust said regulating means to produce a desired progression of temperature and pressure values within said retort.

1,627,771. GARMENT. JOSEPH H. DWORK, Newark, N. J. Filed Feb. 24, 1922. Serial No. 538,837. 1 Claim. (Cl. 128—288.)



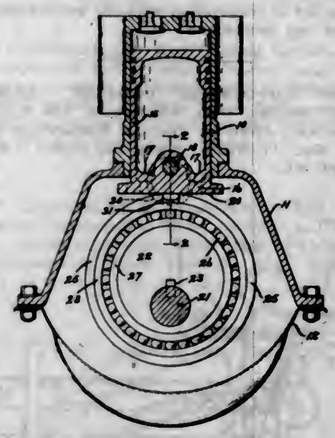
A blank for use in forming a garment of the character described comprising a substantially oblong sheet of waterproof material, the lower longitudinal edge of said blank having a relatively wide and shallow inverted V-shaped notch midway its ends, and oppositely inclined arcuate notches extending from opposite ends of said middle notch, and straight oppositely inclined edges extending from said arcuate notches to the transverse ends of the blank, the upper halves of the transverse end edges offset outwardly, said blank being adapted to have the end portions folded over upon the middle portion to meet along a line which approximately bisects said middle notch, the folded over end portions being adapted to be secured to underlying portion of the blank along the edges of the middle notch and the straight inclined lower edges beyond the arcuate notches to provide the garment with leg openings, said garment being open at the upper half of the front.

1,627,772. METAL WHEEL CONSTRUCTION. ERNEST E. EINFELDT, Davenport, Iowa, assignor to G. Watson French and Joseph L. Hecht, Davenport, Iowa, and W. H. Stackhouse, Springfield, Ohio, doing business as French & Hecht, Davenport, Iowa, and Springfield, Ohio. Filed July 21, 1926. Serial No. 123,828. 3 Claims. (Cl. 301—9.)



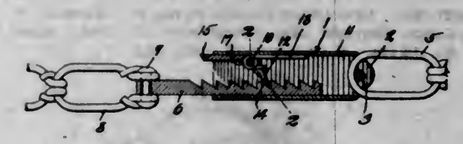
2. In a wheel, the combination of a rim, two spaced hub rings provided with bolt holes, two ranks of spokes connected at their outer ends to the rim and at their inner ends to the hub rings, a bearing box provided with two sets of lugs, said sets being spaced from each other axially of the box and having bolt holes therethrough and adapted to seat against the respective hub rings, and one of said hub rings being formed between its bolt holes with recesses adapted to permit the passage through them of one of the sets of lugs, when the box is inserted endwise in the hub rings to assemble the parts, the relation of the recesses to the bolt holes in the lugs and rings being such, that, when the rings and box are shifted circumferentially relatively to each other after the passage of the lugs through the recesses, the bolt holes in the rings will be brought into registry with the bolt holes in the lugs, and fastening bolts extending through said bolt holes and serving to secure the parts detachably together.

1,627,773. FRAME FOR TYPEWRITING MACHINES. OSKAR FISCHER, Berlin-Friedenau, Germany, assignor to N. V. Machina Maatschappij vor Handel en Industrie, Amsterdam, Holland, a Corporation of Holland. Original application filed Jan. 25, 1924, Serial No. 688,399, and in Germany Nov. 4, 1918. Divided and this application filed Apr. 10, 1925. Serial No. 22,062. 4 Claims. (Cl. 197—186.)



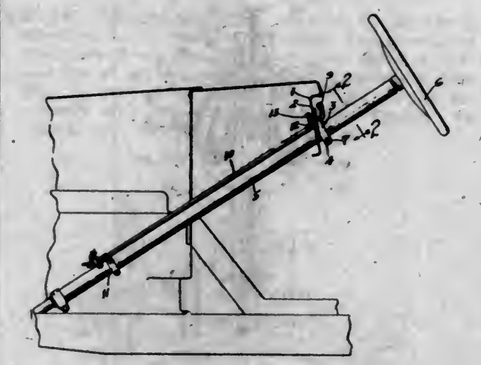
1. A frame for typewriting machines, comprising a top plate, a bottom plate, vertical pillars secured to said plates for connecting the same, rails constituting paper-carriage guideways borne by the top plate, and frame members to which said plates are at their edges secured.

1,627,774. MEANS FOR WASHING LITHOGRAPHIC PRINTING SURFACES. BENJAMIN JOSEPH JOHN GOULDING, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a Company duly registered under the Limited Liability Company's Acts (1862 to 1900) of the British Imperial Parliament. Filed June 3, 1924, Serial No. 717,488, and in Great Britain June 14, 1923. 15 Claims. (Cl. 101—425.)



1. In a rotary lithographic printing press, the combination with a plate cylinder of a power-operated plate washing roller formed with a plurality of co-axial spaced sections each having an operative surface of an absorbent resilient material, and means adapted to bring said operative surfaces into and out of contact with the surface to be washed.

1,627,775. DRIVING CONNECTION BETWEEN A ROTATING SHAFT AND RECIPROCATING PISTON. GEORGE E. A. HALLETT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 23, 1925. Serial No. 39,075. 5 Claims. (Cl. 74—14.)

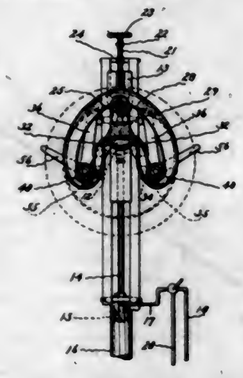


3. In combination, a cylinder, a reciprocating piston therein having a cam face transverse the skirt portion thereof, a crank shaft having a crank throw, a ring having a bearing upon said throw and reciprocated thereby, and a metal spring sufficiently strong to overcome the inertia of the piston at top dead center for holding said piston and ring in contact at all times.

1,627,776. CHAIN COUPLING. CLIFFORD CEDRIC HAUMERSON, Fort Atkinson, Wis. Filed July 26, 1926. Serial No. 125,017. 1 Claim. (Cl. 24—206.)

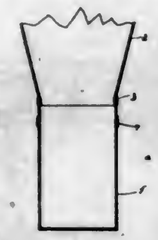
In a device of the class described, a casing including a wall, a latch comprising a foot and a handle disposed at an angle to each other, the handle being in contact with said wall, and projecting outwardly beyond one end of the casing, the latch being provided with an opening located at the angle formed by the foot and the handle, a pivot element mounted in the casing, and engaged with the latch, the pivot element passing across the said opening, a spring engaged around the pivot element, one end of the spring engaging the latch at one end of the said opening, and the other end of the spring bearing against said wall of the casing, and a rack bar insertable into the casing and cooperating with the foot of the latch.

1,627,777. MOUNTING FOR CONTROL LEVERS. ORMOND E. HUNT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 16, 1926. Serial No. 129,681. 6 Claims. (Cl. 74—89.)



1. In a motor vehicle, the combination with an instrument panel and a steering column, of a plate connecting the panel and column, a manually operated lever mounted in said plate, and a work performing shaft extending in a longitudinal plane with said column, and connected with said lever for manual control.

1,627,778. WRENCH. HOWARD M. HUTCHINSON, Brock, Nebr. Filed Dec. 8, 1925. Serial No. 74,067. 1 Claim. (Cl. 81—59.)



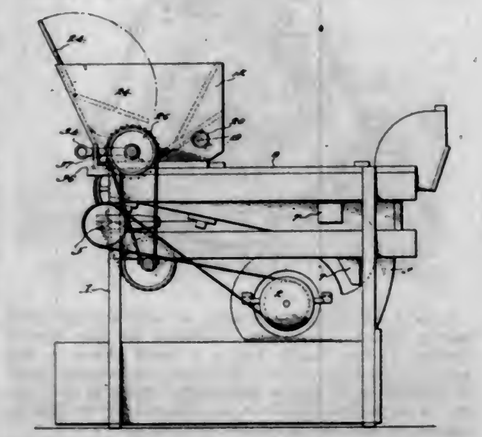
In a wrench of the class described, a handle, a substantially C-shaped jaw, a C-shaped rib formed on the back of the jaw, said rib having channels formed in the opposed faces thereof extending from one end of the C-shaped jaw to a point adjacent the other end, there being ratchet teeth formed in the edge of the rib, said handle including a pair of flat elongated members secured together in face-to-face relation, the inner ends of the members being of C-shape formation and being cut away at the opposite surfaces for receiving the C-shaped rib formed on the jaw, the inner ends of the members comprising the handle having inwardly directed flanges formed thereon for engagement within the respective channels formed in the opposed faces of the rib, said rib being disposed within the cut out portion of the complementary members comprising a handle, said handle being formed with a pocket between the members at a point adjacent the inner end thereof, a dog pivotally arranged within the pocket and having one end in normal engagement with the ratchet teeth, and a pin carried by the dog and extending laterally through one of the side edges of the handle to facilitate the disengagement of the dog from the teeth.

1,627,779. FOLDER FOR PRESSURE BAGS. WILLIAM F. IRRGANG, Chicopee, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 22, 1926. Serial No. 124,195. 4 Claims. (Cl. 18—2.)

1. In a machine for folding pressure bags for insertion in a tire casing a pair of spaced pins adapted to engage the outer periphery of the bag, a pair of folding devices adapted to engage the inner periphery of the bag at points spaced from the pins, and means for moving the folding devices and the pins relatively to each other, whereby the folding devices are caused to move outwardly around the pins to fold the bag around the same.

1,627,780. JOINT BETWEEN METAL AND GLASS AND METHOD OF MAKING THE SAME. GOTTFRIED BRUNO JONAS, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed Apr. 2, 1926, Serial No. 99,426, and in Netherlands May 11, 1925. 7 Claims. (Cl. 49—81.)

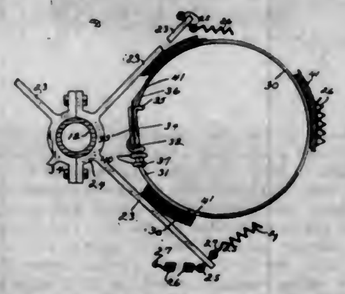
1. A method for making a tight joint, comprising, sealing an alloy of iron, chromium, and aluminum, to glass while in a plastic state.



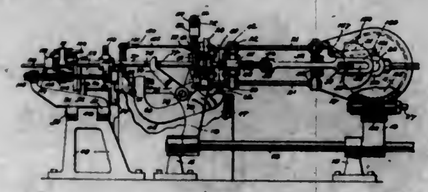
4. An article comprising glass welded to an alloy of iron, chromium and aluminum.

1,627,781. CLOSURE FOR POWDER-DISPENSING CONTAINERS. EDWARD L. KENDALL, Jersey City, N. J., assignor to William G. Kendall, Newark, N. J. Filed June 9, 1926. Serial No. 114,833. 3 Claims. (Cl. 221—62.)

1. A container closure of the class described comprising assembled body and cap members provided in their tops with discharge perforations, a perforated cut-off member slidably disposed between and sustained throughout its area by the tops of the said members and having a finger piece extending through the wall of the cap member, the top of the body member having a slot therein, the said cut-off member having a portion extending downwardly through the slot and provided with an outstanding lug, and a spring leaf disposed against the said portion of the cut-off member and having an opening in which the said lug engages to support the spring leaf, the said spring leaf having portions extending at opposite sides of the said portion of the cut-off member and bearing against the wall of the body member and yieldably holding the cut-off member in position with its perforations out of registration with the perforations of the body and cap members.

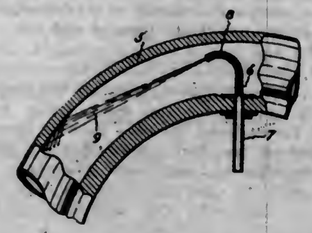


1,627,782. COTTONSEED CLEANER. CHARLES G. KIME, Crestline, Ohio, assignor to The Burch Plow Works Co., Crestline, Ohio, a Corporation of Ohio. Filed Mar. 17, 1926. Serial No. 95,413. 6 Claims. (Cl. 19—41.)



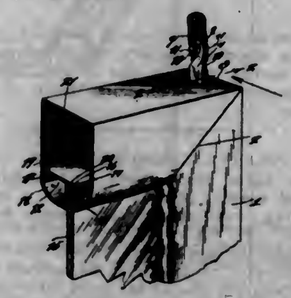
1. In a seed-cleaning machine, a hopper, a feeding drum rotatably mounted in the hopper and provided with projections upon its circumferential surface, and a brush mounted in the hopper at the bottom thereof in the path of the projections on the drum.

1,627,783. LINOLEUM-DISPLAY RACK. HERBERT F. KLEIN, Deerfield, Wis. Filed Mar. 13, 1925. Serial No. 15,191. 8 Claims. (Cl. 242—72.)



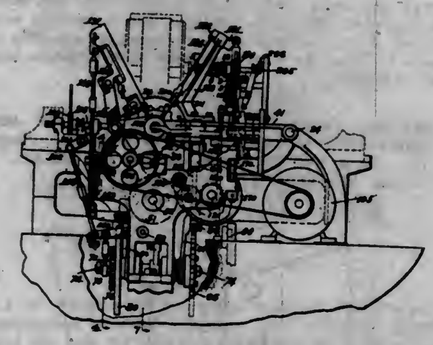
1. In a device of the character described, a ring of wire formed integrally to provide a clip, said clip including a work engaging portion positioned to receive work disposed tangentially of said ring.

1,627,784. DIE-CASTING MACHINE. TORBJORN CONRAD KORSMO, Madison, Wis., assignor to Madison-Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed June 28, 1926. Serial No. 119,143. 21 Claims. (Cl. 22—69.)



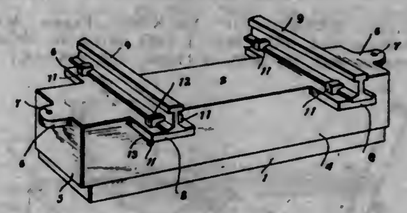
1. The combination with a die casting machine of the type in which the molten metal is forced into the die by gas under pressure entering through a pressure connection, of a movable abutment interposed in said connection and controlling flow therethrough; and means for regulating the movement of said abutment.

1,627,785. METHOD OF VULCANIZING TIRES. STANLEY KRALL, Longmeadow, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 30, 1926. Serial No. 132,398. 3 Claims. (Cl. 18—53.)



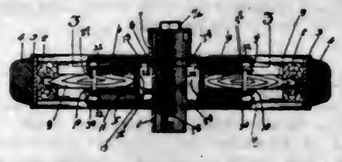
1. A process of vulcanizing a pneumatic tire which comprises locating the tire in a mold, placing within the tire an annular hollow pressure bag formed with a single valve-stem having its inner end tangentially directed and provided with a restricted opening, subjecting the outside of the mold to heat, and admitting to the inside of the bag steam at a pressure corresponding to a temperature greater than that to which the exterior of the mold is heated.

1,627,786. CONNECTER FOR SASH AND SASH CORD. GEORGE W. LANCASTER, Richmond, Va. Filed Apr. 11, 1923, Serial No. 631,417. Renewed Mar. 26, 1927. 4 Claims. (Cl. 24—232.)



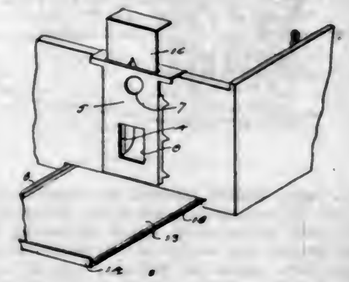
1. A connecter adapted for use in connection with a sash rail, comprising opposed flat plate ears normally in parallelism and adjacent each other, said ears being slotted reversely to form adjacent opposed hooks, whereby upon spreading the ears flatwise from each other and permitting a partial turn to a sash chain link, it may simultaneously engage with both hooks, and means for attaching the ears to the sash rail.

1,627,787. BRUSH MACHINE. ARTHUR W. LE BOEUF, Brooklyn, N. Y., assignor, by mesne assignments, to Northboro Brush Company, Northboro, Mass., a Corporation of Massachusetts. Original application filed May 22, 1916, Serial No. 99,100. Divided and this application filed Jan. 2, 1923. Serial No. 610,124. 26 Claims. (Cl. 300—2.)



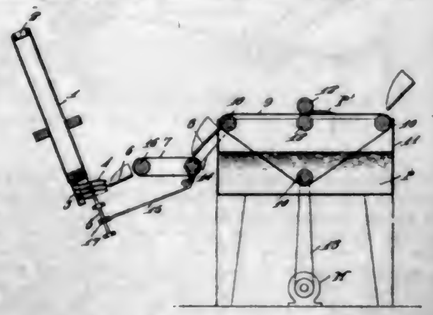
1. In a brush making machine, the combination of a brush turret for supporting brush blanks, means for moving said turret up and down, means for moving the turret longitudinally, and means for intermittently rotating the turret, with means for drilling a hole in the brush blank on one side of the turret in each position, and means for setting a tuft of bristles in the brush blank when in a diametrically opposite position.

1,627,788. RAILROAD TIE. EDWARD A. LOCKWOOD, Zanesfield, Ohio. Filed Aug. 18, 1926. Serial No. 130,051. 1 Claim. (Cl. 238—48.)



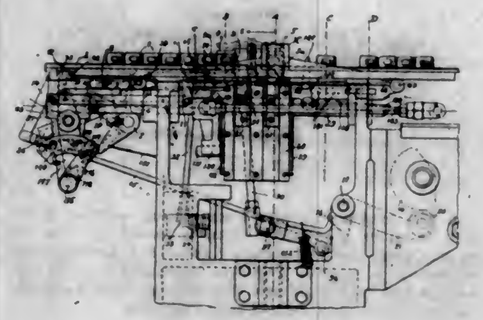
A railroad tie comprising an open-top box having a transverse partition therein integral with its side walls and having its upper edge flush with the upper edges of the side walls of the box, a cover extending over the entire box and having depending walls fitting around the sides and ends of the box, laminated cushioning material entirely filling the box and extending across the upper edges of the walls of the box and the partition and filling the space between said edges and the under side of the cover, supporting plates integral with and projecting laterally from the sides of the cover flush with the top of the same, and rail-anchoring elements extending through said plates and secured at the under sides thereof.

1,627,789. RESILIENT WHEEL. HUGH C. LOAD, Erie, Pa. Filed Feb. 9, 1921. Serial No. 446,244. 45 Claims. (Cl. 152—28.)



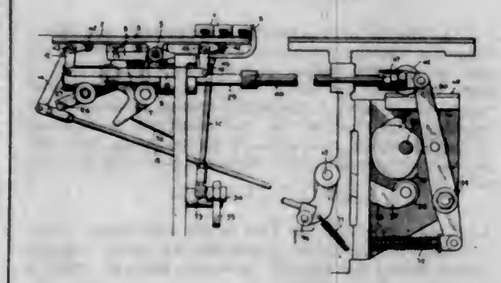
9. In a wheel, the combination of a hub member; a rim member, said members having radially overlapping portions spaced apart; and a resilient axially extending rubber tension connection between the wheel members, said connection being subjected to tension with the initial movement of the wheel members, said connection being formed of a plurality of tension strands thinner than the space between the wheel members, said elements being out of contact.

1,627,790. CIGAR-TIP CUTTER AND CIGAR BOX. THEODORE K. MACORN and JOSEPH A. POZERA, Ziegler, Ill. Filed Feb. 19, 1924. Serial No. 693,821. 6 Claims. (Cl. 131—66.)



2. A container for cigars, a cigar cutter applied to an enclosing wall of the container, and a tray slidably mounted upon the bottom of the container to close thereunder and adapted to receive the cuttings as the tips are severed from the cigars, said cutter having means operating to hold the tray in closed position, and the cutter in turn being held pressed inwardly by the lid of the container.

1,627,791. METHOD OF PACKING. FRANK MACY, Converse, Ind. Filed Mar. 1, 1924. Serial No. 696,309. Renewed Mar. 26, 1927. 1 Claim. (Cl. 226—14.)

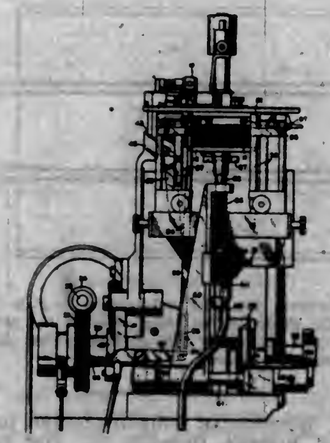


The herein described method of preparing and packaging bottle caps and the like which consists in impregnating the caps with paraffin and delivering them, while hot, upwardly into the open lower end of a container, said container being sealed at its upper end.

1,627,792. FEEDING DEVICE. FRANCIS X. MALOCSAY, Upper Saddle River, N. J., assignor to International Banding Machine Company, a Corporation of New York. Filed May 21, 1923. Serial No. 640,463. 18 Claims. (Cl. 131—61.)

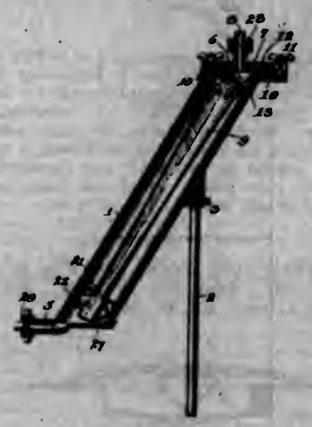
1. In a combined cigar feeding and banding machine, means for moving toward feeding position a row of packed cigars bearing a definite relation toward each other, and means for actuating said cigars one at a time from feeding position to banding position without changing the rotative relationship of the respective actuated cigars to the remaining cigars of said row.

1,627,793. AUTOMATIC FEEDING MECHANISM. FRANCIS X. MALOCSAY, Upper Saddle River, N. J., assignor to International Banding Machine Company, a Corporation of New York. Filed May 21, 1923. Serial No. 640,465. 13 Claims. (Cl. 131—61.)



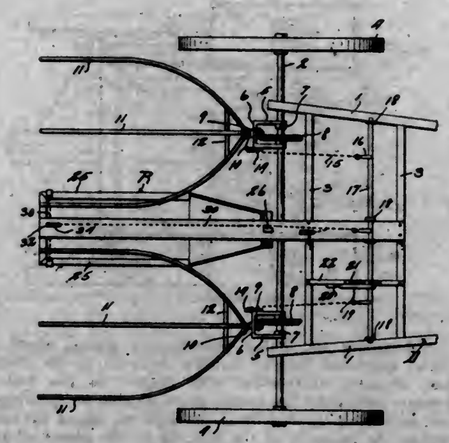
1. In a device of the character described, means for feeding a row of articles one at a time to feeding position, comprising feeding members and a gage member, and means for imparting a substantially elliptic movement to said members.

1,627,794. CIGAR-BANDING MACHINE. FRANCIS X. MALOCSAY, Upper Saddle River, N. J., assignor to International Banding Machine Company, a Corporation of New York. Filed July 26, 1923. Serial No. 653,831. 57 Claims. (Cl. 131—61.)



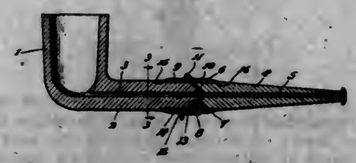
1. In a cigar banding machine, a band carrier adapted to hold a stack of bands, means for spacing the outermost band from the rest of the stack, said carrier having means for supporting the said outermost band and means for applying gum to said outermost band.

36. In a cigar banding machine, a gum applying device, a band stack carrier, means for spacing the outermost band above said stack, means for causing said spaced band to engage said device, and a support beneath said spaced band.



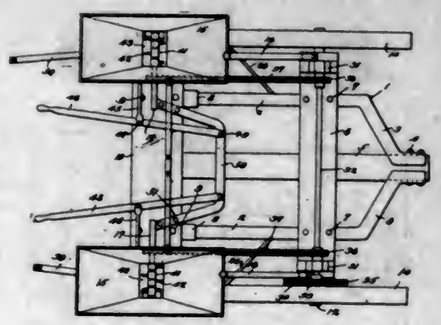
50. In a cigar banding machine, a band stack carrier, means for reciprocating said carrier, and means adapted to engage an edge of said stack during said reciprocation to separate the bands of said stack.

1,627,795. MILK FILTER. ROY A. MANNING, Rutland, Vt., assignor to The Manning Manufacturing Company, Rutland, Vt. Filed June 19, 1926. Serial No. 117,102. 9 Claims. (Cl. 210—154.)



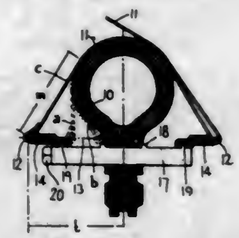
1. A milk filter comprising a container having an opening at top and bottom, a support arranged to carry the container at an angle thereto, a filtering sack within the container, means in the lower portion of the container for forming a sediment trap in the sack, a cap for the top opening of the container, an opening in the cap for admitting milk to the filtering sack, the opening at the bottom of the container being adapted for allowing filtered milk to flow from the container.

1,627,796. MACHINE FOR COLLECTING BUGS. ROBERT MARTIN, Fort Francis, Ontario, Canada. Filed May 8, 1926. Serial No. 107,748. 3 Claims. (Cl. 43—42.)



1. A machine of the class described comprising, in combination, a wheel supported axle, a bracket engaged with the axle for swinging movement about the axle, a revoluble striking element carried by the bracket and disposed rearwardly of the machine, said axle rotating when the machine is in transit, a driving connection between the axle and revoluble element, means for swinging the bracket to raise the element, a frame structure operatively engaged with the axle, a rearwardly disposed beam carried by said frame structure and extending along one side of the revoluble element, a receptacle positioned below the beam, flexible members coacting with the beam and receptacle for supporting said receptacle, the means for swinging the bracket also imposing pull upon said flexible members when the bracket moves upwardly to lift the receptacle.

1,627,797. PIPE. WILLIAM J. MATTERN, Lewistown, Pa. Filed Jan. 26, 1926. Serial No. 83,895. 1 Claim. (Cl. 131—12.)



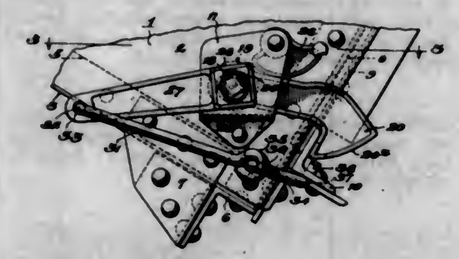
A smoking device including a stem, a mouth piece adapted to be disposed in end to end contact with said stem, sleeves fitted tightly about the stem and mouthpiece and hingedly connected to mount the mouth-piece for swinging movement towards and away from the end of the stem, the free end portion of said stem being projected from the sleeve mounted thereon and tapered and the mouth-piece having a portion enclosed by said sleeve recessed to snugly receive the tapered portion of said stem, and a latch carried by one sleeve and adapted to engage the other sleeve and releasably hold the mouthpiece in operative relation to the stem.

1,627,798. FERTILIZER DISTRIBUTOR. GEORGE H. MCTYRE, Daingerfield, Tex. Filed Apr. 11, 1924. Serial No. 705,906. 1 Claim. (Cl. 111—59.)

A fertilizer distributor embodying a ground wheel, a frame supported thereby, handles mounted on the frame and extended rearwardly with respect to the frame, hoppers carried by the frame, gates slidable on the frame and governing the flow from the hoppers, means for conveying the contents of the hoppers to the places of application, a bracket carried by the frame and located between the hoppers, the bracket extending forwardly from the rear portion of the frame, levers located between the hoppers and prolonged rearwardly beneath the handles, the levers being fulcrumed at their forward ends on the intermediate portion of the bracket for horizontal swinging movement, outwardly extended links pivoted at their inner ends directly to the levers, and means for connecting the outer ends of the links directly and pivotally to the gates.

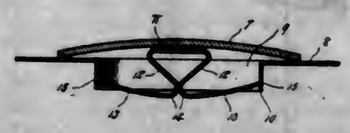
1,627,799. TIRE CONSTRUCTION. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Dec. 9, 1922. Serial No. 605,776. 7 Claims. (Cl. 154—14.)

1. A method of constructing multi-ply tires of substantial horse-shoe cross-section which comprises placing successive layers of material, anchoring the bead edges of each layer of material with a relatively inextensible anchorage while the bead edges of that layer are held out from their ultimate positions, and moving the bead edges of each layer after it is laid and before the laying of the succeeding layer, so that successive piles will, when finally shaped into the horseshoe cross-section be tensioned to the desired degree.



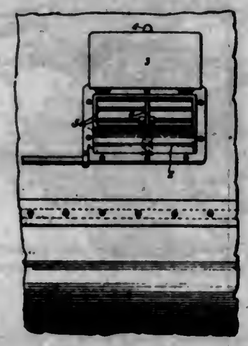
1,627,800. RAILWAY CROSSING. HERBERT MILLS, San Antonio, Tex. Filed Oct. 30, 1926. Serial No. 145,244. 2 Claims. (Cl. 238—8.)

1. In a trackway crossing, pairs of blocks secured to the opposite sides of the rails of the trackway, inclined plates disposed upon the upper edges of the blocks at the outer sides of said rails, hinge rods interconnecting said plates and said blocks, and a horizontal plate



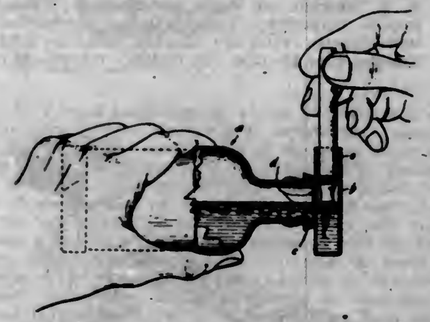
disposed between the rails and secured by rods passing through the blocks at the inner sides of the rails and members upon the under side of said center plates at the opposite edges thereof.

1,627,801. HOPPER-CAR DOOR-OPERATING DEVICE. EDWIN C. MITCHELL, Greenville, Pa. Filed Jan. 25, 1926. Serial No. 83,638. 7 Claims. (Cl. 105—308.)



7. In a railway car door operating and locking means, a door arm carried by the door, a supporting bracket carried by the car, a shaft journaled through the bracket, a door hook pivoted on the shaft and cooperating with the door arm, coacting means on the shaft and door hook for swinging the latter when the former is rotated, and an arm pivoted on said shaft and connected with the door arm, said second named arm being movable independently of said shaft.

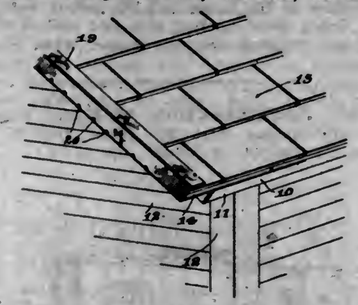
1,627,802. ATTACHING MEANS. DE WITT T. MOATS, Columbus, Ohio. Filed Nov. 12, 1926. Serial No. 147,997. 5 Claims. (Cl. 40—20.)



1. The combination with an object to bear against another object across an opening therein, of a resilient device carried by the first named object having converging portions projecting from the first named object and having portions extending away from one another from said converging portions and adapted to be sprung toward the first named object when entering said opening so that their ends engage and bite the wall of the opening and resist movement out of the opening.

1,627,803. SOAP DOOR FOR WASHING MACHINES. EMANUEL J. PERRY, New Bedford, Mass., assignor to Perry Laundry Machinery Company, Fairhaven, Mass., a Corporation of Massachusetts. Filed May 14, 1926. Serial No. 109,148. 4 Claims. (Cl. 68—37.)

1. A soap feeding and holding device comprising a casing, a closure therefor, and a scraping device conforming to the contour of the inner wall of the casing for removing soap deposits from said wall.



1,627,804. COMBINED STOPPER AND PEN-FILLING ATTACHMENT FOR INK BOTTLES. ARTHUR D. PLATT, Portland, Oreg. Filed Mar. 11, 1925. Serial No. 14,712. 4 Claims. (Cl. 215—57.)

1. The combination with a fluid container, of a member adapted to be removably secured to the mouth of such container and including an auxiliary fluid receptacle open at one end and closed at the other and formed for communication with the container through a fluid transferring duct and an air transferring duct, the connection between the fluid container and auxiliary receptacle permitting the passage of the fluid from the container to the receptacle in a predetermined position of the former and automatically cutting off such passage when the air transferring duct is sealed by the fluid in the auxiliary receptacle.

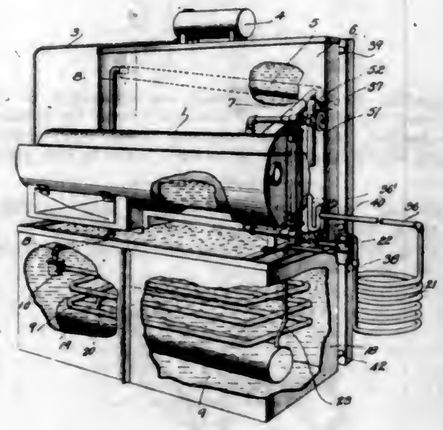
1,627,805. COMBINED SHINGLE SUPPORT AND CORNICE-PROTECTING DEVICE. JOHN E. RICHARDS, Peckville, Pa. Filed July 27, 1926. Serial No. 125,267. 2 Claims. (Cl. 108—26.)

1. In combination with a roof and cornice, a shingle support comprising a metallic plate having integrally formed therefrom a portion adapted to be fastened to the roof in some suitable manner, a downwardly extending flange adapted to abut against the edge of the cornice, a section for projecting beyond the edge of the roof thus protecting the roof against adverse weather conditions, an upwardly extending element along the outer edge of the section adapted to serve as a guide for the edge of the shingles as they are laid, an inwardly

extending clinching portion along the upper edge of the element for the purpose of securely holding the shingles in position, the section, clinching portion and element being formed approximately at right angles to each other.

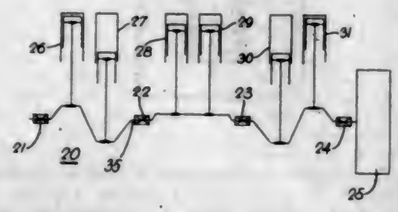
1,627,806. NONSLIP ATTACHMENT FOR AUTOMOBILE WHEELS. JOHN D. ROSS, Washington, D. C. Filed Jan. 19, 1927. Serial No. 162,168. 2 Claims. (Cl. 152—14.)

1. A non-slip unit of the character described comprising a curved plate or resilient material which conforms to the periphery of the tire, calks carried by said plate, U-shaped anchoring elements engaged with said plate of a size to embrace a tire transversely of the plate and a chain at each side of said unit extending lengthwise thereof and connecting the inner ends of the said anchoring elements, and placed under tension by the resiliency of the curved plate.



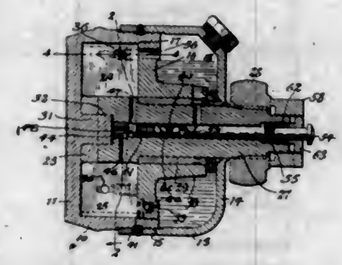
1,627,807. CAN FOR GASOLINE OR THE LIKE. HELEN MAR ROUSSIN, Providence, R. I. Filed Oct. 9, 1926. Serial No. 140,490. 1 Claim. (Cl. 220—86.)

As a new article of manufacture, a container having a depression in one of its walls to provide a pocket, the bottom of the pocket having a threaded opening, a funnel adapted to have endwise movement through said opening, the opposite end portions of the funnel having external threads for engagement with the threaded opening, means for limiting the endwise movement of the funnel in either direction with respect to the bottom



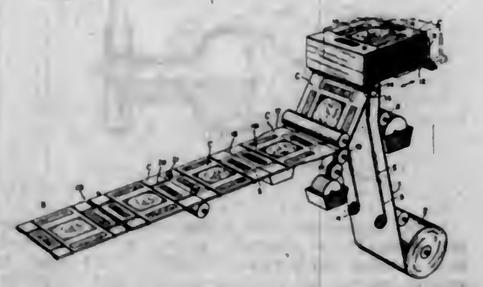
wall of the pocket, a removable plug for closing the funnel, means carried by said plug and engageable with the funnel to impart rotation to the funnel to effect or release the threaded engagement between the opposite end portions of the funnel and the bottom wall of the pocket, and a cover coacting with said wall of the container and disposed over the pocket when in closed position.

1,627,808. REFRIGERATION SYSTEM. RALPH E. SCHURTZ, Kansas City, Mo. Filed July 27, 1923. Serial No. 654,180. 9 Claims. (Cl. 62—5.)



1. In a refrigerating machine, a still-absorber, a condenser, and an evaporator all connected in an operative cycle, a return cooling conduit outside the still-absorber through which fluid from within the still-absorber circulates to reduce the temperature within the still-absorber, and thermal means for vaporizing the fluid in the return conduit to create local pressure in the conduit to interrupt the flow thereto.

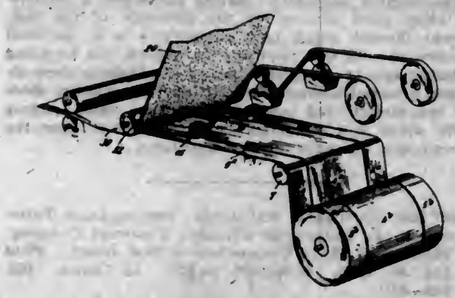
1,627,809. CRANK SHAFT. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 16, 1926. Serial No. 129,490. 6 Claims. (Cl. 74—38.)



1. A crankshaft comprising portions secured together by means coaxial with the crankshaft and of greater torsional flexibility than other portions of said crankshaft.

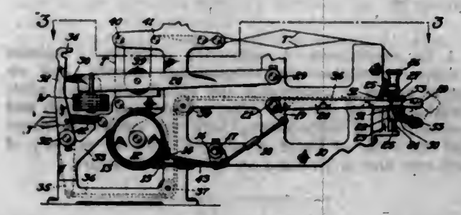
1,627,810. SHOCK ABSORBER. ALBERT B. SHULTZ and ANTHONY B. CASPER, Buffalo, N. Y., assignors to Houde Engineering Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 8, 1926. Serial No. 107,595. 4 Claims. (Cl. 188—89.)

1. A shock absorber, comprising a pressure chamber, a piston oscillating in said chamber and having a hub provided with a passage leading from one side of said piston to the other and a valve seat in said passage, a valve member movable toward and from said valve seat, means for adjusting said valve member relatively to said seat, and spring means for yieldingly holding said valve member in its adjusted position.



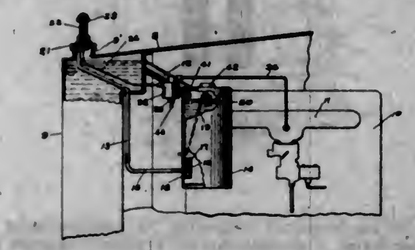
1,627,811. METHOD OF PRODUCING BOXES AND BOX BLANKS. HARRY BRIDGMAN SMITH, Brooklyn, N. Y., assignor, by mesne assignments, to Hoague-Sprague Corporation, Lynn, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1923, Serial No. 612,171. Renewed June 25, 1926. 21 Claims. (Cl. 93—36.)

1. A method of producing printed box blanks, comprising advancing a continuous web of shell material, adhesively conditioning a surface thereof, advancing successively individual printed sheets, securing the successive sheets to the adhesive surface of the web, and severing the web assembly at regular intervals to produce individual printed blanks.



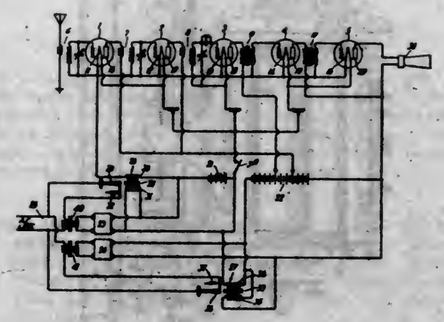
1,627,812. METHOD OF PRODUCING BOXES AND BOX BLANKS. HARRY BRIDGMAN SMITH, Brooklyn, N. Y., assignor, by mesne assignments, to Hoague-Sprague Corporation, Lynn, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1923, Serial No. 612,172. Renewed June 25, 1926. 21 Claims. (Cl. 93—36.)

1. A method of producing box blanks, comprising concurrently advancing two or more strips of box forming material, applying connecting strips to secure the first named strips together, applying and securing a cover



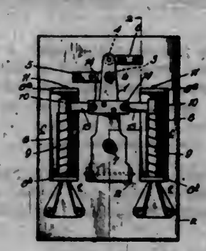
sheet and severing the continuous assembly so produced at regular intervals to form individual box blanks.

1,627,813. BALANCED LET-OFF FOR LOOMS. KENNETH J. UNWIN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1925. Serial No. 63,176. 8 Claims. (Cl. 139—104.)



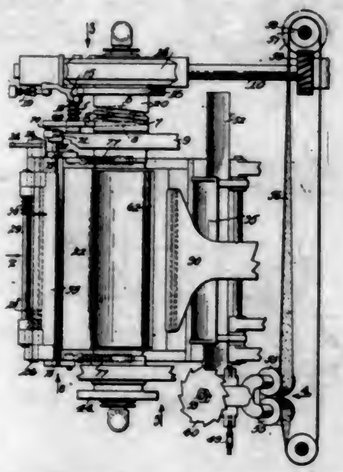
1. In a let-off mechanism for a loom having a pair of alternately operative devices each capable when operative of exerting the same tension on the warp, means to hold one of said devices normally inoperative to tension the warp, means normally acting to cause the other device to exert tension on the warp, an element connected to the last named means effective to cause said last named means to exert a predetermined tension on the warp, said element being movable to increase the tension exerted by said other device, and a member to move the element to increase the tension exerted by said other device to prevent the latter from delivering warp and operatively connected to the first named means to render operative the device normally inoperative to tension the warp.

1,627,814. RADIATOR REFLOW DEVICE. ELLING O. WEEKS, Milwaukee, Wis. Filed Jan. 21, 1921. Serial No. 438,913. 9 Claims. (Cl. 123—25.)



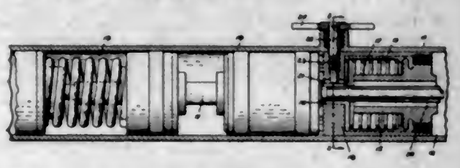
1. An internal combustion engine having a liquid cooling system, a supply tank for maintaing a normal supply of liquid in the system, and a transparent tubular sight device visible from the driver's seat and included in the liquid circuit and through which the liquid flows from the tank to the system.

1,627,815. RADIO BATTERY CHARGER. CARLETON T. WEIBLER, La Grange, Ill., assignor to All-American Radio Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1926. Serial No. 150,534. 5 Claims. (Cl. 250—27.)



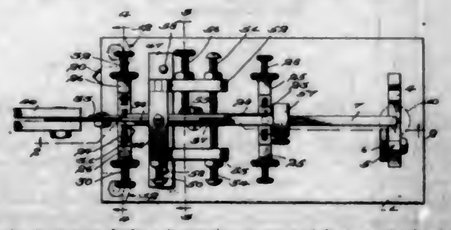
1. In combination, a radio receiver comprising thermionic tubes, a current supply battery for said tubes, a source of charging current for said battery, means responsive to the potential of said battery for connecting the charging source therewith, and means actuated when the radio receiver is taken into use for disabling said last mentioned means.

1,627,816. THERMAL LIMIT RELAY. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 16, 1925. Serial No. 23,526. 4 Claims. (Cl. 200—122.)



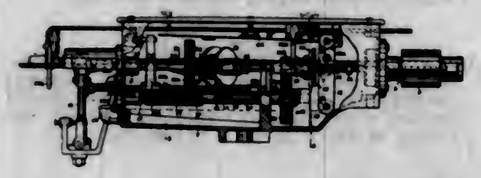
1. In a circuit controlling device, a thermostat comprising a suitable support, a housing on said support composed of a flat bi-metallic strip wound into the form of a helix the convolutions of which fit closely together and form a tube, and a part closing one end of said tube, the other end of said tube being open, said housing having its open end secured to the support and having its closed end uppermost, and an electric heating element insertable through said open end into the housing.

1,627,817. CASTING AND FINISHING MACHINE FOR CURVED STEREOTYPE PRINTING PLATES. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 17, 1923, Serial No. 632,639. Renewed Dec. 27, 1926. 39 Claims. (Cl. 22—3.)



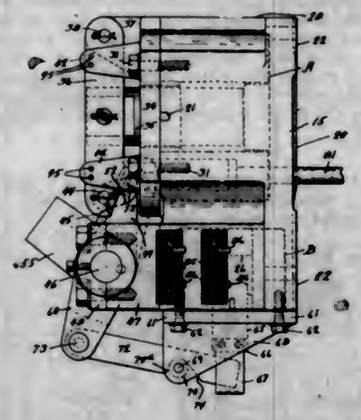
1. The combination with a stereotype plate casting back, of a core rotatable therein, means for starting the core to rotate, and means for automatically stopping the core when it has completed two full revolutions.

1,627,818. CONTROL VALVE FOR RECUPERATOR MECHANISMS. HARRY C. ZIMMERMAN, Washington, D. C. Filed Nov. 27, 1926. Serial No. 151,217. 2 Claims. (Cl. 89—43.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



2. A recuperator including a cylinder, a floating piston within the cylinder provided with a throttling bar, a block within the cylinder provided with a throttling orifice, and an auxiliary manually controlled valve mechanism in the block.

1,627,819. TELEGRAPH TRANSMITTER. JOHN R. YOUNGBLOOD, New Orleans, La. Filed Apr. 16, 1926. Serial No. 102,500. 10 Claims. (Cl. 178—108.)



1. A transmitting instrument comprising a single insulating base, a relatively large metallic plate applied to the underside of the base and being connectible with one side of a circuit, relatively small brackets mounted upon the base and in connection with said plate, a relatively large metallic manipulator having contactors, a relatively small plate situated on the underside of the base, means through which said manipulator is in electrical connection with said relatively small plate, the foregoing relative size of parts establishing a relatively even division of metal between the parts on the respective sides of the circuit, and contacts carried by said brackets with which said contactors are engageable to close the circuit upon operation of the manipulator.

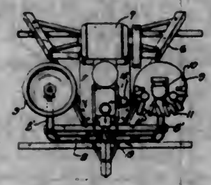
1,627,820. QUILLING MACHINE. GEORGE ADSIT, Paterson, N. J., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 30, 1926. Serial No. 84,877. 14 Claims. (Cl. 242—31.)

1. In combination, a supporting structure, a spindle structure revoluble and reciprocatory therein, and coacting means to reciprocate the spindle structure while rotating one of which is a barrel cam arranged on and concentric and reciprocating with the spindle structure and the other of which is engaged with the camway of said cam and is arranged on the other structure.

1,627,821. ELECTROMAGNET. CHESTER D. AINSWORTH, Wollaston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 1, 1922. Serial No. 585,672. 23 Claims. (Cl. 200—101.)

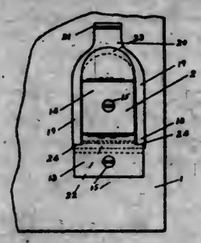
1. An electro-magnet comprising the combination of a magnet frame, a solenoid therein, a plunger operable in the solenoid, a pivoted lever connected with said plunger intermediate its length and pivoted to said frame at one side of said plunger, and a rotatably supported operating shaft disposed at the other side of said plunger and having an arm arranged for engagement with said pivoted lever said shaft having an extension disposed at one side of said arm and having a second arm on said extension.

1,627,822. HOME SAVINGS BANK. VERNE P. ALEXANDER, Chicago, Ill., assignor of one-half to Ollie L. Herron, Chicago, Ill. Filed Jan. 22, 1926. Serial No. 83,127. 6 Claims. (Cl. 232—4.)



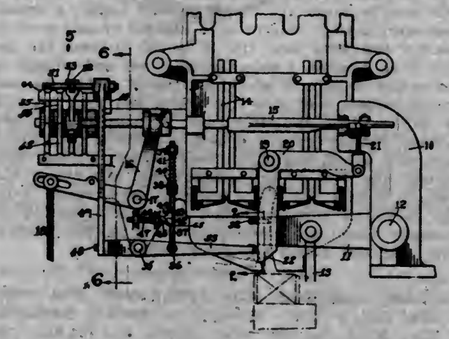
1. A bi-directional clamp for an assembly of superposed articles comprising a set of jaws carried by the foremost article, said jaws being movable to exert pressure in one direction whereby to clamp the intermediate articles to said foremost article and concurrently in the direction of the rearmost article to clamp the same.

1,627,823. RADIOJACK. RALPH M. C. R. AUGUST, Great Kills, N. Y., assignor, by mesne assignments, to L. A. Florence, Teaneck, N. J. Filed Feb. 3, 1925. Serial No. 6,560. 9 Claims. (Cl. 179—96.)



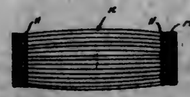
8. A flat slotted insulating radio jack body having flat contacts edge to edge crossing the slot of the body transversely thereof.

1,627,824. DAIRY-EQUIPMENT CLEANER. BRUCE F. BEATY, Waukesha, Wis., assignor to The Universal Milking Machine Co., Waukesha, Wis., a Corporation of Wisconsin. Filed June 21, 1926. Serial No. 117,436. 2 Claims. (Cl. 141—1.)



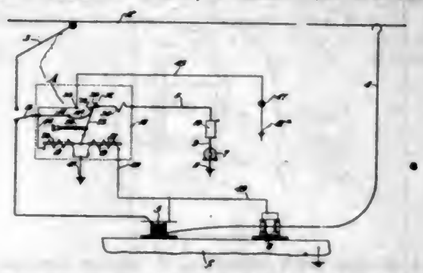
1. A dairy equipment cleaning device comprising a tank, a support adapted to receive a milking machine pulsator unit with the cup leads immersed in said tank, and a pump in communication with the tank and the support.

1,627,825. DOOR CATCH. KENNETH H. BECK and EDWARD H. BLACKBURN, Pittsburgh, Pa. Filed July 6, 1925. Serial No. 41,477. 7 Claims. (Cl. 292—109.)



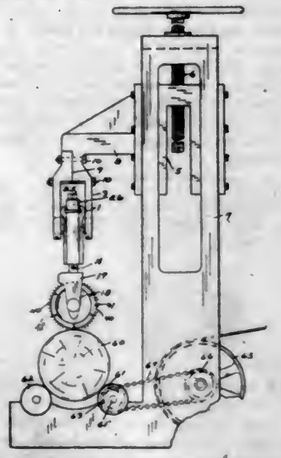
1. A door catch comprising a member arranged to be secured to the face of a door and having a seat in the upper portion thereof, and a latch member loosely mounted in a recess of said door member and arranged to be brought into a position of rest on said seat, said latch member being arranged to be lifted and rotated outwardly therefrom.

1,627,826. INTERMITTENT FEELER IN TRANSFERRER. HAROLD L. BLANCHARD, Millbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1925. Serial No. 64,756. 11 Claims. (Cl. 139—271.)



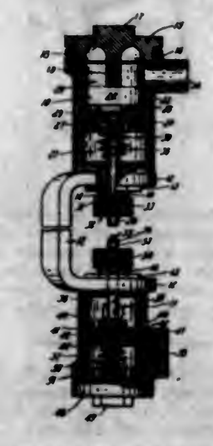
1. In a weft detecting mechanism for looms, a weft detector, a support for said detector to move the latter toward the weft supply on detecting beats of the loom, means normally at rest to be operatively connected to the detector as the latter is moved toward the weft supply and operative when so connected to move the detector into contact with the weft supply, and a device to hold said means out of position to be operatively connected with the detector when a relatively large amount of yarn is present.

1,627,827. PACKING PAD. HERBERT J. BLOCKI, Sheboygan, Wis. Filed Feb. 11, 1924. Serial No. 691,961. 2 Claims. (Cl. 206—46.)



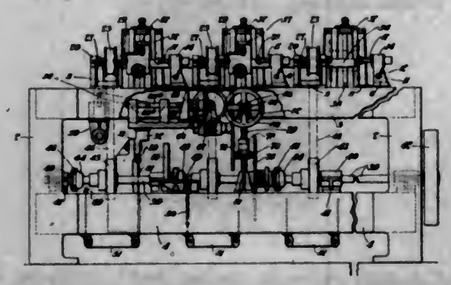
1. As a new article of manufacture, a bundle of packing pads of the character described, each of said pads having open ends and being disposed with its open ends in alignment with other pads of the bundle, and each of such ends of said pads being adherent to the ends of adjacent pads, whereby said bundle will retain its form without securing cords.

1,627,828. AUTOMATIC SAFETY BREAKER. LADURA ALEXANDER BROWN, Uniontown, Pa. Filed Nov. 6, 1925. Serial No. 67,300. 3 Claims. (Cl. 175—294.)



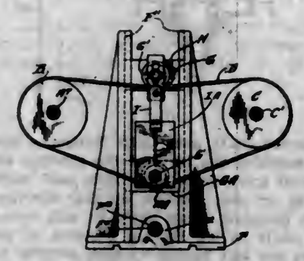
1. In combination with a machine, a motor for operating the machine, a single wire supply circuit for the motor including a cable leading from a source of current supply, a reel for said cable, a cable guide, said cable reel and cable guide being insulated from the remainder of said machine, a safety switch through which the positive lead to said motor passes, said switch comprising a casing, a stationary contact having a lead to the motor, a movable contact arm connected by suitable leads to said cable and normally in contact with said stationary contact, a magnet coil and plunger adapted to be energized by the current flowing through said cable reel and cable guide when said cable is grounded thereon, said coil and plunger being adapted to move said contact arm to break the circuit to said motor, a second stationary contact adapted to be engaged by said movable contact arm when said arm is caused to break the circuit to said motor, a second magnet coil and plunger, a connection from said second stationary contact to said second magnet coil, said last named coil being adapted to be energized by the current flowing through said movable contact arm and to hold said arm in engagement with said second named stationary contact whereby said contact arm will not again engage said first named stationary contact until said cable is disconnected from the source of current supply, and means tending to normally force said movable contact arm into contact with said first named stationary contact.

1,627,829. METHOD AND APPARATUS FOR PRESERVING POSTS. MAURICE E. BROWN, Marinette, Wis. Filed Aug. 28, 1924. Serial No. 734,812. 10 Claims. (Cl. 144—2.)



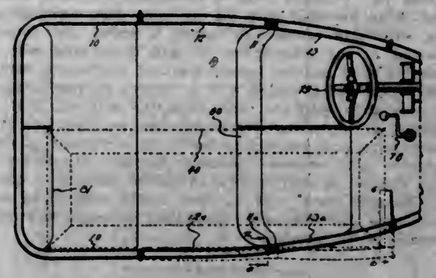
1. A wood perforator comprising the combination of a holder, an adjustable support therefor, a set of rotary wheels provided with peripherally projecting perforating devices, and means for rotating a wooden post in pressure contact with said perforating devices, each of said wheels being adapted to yield independently of the others in accordance with the pressure exerted thereon and each of said perforating devices being adapted to oscillate to a limited extent substantially in the plane of wheel rotation to allow it to be withdrawn from the wood by the rotating wheel substantially along the line of penetration.

1,627,830. VALVE CONSTRUCTION FOR AUTOMATIC HOT-WATER HEATERS. JOSEPH W. BUCKLEY, Springfield, Mass. Filed Nov. 15, 1926. Serial No. 148,415. 3 Claims. (Cl. 236—25.)



1. A water valve for instantaneous water heaters comprising a chamber having a main portion and an enlarged end portion, an inlet opening into the main portion and an outlet opening out of the enlarged portion, a piston sliding in the main portion, connections operable to open a gas valve when the piston is projected into the enlarged portion of the chamber, said piston having an annular recess intermediate of its length and vents leading into said recess from the end of the piston remote from the enlarged portion of the chamber, whereby the water flow will be through the vents and the recess into the enlarged portion of the chamber.

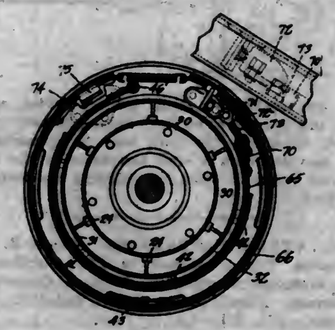
1,627,831. SPOOLING MACHINE. HERBERT S. BUSBY and WARREN A. HALLSTROM, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Oct. 18, 1926. Serial No. 142,341. 10 Claims. (Cl. 242—25.)



1. A spooling machine comprising in combination a main frame, at least one head stock and one tail stock mounted on said frame, a reel adapted to carry a bundle of wire to be spooled, said reel being mounted at the rear of the main frame and being tiltable forwardly toward said main frame and head and tail stocks, means for driving said head stock, means for controlling said driving means to operate and stop operation of said head stock, and means for automatically operating said control means to stop the operation of said head stock when said reel is tilted forward.

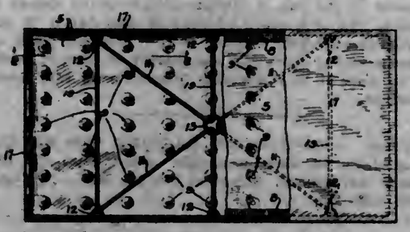
1,627,832. SPEED REGULATION. CHARLES E. CARPENTER, New York, N. Y. Filed Aug. 24, 1921, Serial No. 495,126. Renewed Jan. 7, 1925. 7 Claims. (Cl. 172—293.)

1. In a system comprising a motor, a synchronizing shaft, a pulley driven by the motor, a pulley driven by the shaft, a belt looped about the pulleys, the improved means for maintaining a definite speed relation between the motor and shaft consisting of a motor speed regulator, and means controlled by variations in the length of said belt between given points, resulting from variations in the relative speeds of said pulleys, for adjusting said regulator as required.



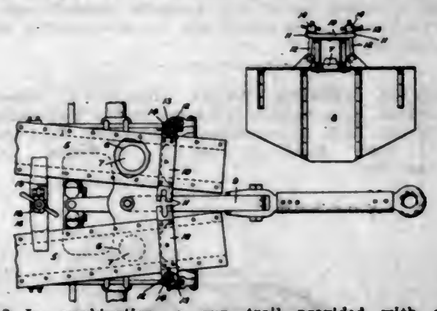
1,627,833. CONVERTIBLE PASSENGER VEHICLE AND CASKET COACH. HARRY A. CHANDLER, Sioux City, Iowa. Filed Oct. 25, 1926. Serial No. 143,983. 10 Claims. (Cl. 296—16.)

1. A convertible vehicle body, having a normal width at its forward extremity which is less than the width at it rear extremity, a pair of doors hinged in one side of said body, a post separating the doors, the doors and post being movable to bring them into a common plane parallel to the longitudinal axis of the body and alinged with the widest portion of the side wall of the vehicle.



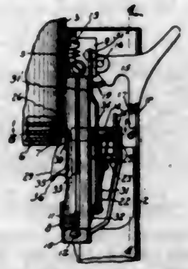
10. In combination with a vehicle body having upper and lower sills provided with slotted cavities, a post having protruding elements comprising a tongue at one end received in one of the cavities, a spring-urged bolt received in the other cavity, said bolt being retractable to allow removal of the post, a bracket having a slotted arm to receive one of said protruded elements and a socket secured to the vehicle body to receive another arm of said bracket.

1,627,834. VEHICLE BRAKE. THERON P. CHASE, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 14, 1924. Serial No. 699,252. 6 Claims. (Cl. 188—140.)



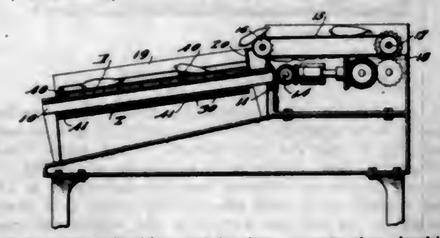
1. A brake comprising, in combination, a drum, a floating ring inside the drum, centrifugal means frictionally engaging the ring to cause it to rotate with the drum, a driver-controlled servo device arranged to engage and be operated by the ring, and a brake member arranged to be moved by the servo device into engagement with the drum.

1,627,835. PNEUMATIC BED. ROBERT LEE COMBS, Herington, Kans. Filed June 14, 1923. Serial No. 645,394. 2 Claims. (Cl. 5—350.)



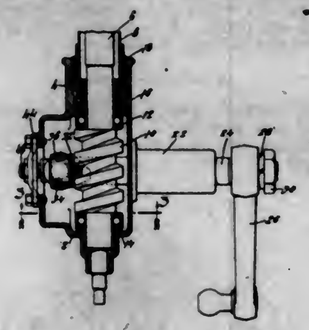
1. A pneumatic bed, comprising an air tight casing adapted to be inflated and having a series of eyes secured internally to the top and bottom, lacing cords roven through the eyes, elastic cords extending across the interior of the casing obliquely and perpendicularly to the sides thereof, all of said elastic cords being in a plane parallel to the top and bottom of the casing and connected to the sides of the casing, and a single ring at the center of the casing through which all of said elastic cords are roven, said ring being supported by the tension of said elastic cords.

1,627,836. TRAIL CONNECTION. THOMAS A. CONLON, Silver Spring, Md. Filed Dec. 22, 1925. Serial No. 77,078. 3 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, Stat. L., 625.)



2. In combination, a gun trail provided with an aperture and a transverse cleat having forked arms and a member to which the trail may be connected, said member provided with a stud receivable in the aperture of the trail and with bolts for engaging the forked arms of the cleat.

1,627,837. VENDING APPARATUS. HENRY B. COOLEY, Kensington, Conn., assignor to The American Paper Goods Company, Kensington, Conn., a Corporation of New Jersey. Filed June 12, 1922. Serial No. 567,530. 4 Claims. (Cl. 211—8.)



2. A machine of the class described comprising a barrel to receive a stack of nested drinking cups, the discharge opening of the barrel being smaller than the transverse diameter of the cup, a plunger positioned to engage the terminal cup of a stack of cups in said barrel to push the side thereof inward and to force it from the stack, and an actuator for operating the plunger to push it inward and to move it in a direction transverse to said inward movement.

1,627,838. CORN-HUSKING MACHINE AND METHOD. RALPH COVER, Baltimore, Md. Filed Sept. 27, 1921, Serial No. 503,523. Renewed Jan. 11, 1927. 25 Claims. (Cl. 130—5.)

1. In corn husking mechanism, cooperating husking rolls, having eccentric surfaces provided with interfitting ribs with greater rib clearance at certain points and less rib clearance at other points of the roll peripheries.

1,627,839. STEERING GEAR. HARRY M. DENYES and WALTER A. KULL, Saginaw, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 11, 1925. Serial No. 55,751. 3 Claims. (Cl. 74—79.)

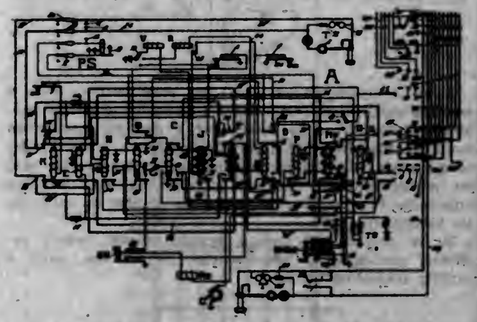
1. A steering shaft, gear teeth thereon, a member having teeth engaging the teeth of the steering shaft and a stud directed away from said teeth, said member being reciprocated by the rotation of the steering shaft, a rock shaft mounted at an angle to said steering shaft, said rock shaft having thereon a sleeve at an angle to its axis, an eye bolt having its stem slidable in the said sleeve and its eye mounted on said stud and means to adjust the engagement of the driving and driven teeth.

1,627,840. VACUUM VALVE. EDWARD F. DONNELLY, Malden, Mass. Filed Aug. 31, 1925. Serial No. 53,461. 1 Claim. (Cl. 251—127.)

A vacuum valve comprising, in combination, a casing provided with a fluid inlet passage communicating with the interior thereof, a sleeve detachably mounted in said casing and provided with a recess therein, said sleeve also being provided with an air inlet port communicating with said recess and having a valve seat formed thereon at the intersection of said recess and port, a movable valve member loosely mounted and guided within said recess and provided with a tapered portion adapted to rest upon said seat and close the said air port, a thumb screw having screw-threaded engagement with said casing and adapted to limit the movement of said movable valve member, the latter having a shoulder portion slidable in said screw and guided thereby, a check nut for said screw, and a screen within said casing and interposed between said fluid inlet passage and said movable valve member.

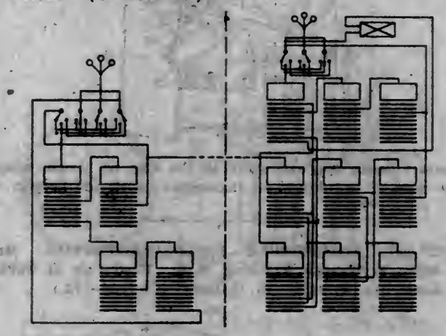
1,627,841. CONTINUOUS KILN AND DRIER. CONRAD DRESSLER, New York, N. Y., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,505. 7 Claims. (Cl. 34—46.)

1. Brick drying and heating apparatus comprising in combination, a fire heated tunnel kiln in which the brick are burned, and a drying chamber in which the brick are dried, means for utilizing products of combustion from the tunnel kiln in heating the drying chamber, means for cooling the brick and brick transporting means in the tunnel kiln by the use of air thereby heated and means for injecting the air thus heated into the drying chamber at intervals along the major portion of



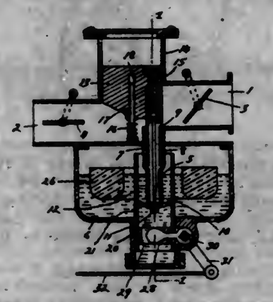
the length of the latter to supply heat thereto and to serve as a vehicle for carrying moisture away from the brick and out of the chamber.

1,627,842. DEVICE FOR UNSCREWING AND WITHDRAWING PIPE. CHARLES R. EDWARDS, Houston, Tex. Filed Nov. 18, 1921. Serial No. 516,173. 30 Claims. (Cl. 255—35.)



21. In an unscrewing device of the character described a driven member having a driving gear formed with gear teeth therein, a grapple adapted to be rotated in either direction through said teeth and means through which the device may be locked together to rotate as a unit.

1,627,843. TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Chicago, Ill. Filed Jan. 24, 1921, Serial No. 439,459. Renewed Oct. 27, 1926. 104 Claims. (Cl. 179—27.)

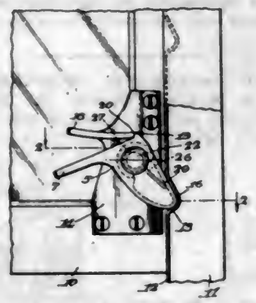


1. In a telephone system a calling telephone leading over a calling line to a selector, a called line, a cooperative successive switch, means on the calling line to direct the operation of the selector to effect its connection with the successive switch, and for directing the operation of the successive switch into selective relation with the called line and for applying a signaling current thereon, and means whereby the telephone on the calling line may be restored to normal idle position before a response is obtained on the called line without restoring the selector and its successive switch.

1,627,844. AUTOMATIC TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Chicago, Ill. Filed Feb. 17, 1921, Serial No. 445,761. Renewed Nov. 8, 1926. 115 Claims. (Cl. 179—27.)

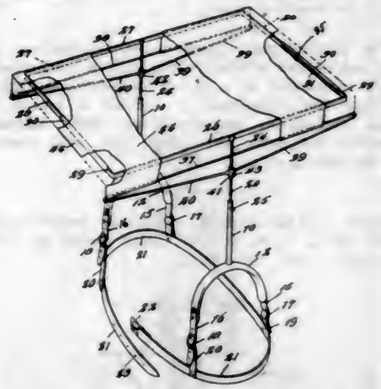
1. In a telephone system, a calling station, means under the control of said calling station for extending a talking connection to a called station, means for then extending the connection to include a second called station, and means whereby either called station can thereafter disconnect the other from said connection with the calling station.

1,627,845. CARBURETOR. WILLIAM GRIESCHEIT, Detroit, Mich. Filed Nov. 27, 1922. Serial No. 603,637. 1 Claim. (Cl. 261—51.)



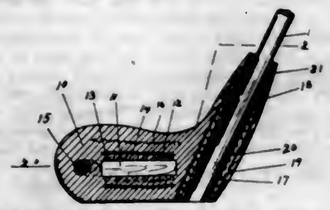
In a carburetor, a mixing chamber, a constant level chamber, a tube fixed in the wall of said mixing chamber and extending into said constant level chamber, an adjustable cup in said constant level chamber surrounding said tube, said tube being open to the atmosphere and having a valve seat in its bottom, and a needle valve responsive to the depression in said mixing chamber extending through said tube to cooperate with said valve seat, so that adjustment of said cup simultaneously varies the free opening of the fuel passage and the air passage between the end of said tube and the bottom of said cup.

1,627,846. SASH LATCH. WILLIAM S. HAMM, Hubbard Woods, Ill., assignor to The Adlake Company, a Corporation of Illinois. Filed May 6, 1926. Serial No. 107,067. 3 Claims. (Cl. 292—228.)



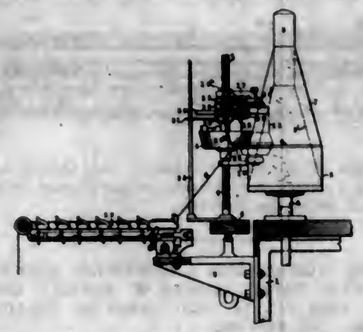
1. A sash latch comprising a sash plate having an approximately horizontal finger rib, and a keeper-engag-

ing dog pivoted to the plate and having a shoulder for engaging the rib when the dog is advanced, the point of



contact being approximately in the line of thrust when the nose of the dog is in engagement with the keeper.

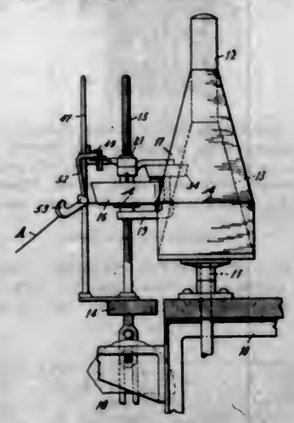
1,627,847. ADJUSTABLE HEAD PROTECTOR. MINERVA E. HAROLD, Flushing, N. Y. Filed July 31, 1925. Serial No. 47,342. 10 Claims. (Cl. 135—12.)



1. In a device of the character described, the combination of a laterally adjustable canopy carrying framework, standards to support said framework, means vertically adjustable on said standards, adapted to hold a canopy covering on said framework and means to detachably attach said supporting means to the body of the wearer.

1,627,848. GOLF CLUB. EDWARD L. HUBBARD, Oakland, Calif. Filed Apr. 6, 1925. Serial No. 20,937. 7 Claims. (Cl. 273—77.)

1. A molded phenol composition golf-club having a filler block of wood with a winding cord or cloth around the wood, the wood and cord or cloth being coated with a phenol varnish or cement.



1,627,849. WINDING AND DYEING APPARATUS. ROBERT GOULD JENNINGS, Elmira, N. Y. Filed Sept. 13, 1922. Serial No. 588,097. 46 Claims. (Cl. 8—19.)

2. In a dyeing apparatus, in combination, means for imparting traveling movement to yarn or the like, and means traveling approximately at the same speed as said yarn irrespectively of the rate of travel thereof for random application of dye thereto.

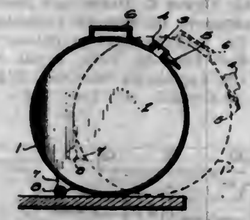
39. A process of treating textiles which includes winding a thread of textile upon a winding surface while moving the thread thereacross for distribution of the textile upon the surface and applying dye over the winding surface synchronously with the movement of said thread across said surface.

1,627,850. JET DYEING APPARATUS AND PROCESS. ROBERT GOULD JENNINGS, Elmira, N. Y. Filed Apr. 18, 1923. Serial No. 631,776. 46 Claims. (Cl. 8—19.)

4. In a dyeing apparatus, the combination with a winding mechanism including a support on which a running textile thread is wound, of a dye jet mechanism mounted adjacent said support adapted to project a jet of dye upon said running textile thread, a valve for said jet mechanism and means controlled by said winding apparatus to operate said valve for rendering said dye jet intermittent.

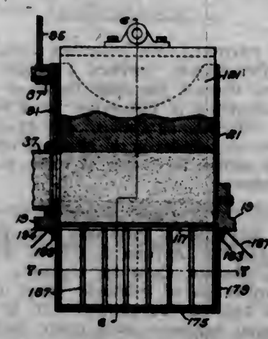
39. A process for dyeing textile threads which includes, projecting a concentrated jet of dye upon a rapidly travelling thread.

1,627,851. CONTAINER. PHILIP J. KROLL, Joplin, Mo. Filed Nov. 4, 1924. Serial No. 747,861. 3 Claims. (Cl. 221—1.)



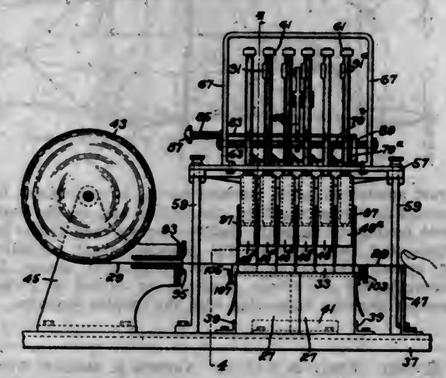
2. A liquid container comprising a cylindrical body portion having its axis arranged horizontally, said container being capable of being rolled on its curved wall, a

weight arranged in the bottom of said container, said container being provided with an outlet opening at a point substantially diametrically opposite said weight,



and a handle arranged on the curved wall of said container adjacent the weighted portion thereof and adapted to engage the surface on which said container is resting to prevent movement in one direction.

1,627,852. CONTAINER. PHILIP J. KROLL, Joplin, Mo. Original application filed Nov. 4, 1924, Serial No. 747,861. Divided and this application filed Dec. 10, 1925. Serial No. 74,601. 2 Claims. (Cl. 221—1.)



1. A liquid container comprising a cylindrical body portion having its axis arranged horizontally, said container being capable of being rolled on its curved wall, and a weighted handle arranged transversely on said curved wall near the bottom thereof, and adapted to engage the surface on which said container is resting to normally prevent movement of said container in one direction, said container being provided with an outlet opening substantially diametrically opposite said weighted handle.

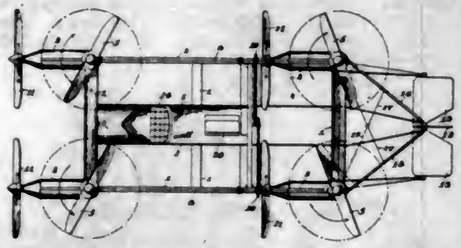
1,627,853. METHOD OF AND APPARATUS FOR CHARGING CONTAINERS WITH ICE CREAM OR OTHER MATERIAL. FREDERICK X. KUHN, Waltham, Mass. Filed July 27, 1923. Serial No. 654,147. 25 Claims. (Cl. 93—3.)

24. In a device for filling a container with individual portions of ice cream or similar material, a holder for an unpartitioned carton, and means associated with said holder adapted to present in said carton sheets of separating material arranged at intervals therein to constitute separating partitions or walls and sub-dividing the carton into separated compartments.

1,627,854. ICE-CREAM PACKAGE AND METHOD OF AND APPARATUS FOR MAKING THE SAME. FREDERICK X. KUHN, Waltham, Mass. Filed Jan. 25, 1927. Serial No. 163,382. 20 Claims. (Cl. 93—3.)

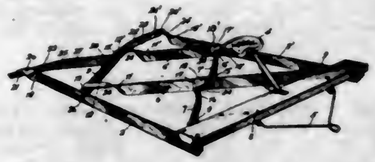
8. The method of preparing a container to receive individual separated charges of ice cream or similar material which consists in installing in said container a strip of separating material and holding the same to form separate pockets or compartments.

1,627,855. COMBINED MUFFLER AND HEATER. WALTER A. KYSOR, Allegan, Mich. Original application filed May 24, 1924, Serial No. 715,307. Divided and this application filed Jan. 24, 1925. Serial No. 4,543. 2 Claims. (Cl. 257—16.)



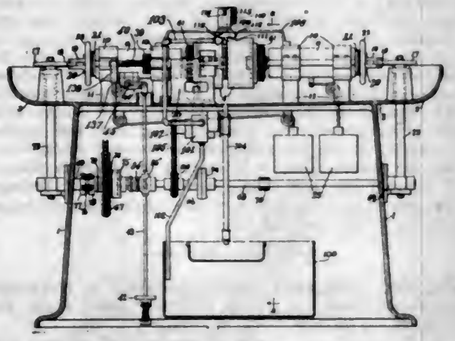
1. In a device of the class described, the combination of concentrically disposed inner and outer tubular walls providing a central elongated gas chamber and a surrounding air chamber, said air chamber having air inlet and discharge openings at the ends thereof, said gas chamber having an annular gas discharge opening at its rear end, and a rearwardly tapered discharge pipe for heated gases disposed centrally within said gas chamber and extending approximately from end to end thereof, the diameter of said pipe at its larger end being such that it lies close to the said inner wall, said pipe having a plurality of side discharge orifices disposed around it so that the heated gases are discharged therefrom in laterally directed jets and thence flow longitudinally through said gas chamber around said pipe to said gas discharge opening at the rear end thereof.

1,627,856. AIRCRAFT DESIGN. JAMES L. MACVICAR, Newport News, Va. Filed June 24, 1925. Serial No. 39,328. 2 Claims. (Cl. 244—19.)



1. In an aircraft, a central power plant, driving and lifting propellers, arranged for intensifying the lifting air stream lines delivered by the lifting propellers, and whereby the entering edge of the driving propeller is provided with a new body of air consisting of the forward driving movement, the air to attack being thrust back and at the same time the lifting propeller being rotated

upwards thereby thrusting the air stream downward and resulting in the downward thrust air stream being banked on top of the air stream from the driving propellers, resulting in greatly intensifying the lifting power of the lifting propellers, suitable propeller shafts, and frame for carrying the power plant propeller and various air-

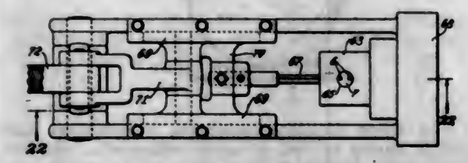


craft appliances, plate brackets having large surfaces for increasing the strength of the frame, and at the same time tending to maintain stability for steerage means for supporting and enclosing the propeller shaft consisting of cylindrical tubular members, additional means for strengthening the frame consisting of curved or arched member portions connecting with the tubular supports.

1,627,857. ROAD SCRAPER. ARTHUR R. MISKIN, Ucon, Idaho. Filed June 26, 1925. Serial No. 39,773. 7 Claims. (Cl. 37—143.)

1. A road scraper, comprising diagonal blades arranged in oppositely inclined sets which cross each other, the blades being rigidly secured to each other at their intersections and at their ends secured to side frame pieces of the scraper.

1,627,858. GRINDING MACHINE. JOHN F. MORGAL, Springfield, Ohio, assignor, by mesne assignments, to Bernard E. Crabbs. Filed Mar. 7, 1921. Serial No. 450,281. 23 Claims. (Cl. 51—118.)



1. In a grinding machine, two grinding members mounted for rotation about a common axis and having opposed grinding faces, means for rotating said grinding members, means for moving one of said grinding members axially toward and from the other grinding member, a work support mounted for rotation about an axis substantially parallel with the axis of said grinding members and having means for supporting an article to be ground for rotation about the axis thereof, a portion of said article extending between said grinding members so that the lateral faces of said article will be simultaneously acted upon by the respective grinding members, said supporting means being of such a character that said article will be automatically positioned thereon by its contact with said grinding members, and means for rotating said work support during the grinding operation to cause the entire circumferential portion of said article to pass between said grinding members.

1,627,859. PROPELLANT POWDER. JOHN M. OLIN and ARTHUR S. O'NEIL, Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Apr. 4, 1924. Serial No. 704,125. 14 Claims. (Cl. 52—11.)

1. A propellant powder mixture of slow-burning powder grains and quick-burning powder grains of substantially the same densities.

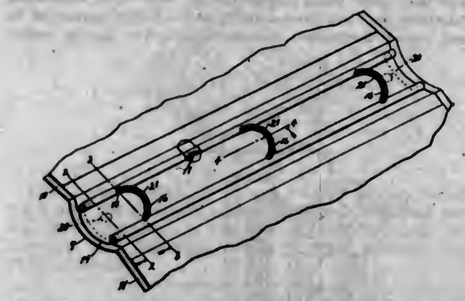
1,627,860. METHOD OF AND APPARATUS FOR FORMING DETONATOR IGNITER TERMINALS. JOHN M. OLIN, VICTOR L. DAVIS, and JOHN B. SMITH, Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Original application filed Dec. 30, 1922, Serial No. 609,954. Divided and this application filed Nov. 5, 1925. Serial No. 67,186. 16 Claims. (Cl. 140—71.)

1. In the art of making detonators, the process comprising, forming the ends of a pair of igniter connections a predetermined distance from the plug thereon in a single operation in order to provide a filament seat.

1,627,861. PROPELLANT POWDER AND PROCESS FOR MAKING SAME. ARTHUR S. O'NEIL, East Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Feb. 10, 1923. Serial No. 618,388. 39 Claims. (Cl. 52—11.)

1. A propellant powder grain comprising, a dense core surrounded by a porous envelope.

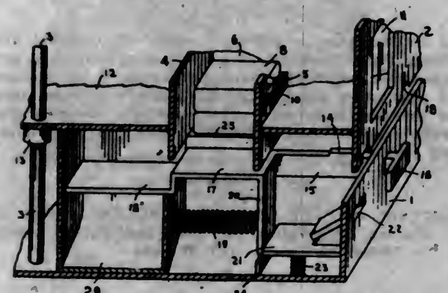
1,627,862. PROPELLANT POWDER AND PROCESS OF MAKING SAME. ARTHUR S. O'NEIL, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Sept. 4, 1923. Serial No. 660,939. 29 Claims. (Cl. 52—11.)



1. A propellant powder grain of dense colloided nitrocellulose the surface layer only of which is impregnated with an oxidizer.

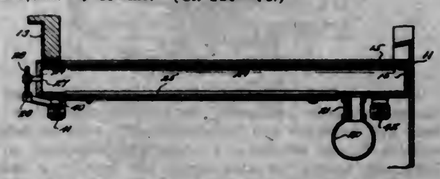
1,627,863. EXPLOSIVE POWDER AND PROCESS OF MAKING SAME. ARTHUR S. O'NEIL, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Dec. 1, 1924. Serial No. 753,844. 25 Claims. (Cl. 52—20.)

1. A globular explosive grain freely formed in space from a completely molten material.



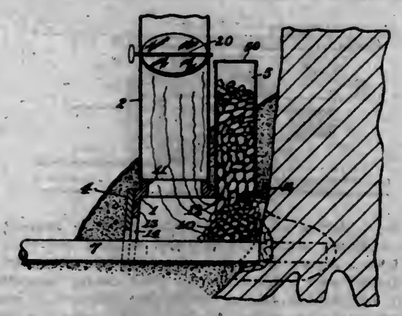
10. The process consisting in causing a completely molten explosive to become solidified in space while under surface tension.

1,627,864. LOOSE-LEAF BINDER. ERNEST L. PEARSONS, Chicago, Ill., assignor to David J. Molloy Company, a Corporation of Illinois. Filed Mar. 26, 1925. Serial No. 18,340. 4 Claims. (Cl. 129—28.)



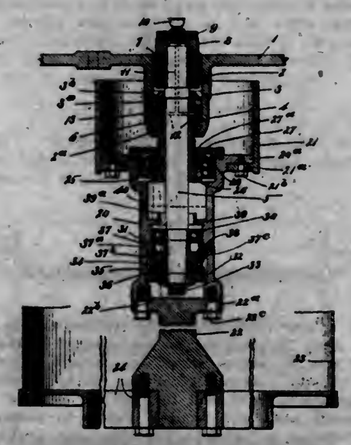
1. In a loose leaf binder, a plate having its longitudinal edges return-bent and provided with notches, a resilient flexible paper-retaining member, and means on each end of said retaining member for detachably engaging said notches for holding said last named member in paper-holding position on said plate, said retaining member assuming the form of a straight element when released.

1,627,865. ESKIMO-PIE-VENDING MACHINE. ALBERT PROBST, Los Angeles, Calif. Filed Jan. 2, 1926. Serial No. 78,867. 3 Claims. (Cl. 211—8.)



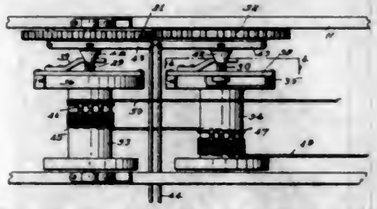
1. A vending machine having in combination a prismatic casing, a heat insulating chamber within said casing, two concentric cylinders within said insulating chamber, a plurality of magazines for holding articles to be vended between said concentric cylinders, a central compartment within the inner of said cylinders, a central shaft upon which said prismatic casing may rotate, and an ejector means beneath said magazines.

1,627,866. GRATE. CLARENCE CLEVELAND RANSDELL, Monroe City, Mo., assignor of one-half to W. L. Harrison, Shelbina, Mo., and one-fourth to J. C. Delonay, Monroe City, Mo. Filed Apr. 14, 1926. Serial No. 102,023. 6 Claims. (Cl. 110—74.)



1. In a grate, a plurality of hollow cylindrical grate elements having portions cut away longitudinally, cylinders mounted within said hollow elements, the cylinders last named also being cut away longitudinally, and means for partly rotating the cylinders last named.

1,627,867. STUMP BURNER. HENRY L. REYNOLDS, Seattle, Wash. Filed Aug. 22, 1922. Serial No. 583,485. 1 Claim. (Cl. 110—21.)



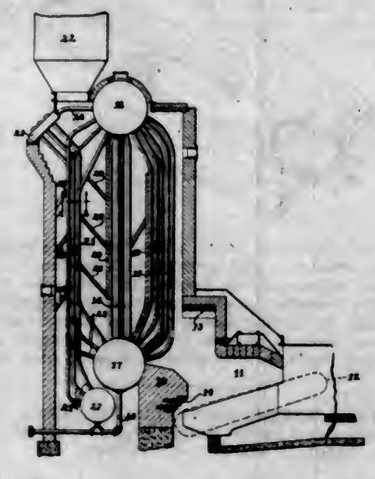
A stump burner comprising a furnace casing having one end open to be placed against the face of the stump to be burned and an opening at the opposite end for the accommodation with the first named opening of an air blast pipe, an air blast pipe adapted to pass through both said openings and movable lengthwise to maintain its discharge face close to the burning face of the stump, said furnace casing having an opening in its top for a stack connection and a separate fuel feed opening between the stack connection and the end of the casing which is placed against the stump, a draft stack and a feeding hopper for solid fuel adapted to be connected with their respective openings in the casing to thereby insure an effective ignition of the body of the stump.

1,627,868. CENTRIFUGAL MACHINE. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Dec. 24, 1921. Serial No. 524,664. 10 Claims. (Cl. 308—148.)

9. In a gyratory suspended centrifugal machine, the combination of a hanger, a nonrotating gyratory suspension spindle supported therein to swing upon a spherical ball joint arranged to positively prevent axial movement of said suspension spindle in either direction, a rotary basket shaft suspended to rotate on and swing with said suspension spindle, the suspension spindle being provided with a lubricating passage for conveying lubricant to the spherical surfaces of said joint, substantially as described.

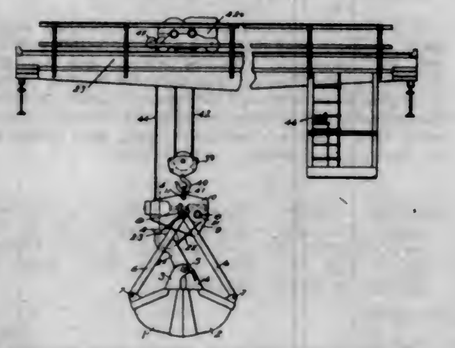
1,627,869. MECHANISM FOR OPERATING AND CONTROLLING EXCAVATOR DIPPERS. GEORGE T. RONK, Fairfield, Iowa. Filed July 27, 1925. Serial No. 46,390. 2 Claims. (Cl. 214—135.)

1. In a device of the class described, a support, a boom, a dipper stick pivotally and slidably mounted on said boom, means for imparting sliding movement to said dipper stick relative to its pivot center comprising a pair of parallel shafts, means for imparting rotary movement to said shafts in opposite directions, a drum for each of said shafts loosely mounted thereon, a cable, one end of which connects one end of said dipper stick, the other end of said cable being wound on one of said drums, a second cable for said drum wound in the opposite direction, said second cable being wound on said second drum in an opposite direction from the first drum, a third cable wound on said second drum in the opposite direction from the winding of the first cable on the first drum, said third cable having its other end connected to the opposite end of the dipper stick from which the first cable is connected means for throwing either of said drums into or out of operative relation with its respective shaft.



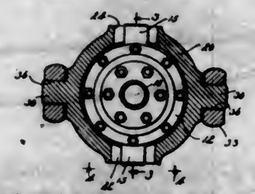
1,627,870. DISPENSING DEVICE. WILLIAM A. SEIDEMANN, Milwaukee, Wis., assignor to Blue Point Tool Company, Racine, Wis., a Corporation of Illinois. Filed Mar. 11, 1925. Serial No. 14,793. 4 Claims. (Cl. 211—8.)

1. In a dispensing device, the combination of a sheet metal plate having struck up tongues arranged in spaced relation and a struck up support adjacent the lower of said tongues, a tubular container having its ends engageable with said tongues and clamped thereby against the plate and secured thereto by endwise sliding movement in opposite directions, the lower end of the container being so positioned relative to said support as to allow only one of the articles, to be dispensed from the container, to be in a position for removal.



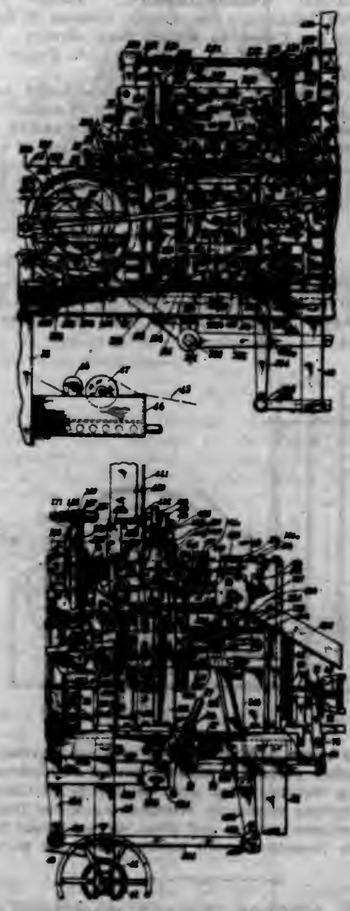
1,627,871. WATER TUBE BOILER. LOYD R. STOWE, St. Louis, Mo. Filed Aug. 30, 1920. Serial No. 407,046. 7 Claims. (Cl. 122—336.)

1. The combination with a furnace and a tortuous flue therefor of a water tube boiler comprising upper and lower chambers and two banks of generating tubes located in the first and second passes of said flue and connecting said chambers, additional upper and lower chambers and a third bank of tubes disposed substantially vertically in the last pass, alternate tubes in said last pass being connected to said first mentioned chambers and the intermediate tubes being connected to said second mentioned chambers, said flue having baffles



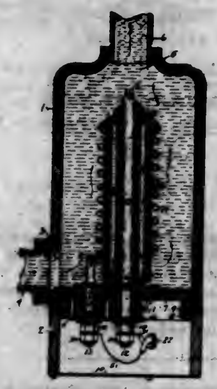
in its last pass arranged to reduce the sectional area substantially below the sectional area of the initial pass whereby a relatively greater proportion of the products of combustion are brought into contact with the tubes of the last pass, said upper chambers communicating with each other and said lower chambers communicating with each other.

1,627,872. POWER-ACTUATED BUCKET. GUY H. STRAYER, Belle Valley, Pa. Filed Dec. 2, 1925. Serial No. 72,682. 3 Claims. (Cl. 37—184.)



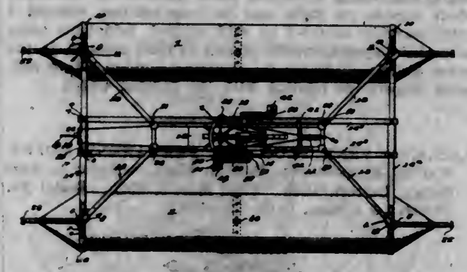
1. In a power actuated bucket, the combination of bucket members; a head; rigid links connecting the head and members and maintaining the head in definite relation to the members; a worm gear mounted in the head and having its axis across the bucket; a sheave locked with the gear; a cable extending from the sheave and actuating said members; a worm actuating the gear and extending lengthwise of the bucket; and a motor mounted on the head in axial alinement with the worm and actuating the worm.

1,627,873. SWIVEL. ROY TAYLOR, Los Angeles, Calif., assignor of one-half to David A. Cant, Los Angeles, Calif. Filed Sept. 2, 1924. Serial No. 735,394. 5 Claims. (Cl. 255—25.)



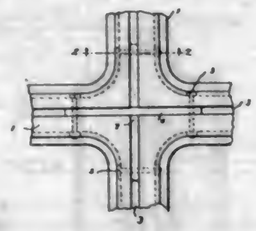
1. A swivel device for rotary drilling outfits, including a body for rotatably supporting a drill stem and having offset trunnions, a ring surrounding the body and receiving said trunnions, and a bail for pivotally suspending the ring.

1,627,874. BOX-MAKING MACHINE AND THE METHOD OF MAKING BOXES. LOUIS TRIOLO, Brooklyn, N. Y. Filed Apr. 4, 1925. Serial No. 20,702. 34 Claims. (Cl. 93—36.)



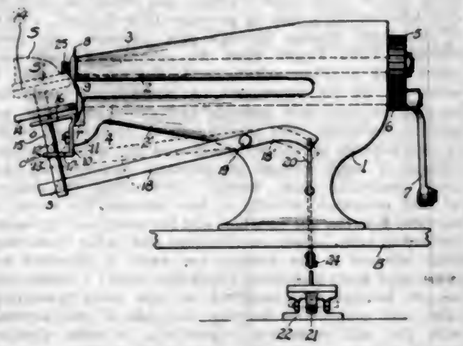
1. In a tensioning device for a paper strip the combination of a pivoted supporting plate, a presser arm pivoted over the plate with its free end adapted to bear on the strip of material supported on the plate.

1,627,875. ELECTRIC WATER HEATER. JESSE J. UNDERWOOD, Tacoma, Wash., assignor of one-half to Joseph B. Antonette, Tacoma, Wash. Filed Aug. 20, 1925. Serial No. 51,358. 1 Claim. (Cl. 219—39.)



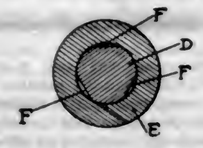
An electric water heater comprising a fixed water chamber provided with connections to the hot water system, whereby it is supported; a removable base closing the lower end of said water chamber and supported thereby, said base having a pair of passages therethrough; a pair of terminals passing through said passages, one such terminal being longer than the other, and each provided with a collar within said chamber and with a screw-nut on its outer end; a water-tight insulating packing in each said passage and surrounding the respective terminal, said packing being compressed within said passage by the screw-nut and the collar whereby leakage of water around the terminal is prevented; an inner insulating tube loosely surrounding the longer of said terminals whereby a free passage for water is provided between the terminal and its insulator; an outer insulating tube loosely surrounding said inner insulating tube, whereby a free passage for water is provided between said inner and outer insulating tubes; a submerged electric heating wire mounted on said outer insulating tube; and connections between the ends of said heating wire and said terminals respectively, whereby electric energy may be conducted to said heating wire.

1,627,876. OVER-WATER CRAFT. JAMES B. WILLIAMS, Tampa, Fla. Filed Aug. 24, 1922. Serial No. 584,008. 7 Claims. (Cl. 115—26.)



1. A water craft comprising two floats detachably connected in substantially parallel relation by front and rear transverse members, longitudinal members detachably connected to and supported by said transverse members, a paddle-wheel detachably mounted on said longitudinal members, upwardly-extending braces having lower terminals bearing on and holding said transverse members in association with said floats, an upper frame supported by said braces, and a seat on said upper frame.

1,627,877. RAILWAY CROSSING. NORBERT ZINK, Pueblo, Colo. Filed Apr. 19, 1926. Serial No. 103,104. 2 Claims. (Cl. 246—457.)



1. A bridge member for a railway crossing, comprising a middle and side portions, the top side of the middle portion projecting above the top side of the outer portions intermediate the ends the member and the outer portions extending below the surface of the side portions at the outer ends thereof.

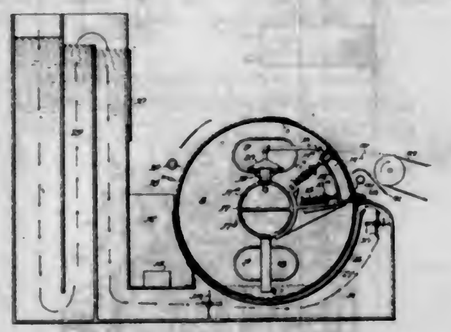
1,627,878. SOLE-FUDGING ATTACHMENT FOR SOLE-CUTTING MACHINES. JOSEPH ZDVORACEK, St. Louis, Mo. Filed June 5, 1926. Serial No. 113,959. 3 Claims. (Cl. 12—32.)

2. A fudging attachment for a cutting machine having a suitable supporting standard provided with a pair of vertically spaced bearings, a shaft disposed in each of said bearings, means for rotating said shafts, and a rotary knife mounted on the outer extremity of each shaft, comprising a fudging wheel mounted on the upper shaft outside the knife and in close relation thereto, a table movably mounted on said support, said table being normally disposed outside of and in close relation to the lower knife, and means for elevating said table into intimate cooperative relation with the fudging wheel.

1,627,879. VENT PLUG FOR PERMANENT MOLDS. WALTER S. ANDERSON, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Mar. 9, 1925. Serial No. 13,994. 4 Claims. (Cl. 22—183.)

1. In a metal mold having a cavity therein, a vent plug adapted to close said cavity and provided with a flat surface, an air passage between the wall of said cavity and said plug opposite said flat surface not over .015".

1,627,880. AUTOMATIC HANDLE. WILLIAM EDWARDES BAXTER, Louisville, Ky. Filed July 6, 1925. Serial No. 41,815. 3 Claims. (Cl. 294—33.)

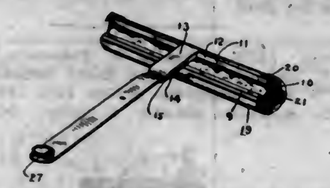


1. A lifter of the class described, comprising a strip of resilient material bent intermediate its ends to form handle members, said handle members being bent towards each other at their outer extremities to form gripping portions of unequal lengths whereby when the handle members are pressed towards each other the gripping portions are moved into interlocked relation, the longer of said portions overlapping the shorter.

1,627,881. PROCESS FOR THE REDUCTION OF HALOGENATED HYDROCARBONS. ALFRED FELIX SEBASTIEN BELLONE, Lyon, France, assignor to Societe Chimique des Usines du Rhone, Paris, France. Filed Jan. 28, 1924, Serial No. 689,169, and in France Nov. 21, 1923. 5 Claims. (Cl. 260—165.)

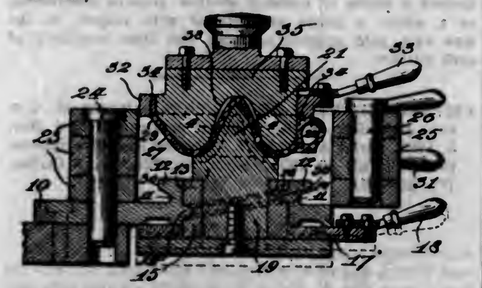
1. The process of reduction of halogenated hydrocarbons and poly-halogenated derivatives of organic compounds consisting in treating said hydrocarbons with ferrous hydroxide in the presence of water and of a substance having a basic reaction, thereby substituting progressively hydrogen for the halogen atoms in said halogenated hydrocarbons and poly-halogenated derivatives.

1,627,882. PAPER-MAKING MACHINE. EARL E. BERRY, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed Apr. 7, 1923. Serial No. 630,484. Renewed Apr. 27, 1925. 33 Claims. Cl. 92—43.)



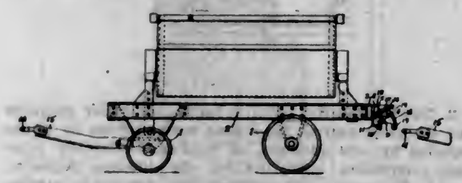
1. In a paper making machine, the combination of a hollow rotary perforated member having an unobstructed interior, a vat in which said member is partially immersed, suction means for withdrawing water from the interior of said member and other suction means for reducing air pressure in said member above the water.

1,627,883. HUMIDOR. ROBERT S. BLAIR, Sound Beach, Conn. Filed May 9, 1919. Serial No. 295,875. 11 Claims. (Cl. 23—252.)



1. In apparatus of the general nature of that herein described, in combination, a container, and a member

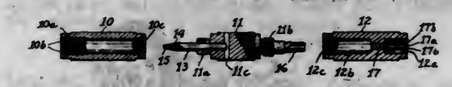
adapted to change color on changes in its dampness, mounted in such container and having one surface thereof



exposed to the interior of said container, said container being formed to expose said member to view from the outside of said container.

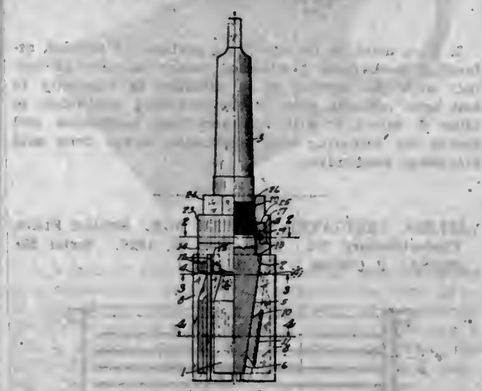
1,627,884. METHOD OF MOLDING FRUIT-JUICE EXTRACTORS. WILLIAM M. BRISTOL, Highland, Calif., assignor to California Fruit Growers Exchange, Los Angeles, Calif., a Corporation of California. Filed Dec. 16, 1924. Serial No. 756,216. 2 Claims. (Cl. 49—85.)

1. The method of molding a glass fruit-juice extractor, having an upwardly projecting cone in a mold having an upwardly projecting substantially conical core, which consists in placing a ball of glass on top of the core, confining the ball of glass and compressing the same down into the mold from above.



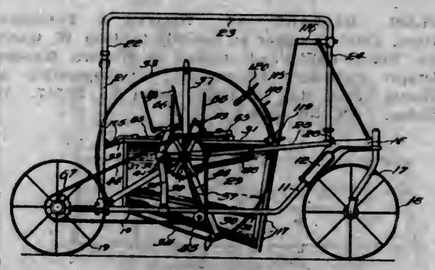
1,627,885. COUPLING DEVICE. SHERWOOD M. CHASE, Columbus, Ohio, assignor to The Chase Foundry & Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 3, 1926. Serial No. 146,050. 10 Claims. (Cl. 280—33.15.)

1. In a coupler, a frame having a hook supporting portion and a stationary eye guiding portion, a hook mounted therein, yielding means to maintain said hook in engagement with said guiding portion, whereby the eye may be pressed against the exterior of said hook passing over the end thereof along the guiding portion to a point behind the hook into locking position.



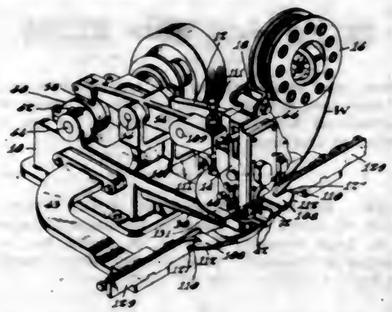
1,627,886. VALVE TOOL. EDWARD C. COOLEY, Elgin, Ill. Filed May 13, 1925. Serial No. 29,865. 12 Claims. (Cl. 7—1.)

7. In a valve tool of the class providing tool members, the combination of a tap for cleaning the internal threads of a valve stem, a die for cleaning the external threads of a valve stem and a wrench for removing a valve core from a valve stem, a straight cylindrical handle consisting of a plurality of parts having end threaded en-



gagement, said parts carrying said tool members on their ends, said tool members being wholly contained within the cylindrical boundary of said handle for the closed condition of said tool.

1,627,887. REAMING OR BORING TOOL. ROBERT R. DAVIS, St. Louis, Mo., assignor, by mesne assignments, to St. Louis Reaming Tool Co., St. Louis, Mo., a Corporation of Missouri. Filed Oct. 29, 1923. Serial No. 671,472. 8 Claims. (Cl. 77—75.5.)

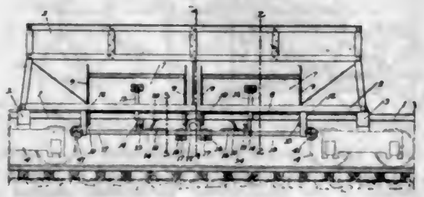


3. A boring-tool or reamer comprising a bar having a radial slot opening upon its peripheral face, in combination with a cutter disposed for adjustable movement in the slot, the cutter having a pocket, and means including a member disposed in said pocket and having engagement with the bar for retaining the cutter against radial displacement within the slot both during adjustments and working operations thereof.

1,627,888. GRAIN SHOCKER. HARRY S. DICKINSON, Moline, Ill., assignor, by mesne assignments, to Berry Shocker Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Mar. 17, 1922. Serial No. 544,514. 35 Claims. (Cl. 56—419.)

1. In a grain shocker, the combination of a tiltable pan, trip mechanism adapted when tripped to permit of the tilting of the pan, packer mechanism adapted to act upon the material accumulated in the pan and means associated with the packer mechanism, and adapted at a predetermined point in such accumulation to actuate the trip mechanism, substantially as described.

1,627,889. ATTACHING MACHINE. WILLIAM E. ELLIOTT, Lynn, Mass. Filed Apr. 5, 1922. Serial No. 549,889. 34 Claims. (Cl. 1—5.)

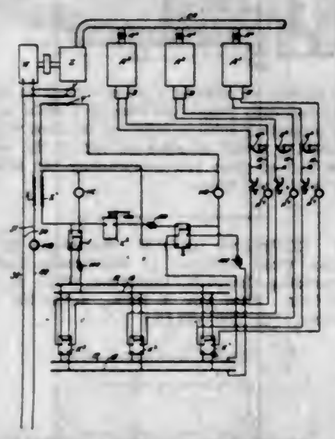


1. In a machine for attaching portions of articles, attaching mechanism, positioning means movable in contact with the portion to be attached in proximity to and upon opposite sides of the attaching mechanism to aline it laterally with the attaching mechanism and means for actuating said positioning means from said attaching mechanism.

1,627,890. IRRIGATED FLOWER BOX. STUART ELLIS, Fredericksburg, Va. Filed Feb. 19, 1926. Serial No. 89,384. 2 Claims. (Cl. 47—38.)

1. In a self-irrigating box, a plate L-shaped in vertical cross section seating on and extending over substantially the entire bottom of the box and having its upstanding end seating against one end of the box, a channel for the passage of water between the upstanding end of the L-shaped plate and the adjacent end of the box, the central bottom portion of the plate having a corrugation extending longitudinally thereof in communication with the first mentioned channel, and having spaced transverse corrugations for laterally distributing the water over the entire bottom portion of the box and the edges thereof.

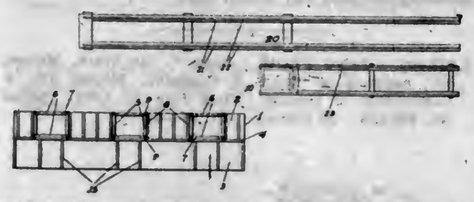
1,627,891. BALLAST CAR. WILLIAM A. FLANAGAN, Ripon, Calif., assignor of one-half to John W. Garrison, Ripon, Calif., and one-half to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed May 11, 1925. Serial No. 29,517. 13 Claims. (Cl. 105—251.)



1. A ballast car including a body, downwardly opening gates hinged along the bottom of the body, a power operated mechanism common to all the gates for operating the same, and individual hand controlled means for each gate in addition to the power mechanism, for operating the gates.

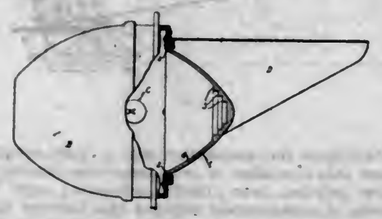
1,627,892. LENS. CHARLES W. FREDERICK, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 5, 1922. Serial No. 565,956. 3 Claims. (Cl. 88—57.)

1. A photographic lens with axially symmetrical surfaces and with a finite focal length having on a surface thereof a series of polished shallow grooves comprising, as a whole, a group symmetrical with respect to the lens axis, said grooves covering less than one-third of such surface.



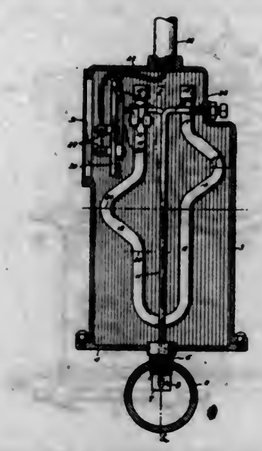
1,627,893. FURNACE REGULATION. GEORGE H. GIBSON, Montclair, N. J. Original application filed Mar. 5, 1923, Serial No. 622,891. Divided and this application filed July 26, 1924. Serial No. 728,344. 5 Claims. (Cl. 290—7.)

2. The combination with a battery of boiler furnaces and electrical current generating means driven by steam supplied by said furnaces, of separate electrically actuated combustion regulators for the different furnaces, means for passing a predetermined fractional portion of the electric current generated to said regulators, and means for dividing the current passed to the different regulating mechanisms among the latter so that a constant current will be supplied to one or more of said regulators and the remaining regulators will receive the balance of said current portion.



1,627,894. METHOD OF AND APPARATUS FOR MAKING BOX LIDS. HENRY J. GOFF, Stockton, Calif., assignor to Stockton Box Company, Stockton, Calif., a Corporation. Filed Oct. 18, 1926. Serial No. 142,202. 18 Claims. (Cl. 144—7.)

1. A method of making box lids formed of transversely alined boards and end cleats glued across the board, as the lids are made, consisting in assembling a plurality of the component parts of the lids in proper

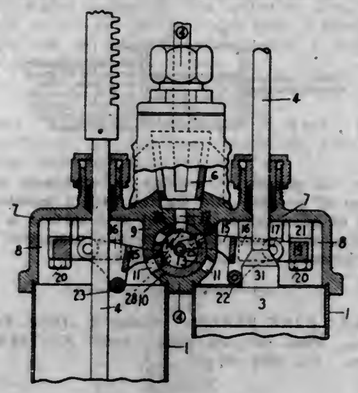


and superimposed order to form a stack, and then applying a clamping pressure to the stack as a unit in the planes of the end cleats.

1,627,895. SIGNAL LANTERN AND LENS THEREFOR. ALEXANDER H. HANDLAN, St. Louis, Mo. Filed Jan. 15, 1925. Serial No. 2,618. 2 Claims. (Cl. 177—329.)

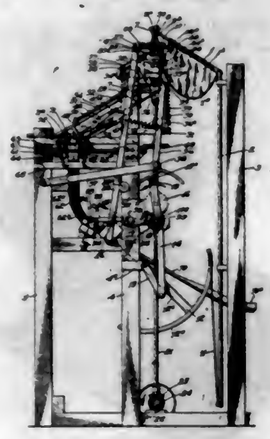
1. A lens for traffic control signal lamps comprising a transparent member in the form of a hollow conoid having beam-forming elements on a face of said conoid near the apex thereof, and a skirt portion designed for diffusing light extending rearwardly from said beam-forming elements to the rim portions of said lens.

1,627,896. NO-FLOW ALARM-CIRCUIT CLOSER. ROY E. HANSON, Los Angeles, Calif. Filed Apr. 29, 1926. Serial No. 105,500. 10 Claims. (Cl. 200—52.)



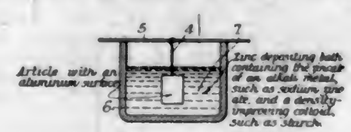
1. A device of the character described comprising; an upright U-tube having closed ends, flexibly positioned for lateral movement in its plane; mercury filling the bend of the tube and portions of its arms; means whereby a flow of fluid may be made to create a difference of pressure in said arms for displacing the mercury to shift its center of gravity and thereby cause lateral movement of the tube; and electric circuit closing means adapted for operation by said lateral movement.

1,627,897. WOVEN-WIRE FABRIC. DOUGLAS G. HARVEY, Dixon, Ill. Filed July 28, 1921. Serial No. 488,093. 2 Claims. (Cl. 33—127.)



1. A web of wire screen cloth having, measure marks at predetermined distances and adjacent the edge thereof, each of said measure marks consisting of an enlarged opening formed by a separation of adjacent wires and a film of marking medium bridging across and filling the openings between the wires around said enlarged opening.

1,627,898. LIQUID-DISPENSING APPARATUS. WILLIAM T. HATMAKER and EARL E. EICKMEYER, Dayton, Ohio, assignors to The National Recording Pump Company, Dayton, Ohio, a Corporation of Ohio. Filed June 21, 1924. Serial No. 721,485. 20 Claims. (Cl. 103—227.)

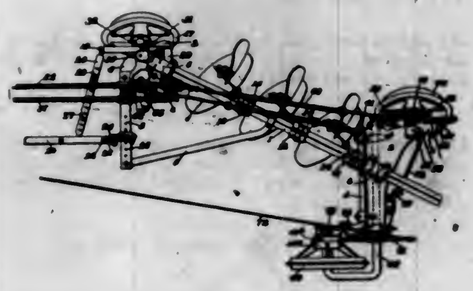


1. In a dispensing apparatus, a cylinder, a piston mounted in said cylinder, means for actuating said piston, a discharge line connected with said cylinder, a cut-off to control said connection, and means supported independently of said cut-off for automatically closing said cut-off when a predetermined quantity of liquid has been discharged from said cylinder.

1,627,899. FISH SEGREGATING, DIRECTING, TIMING, AND TURNING APPARATUS. FRANK HEATH, National City, Calif. Filed June 25, 1925. Serial No. 39,557. 42 Claims. (Cl. 17—3.)

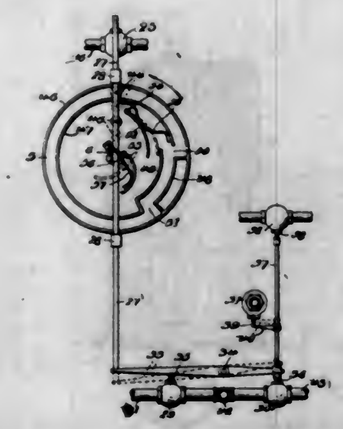
10. In an apparatus of the class described, a shiftable hopper, an intermittently shiftable supporting member positioned at one side of said hopper adapted to receive a few of the members contained in said hopper when the same is shifted, a segregating means for receiving and individually segregating the members discharged from said supporting member, and a pair of angularly positioned, oppositely disposed and oppositely reciprocating brushes positioned contiguous to the discharge end of said segregating means adapted to receive the individually segregated members therein.

1,627,900. PROCESS OF COATING ALUMINUM SURFACES. EDWARD HALLSTED HEWITSON, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 23, 1926. Serial No. 130,828. 9 Claims. (Cl. 91—68.3.)



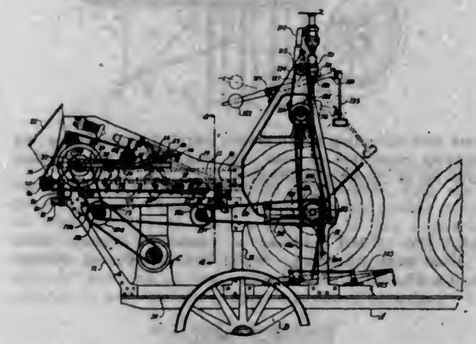
1. In the process of coating an aluminum surface, the step of treating said surface with a solution of a zincate of an alkali metal until said surface is coated with zinc, said solution containing a protective colloid which increases the density of said zinc.

1,627,901. BARK PEELER. HARRY R. HILLS, Emerald, Idaho. Filed Oct. 20, 1924. Serial No. 744,626. 1 Claim. (Cl. 306—45.)



In a bark peeler the combination of a handle bar having a head and oppositely opening, spaced, overlapping slots arranged in parallel planes in said head, a fork having side bars and angular, parallel, oppositely-hooked ends in the overlapping slots, and a retaining ferrule enclosing the head and hooked ends.

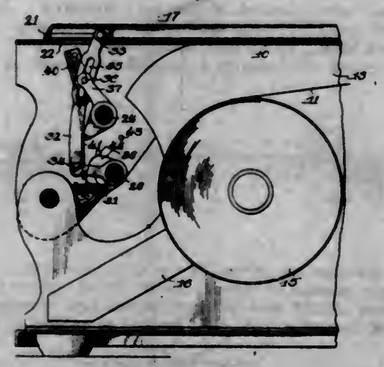
1,627,902. GANG PLOW. JOHN V. HOLSTEIN, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 21, 1921. Serial No. 486,455. 26 Claims. (Cl. 97—53.)



1. In a plow the combination with a frame comprising a front frame member, a rear transverse member, and a plow carrying beam rigidly connecting said frame members, of a transversely disposed axle mounted on said rear frame member and having a crank at the landward end thereof, a bearing on said rear frame member for the furrowward end portion of said axle, means for adjusting the landward end portion of said axle fore and aft, a land wheel mounted on said crank, and means for rocking said axle.

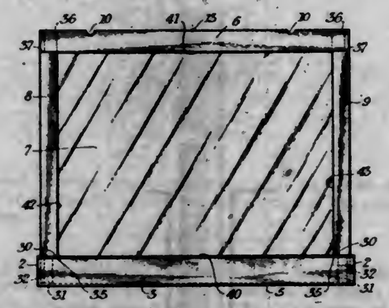
1,627,903. AUTOMATIC CONTROL MECHANISM FOR WATER SOFTENERS. ALBERT C. HOUGLAND, St. Paul, and LYNN G. LINDSAY, Minneapolis, Minn. Filed Sept. 22, 1926. Serial No. 136,943. 8 Claims. (Cl. 137—144.)

1. In an automatic control for a water softener having valve mechanism for controlling the flow of water and regenerating fluid therethrough, the combination with a water driven motor, of means for supplying water to said softener through said motor, means operated by said motor for periodically actuating said valve mechanism, a by-pass for said motor arranged to supply water to said softener and adjustable means disposed in said by-pass to restrict the flow of water therethrough.



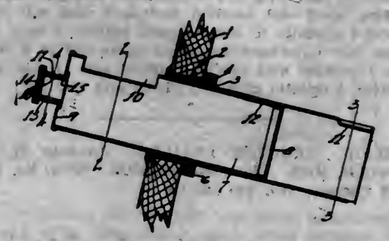
1,627,904. BALING MACHINE. LUCIEN W. HUFFF, Galesburg, Ill. Filed Apr. 16, 1923. Serial No. 632,581. 30 Claims. (Cl. 100—1.)

1. In a baling machine, in combination, a forming box adapted to receive material to be fashioned into continuously running mat form, means for advancing the mat within the forming box and tufting means active to fashion an integrating tie from the material of the mass, consisting of needle members active for the purpose of spaced intervals.



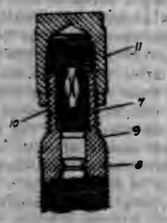
18. The method of forming an integrated mat from grain products, consisting in feeding a grain product mass, under pressure, through a restricted way, and tufting the mat formation during passage through said way, from the constituent material of said mat.

1,627,905. WEB-FEEDING MECHANISM. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1924. Serial No. 719,594. 22 Claims. (Cl. 271—2.5.)



1. A web feed mechanism comprising a rock-shaft, a lever eccentrically fulcrumed on said shaft, and means for causing an oscillatory movement of said lever while engaged with the web to move the latter, said lever being moved into engagement with the web by the rocking of said shaft.

1,627,906. PORTABLE PROJECTION SCREEN. LOYD A. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 23, 1923. Serial No. 640,992. 4 Claims. (Cl. 88—24.)

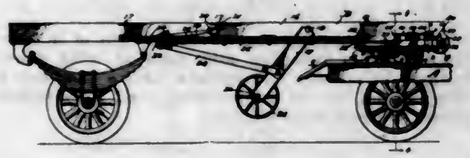


3. In a projection screen, the combination with a base, of side arms supported by the base, a top bar supported by the side arms, a spring roller carried by the base, a screen carried by the roller, the base, top bar and side arms having an area lying in a common plane against which a screen is held flat by the action of the spring.

1,627,907. ASH RECEPTACLE. HANS G. JORGENSEN, Erie, Pa. Filed May 25, 1923. Serial No. 641,375. 3 Claims. (Cl. 220—18.)

1. In an ash receptacle, the combination of a cylindrically shaped mounting, said mounting being screw-threaded at one end and provided with a shoulder; a clamping nut on the screw thread; and a cylindrical drawer slidingly mounted therein.

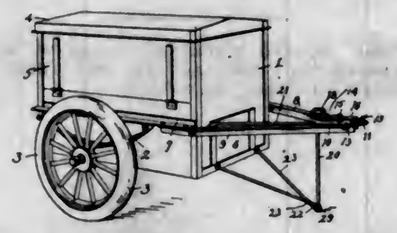
1,627,908. VALVE CAP. GEORGE F. KEENA, Detroit, Mich. Filed Oct. 13, 1924. Serial No. 743,287. 3 Claims. (Cl. 152—12.)



1. A valve cap adapted for threading on an exteriorly threaded valve stem, said cap being made from comparatively soft material and provided with interior threads adapted for engaging said exterior threads, said threads being dissimilar in formation and pitch, to permit the flowing of the threads of said cap into close engagement with the threads of said stem.

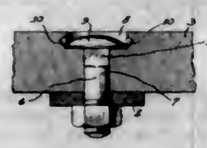
1,627,909. ROCK-DRILL BIT. WARREN J. KIRBY, Miami, Ariz. Filed Apr. 26, 1926. Serial No. 104,686. 2 Claims. (Cl. 255—64.)

1. As a new article of manufacture, a drill bit comprising a body 1 provided with an enlarged outer end 5 and with a comparatively large elliptic shaped bevelled surface 8, said body 1 provided with a water channel 2 opening upon said bevelled surface 8, and said body 1 provided opposite to said bevelled surface 8 with an inclined face 6 terminating at its outer end in a straight edge 7 parallel with the longitudinal axis of said body 1, whereby a circular groove is cut by said drill bit.



1,627,910. TRACTOR-TRAILER. CHARLES H. LAND, Detroit, Mich. Filed Sept. 10, 1925. Serial No. 55,465. 15 Claims. (Cl. 280—33.1.)

1. In a device of the character described, the combination with a tractor and trailer of a fifth wheel secured to the tractor including a turnable member having converging guide channels adapted to actuate means for operating a supporting leg carried by the trailer; a leg carried by the trailer adapted to support the forward end of the trailer when the latter is disconnected from the tractor and to be released from supporting relation upon coupling the trailer to the tractor, and means co-ordinating with the converging guide channels of the turnable member of the fifth wheel and connected with said supporting leg, whereby upon a forward or backward movement of the tractor the leg may be shifted from a position adapted to support the trailer to a transit position, or vice-versa.



1,627,911. VEHICLE. NIEL P. LARSEN, Cleveland, Ohio, assignor to The American Coach & Body Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 2, 1926. Serial No. 85,482. 5 Claims. (Cl. 280—33.4.)

1. A vehicle of the type described, comprising a body portion and wheels attached thereto, a tongue comprising forwardly converging side members connected to the body portion, means for supporting said members comprising a rod attached at one end to one of the converging mem-

bers and extending substantially parallel therewith, a leg slidably connected to said rod, and means for securing said leg in operable position.

1,627,912. BOLT. HARRY A. LOMASON, Detroit, Mich. Filed Sept. 13, 1924. Serial No. 737,450. 3 Claims. (Cl. 85—9.)

2. A bolt for the purpose described including a head and upstanding lugs integral with the head to provide for entering said head and lugs within a countersink around an opening to receive the bolt, said lugs being bendable into engagement with the side wall of the countersink to hold the bolt against endwise movement.

1,627,913. WALL CONSTRUCTION. JOHN F. MAKOWSKI, Stockton, Calif., assignor, by mesne assignments, to Fire Proof Wall Company, Reno, Nev., a Corporation. Filed Feb. 16, 1926. Serial No. 88,576. 6 Claims. (Cl. 72—115.)

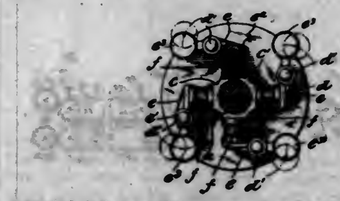
1. A wall stud comprising a thin flat member, and nailing blocks secured to the flat faces of such member.

1,627,914. RADIATOR. SVEN MALER, Milwaukee, Wis. Filed May 17, 1924. Serial No. 714,138. 2 Claims. (Cl. 257—139.)

1. A radiator formed of sheet metal and including vertical fluid chambers and central longitudinal fluid conduits, the depth of the fluid chambers being greater than the distance between them, a plurality of the adjacent fluid chambers positioned on the same side of said fluid conduits being formed from one integral sheet of metal, adjacent portions of said fluid chambers being secured together to prevent lateral and longitudinal spreading.

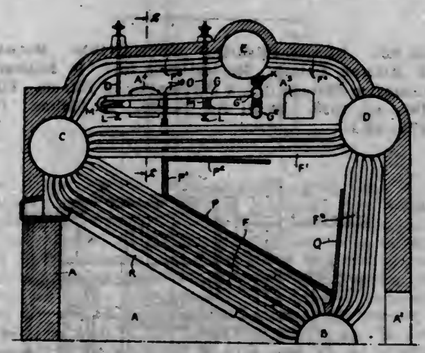
1,627,915. MOLDING STRIP. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 1, 1926. Serial No. 112,951. 5 Claims. (Cl. 20—69.)

1. A strip of molding formed of a single piece of metal having a channel-shaped portion, an open return-bent portion extending from one wall thereof and into the channel portion to provide gripping means for a door jamb, and an open return-bent portion extending from the outer wall of the channel-shaped portion longitudinally of the base thereof and adapted to receive a weather strip.



1,627,916. WINDOW. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 9, 1925. Serial No. 55,859. 4 Claims. (Cl. 98—8.)

1. In combination with a wall having an aperture, a closure therefor, flexible strips clamped to opposed edges of the closure, and means engaging said flexible strips whereby either one of opposed edges may be spaced from the wall.

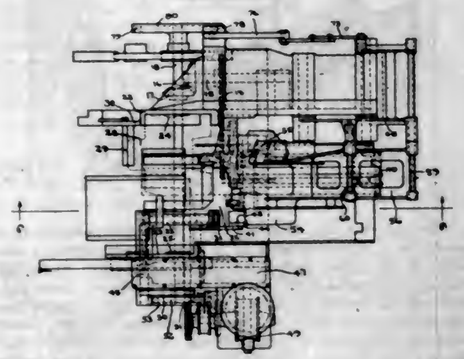


1,627,917. VIBRATION DAMPENER. ALFRED FELLOWS MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1926. Serial No. 104,242. 2 Claims. (Cl. 74—6.)

1. A vibration damping device comprising a rotating member, a plurality of pivoted elements, means to mount said elements with the rotating member, inertia means on one end of said pivoted means, seats on the opposite ends, co-operating seats on the rotating means, and means

mounted between the co-operating seats to resist movement of the inertia means due to rotation of the rotating member.

1,627,918. SUPERHEATER BOILER. FRANCIS MILLER MACDOWELL, Fanwood, N. J., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1923. Serial No. 663,096. 1 Claim. (Cl. 122—302.)

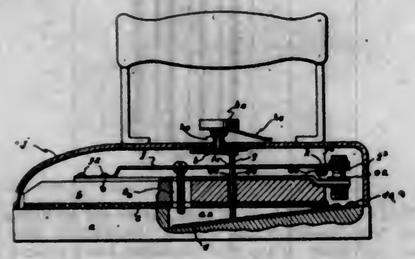


The combination with a water tube boiler comprising a steam and water drum and a water drum adjacent one end of the boiler, a second steam and water drum adjacent the opposite end of the boiler, banks of tubes connecting the water drum to each of the steam and water drums, a third bank of tubes connecting the two steam and water drums, a steam drum parallel to the other drums and located intermediate the ends of the boiler and sufficiently above said third bank of tubes to provide space between said drum and last mentioned tubes for the hereinafter mentioned superheater headers and having a heating gas outlet adjacent said water drum, and tubes connecting said steam drum to each of said steam and water drums, of a superheater located in the space between the steam drum and said third bank of tubes and comprising headers parallel to and beneath the steam drum and tubular superheater elements secured to said headers and extending from the latter toward said opposite end of the boiler in the space between said third bank of tubes and the steam tubes connecting the steam drum to said second steam and water drum, and baffle means including a baffle extending upwardly between the tubes connecting the water drum to the two steam and water drums and across said third bank of tubes, and a baffle formed in part by said headers for causing the heating gases to flow upward toward the last mentioned steam and water drum along the tubes connecting it to the water drum and thence upwardly across an adjacent portion of said third bank of tubes and portions of the superheater elements, and thence downward across the remaining portions of the superheater tubes into said third bank of tubes and thence downward to said outlet through the bank of tubes connecting the first mentioned steam and water drum to the water drum.

1,627,919. MEANS AND METHOD FOR SCUTCHING FIBROUS PLANTS. JOHN A. MCLEOD, Memphis, Tenn. Filed Feb. 25, 1926. Serial No. 90,520. 8 Claims. (Cl. 19—28.)

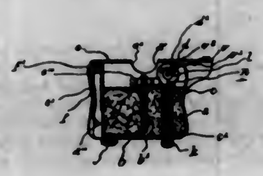
1. In apparatus of the character described, the combination of crushing means, means for delivering material thereto in predetermined arrangement, scutching means at a distance from said crushing means, means adjacent said scutching means, for regulating the delivery of material from said crushing means to said scutching means, and hackling means receiving material from said scutching means.

1,627,920. BLANK-FEEDING MECHANISM. MICHAEL J. MILMOE, Chicago, Ill., assignor to F. B. Redington Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1925. Serial No. 74,969. 22 Claims. (Cl. 271—29.)



1. Apparatus for feeding blanks comprising a magazine having supporting ledges for a stack of blanks, a suction head for engaging a projecting portion of the lowermost blank of the stack and for moving said projecting portion downwardly, a stripper arranged to enter the space between the said projecting portion and the remaining blanks in said magazine to extract said blanks from said magazine, and a lifter operated by said stripper to raise the remaning blanks in said magazine to permit said lowermost blank to be easily withdrawn from said supporting ledges.

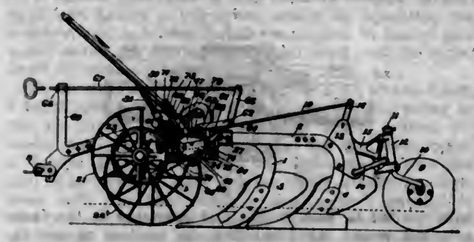
1,627,921. METHOD OF PRODUCING FEED STUFF. CARL S. MINER, Glencoe, and GODFREY STEERUP, Chicago, Ill., assignors to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed May 28, 1921, Serial No. 473,360. Renewed Mar. 23, 1927. 11 Claims. (Cl. 99—11.)



11. The process of treating oat hulls which consists in subjecting them to the conjoint action of heat, pressure and substantially less than its own weight of water in the presence of lime, said lime being present in both the solid and the dissolved state.

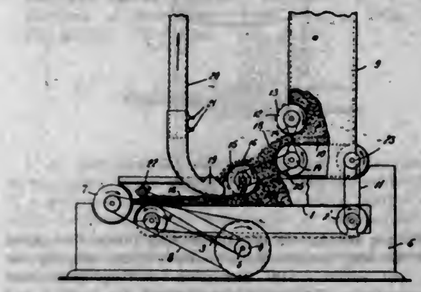
1,627,922. FLATIRON. JOSEPH W. MYERS, Jackson, Mich., assignor, by direct and mesne assignments, of one-third to Joseph H. Myers, Jackson, Mich.; one-third to Arthur J. Tuttle, Detroit, Mich.; and one-third to Agnes W. Myers and Joseph W. Myers, Jackson, Mich. Filed Mar. 24, 1924. Serial No. 701,404. 10 Claims. (Cl. 219—25.)

1. In an electrically heated flatiron a removable cover therefor a circuit controlling apparatus, a thermostat adapted to actuate said apparatus, and a cam forming an adjustable yielding force modifying the action of said thermostat, said cam being itself elastic, said cam being permanently secured to said cover and adapted to automatically engage to actuate said apparatus when the cover is adjusted to the iron.



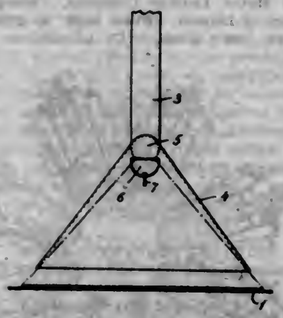
1,627,923. AUTOMATIC FIRE-PRODUCING DEVICE. LOUIS AUGUSTE NEVIÈRE, Chateau de Mere, near Artaimes, France. Filed June 22, 1923, Serial No. 647,010, and in Belgium July 5, 1922. 5 Claims. (Cl. 67—7.1.)

1. In a lighter, the combination of a reservoir member having an enclosed portion adapted to contain an inflammable liquid and also having a projecting portion beyond said enclosed portion, a cover member slidably mounted on said reservoir, a wick located in said enclosed portion and having its end projecting into said projecting portion, ignition means mounted on said reservoir adjacent said projecting end, said ignition means being adapted to be actuated when said cover member and reservoir member are moved relatively to each other in one direction, spring means adapted to actuate said cover member and reservoir member in the opposite direction, one of said members having a perforation and the other of said members having a longitudinal opening, said perforation and opening being adapted to register during the movement of said members against the force of said spring so as to insure a continuous and substantially uniform air supply to said wick.



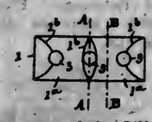
1,627,924. GANG PLOW. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 23, 1920. Serial No. 405,289. 28 Claims. (Cl. 97—73.)

1. In a plow comprising a beam, a furrow opener carried by the beam, and supporting wheels, the combination of a screw supported on the beam, connections operated by the rotation of said screw to move the beam and furrow opener vertically, and a train of gearing between said screw and one of the wheels and operable at will to



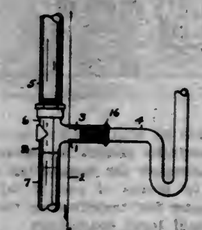
connect the latter wheel with said screw whereby the traction power of said wheel is transmitted to rotate the screw.

1,627,925. SYSTEM OF FEED CONTROL. HENRY HARRIS PAYZANT, Everett, Wash., assignor to Wood Conversion Company, Cloquet, Minn., a Corporation of Delaware. Filed May 28, 1925. Serial No. 33,407. 7 Claims. (Cl. 198—53.)



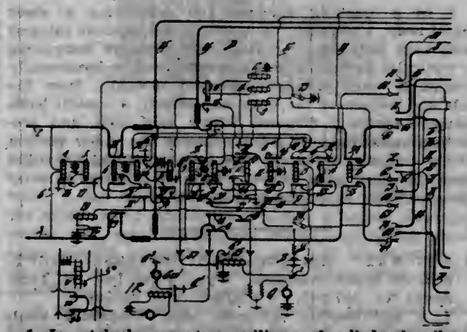
1. The method of forming loose material into a layer of uniform thickness, which consists in continuously depositing an excessive amount of the material onto a traveling support, and simultaneously shaping a portion of the material into a layer and lifting the excess away from said layer.

1,627,926. DISTRIBUTING HOOD. HENRY HARRIS PAYZANT, Everett, Wash., assignor to Wood Conversion Company, Cloquet, Minn., a Corporation of Delaware. Filed May 28, 1925. Serial No. 33,406. 7 Claims. (Cl. 302—59.)



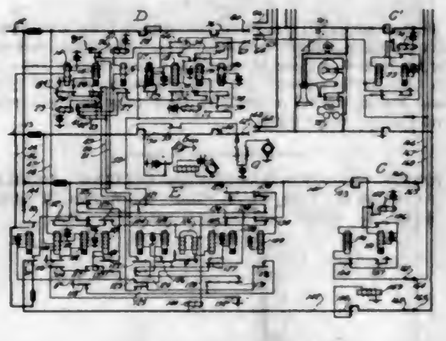
1. A device of the type described comprising a supply pipe, a distributing hood associated therewith, said hood having an opening in the side thereof, and a member having a curved edge, said member being hinged to said hood along one edge of the opening in the side thereof and adapted to swing into the interior thereof.

1,627,927. SAFETY RAZOR. DANIEL PETARD, Nice, France. Filed June 25, 1924, Serial No. 722,224, and in France Feb. 27, 1924. 1 Claim. (Cl. 30—12.)



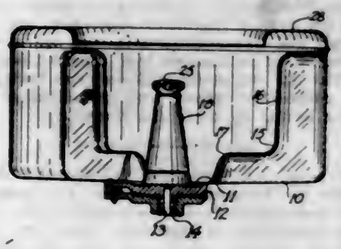
For use on safety razors of the Gillette type, a concavo-convex spacing plate adapted to be interposed between the blade and the curved guard and provided on its convex face with recesses forming separated elevated portions having curved edges and each constituting a support for the razor blade.

1,627,928. VENTED WASTE-PIPE FITTING. CHARLES F. PRESSLER, Fort Wayne, Ind. Filed Nov. 9, 1925. Serial No. 67,707. 1 Claim. (Cl. 182—22.)



A device of the class described comprising a T-shaped fitting having annular discharge and venting portions in vertical alinement and an annular inlet portion adapted to be removably connected to a waste pipe leading from a plumbing fixture, and having communication with both the discharge and venting portions, the fitting being adapted to be installed in a wall with its inlet portion projecting exteriorly thereof, a seat in the wall of the fitting opposite to and in axial alinement with the inlet portion and an open ended tube adapted to be inserted into the inlet portion and engaged at one end in the said seat and having a port therein adapted to register with the discharge portion, said tube having its outer end threaded.

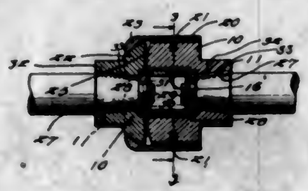
1,627,929. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 13, 1917. Serial No. 196,380. 80 Claims. (Cl. 174—18.)



1. In a telephone system, calling and called subscribers' lines, an automatic connector switch controlled by the calling subscriber to connect said lines, and means controlled by the called subscriber for releasing and re-operating said connector to connect the said calling line with another called line.

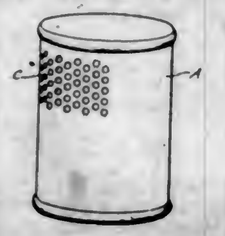
1,627,930. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 26, 1920, Serial No. 384,353. Renewed July 21, 1926. 90 Claims. (Cl. 179—18.)

1. In an automatic branch exchange, incoming and local connectors, means for completing a call from the main exchange by means of one of said incoming connectors, and means for transferring the call by means of any one of said local connectors.



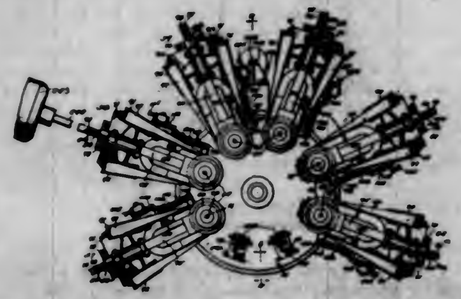
1,627,931. WASHING-MACHINE TUB. SIMON E. SCHROEDER, Newton, Iowa. Filed Feb. 6, 1925. Serial No. 7,226. 3 Claims. (Cl. 259—75.)

1. In a washing machine tub comprising a sheet metal body, a plurality of spaced baffle members integral with said body, each of said baffle members comprising a vertically extending reach member and a horizontally extending reach member impressed inwardly from the side and bottom of the body respectively, a conical baffle member centrally disposed within said body and projecting upwardly to a point adjacent the upper portion of the tub, and a top for said body extending inwardly from the upper edge thereof a distance sufficient to cover the vertically extending reach members.



1,627,932. BALL-BEARING UNIVERSAL JOINT. WALTER SCOTT, Sheridan, Wyo. Filed Dec. 28, 1926. Serial No. 157,587. 4 Claims. (Cl. 64—91.)

1. A ball bearing universal joint comprising heads adapted for attachment to shaft sections having lugs upon adjacent faces, said lugs interdigitating and having the adjacent faces thereof provided with coacting grooves combining to produce longitudinally directed ball receiving channels, said lugs and heads combining in the assembled relation thereof to produce a central axial chamber, a sleeve within said chamber and having projecting ball retaining elements corresponding in number to the spaces between adjacent faces of the lugs and

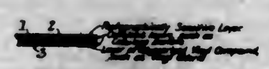


balls carried by said flanges and operating in the channels and means for connecting the sections to one another permitting relative angular displacement thereof.

1,627,933. WINDING BOBBIN. HARRY V. N. SNYDER, Clifton, N. J., assignor to The Manhattan Rubber Mfg. Company, a Corporation of New Jersey. Filed Jan. 19, 1927. Serial No. 162,016. 1 Claim. (Cl. 242—178.)

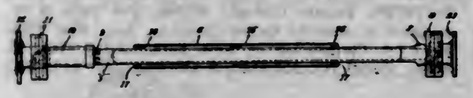
A winding bobbin suitable for having threads of rayon wound thereon, comprising a hollow, thin, slightly resilient but substantially distortion-resisting body having a multitude of perforations through its surface and communicating with its hollow interior, the exterior and the interior of the winding surface of the bobbin being entirely covered with a thin layer of rubber resistant to acids and alkalis and vulcanized to such a degree between softness and rock-hardness as renders the covering material somewhat yielding but tough and substantially resistant to cracking or chipping and with an exterior surface of high molecular cohesion.

1,627,934. UNIVERSAL MULTIPLE-OPERATION MACHINE. LOUIS H. STEIN, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1924. Serial No. 736,419. 28 Claims. (Cl. 29—38.)



1. In combination, a table adapted to be intermittently advanced by rotary motion, a plurality of working heads stationed at equidistant stations about said table or

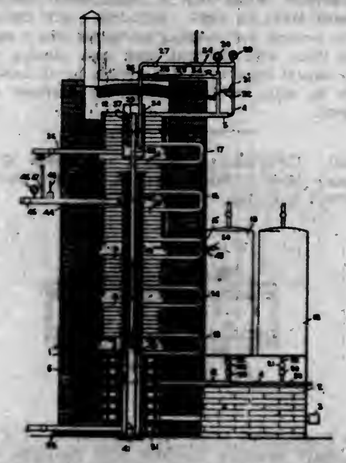
carrier, said heads having spindles disposed vertically above the table or carrier, a common central vertical shaft below the table or carrier, a plurality of radial drive shafts connected to the common central vertical shaft and having a belt-driven means for operating the spindles, and a driving member connected to one of said radial shafts for driving the central shaft and the radial shaft in unison.



15. In combination a frame having a top frame plate, a barrel and a base, a table having a central bearing in the top frame plate and having a thrust bearing between the bottom of the table and the top frame plate, a Geneva gear connected to the table shaft below the top frame plate, a main driving shaft axially in alignment with the table shaft, a counter-shaft parallel to the axis of the aforesaid shaft, Geneva pinion and cam mechanism loosely mounted on said counter-shaft, a controlling cam shaft, a cam on the cam-shaft controlling the clutching of said counter-shaft to the Geneva cam and pinion, and quick releasable means for changing the cam to control the rate of advance of the table.

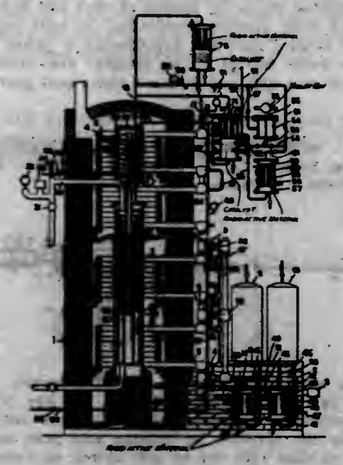
1,627,935. LAMINATED FILM WHICH INCLUDES A LAYER OF POLYMERIZED VINYL CHLORIDE. RAY L. STINCHFIELD, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 1, 1926. Serial No. 99,075. 25 Claims. (Cl. 95—9.)

1. A photographic film comprising a light-sensitive photographic layer, a flexible and easily electrifiable layer of a polymerized vinyl compound, and a flexible colloid layer coextensive with said layer of polymerized vinyl compound, and in condition to reduce the potential of electric charges formed on said polymerized vinyl compound layer.



1,627,936. PROPELLER SHAFT. CARL E. SWENSON, Rockford, Ill., assignor of one-fourth to Carl L. Anderson, one-fourth to Levin Faust, and one-fourth to Eric S. Ekstrom, Rockford, Ill. Filed Dec. 30, 1925. Serial No. 78,276. 2 Claims. (Cl. 64—29.)

1. A propeller shaft of the character described comprising in combination a relatively small diameter shaft of about the average length having power-transmitting connections at opposite ends, a comparatively large diameter tubular shaft surrounding an intermediate portion of the length of said first mentioned shaft, and a plurality of rings fixed on said first mentioned shaft in spaced relation and arranged to bear within said second named shaft, said second named shaft being held against endwise movement with respect to said rings.

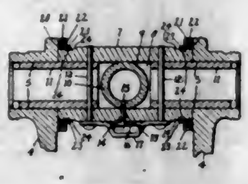


1,627,937. APPARATUS FOR CRACKING AND DISTILLING HYDROCARBON OILS. STEPHEN L. TINGLEY, Nitro, W. Va. Filed Oct. 12, 1923. Serial No. 668,229. 18 Claims. (Cl. 196—110.)

1. A cracking and distillation apparatus comprising a furnace, a coil within said furnace for heating the hydrocarbon oil and means for supplying oil to the same, a jacket entirely surrounding said coil and means for supplying water thereto and causing it to flow in the same direction as the flow of the oil whereby it will be converted into superheated steam by the heat of the furnace and the oil progressively heated, vaporized and the vapors superheated at substantially the same pro-

gressively increasing temperatures as those of the water and its vapor the oil containing coil protected from direct exposure to the heat of the furnace.

1,627,938. OIL DISTILLATION AND CRACKING. STEPHEN L. TINGLEY, Nitro, W. Va. Filed Dec. 28, 1923. Serial No. 683,165. 33 Claims. (Cl. 196—52.)



1. An oil cracking and distillation apparatus comprising a furnace, a jacketed coil within said furnace formed in a series of superposed substantially horizontal sections, means respectively for supplying oil and water to the lower end of said coil and jacket, a header communicating with said oil-supplying means and having check valve control connection with said coil intermediate of its sections acting to control the fluctuations of the liquid level of the oil in said coil.

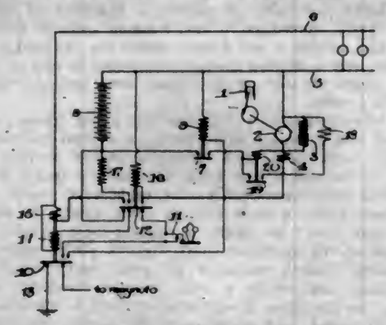
13. An oil cracking and distillation apparatus comprising a furnace, a conduit for the oil within said furnace, a fixation chamber, means for supplying oil to said conduit, means for subjecting the oil before entering said conduit to emanations from a radioactive substance and means for conducting the highly heated oil vapors from said conduit to said fixation chamber.

1,627,939. PROCESS OF COLORING MATERIALS. JOHN P. TRICKEY, Evanston, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 2, 1923, Serial No. 610,351. Renewed Mar. 23, 1927. 8 Claims. (Cl. 260—2.)

1. The process for coloring materials which comprises treating them with furfural, and then causing the furfural to impart color to said materials by an independent reaction in situ involving only the furfural and an acid agent.

1,627,940. UNIVERSAL JOINT. RAYMOND G. UACH, Allegan, Mich. Filed Nov. 3, 1926. Serial No. 145,969. 5 Claims. (Cl. 64—102.)

1. In a universal joint, the combination of a pair of forked shaft members provided with bearings at their ends, a coupling member comprising a center block having intersecting bores of the same diameter, a through journal pin disposed in one of the said bores of said center block, a pair of journal pins disposed in the other bore of said center block at the sides of the said through journal pin, locking pins arranged through said center block to engage said pair of journal pins, and a spring retaining pin disposed through the side of the center block to engage said through journal pin, said spring retaining pin being formed of wire and having a yoke-shaped body portion terminating in coils engaged with said locking pins and constituting a guard, said spring pin being carried by an integral arm extending from one of said coils and disposed under said guard.

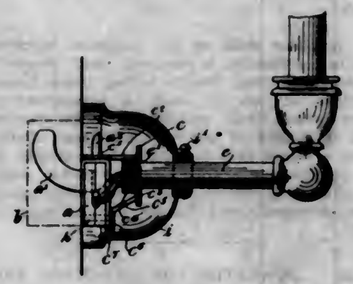


1,627,941. SURGICAL INSTRUMENT. REINHOLD H. WAPPLER, Yonkers, N. Y. Filed Oct. 16, 1924. Serial No. 743,856. 8 Claims. (Cl. 128—7.)

3. In a surgical instrument the combination of a barrel, a pair of jaws mounted upon one end of said barrel, mechanism connected with said jaws and controllable by the operator for causing said jaws to grip and thus to close said end of said barrel, an endoscope extending lengthwise through said barrel and having a field of vision extending obliquely outward from said open end thereof and between said jaws when open, said field of vision having the form of a cone with its axis entirely within the general plane in which said jaws are to be closed.

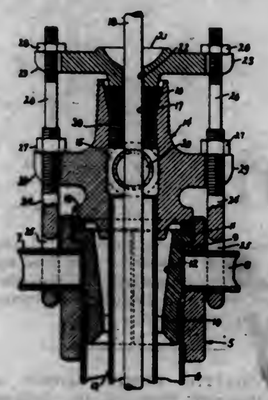
1,627,942. AUTOMATIC GENERATING PLANT. THOMAS S. WATSON, Milwaukee, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed June 12, 1922. Serial No. 567,734. 3 Claims. (Cl. 290—31.)

2. In a gas-engine-operated generating unit, a generator having windings for supplying mains at a service voltage, means for permitting the starting of the engine by a materially lower voltage battery supplying current to said windings for operating the generator as a



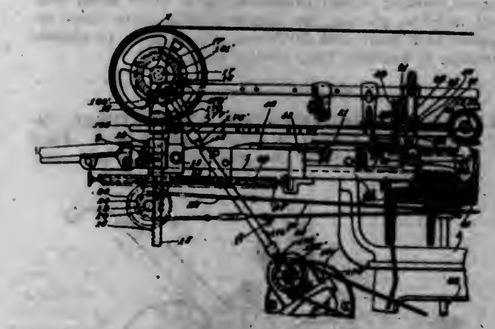
motor and comprising a shunt field coil auxiliary to said windings and included in circuit momentarily at the time of closing the starting circuit.

1,627,943. ROCKING-HANDLE FLUSH-TANK FITTING. ARTHUR W. WELLINGTON, Waterbury, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Sept. 4, 1926. Serial No. 133,563. 3 Claims. (Cl. 4—67.)



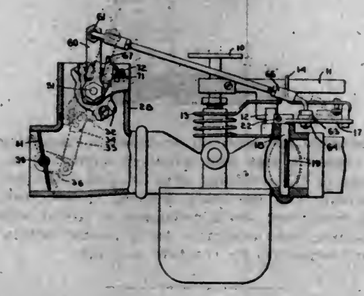
3. An assembly or unit for rocking-handle flush-tank fittings, consisting of a threaded sleeve having its inner end reduced in diameter, a shaft passing through the said sleeve, projecting at each end therefrom, and a pin passing through the reduced end of the sleeve and through the shaft which rocks upon it and shorter in length than the full diameter of the sleeve.

1,627,944. ADAPTER FOR FIXTURE-SUPPORTING DEVICES. ERNEST CANTELO WHITE, New York, N. Y., assignor to Electric Outlet Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1921. Serial No. 455,916. 3 Claims. (Cl. 240—85.)



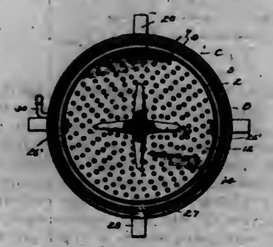
1. An adapter for a demountable electrical connecting and supporting plug for fixtures, the plug having an upstanding lug for engagement with a fixture having a bridge, an inwardly projecting member on said adapter, a slot in said member for detachable engagement with said lug, threaded means on the adapter for supporting the fixture, and means co-operating with the slot for supporting the adapter from the plug.

1,627,945. CASING HEAD FOR OIL WELLS. WILSON B. WIGLE, Long Beach, Calif. Filed Nov. 10, 1925. Serial No. 68,188. 3 Claims. (Cl. 166—14.)



1. A casing head for oil wells comprising a body member having an internal seat adjacent its upper end adapted to be detachably secured to the upper end of a well casing and having gas outlet pipes leading therefrom, a sleeve having a conical bore for the reception of tubing slips mounted on the seat of the body member, an expansible packing member mounted on the upper end of the sleeve, a spider member having a bore therethrough and fluid outlets leading therefrom disposed on said packing member, a packing member disposed in the upper end of said spider bore having an aperture for the passage of pump rods therethrough, the lower end of said bore being threaded for the reception of the upper end of a string of oil tubing, a gland follower bearing against said packing member to compress the same, and means to secure the spider to the body and to simultaneously expand the packing members.

1,627,946. CAN-LABELING MACHINE. CHARLES H. WILD, Baltimore, Md., assignor to Burt Machine Company, Incorporated, a Corporation of Maryland. Filed Aug. 26, 1924. Serial No. 734,160. 58 Claims. (Cl. 216—58.)

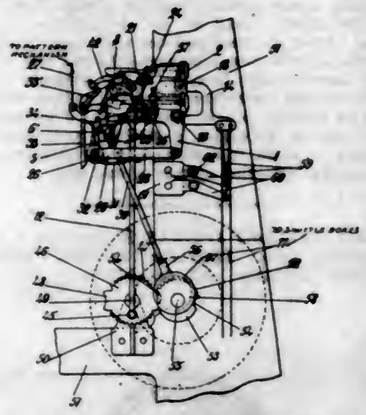


1. In a can labeling machine having a feed belt engaging the cans from above to roll them through the machine, and feed belt pulleys at opposite ends of the machine, means for equally and simultaneously adjusting the feed belt and the feed belt pulleys at the opposite ends of the machine up or down to provide for treating cans of different diameters.

1,627,947. THERMOSTATIC CONTROL FOR CARBURETORS. MERL B. WOLFARD, Cambridge, Mass., assignor to Hopewell Brothers, Watertown, Mass., a Copartnership composed of Charles F. Hopewell and Helen C. Hopewell. Filed Sept. 4, 1924. Serial No. 735,046. 43 Claims. (Cl. 261—39.)

1. In combination with an internal combustion engine having an intake conduit and means for supplying a liquid fuel thereto, means for supplying hot air to said conduit, means for admitting cold air to said conduit, controlling means initially positioned respectively to prevent admission of cold air and to admit a restricted amount of hot air from said hot air supply to said conduit, thermostatic means influenced by the heat from the engine operable upon increase of the temperature thereof to cause said controlling means to admit an increasing supply of hot air to said conduit until a predetermined temperature of the engine is attained, and simultaneous therewith to admit to said conduit an initially less but more rapidly increasing amount of cold air.

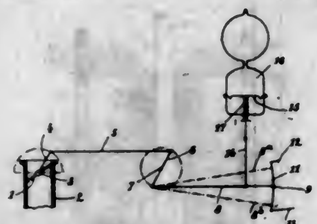
1,627,948. LAUNDRY APPLIANCE. CHARLES R. ASMUS, Columbus, Ohio. Filed Dec. 9, 1924. Serial No. 754,832. 2 Claims. (Cl. 68—30.)



1. In a washing machine, a boiler comprising inner and outer sections, said sections being formed with spaced bottom and side walls, means for suspending the inner section within the outer section, consisting of a fixed ring support arranged interiorly of the outer section, and a complemental ring support stationarily projecting from the side wall of the inner section and engaging the said first named ring support, the engaging surfaces of said support being disposed on an angle with respect to the horizontal so as to center automatically the position of the inner section within the outer section, the non-engaging surfaces of said ring support being angularly disposed so as to facilitate the shedding of water.

1,627,949. ELECTRIC MOTOR. EDGAR N. BAKER, Springfield, Ohio, assignor to The Robbins & Myers Company, Springfield, Ohio, a Corporation of Ohio. Filed July 14, 1924. Serial No. 725,819. 1 Claim. (Cl. 172—278.)

In a motor of the character described, a supporting casing an armature and field windings supported in said casing, one of the windings being of high reactance and low resistance and the other winding of low reactance and high resistance, and a resistance in circuit with the latter winding, said resistance being located within said casing and supported by the field winding.



1,627,950. DOBBY FOR LOOMS. PAUL JOSEPH BANZET, Bourgoin, France, assignor to Bruyere Banzet & Co., Societe Dauphinoise de Materiel Textile, Bourgoin, France, a Corporation of France. Filed July 15, 1924, Serial No. 726,080, and in France Nov. 27, 1923. 3 Claims. (Cl. 139—175.)

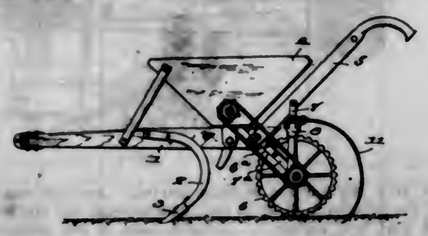
1. In a double lift dobby mechanism having multiple shuttles and raising box mechanisms for the control thereof, with swinging baulks and griffe bars, the actuating means therefor comprising in combination an intermittent device, comprising a gear attached to a loom shaft, having toothed sectors and plain sectors and a cooperating gear having toothed sectors cooperating with the toothed sectors of said gear, and concave sectors cooperating with said plain sectors, a crank pin attached to said second mentioned gear, and a connecting rod leading therefrom to means cooperating with said griffe bars, whereby a dwell is obtained at the end of each movement of the griffe bars.

1,627,951. CONTROL OF CARBURETORS. MARIUS JEAN-BAPTISTE BARBAROU, Paris, France. Filed Feb. 23, 1924, Serial No. 694,804, and in France Mar. 24, 1923. 6 Claims. (Cl. 123—75.)

1. A transmission gear for the control of the carburetor of an internal combustion engine comprising a control member, a rod and link gear operatively connecting said control member with the throttle valve of the carburetor, an elastic membrane one face whereof is subjected to a pressure substantially equal to the atmospheric pressure at the lowest altitude at which the engine is intended to work, while its other face is subjected to the surrounding atmospheric pressure and means for operatively connecting said membrane to one rod of said rod and link gear,

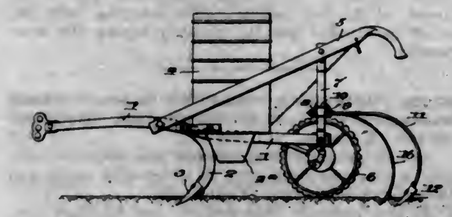
said rod being adapted to slide on the preceding link whereby the operative length of said link may be varied and the ratio of the transmission of movement is varied in accordance with the altitude and increases at the same time as the latter.

1,627,952. PLASTIC CEMENTITIOUS MATERIAL. HARRY E. BACOKEY, Evanston, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1923. Serial No. 656,455. 4 Claims. (Cl. 106—35.)



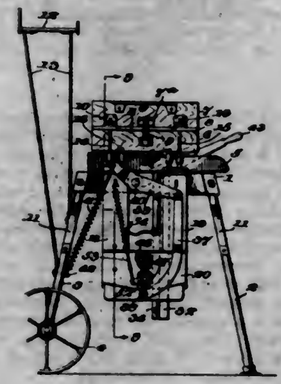
1. A plastic cementitious material comprising substantially eighty-eight parts by weight of hydraulic cement, six parts of finely divided plastic clay and six parts of finely divided hydrated lime.

1,627,953. METHOD OF CONSTRUCTING METAL WHEELS. EDOUARD WILFRID BUGUET, Montrouge, France. Filed Mar. 7, 1924, Serial No. 697,649, and in France Mar. 15, 1923. 6 Claims. (Cl. 29—159.)



1. The method of constructing metal wheels which comprises forming radially disposed ribs in sheet metal conical member, placing two members with their bases opposite each other, and subjecting said members to stresses tending to augment their conical height.

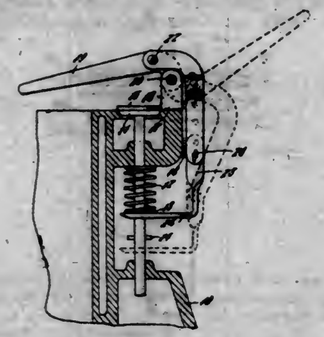
1,627,954. ATTACHMENT FOR AGRICULTURAL IMPLEMENTS. EUGENE M. COLE, Charlotte, N. C. Filed Feb. 2, 1924. Serial No. 690,179. 4 Claims. (Cl. 97—179.)



1. An attachment for agricultural implements having a beam, handle bars, and substantially vertical braces extending downwardly from the handle bars, said attachment comprising a bracket having two angularly disposed arms, means for clamping one arm of such bracket to one of said braces at any desired point longitudinally thereof, and a plow shank having its upper end secured to the other arm of said bracket.

1,627,955. ATTACHMENT FOR FERTILIZER DISTRIBUTORS. EUGENE M. COLE, Charlotte, N. C. Filed Feb. 2, 1924. Serial No. 690,181. 5 Claims. (Cl. 97—179.)

1. An attachment for fertilizer distributors or the like, having a frame, and means for supporting the same at two points, handle bars, and braces connecting the frame and handle bars, said attachment comprising a cross bar, means for frictionally clamping said bar to said braces so that it will be supported thereby in a substantially horizontal position said frictional clamping means constituting the sole securing means for said bar, and one or more plow shanks having their ends attached to and carried by said cross bar.

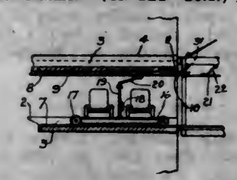


1,627,956. LIFTING MECHANISM. EUGENE M. COLE, Charlotte, N. C. Filed Mar. 5, 1926. Serial No. 92,587. 12 Claims. (Cl. 22—48.)

1. Lifting mechanism comprising a plurality of vertical rods, a frame in which said rods are yieldingly mounted, means for raising said frame, means permitting said rods to yield during the initial movement of said frame, and means for automatically locking said rods to the frame after the latter has traveled a predetermined distance.

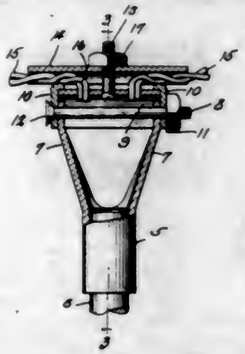
1,627,957. VALVE LIFTER. JOHN COTTRELL and JOHN MARKER, Ionia, Mich. Filed Feb. 24, 1926. Serial No. 90,412. 5 Claims. (Cl. 29—86.3.)

1. A valve lifter for use upon and in conjunction with internal combustion engine valves comprising a pair of interassociated horizontally and vertically disposed disks adapted to be seated upon the head of a valve and the corresponding outer side of the cylinder block, an



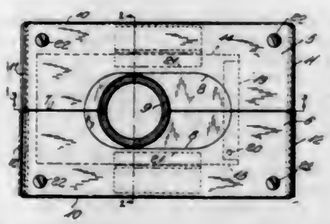
operating lever pivotally mounted between the disks, and lifting means associated with the operating lever and valve mechanism.

1,627,958. RADIOFREQUENCY CHOKE COIL SYSTEM. ALFRED CROSSLEY, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed July 20, 1926. Serial No. 123,785. 4 Claims. (Cl. 175—359.)



4. A choke coil system comprising in combination a plurality of choke coil units each arranged to have small distributed capacity, means for mounting said choke coil units with respect to each other in such manner that there is no appreciable magnetic or electrostatic coupling therebetween, a series connection between said plurality of coils with the outer terminal of one coil connected to the inner terminal of a succeeding coil with the terminals of said choke coil system across the inside of one of said choke coils and the outside of another of said choke coils for substantially increasing the resistance of said choke system at resonant frequencies for preventing the destruction of said choke coil system at said resonant frequencies while maintaining the distributed capacity of said choke coil system at a low value.

1,627,959. STORAGE BUILDING FOR MOTOR CARS AND THE LIKE. KEPPEL DISNEY, Vancouver, British Columbia, Canada. Filed June 12, 1926. Serial No. 115,693. 3 Claims. (Cl. 214—16.1.)



1. A storage building for motor cars and the like comprising two or more superimposed floors and an elevator communicating between the floors, an aisle extending from the elevator shaft bounded on one or both sides with car storage spaces, electric conductors extending along the aisel, energized feeders carried by the elevator and an electric tram adapted to be carried by the elevator for transporting a car along the aisel, said tram deriving its energy from the feeders and the conductors.

1,627,960. MOP-HANDLE FASTENER. JOHN W. DOTY, Olney, Ill. Filed Aug. 20, 1926. Serial No. 130,512. 2 Claims. (Cl. 15—229.)

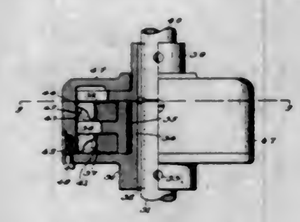
1. In a mop, a head including a wire frame, a handle, a socket member in which the handle is positioned, said socket member having arms extending therefrom, a clamp including jaws adapted to embrace portions of the wire frame, strands carried by the frame, and means for connecting the arms of the socket member to the clamp to permit the socket member to move to various angles with respect to the mop head.

1,627,961. PLATE THIMBLE FOR PIPES. JOHN W. FARLEY, Cleveland, Ohio. Filed July 23, 1926. Serial No. 124,417. 4 Claims. (Cl. 126—317.)

1. A device of the class described, comprising two substantially rectangular plates disposed in a common plane and having longitudinal edges in contact with each other, said plates being notched to form a pipe-receiving slot and having laterally bent flanges on their ends and on their outer longitudinal edges but not on their abutting edges, a pair of channeled strips receiving the end flanges of said plates, said strips being secured to the end flanges of one plate and being slidably engaged with those of the other plate, a pair of smaller plates at one side of the first named plates notched to form a pipe-receiving opening, and means for holding said smaller plates slidably engaged with the first named plates.

1,627,962. CIRCUIT CLOSER. JOSEPH A. FIEDLER, St. Paul, Minn. Filed Dec. 16, 1925. Serial No. 75,736. 1 Claim. (Cl. 200—52.)

A circuit closer of the class described comprising a movable contact arm, an angular bracket supported within the path of movement of said contact arm, one of the leg members of said angular bracket having a threaded opening formed therein, a thimble threaded through the opening, a head formed on one end of the thimble to provide a closure therefor, said head engaging the leg member of the angular bracket in which the threaded opening is formed, a cap threaded on the open end of the thimble, a headed contact pin arranged within the thimble, the shank portion of said contact pin extending through the cap and adapted for cooperation with the

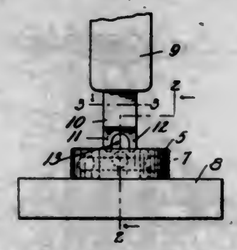


movable contact arm, and an expansible coil spring arranged within the thimble and cooperating with the head of the contact pin for normally urging the same outwardly.

1,627,963. MEDICINAL PRODUCT. HENRY C. FULLER, Washington, D. C. Filed Jan. 30, 1920. Serial No. 355,152. 5 Claims. (Cl. 167—7.)

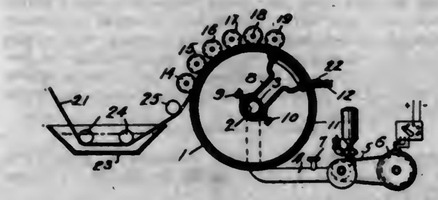
1. As new products, fluid extracts and tinctures comprising a vegetable drug used as a remedial agent and a halogen-containing ester of glycerine.

5. As new products, fluid extracts and tinctures comprising a vegetable drug used as a remedial agent and monochloraceticmonoglyceride.



1,627,964. LOST-MOTION COUPLING. ROBERT M. GALLOWAY, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Mar. 24, 1925. Serial No. 17,968. 2 Claims. (Cl. 64—26.)

1. In a lost motion coupling, the combination comprising a driving member; a driven member adapted to be operated by said driving member; a floating plate positioned between the driving and driven members; co acting lugs projecting from the sides of said members and the floating plate for driving the driven member from the driving member and for producing a predetermined lost motion upon reversing direction of rotation of the driving member; resilient members positioned between said lugs to prevent shock upon abruptly reversing the driving member, said resilient members extending only through a portion of the total circular distances between engaging lugs; and floating rings mounted on said floating plate for holding said resilient members in position to be engaged by said lugs.

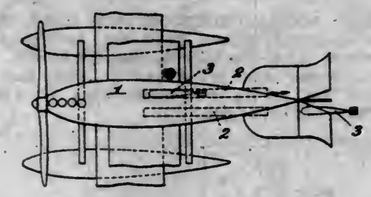


1,627,965. BALL-BEARING-ASSEMBLING DEVICE. ROBERT E. GAMBLE, Philadelphia, Pa., assignor to Standard Steel and Bearings Incorporated, Philadelphia, Pa., a Corporation of Delaware. Filed June 23, 1922. Serial No. 570,476. 2 Claims. (Cl. 29—84.)

1. In a device for loading ball bearings, a wedging member having a forked construction, the members of the forked portion being separated tangentially with relation to the curvature of the race rings when the wedging member is in operative position, the members of the fork being adapted to engage the opposing surfaces of the ring on opposite sides of the filling opening, and the recess separating the members of the fork extending upwardly into the wedging member a sufficient distance to provide for the placing of a ball in position therein and over the filling slot, whereby when the wedging

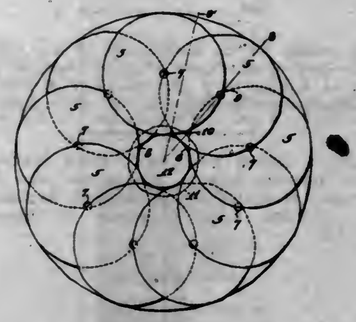
member is pressed into separating relation with the rings the ball will drop through the opening into the raceway grooves.

1,627,966. APPARATUS FOR OPERATING ON PAPER AND OTHER FABRICS. NICHOLAS M. GOODLETT, New York, N. Y., assignor to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1920. Serial No. 374,636. 39 Claims. (Cl. 92—69.)



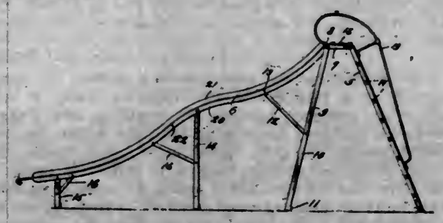
1. In an apparatus for operating on paper, the combination of a supporting surface for the paper having grooves therein parallel with the direction of travel of the paper and a crinkle-forming abutment having serrations fitting into said grooves, and means for applying fluid pressure to the paper immediately in advance of the abutment.

1,627,967. POCKET-IRON LEATHER GUARD. ED HAMBLIN, Jr., Woodward, Okla. Filed Mar. 4, 1926. Serial No. 92,209. 1 Claim. (Cl. 273—12.)



A guard for use in connection with a pool table pocket iron and leather covering therefor, said guard embodying a body portion formed of flexible material, said body portion being curved to conform to the curvature of the pocket iron and being of a length equal to the length of the pocket iron, said guard adapted to grip the pocket iron throughout the entire length of the pocket and adapted to cover the entire front face of the iron, portions of the body portion being cut away providing a plurality of gripping fingers adapted to extend over the rear edge of the pocket iron to grip the pocket iron, said fingers having openings in the upper surfaces thereof, said openings adapted to receive securing rivets to be driven into the leather covering of the pocket iron.

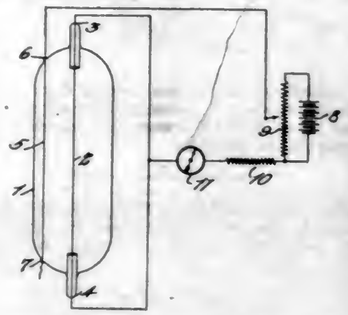
1,627,968. TORPEDO-LAUNCHING MEANS FOR AEROPLANES. FRITZ W. HAMMER, Lichterfelde, near Berlin, Germany, assignor to F. W. Hammer Corporation, a Corporation of New York. Filed Aug. 6, 1924, Serial No. 730,520, and in Germany Oct. 4, 1923. 1 Claim. (Cl. 244—1.)



The method of launching a torpedo from an advancing aeroplane which consists in discharging the same tail first in an inclined upward and rearward direction from beneath the aeroplane.

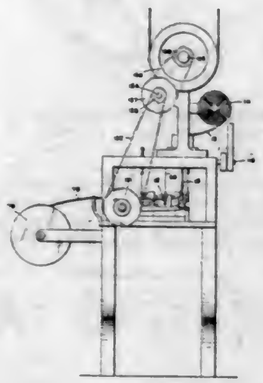
1,627,969. BUFF SECTION FOR BUFFING WHEELS. ROBERT E. HARRISON, Philadelphia, Pa. Filed Aug. 9, 1924. Serial No. 731,011. 4 Claims. (Cl. 51—193.)

1. A buff section adapted to be mounted upon a buffing wheel shaft, and comprising a plurality of uniformly arranged over-lapping discs in annular arrangement spaced across the center of the annulus by a distance considerably greater than the diameter of the shaft to prevent bunching of the overlapping close to the shaft and filling material for the space about the shaft, some of which overlaps the inner edges of the discs.



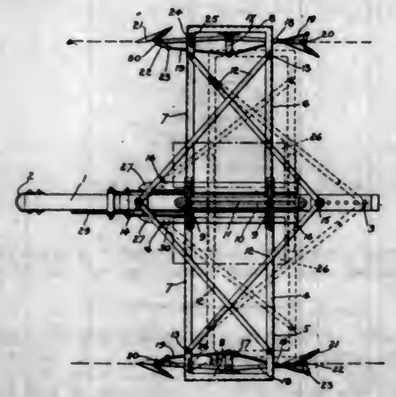
1,627,970. SLIDE. PAUL HELD, St. Cloud, Minn. Filed Nov. 18, 1926. Serial No. 149,139. 3 Claims. (Cl. 272—56.5.)

1. An amusement device including a slide section and a supporting section, said supporting section embodying a ladder, means for pivotally connecting the supporting section and slide section, said slide section including



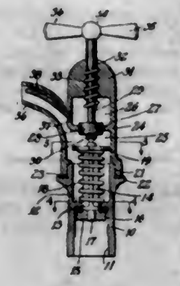
pairs of angle bars, a length of sheet metal extending throughout the length of the angle bars and having its side edges secured between the pairs of angle bars, and said length of sheet metal having its free edge curved downwardly and inwardly.

1,627,971. MANUFACTURE OF VERY THIN WIRES. GUSTAV LUDWIG HERTZ, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed Apr. 22, 1925, Serial No. 25,164, and in the Netherlands June 18, 1924. 2 Claims. (Cl. 176—132.)



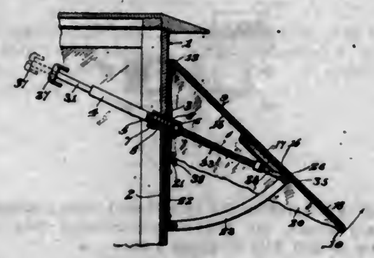
1. A process for the manufacture of very thin wires, characterized in that wires of larger diameter are connected as cathode in a glow discharge at such a current density that disintegration of the cathode occurs.

1,627,972. CHAIN-MANUFACTURING MACHINERY. JOHN HERBERT HEWITT, Birmingham, and BERNARD WULSTAN HARCOURT, Sutton Coldfield, England. Filed Dec. 17, 1925. Serial No. 76,095. 14 Claims. (Cl. 59—7.)



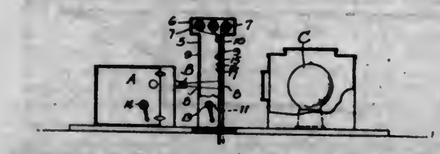
1. In a machine for manufacturing chains, the combination of a feed device for supplying links; a bed having an assembly passage for receiving said links; means for relatively positioning the links within the assembly passage to form chain units; said means including a sliding plunger adapted to relatively position and move forward said links; means for connecting said chain units by inserting pivot members in perforations in the links; and a feed device for engaging the connected units and moving them forward to accommodate the links which are being moved forward by the plunger; whereby the machine is enabled to assemble chains in which the ends of adjacent links of the same course are spaced apart.

1,627,973. FURROWING MACHINE. REGINALD HILL, Kelowna, British Columbia, Canada. Filed June 5, 1924. Serial No. 718,131. 2 Claims. (Cl. 97—225.)



1. A furrow forming machine comprising discs arranged in pairs, each pair being disposed to cut a single furrow, each disc being formed and mounted to present a forward cutting edge and a rear turning edge to the soil to be furrowed and means for maintaining the forward cutting edges of the discs of a pair upon a medial line irrespective of the setting of the discs or the width of the furrow.

1,627,974. STOPCOCK. MAX HIMMERICH, New York, N. Y. Filed Feb. 5, 1926. Serial No. 86,134. 1 Claim. (Cl. 251—140.)

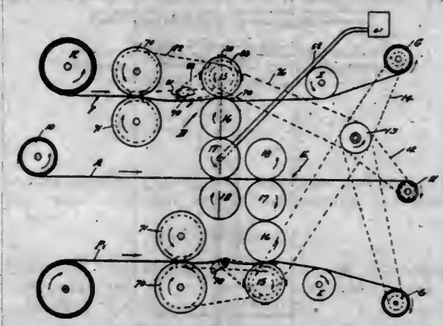


In a stop cock, a self-closing valve comprising a sleeve adapted to be secured to piping, at one end, a housing having a spout removable secured to said sleeve at the other end, an annular flange inside said sleeve projecting toward the pipe end thereof, a web post passing through the opening in said flange, a disk rigid with said post on the pipe end thereof, a gasket embedded in said disk and adapted to contact with said annular flange, a channeled washer rigid with the other end of said post, a coiled spring surrounding said post and having its ends retained between said flange and washer, a threaded plunger rotatably mounted in said housing, a shank aligned with said plunger within the housing, a conical stud at the end of said shank lying in engagement with the washer on said post, said plunger upon rotation thereof causing said stud to force said washer and post toward the pipe end of the sleeve and simultaneously the disk away from said flange, said spring normally urging said disk against said flange to close the valve, the webs of said post and the channels of said washer being provided to lessen the obstruction of the device to the free flow of liquid, and said housing being removable from said sleeve without disturbing the normal closed position of the valve.

1,627,975. AUTOMOBILE VISOR. WILLIAM E. KEMPTON, Marshall, and JOHN RUCKER, Morgan, Minn. Filed Apr. 26, 1926. Serial No. 104,753. 8 Claims. (Cl. 296—95.)

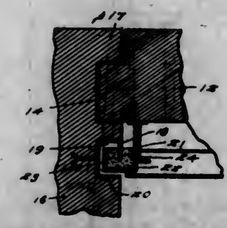
1. A visor for automobiles comprising an adjustable visor body, an adjusting rod therefor extending lengthwise thereof and further slidably connected with the ends of the visor body, supporting means for said visor body and rod, and a lengthwise shiftable adjusting element for said rod, said element having a rigid rear portion and a flexible outer portion connected to said rod centrally thereof.

1,627,976. METHOD OF PRODUCING COMPOSITE MOVING-PICTURE FILMS. ALVIN V. KNECHTEL, Los Angeles, Calif., assignor to Pathe Exchange, Inc., a Corporation of New York. Filed Aug 25, 1924. Serial No. 734,013. 1 Claim. (Cl. 88—16.)



The herein described method of multiplying and forming upon a sensitized film, images of the same objects in motion contained upon a plurality of positive films, which consists in first photographically printing images of objects upon said positive films and in arranging the films so that the order of the arrangement of the images upon one film is relatively different from the order of arrangement of the same images upon another one of said positives, superimposing the positives to cause their frames to coincide in a manner that will multiply the images when viewed through said frames, and finally moving the positives simultaneously while exposing their coinciding frames to a sensitised film.

1,627,977. PROCESS FOR THE PURIFICATION OF BURNER GASES AND FOR OBTAINING CHEMICALLY-PURE SULPHURIC ACID. MAX KRAFFT, Hruschau, Czechoslovakia. Filed June 25, 1923, Serial No. 647,753, and in Germany June 30, 1922. 5 Claims. (Cl. 23—178.)

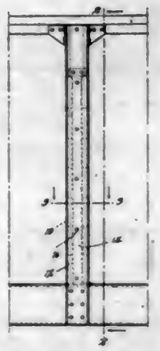


1. Process for the purification of burner gases and for obtaining chemically pure sulphuric acid which comprises freeing the burner gases from dust, passing the dust-free, hot gasses through a washing apparatus and regulating the speed and the quantity of gases passing through the apparatus in such a manner that the particles of impurities in the form of cloud are enlarged by the vaporization and condensation of the washing liquid to such an extent that they are easily separable in an electrical gas-purifier but not to so great an extent that they are deposited in the washing apparatus and separating the enlarged particles in an electrical gas-purifier.

1,627,978. TAG-MAKING MACHINE. CHARLES C. KURTZ, Los Angeles, Calif. Filed June 16, 1926. Serial No. 116,308. 27 Claims. (Cl. 93—92.)

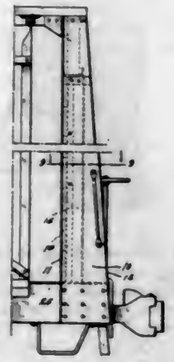
4. In a device for punching patches from patch stock and applying the patches to tag stock, a punch roll, a complementary die roll, means for operating the rolls, means for feeding the patch stock between the rolls, and means for transferring the patch punchings from the die recesses of the die roll to the tag stock.

1,627,979. COMBINED BRICK KILN AND DRIER. NICHOLAS U. LUDWIG, Buffalo, N. Y., assignor of one-third to George W. Weyand, Buffalo, N. Y. Original application filed May 20, 1922, Serial No. 562,419. Divided and this application filed Jan. 2, 1925. Serial No. 209. 1 Claim. (Cl. 25—142.)



In a combined kiln and drier, a tunnel having longitudinally extending grooves in its side walls and longitudinally extending channels therebelow, cars adapted to travel in the tunnel, the said cars having edge flanges fitted in the grooves to produce a stepped joint between the firing zone and the zone occupied by the wheels of the cars, lining plates in the channels, each of said lining plates having an upper depending flange at the edge of the channel and terminating above the lower edge of the channel, troughs suspended from the cars throughout the lengths of the cars on each side thereof under the flanges and in such relation thereto that the flanges extend through the troughs, and a sealing agent in each trough into which the flanges project.

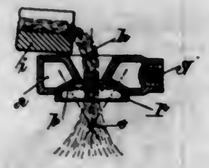
1,627,980. PARTITION END FOR FREIGHT CARS. ROBERT J. MAGOR, New York, N. Y., assignor to Magor Car Corporation, New York, N. Y., a Corporation of Delaware. Filed July 31, 1926. Serial No. 126,205. 8 Claims. (Cl. 105—376.)



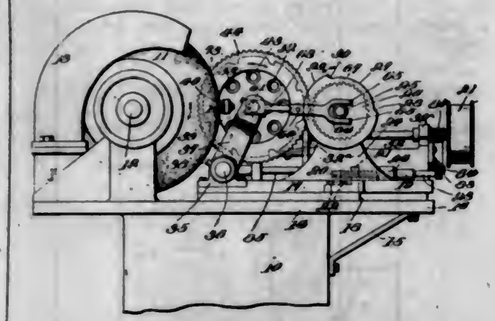
1. A partition end for freight cars comprising a metallic partition post including a pair of channel members centered relative to each other and secured together back to back, the inner channel member being of less width than the outer channel member, a pair of parallel partition boards extending from the partition post inwardly and transversely of the car, said partition boards having

their end edges abutting the rear face of the outer channel member and their inner sides adjacent said end edges engaging the outer faces of the flanges of the inner channel member and through bolts passed through

the partition boards, disposed adjacent to but spaced exteriorally of the inner channel member and acting to secure the partition boards to the partition post with the inner channel member clamped between the partition boards.



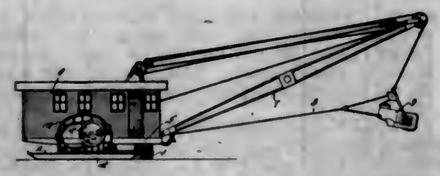
1,627,981. CORNER POST FOR FREIGHT CARS. ROBERT J. MAGOR, Montreal, Quebec, Canada, assignor to Magor Car Corporation, New York, N. Y., a Corporation of Delaware. Filed July 31, 1926. Serial No. 126,206. 9 Claims. (Cl. 105—380.)



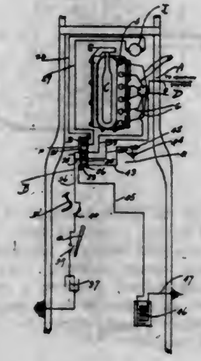
1. In a car, the combination of a flanged pressed plate corner post, an angle having one flange secured to the web portion thereof and extending lengthwise and vertically of the same, a vertically disposed end board extending transversely of the car and having an end thereof fitted in the seat between the post and the angle and bolts passed through the other flange of the angle and the end board adjacent the end thereof engaging the corner post.

1,627,982. METHOD AND MEANS FOR THE TREATMENT OF SLAGS BY FLUIDS UNDER PRESSURE. MARTIAL MAGUET, Le Teil, France, assignor to La Société Anonyme des Chaux et Ciments de Lafarge et du Teil, Le Viviers (Ardeche), France. Filed Oct. 6, 1923, Serial No. 666,975, and in France Oct. 26, 1922. 4 Claims. (Cl. 83—91.)

2. An apparatus for granulating molten slag, comprising an annular member, means for causing a solid stream of molten slag of substantially circular cross-section to fall freely through said member along the vertical axis thereof, said member having means adapted to direct streams of fluid on said stream of molten slag and converging on a point on the axis of said falling stream below said means, and means for conveying fluid under pressure to said fluid directing means.



1,627,983. DEMOUNTABLE-DRILL-BIT GRINDER. JOSEPH MAICKEL, Butte, Mont. Filed Jan. 14, 1926. Serial No. 81,221. 24 Claims. (Cl. 51—108.)



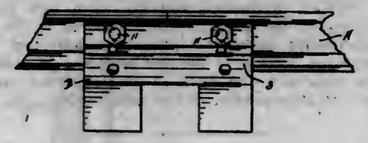
1. The combination with an abrasive wheel, a plurality of work holders, means to successively present said holders individually to the abrasive wheel at a predetermined angle and thereafter to remove the same and present another said holder thereto, said means serving further to later represent said first holder to the abrasive wheel at a different predetermined angle, and means to advance said holders toward the surface of the wheel when presented thereto to effect a dressing of the presented article.

1,627,984. TRACTION MACHINE. OSCAR J. MARTINSON, Chicago, Ill., assignor to Monighan Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1925. Serial No. 25,567. 13 Claims. (Cl. 180—8.)

1. A mechanism of the class described, comprising a main supporting base, auxiliary bases located at the sides of said main supporting base, a horizontal shaft extending across said main supporting base and provided with toothless eccentric wheels at its ends engaging suitable coacting ways on said auxiliary bases, means for driving said shaft, said ways being in the form of elliptical openings with their major axes extending in the horizontal direction transversely of said shaft, and having minor axes substantially the same as the diameter of the said wheels.

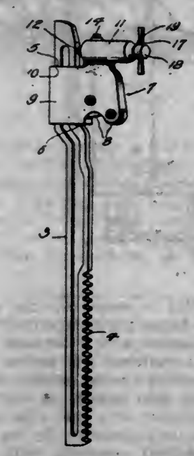
1,627,985. ELECTRIC SPEED CONTROL FOR MOTOR VEHICLES. HENRY L. MASON, Asheville, N. C. Filed Mar. 29, 1920. Serial No. 369,681. 14 Claims. (Cl. 175—355.)

5. In an electric speed control device for motor vehicles, an internal combustion engine including an ignition system, a generator, means operatively connecting the generator with the internal combustion engine, an electric circuit for diverting partial flow of current of the ignition system from the engine, a relay interposed in the circuit including electromagnets, and a pivoted armature, means carried by the armature for closing the circuit when in engagement with the magnets, means for energizing the magnets from the generator, a tension spring connected to said armature, and means for regulating the tension of said spring.



1,627,986. WALL CONSTRUCTION. JOHN MCKENZIE, Whangarei, Auckland, New Zealand. Filed Sept. 30, 1924, Serial No. 740,769, and in New Zealand Jan. 28, 1924. 1 Claim. (Cl. 72—38.)

In a wall, a double row of slabs, each slab consisting of a body and a pair of spaced vertical hook-like ribs extending therefrom towards the opposite slab, said ribs being spaced from the ends of the body, each rib hooked with one rib of an opposite slab, said hook like ribs of each slab extending in opposite directions and all the ribs being substantially parallel to each other.



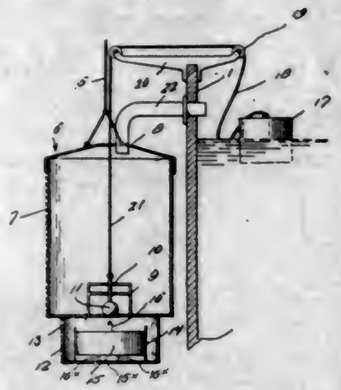
1,627,987. RAIL JOINER. JOHN MORELLO, Salt Lake City, Utah, assignor of one-half to Frank Scaglione, Salt Lake City, Utah. Filed Oct. 4, 1926. Serial No. 139,279. 1 Claim. (Cl. 238—198.)

In a rail joiner the combination of a base member having a vertically disposed rail engaging portion formed on one side thereof; a flange formed on the other side; a locking member adapted to be placed under the flange on said base; a hole through said base and a lug on said

locking member adapted to be placed in said hole in the base when said base and locking member are holding a rail.

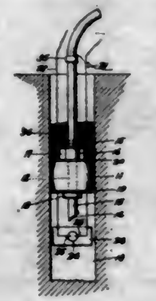
1,627,988. CALENDER RACK. FRANK M. MORTON, Phoenix City, Ala. Filed Oct. 11, 1926. Serial No. 140,987. 4 Claims. (Cl. 19—162.)

1. A device of the class described comprising a rack, a lap pin bearing head having a longitudinally slidable connection with said rack, inter-engageable elements on the rack and head to operatively connect them and to normally prevent said head from sliding upon the rack, yieldable means to normally hold said elements in engagement, said means being releasable when abnormal pressure is applied to said head, manual means for stressing said yieldable means to place it in condition to function, and invariable means for limiting the movement of said stressing means, insuring that it shall impart no more than predetermined strength to said yieldable means.



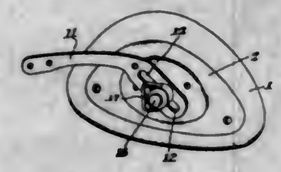
1,627,989. AUTOMATIC WINDSHIELD CLEANER. JOHN L. NILSON and JOHN F. PRINCE, Chicago, Ill. Filed Feb. 10, 1923. Serial No. 618,174. 4 Claims. (Cl. 121—120.)

1. Mechanism for actuating a windshield cleaner shaft, said mechanism embodying a cylinder and piston, a lever connected with said shaft and having two operating por-



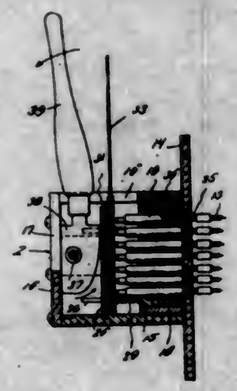
tions, a reciprocating member connected with the piston and having two oppositely inclined slots extending in the direction of the reciprocation of the member and arranged end to end, said slots being open at one end at their point of divergence, whereby when said member is reciprocated the said operating portions of the lever will alternately enter the respective individual slots, the said open portion of the slot operating to cause the lever to rock back and forth at predetermined times in the cycle of reciprocation of the said member.

1,627,990. AUTOMATIC CONTROL FOR WINDMILLS. PATRICK J. NOLAN, Alliance, Nebr. Filed Sept. 15, 1925. Serial No. 56,497. 1 Claim. (Cl. 137—68.)



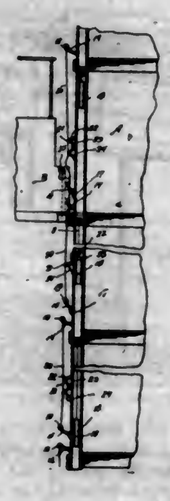
The combination in means for the purpose described, of a hollow container provided at its top with an opening and at its bottom with a discharge opening and also provided with a guide on said bottom, a ball valve cooperable with said discharge opening and having an upwardly extending stem movable in said guide, an operating member connected with said stem and extending upwardly through the opening in the top of the container, a suspension element connected with said top, a cup connected with and pendent from the bottom of said container and provided with a drain hole, a float guided for vertical rectilinear movement in said cup, and a pin extending upwardly from said float and adapted following rising of the float to hold the ball valve off its seat.

1,627,991. BLASTING. WILLIAM O. OWEN, Washington, D. C. Filed June 28, 1924. Serial No. 722,982. Renewed Sept. 27, 1926. 3 Claims. (Cl. 102—5.)



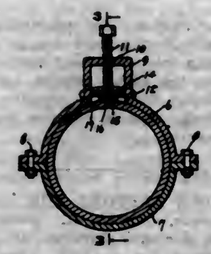
1. A process of blasting which comprises introducing into a plugged hole in a substantially impervious formation, an unconfined mixture of oxygen-containing gas and hydrocarbon fuel, under substantial super-atmospheric pressure, all without any cartridge for holding the same, and igniting the mixture by an electric spark.

1,627,992. TRUSS PAD. ISAAC M. PEASE, Cincinnati, Ohio. Filed Sept. 20, 1926. Serial No. 136,562. 3 Claims. (Cl. 128—112.)



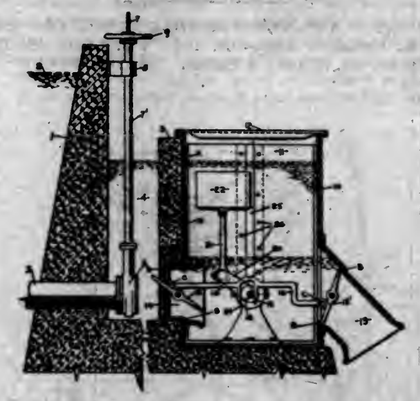
1. In a device of the class described, a truss pad provided with a hub having a smooth bore, a standard rotatable in the bore and slidable longitudinally in the bore, the standard being provided with a circumferentially spaced longitudinal grooves, a clamping device movable in the hub and adapted to be engaged in any of the grooves, a support, and means for assembling the standard with the support.

1,627,993. ELECTRIC SIGN. JOHN PEDERSEN, St. Louis, Mo. Filed Feb. 27, 1926. Serial No. 91,166. 2 Claims. (Cl. 200—46.)



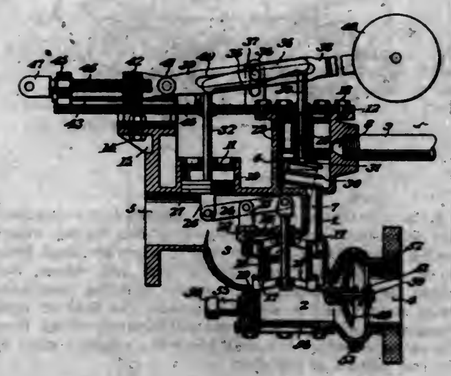
1. In circuit controlling means for an electric sign, comprising a base plate, a casing mounted on said base plate, a block member mounted in said casing against said base plate, a plurality of resilient contact members mounted in said base plate in predetermined relation, guide rods mounted in said block member and projecting in spaced parallel relation within said casing, a movable switch member mounted on said guide rods, a slide holder carried by said movable switch member, a pattern plate movably mounted in said slide holder and movable with said movable switch member adapted to control the engagement of said switch member with said resilient contacts, means on said guide rods for normally holding said movable switch member away from said resilient contacts, and manually operable means movable in said casing adapted to move said movable switch member into engagement with certain of said resilient contacts.

1,627,994. GATE MECHANISM FOR FREIGHT-ELEVATOR HATCHWAYS. JOHN PEDERSEN, St. Louis, Mo. Filed Oct. 28, 1926. Serial No. 144,742. 4 Claims. (Cl. 187—59.)



3. In a gate mechanism for freight elevator shafts, vertically slidable gate members for each floor landing of the shaft which gate members are of a height greater than one half the height of the particular floors of the building, means for automatically elevating the gate to closed position, means for locking the gates in closed position, elevator operable means for releasing the gates whereby they may be lowered when the elevator reaches a particular floor landing, means for partially releasing the next lower gate so that when the gate at the floor adjacent the elevator is lowered the same will contact the next lower gate and partially lower the same so as to permit of the full movement of the first mentioned gate to open position, means operable by the elevator at the particular landing for limiting the lowering of the next under gate, said means being further operable to prevent the entire lowering of said next under gate.

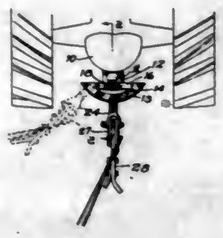
1,627,995. PIPE-SEALING DEVICE. WILLIAM J. PENDRY, Martinez, Calif. Filed Dec. 7, 1925. Serial No. 73,755. 2 Claims. (Cl. 137—80.)



1. As a new article of manufacture, a leak sealer formed of soft metal comprising a body having a centrally disposed conical portion on one side and a skirt thereabout.

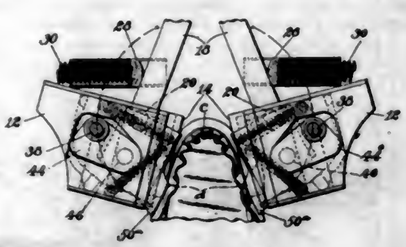
1,627,996. HYDRAULIC MOTOR. MARION F. PERKINS, Topeka, Kans. Filed Dec. 9, 1924. Serial No. 754,742. 4 Claims. (Cl. 253—18.)

1. In a hydraulic motor, a dam, a plurality of housings in axial alignment and paralleling said dam, a crank shaft positioned longitudinally in said housings, said shaft having a crank, a float and cam, supply and exhaust valves, a bar actuated by said cam, said bar adapted to open and close said valves alternately for receiving and discharging the water, substantially as shown and described.



1,627,997. DUPLEX THROTTLE VALVE. FRANCIS NESBITT POIGNAND, Westfield, N. J., assignor, by mesne assignments, to Super-Gas Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 20, 1926. Serial No. 103,396. 10 Claims. (Cl. 50—10.)

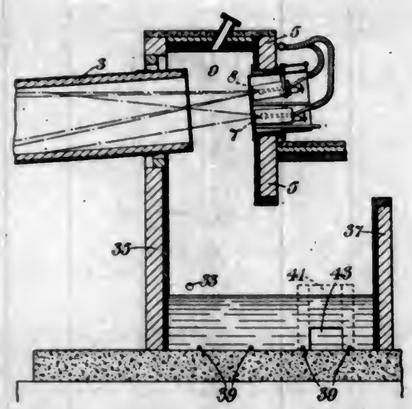
1. A valve casing formed with an inlet chamber and an outlet chamber, the inlet chamber being provided with a low-pressure inlet and with a high-pressure inlet; a feed valve controlling communication between said two chambers; means operating to close the feed valve when a predetermined degree of fluid pressure is in the outlet chamber; a high-pressure valve controlling communication between the high-pressure inlet and the inlet chamber; and means to impose equal pressures on the feed



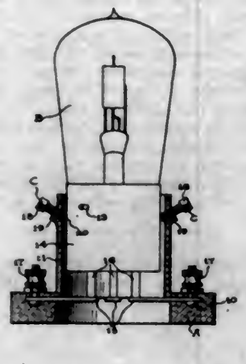
valve and on the high-pressure valve tending to open said valves, said pressure-imposing means opening the high-pressure valve and the feed valve when the pressures in the two chambers fall below the valve-opening pressure.

1,627,998. TRACTOR DRAWBAR COUPLING. CLOYD M. PORTER, Connersville, Ind. Filed Sept. 18, 1925. Serial No. 57,188. 3 Claims. (Cl. 280—33.44.)

1. A drawbar coupling comprising a segmental T section, a supporting web within the segmental section for keeping the T section rigid and adapted for attachment to a tractor, a yoke slidably mounted on the segmental section, and stop means secured to said segmental section for determining the travel of the yoke.



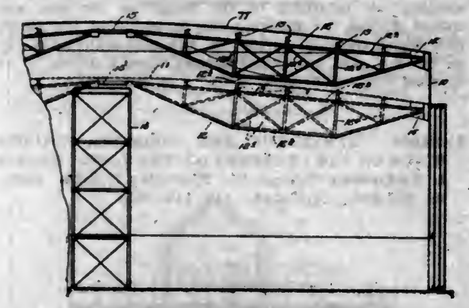
1,627,999. LASTING MACHINE. CHARLES F. PTM, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 20, 1924. Serial No. 700,719. 31 Claims. (Cl. 12—14.)



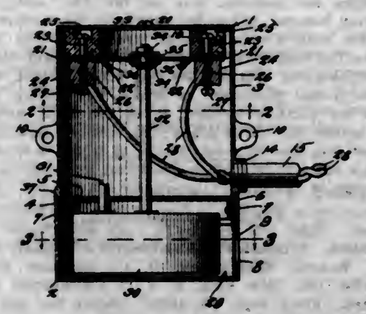
1. In a machine of the class described, the combination with shoe positioning means, of end lasting wipers having substantially straight wiping edges to adapt them to operate on shoes of different sizes and shapes, and means for imparting to said wipers swinging movement about an end of the shoe to transfer the field of their engagement with the upper materials progressively from the extreme end of the shoe along the opposite sides of the end portion of the shoe.

1,628,000. PROCESS FOR THE MANUFACTURE OF CEMENT. THOMAS RIGBY, London, England. Original application filed July 20, 1925, Serial No. 44,865, and in Great Britain July 28, 1924. Divided and this application filed Nov. 28, 1925. Serial No. 71,923. 1 Claim. (Cl. 222—7.)

In a wet process of making cement in a heated rotary kiln having a head at the gas exit end thereof and a chamber immediately beneath and in communication with said gas exit end, the step of immediately passing the hot gases, carrying solid particles from the kiln, upon their exit therefrom, over a body of slurry in said chamber, whereby the heaviest particles of any material swept out of the kiln fall by gravity and are entrained by the slurry in said chamber in the kiln head.



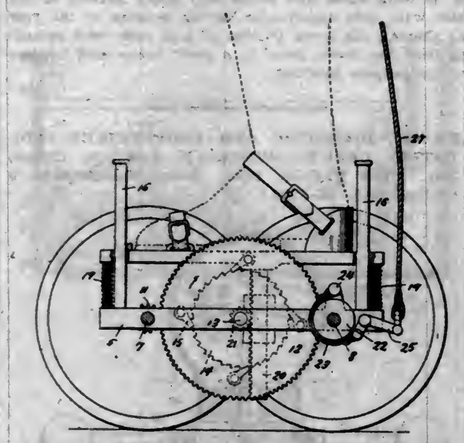
1,628,001. VACUUM-TUBE SOCKET. RAYMOND SCHUR, Chicago, Ill. Filed Jan. 21, 1924. Serial No. 687,569. 4 Claims. (Cl. 173—328.)



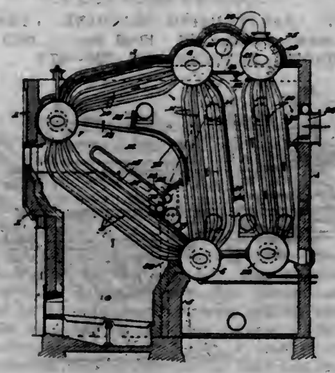
1. A socket for audion tubes comprising a base and a socket portion, individual contact members carried by the base and extending into the socket portion, and a member threaded into the socket portion and engaging the tube base for firmly forcing a plurality of conductors carried by the tube base in effective engagement with said contact members.

1,628,002. CROWN SUPPORT FOR GAS HOLDERS. AUBREY W. SEELS, Chicago, Ill., assignor to Chicago Bridge & Iron Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1925. Serial No. 60,059. 6 Claims. (Cl. 48—177.)

2. In a gas holder of the character described, having an inner bell with a crown, a crown support comprising; a plurality of radial trusses arranged beneath the crown of the inner bell, having their outer ends connected to said bell, their inner ends somewhat higher than the outer ends and joined together to form a self-supporting arch construction, said trusses not being directly connected to said crown; and a centrally arranged tower in said gas holder adapted to support the inner ends of said trusses when the gas holder is deflated whereby said trusses will then support said crown.



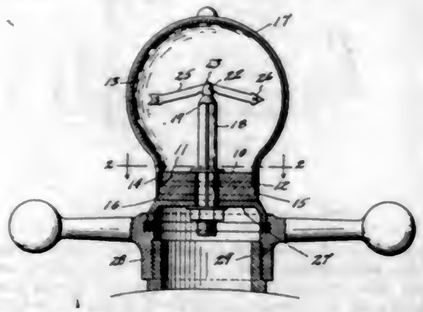
1,628,003. FLOAT-OPERATED SWITCH. EARLY BARNETT SMITH, Tampa, Fla. Filed Feb. 7, 1922. Serial No. 534,830. 1 Claim. (Cl. 200—84.)



An electric switch comprising contact members having their inner ends spaced apart, a bridge cooperating with the inner ends of the contact members, means for moving the bridge into and out of engagement with the inner ends of the contact members, an annular bracket and means for mounting the bracket in fixed position, the bridge operating within the annular bracket, oppositely disposed retaining blocks having openings for the reception of conductors, the outer ends of the contact members being received between the bracket and the blocks, screws passing through the bracket and the outer ends of the contact members and threaded in to the blocks to bind the outer ends of the contact members between the bracket and the blocks, the screws projecting into the openings of the blocks, and other screws threaded into the blocks in alinement with the first-specified screws, said other screws entering the openings of the blocks and serving to bind conductors against those portions of the first-specified screws which project into the openings.

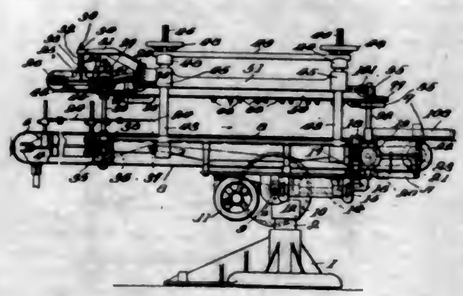
1,628,004. SKATING DEVICE. JOHN STETSON, San Francisco, Calif. Filed June 29, 1926. Serial No. 119,368. 1 Claim. (Cl. 208—174.)

In a skating device of the class described, a frame, front and rear axles journaled transversely thereon, ground engaging propelling wheels supported on the axles, a shaft journaled transversely on the intermediate portions of the frames, pairs of aligned spur gears keyed on the axles, a pair of driving gears loosely mounted on the intermediate shaft and adapted for engagement with the respective pairs of aligned spur gears, posts extending upwardly from the forward and rear end portions of the frame, a foot resting plate arranged above the frame and adapted for vertical sliding movement, apertured lugs at the forward and rear ends of the plate through which said posts extends, expansible coil springs interposed between the frame and the foot resting plate for normally maintaining the latter in a raised position but to permit the same to be forced downwardly when the weight of the skater is placed thereon, a pinion keyed on the intermediate shaft, a vertical rack bar secured at its upper end to the bottom of the foot resting plate and adapted for engagement with the pinion for rotating the intermediate shaft, ratchet wheels keyed on the intermediate shaft adjacent the respective driving gears, and cooperating pawls pivotally mounted on the driving gears and engaging the respective ratchet wheels for effecting the actuation of the driving gears and a simultaneous operation of the ground engaging propelling wheels in one direction.



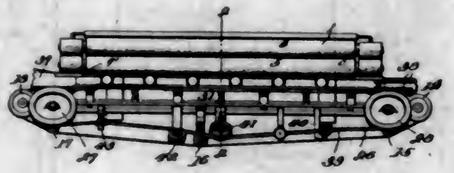
1,628,005. WATER-TUBE BOILER. FREDERICK C. STIMMEL, Chattanooga, Tenn., assignor to The Casey-Hedges Co., Chattanooga, Tenn., a Corporation of Ohio. Filed Sept. 14, 1923. Serial No. 662,629. 1 Claim. (Cl. 122—302.)

A boiler of the character described having a lower drum, two upper drums, and three sets of water-tubes extending between said drums and arranged in triangular



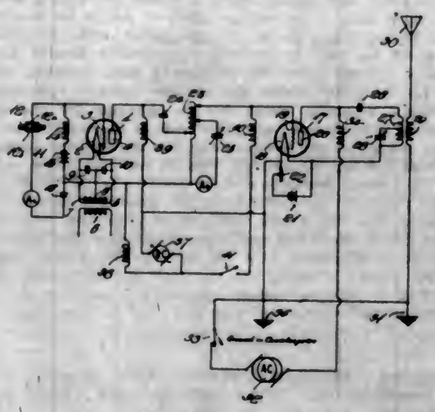
formation, additional water-tubes extending from the lower drum to the front one of the upper drums through the central portion of the triangular space formed between said three sets of tubes, said additional water-tubes being bent intermediate of ther ends and having upwardly and forwardly inclined portions below their bends, a baffle wall extending from the lower drum to a point beyond the bends in said tubes and having its upper portion supported on said additional water-tubes, an upwardly extending ridge on said baffle wall near its front edge, and a superheater arranged above the lower set of water-tubes and below said upper portion of the baffle wall, said superheater having headers at the rear end thereof, the lower portion of said baffle wall extending from the lower drum to a point below said headers for the purpose specified.

1,628,006. DIRECTION AND TEMPERATURE INDICATING DEVICE. CARROLL E. SWENSON, Clifton, Tex. Filed May 17, 1926. Serial No. 109,457. 9 Claims. (Cl. 33—222.)



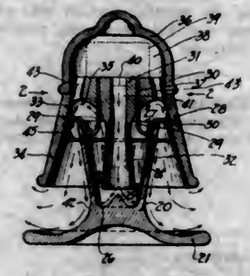
1. In A device of the character described, an upright housing having transparent sides and a top, a mounting for the housing, a supporting member extending upwardly in the housing, a bearing upon the upper end of the supporting member, a magnetic needle having a hub, the hub being rotatably mounted on the bearing and having a depending portion surrounding said bearing for confining it thereon, a fastener depending from the top of housing and having a member on its lower end for engaging the hub of the needle, and means over the top of the housing connected to the fastener for moving it vertically in the housing.

1,628,007. JAR-CLOSING MACHINE. THOMAS L. TALIAFERRO, Chicago, Ill. Filed Dec. 1, 1923. Serial No. 678,032. 30 Claims. (Cl. 226—87.)



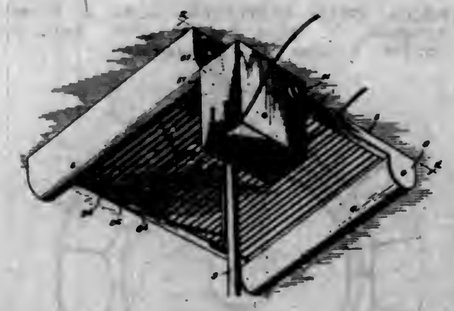
1. A jar closing machine having in combination, means for turning the flange of the jar cap underneath the ledge on the jar, means for conveying the jar with the cap resting thereon through the machine with the cap in rolling contact with the flange turning means, said flange turning means including spaced devices between which the flanged edge of the cap passes for positively starting the inturning of the flange on the cap, and spaced devices for finishing the inturning of the flange underneath the ledge of the jar, and thus sealing the cap on the jar, said last-named devices being mounted so as to yield relative to each other.

1,628,008. APPARATUS FOR FORMING SEALING RINGS ON JAR CLOSURES OR THE LIKE. THOMAS L. TALIAFERRO, Chicago, Ill. Filed May 7, 1924. Serial No. 711,698. 22 Claims. (Cl. 113—80.)



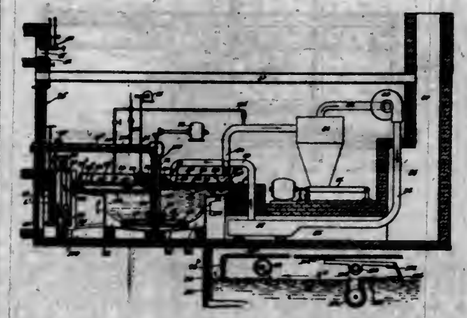
1. An apparatus for applying a plastic sealing material to disks for covering jars or the like, comprising a rotating member, means for supplying the surface of said member with a thin uniform layer of sealing material, means for supporting the disks so that said disks may be rolled along said member one after another with the edges thereof positioned to scrape the sealing material from the rotating member on to the disks, and means for rolling the disks along the member including two cooperating traveling devices one of which is arranged to engage the side face of the disk and the other to engage the edge of the disk.

1,628,009. SIGNAL-TRANSMISSION SYSTEM. ALBERT H. TAYLOR, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 20, 1926. Serial No. 136,701. 5 Claims. (Cl. 250—17.)



1. In a signal transmission system an electron tube oscillator, an electron tube amplification system having its input circuit connectd to the output circuit of said oscillator and a high potential source for impressing a positive potential upon the output circuit of said oscillator and a negative potential upon the input circuit of said power amplifier.

1,628,010. SOUND AMPLIFIER. CHARLES W. TAYLOR, Salt Lake City, Utah, assignor to Emilius C. F. Hartmann and David Neff, Salt Lake City, Utah. Filed Apr. 22, 1925. Serial No. 25,065. 5 Claims. (Cl. 181—27.)

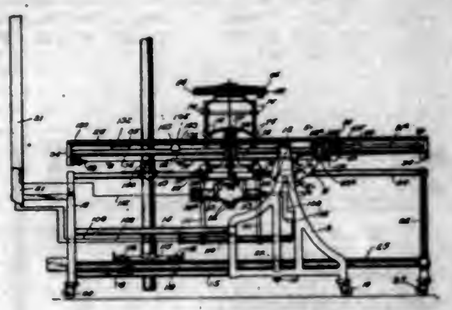


1. A sound amplifier comprising a plurality of hollow bodies of gradually increasing sizes relatively to each other, placed one within the other in alternating reverse order and spaced apart from each other to define a circuitous passage for sound waves, and flexible connections between successive ones of the said bodies.

1,628,011. CLOSURE MEMBER. LEWIS R. TOMPKINS, Atlantic City, N. J., assignor of one-half to George H. Shea, Quarryville, Pa. Filed Feb. 20, 1926. Serial No. 10,698. 10 Claims. (Cl. 268—11.)

1. In a device of the character described, a closure member having a bias toward open position, a motor to close said member, connecting means between said member and said motor, said connecting means being normally locked against movement to retain said closure member in closed position, and combined means for unlocking a portion of said connecting means to permit said closure member to open and for closing a circuit to said motor; said combined means being operable by said motor for connecting said closure member to said motor after a predetermined length of time to close said closure member.

1,628,012. PROCESS AND APPARATUS FOR METALLIZING ORES. HARMON N. TRACY, Los Angeles, Calif. Filed May 29, 1923. Serial No. 642,164. 22 Claims. (Cl. 75—17.)

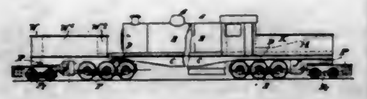


1. A process for extracting metal from ores that includes forcibly throwing metal carrying ore in finely divided form, and with its particles relatively widely dispersed, into a body of metal absorbing liquid at a point below its surface, and maintaining a non-oxidizing atmosphere on the ore and on the liquid surface at the place of entry of the ore into the liquid.

1,628,013. REVOLVING TRAY FOR DINING TABLES. MANDIUS B. TWEDT, Portland, Oreg. Filed Jan. 14, 1924. Serial No. 686,208. 2 Claims. (Cl. 45—26.)

1. In a revolving tray, the combination with a base portion having a smooth upper surface, and a tray portion having a smooth lower surface; of means for rotatably supporting the tray portion above the base portion, comprising an axially disposed pivot means rotatably connecting and supporting the tray portion in spaced relation above the base portion, a triangular shaped roller carrier formed of sheet metal, revoluble upon the pivot means between the base and tray portions and having portions cut from each edge thereof adjacent each point of the carrier and forming radially extending stub shafts each having shoulders formed at its inner end, a roller mounted upon each of said shafts and engaging the confronting faces of the base and tray portions for rotatably supporting the tray member in parallel spaced relation above the base portion, and means for preventing movement of the rollers off of said shafts.

1,628,014. X-RAY APPARATUS. JULIUS B. WANTZ, Chicago, Ill., assignor to Victor X-Ray Corporation, Chicago, Ill., a Corporation of New York. Filed Feb. 11, 1922. Serial No. 535,742. 37 Claims. (Cl. 250—34.)

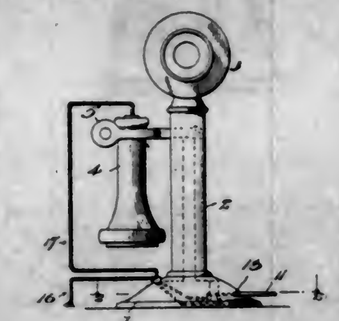


1. In an X-ray photographic and fluoroscopic table comprising a stand, a patient's support having a transverse pivotal mounting in said stand, a fluorescent screen on the upper side of said support and movable therealong, and a tube-supporting member and tube at the opposite and under side of said support and adapted to be moved lengthwise thereof, said tube-supporting member having a tiltable tube holding portion adapting said tube and tube holding portion to adjustment angularly to said patient's support and to said screen.

1,628,015. WASHING COMPOUND. SAMUEL I. WELSHER, New York, N. Y., assignor, by mesne assignments, to Frank A. Bower, Bayside, N. Y. Filed May 8, 1923. Serial No. 637,572. Renewed Nov. 19, 1925. 5 Claims. (Cl. 87—5.)

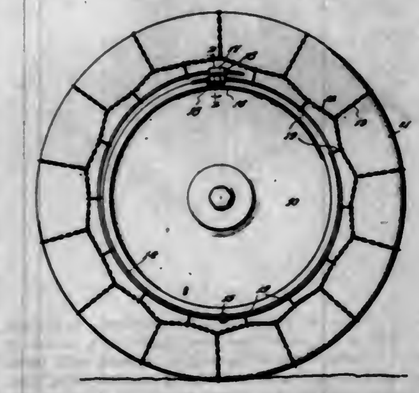
1. A laundry washing compound composed of material adapted to be poured from its package into the washing water in loose granular form and including a major proportion of a solid oxygen bearing sterilizing and bleaching salt and anhydrous soap thoroughly mixed with said sterilizing and bleaching salt, said anhydrous soap being dehydrated to a high degree so that it is in crumpled flake form.

1,628,016. STEAM LOCOMOTIVE. ROBERT HARBEN WHITELEGG, Manchester, England. Filed Apr. 29, 1926, Serial No. 105,521, and in Great Britain Apr. 17, 1925. 4 Claims. (Cl. 105—175.)



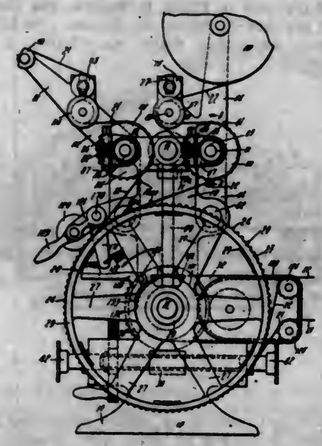
1. An articulated locomotive comprising a boiler unit carrying tanks and having a carrier frame provided with a bogie pivot center at each end beyond the boiler, a power unit and a power driven group of driving wheels, the power unit being provided with tanks arranged beyond the end of the boiler unit and connected to one of the pivot centers of the carrier frame while the other pivot center of the carrier frame is connected to the power driven group of wheels, said power driven group of wheels being provided with an additional power driven group of wheels flexibly pivoted thereto.

1,628,017. TAPPET. MERRILL M. WILCOX, Saginaw, Mich.; A. Elwood Snow, administrator of said Merrill M. Wilcox, deceased, assignor, by mesne assignments, to Wilcox Products Corporation, Saginaw, Mich., a Corporation of Michigan. Filed July 21, 1924. Serial No. 727,338. 1 Claim. (Cl. 123—90.)



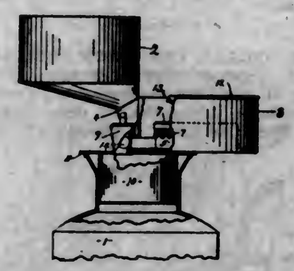
In a tappet having a shank and a platform cast integral and having the working face of said platform hardened by chilling, a raised reinforcing member cast integral with the platform.

1,628,018. TELEPHONE SWITCH. COOPER WHITFIELD WILKERSON, Birmingham, Ala. Filed Aug. 21, 1925. Serial No. 53,573. 1 Claim. (Cl. 179—158.)



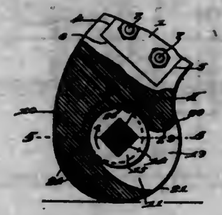
The combination with a slotted hollow telephone base and an insulating base block therein, of a plurality of spaced pairs of arcuate conductor plates supported in said block, a laterally movable switch lever pivoted intermediate said pairs of plates with its free end projecting through the slotted base, and spaced contact pins on said lever for selective co-action with said spaced pairs of plates.

1,628,019. CHAIN TIGHTENER. ROBERT N. WILSON, Colegrove, Pa. Filed Dec. 28, 1926. Serial No. 157,586. 2 Claims. (Cl. 152—14.)



1. In a tire chain tightener, the combination of a rigid side member, and tire chain engaging elements loosely mounted on said member for free rocking movement in the plane of said member, said member being of a stiffness to sustain outward pulling stress of a tire chain on said elements and distribute such stress lineally of said member without elongation thereof and distortion of the shape of said member, and means for adjustably contracting said member with the ends thereof in overlapping relation.

1,628,020. COLORING MACHINE. ALVIN WYCKOFF, Los Angeles, Calif., assignor to Famous Players-Lasky Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1919. Serial No. 334,623. 23 Claims. (Cl. 271—2.8.)



1. In a machine of the character described, a revolving drum adapted to carry a film, and yielding means for placing the film under tension as it is fed to the drum, said means comprising a roller over which the film passes, drive means for the drum and roller, and a yielding connection between the drive means and the roller.

1,628,021. MILK STRAINER. FERDINAND J. ZIEGLER, Topeka, Kans. Filed Dec. 26, 1925. Serial No. 77,737. 2 Claims. (Cl. 210—157.)

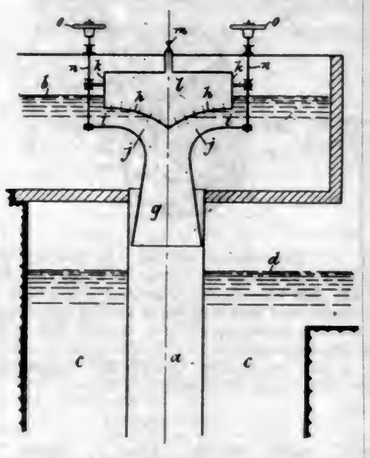
1. In a milk strainer, a flanged spout having a reservoir connected thereto and extending to one side so that one side of the wall is in vertical alignment with the axis of the spout, a funnel positioned above the reservoir having a spout in vertical alignment with one side thereof as connecting means for said funnel and reservoir and being so connected and extending in opposite directions to counter-balance on the diametrical axis of the spout, an annular wall concentrically positioned within the reservoir, the top thereof being spaced from the top of the reservoir, a woven fabric strainer to cover the top of said annular wall and held firmly thereto by a removable ring, a duct connecting the spout with the bottom of the annular wall, a rotary valve positioned on the flanged spout adjacent the reservoir and connected thereto by a hollow necked member, the said valve communicating with the flanged spout, all as, and for the purpose described.

1,628,022. UNDERGROUND BEARING. ANDREW E. BERGLOFF, Cheney, Wash., assignor to Wolfe Improved Rotary Rod Weeder, Cheney, Wash., a Corporation of Washington. Filed Nov. 27, 1926. Serial No. 151,219. 8 Claims. (Cl. 97—42.)

1. In an under-ground weeder rod bearing, a shoe, horizontally converged to form a vertically disposed prow-edge, said shoe having a gearing ring cavity within its side walls and said side walls having alined openings for projection therethrough of a weeder rod, a bearing ring peripherally mounted to rotate in said cavity and having a rod journalling opening for supporting said rod free from engagement with said shoe.

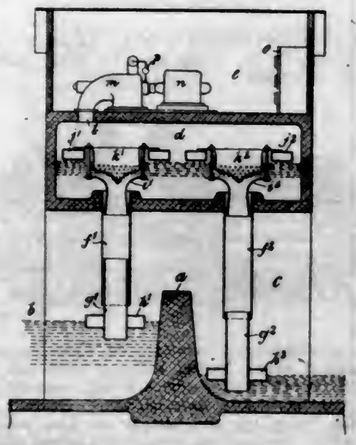
1,628,023. BACK BRUSH. JOHN J. ADKINS, Southport, N. C. Filed Nov. 6, 1926. Serial No. 146,737. 3 Claims. (Cl. 15—222.)

1. A brush comprising a plurality of flexible fibrous strands twisted together to form a body, and fibrous material inserted between said strands in the intermediate portion of said body, substantially as set forth.



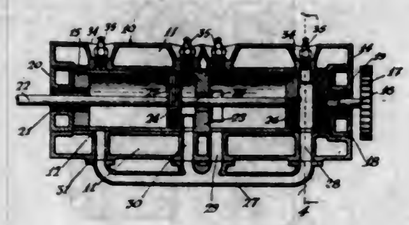
1,628,024. CYLINDER COCK. JAMES G. BLUNT, Schenectady, N. Y. Filed Mar. 13, 1925. Serial No. 15,400. 6 Claims. (Cl. 121—134.)

1. In a cylinder cock structure for steam locomotives, an elongated casing having a steam inlet port in its side wall, a differential piston device mounted in the casing for movement longitudinally thereof, hollow cylindrical seats for the pistons of said differential piston device, the seat for the smaller piston being provided in its side wall with a discharge port adapted to be covered and uncovered by the movement of the piston, said steam inlet port in the casing being located be-



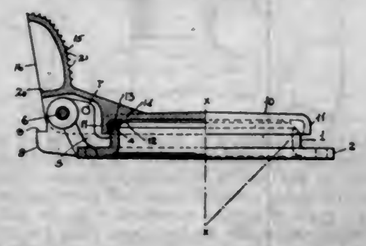
tween the pistons whereby steam pressure will act on the larger piston to move the smaller piston to port closing position, and spring means acting against the outer end of the larger piston to move the smaller piston to discharge port uncovering position upon the fall of steam pressure between the pistons.

1,628,025. HYDRAULIC AIR-COMPRESSION PLANT. JENS ORTEN BOVING, Westminster, London, England. 1, 1925, Serial No. 53,812, and in Great Britain Sept. 8, 1924. 4 Claims. (Cl. 230—13.)



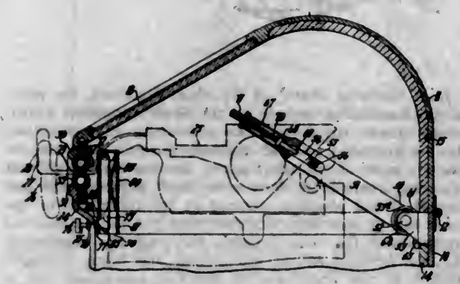
1. In a hydraulic air compression plant wherein down-flowing water inspires air, a downcast shaft, an upcast shaft, a water inlet pipe of Venturi section on said downcast shaft, and a perforated cover plate externally exposed to air on said inlet pipe.

1,628,026. HYDRAULIC AIR-INSPIRING PLANT. JENS ORTEN BOVING, Westminster, London, England. Filed May 4, 1926, Serial No. 106,603, and in Great Britain June 2, 1925. 10 Claims. (Cl. 230—15.)



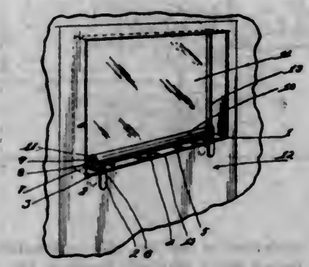
1. A tidal energy utilization plant consisting of a shaft leading from water in a dammed-in basin, a shaft leading from water in a tidal region, a closed chamber to which air is admitted under control interconnecting the upper ends of said two shafts, means above each of said shafts for inspiring air from above and in contact with the water in said chamber by water descending said shafts, and means for maintaining the lower ends of both of said shafts close beneath the respective water level in said dammed-in basin and in said tidal region.

1,628,027. INTERNAL-COMBUSTION ENGINE. GEORGE E. BURSON, Glendale, Calif., assignor of twelve and one-half per cent to Albert L. Burson, twelve and one-half per cent to Harvey W. Burson, twelve and one-half per cent to Frank B. Burson, and twelve and one-half per cent to Harold H. Burson, Glendale, Calif. Filed Nov. 24, 1925. Serial No. 71,107. 5 Claims. (Cl. 123—80.)



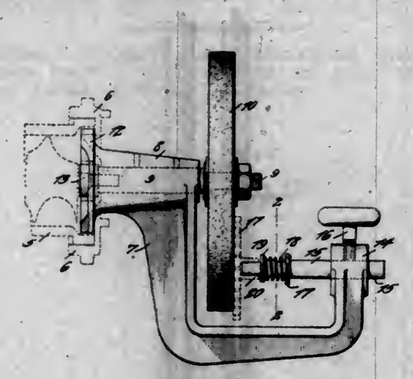
1. An internal combustion engine comprising a rotatable cylinder, a housing in which said cylinder is rotatable, means closing each end of the cylinder, means forming a partition centrally of the cylinder rotatable therewith, a piston rod extending through one end of the cylinder and through said partition, pistons on the piston rod on each side of the partition, there being ports formed in said cylinder on each side of the partition and adjacent each end, means providing an inlet port and an exhaust port adjacent each side of the partition adapted to be uncovered by the ports in the cylinder adjacent the partition, means providing an inlet and an exhaust port adjacent each end of the cylinder adapted to be uncovered by the ports in the cylinder adjacent its end, means for igniting the fuel in the cylinder upon each side of both of the pistons, and means for rotating the cylinder.

1,628,028. COLLAR AND COVER FOR TANK GAUGE HOLES. TRACY J. CALHOUN, Cleveland, Ohio, assignor to The Oil Conservation Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 12, 1925. Serial No. 8,734. 7 Claims. (Cl. 220—24.)



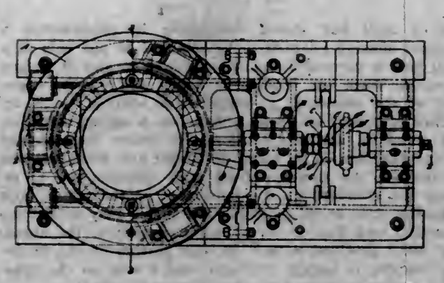
1. In a cover for tank holes, the combination of a collar adapted to be secured to the tank and having a beveled seating edge, a cover pivotally mounted on said collar and having a complementary beveled seating portion, one of said two beveled meeting seats being curved to give a line contact, said pivotal connection being loose so as to allow said cover to center itself in seating position.

1,628,029. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Continuation of application Serial No. 559,693, filed May 10, 1922. This application filed Mar. 31, 1924. Serial No. 703,090. 10 Claims. (Cl. 220—35.)



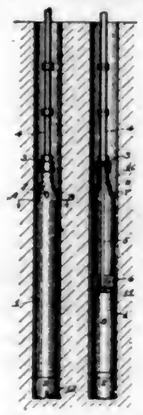
1. A sound-deadening casing for a typewriting machine, comprising a body-part, a cover hinged thereto, and a device tending to open the cover; said opening device including an arm having a pin-and-slot engagement with the cover, a shaft on the casing-body, on which shaft the arm is pivoted, a clutch on the arm, a collar slidable and revoluble on the shaft, a clutch on the collar, and a coil spring anchored at one end to the casing and engaging and bearing upon the collar at its other end to cause the clutch on the collar to engage the clutch on the arm to cause the arm to swing on the shaft.

1,628,030. ROLLER ARM REST. HARRY CATLETT, Los Angeles, Calif., assignor of one-half to Albert N. Scare, Los Angeles, Calif. Filed Apr. 20, 1926. Serial No. 103,251. 3 Claims. (Cl. 155—198.)



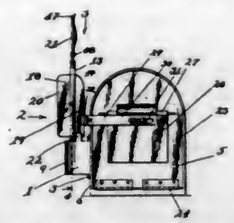
1. An arm rest comprising in combination a pair of brackets having depending arms adapted to engage wall surfaces of a vehicle, the top of the bracket being adapted to be supported on a horizontal surface, a band secured to the brackets and having upturned ears, and a roller journaled in said ears.

1,628,031. SHARPENER FOR GRINDER KNIVES. EMIL G. CHERMAK and FRANK S. PRITZL, Manitowoc, Wis. Filed Oct. 28, 1926. Serial No. 144,836. 4 Claims. (Cl. 51—247.)



1. In a sharpener for grinder knives, a bearing having a flange adapted to be clamped on a grinder, a shaft rotatable in the bearing and having connection with the shaft of a feed worm of a grinder, an abrading wheel on the outer end of the shaft, a bracket formed as a part of the bearing, said bracket having an angularly disposed apertured boss, a rod adjustable therein, the inner end of the said rod being in proximity to the abrading wheel and adapted to rotatably support a grinding disk, and means for urging the disk into engagement with the abrading wheel.

1,628,032. ROTARY DRILLING MACHINE OF WELL-BORING APPARATUS. JAMES CHILDS, Barrow-in-Furness, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed July 15, 1924, Serial No. 726,110, and in Great Britain Sept. 1, 1923. 4 Claims. (Cl. 255—23.)

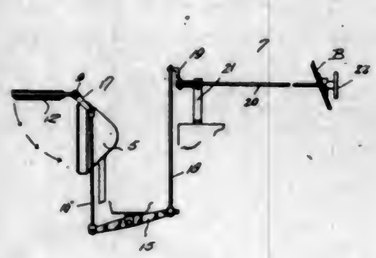


1. In a rotary well drilling machine having a turntable and a shaft for driving said turntable the combination with said shaft of a locking collar loosely mounted thereon, a pawl adapted to engage with said collar to prevent rotation thereof, and a device secured to said shaft for impositively connecting said collar to said shaft to yieldably lock said shaft against rotation when said pawl is in engagement with said collar, whereby if said machine is started while said shaft is yieldably locked, said device will slip and permit said shaft to rotate said turntable.

1,628,033. DRILLING APPARATUS. FRANCIS FALCONER DAVIS, Mount Vernon, Ohio, assignor to Francis Harley Davis, Monterey, Calif. Filed June 12, 1923. Serial No. 644,912. 13 Claims. (Cl. 255—72.)

1. In a calyx drill apparatus of the kind described, an elongated tubular structure comprising a drill element and a calyx element means for carrying fluid through the calyx and a bulkhead adapted to close the bottom end of the calyx, the said bulkhead composed of substance that will swell when wet, as wood.

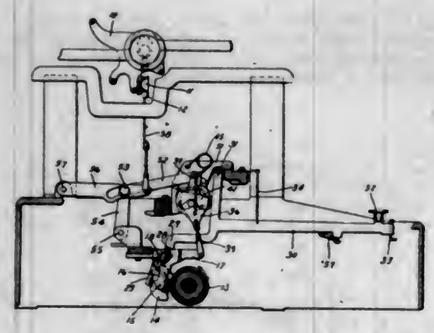
1,628,034. ATTACHMENT FOR MAIL BOXES. JOHN R. DE MIER, Los Angeles, Calif. Filed Feb. 11, 1926. Serial No. 87,567. 4 Claims. (Cl. 232—35.)



1. A mail box signal comprising in combination a vertical housing adapted to be attached to one side of a mail box, a vertical standard journaled in and extending upwardly from the housing, a signal flag on the upper end of the standard, a trigger arm adapted to be attached to a door or lid of a mail box, a spring coiled on the standard, normally tensioned to rotate the standard in one direction on its axis, the trigger arm being adapted to restrain the standard from such rotation and to release the standard on the movement of the trigger arm with the door or lid, whereby the spring may rotate the standard and flag to one signalling position, the standard being provided with a fin, one portion of the fin being adapted to engage a trigger, and a stop on the housing adapted to engage another portion of the fin.

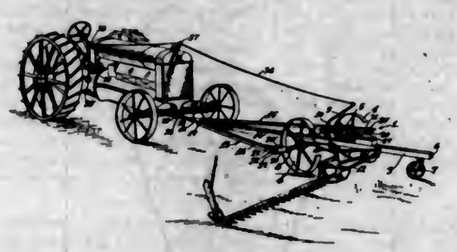
1,628,035. PROCESS OF SPROUTING BUDS AND PLANTS. FRANK EARL DENNY, Yonkers, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc., Yonkers, N. Y., a Corporation of New York. Filed July 14, 1926. Serial No. 122,506. 8 Claims. (Cl. 47—58.)

1. The method of treating buds prior to planting which consists in contacting them with a halogen derivative of ethylene.



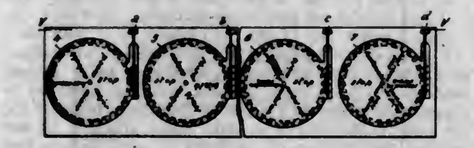
7. The method of treating potatoes prior to planting which consists in immersing them in a solution of ethylene chlorhydrin.

1,628,036. VEHICLE HEADLIGHT-DIMMING DEVICE. PATRICK DOHERTY, Gary, Ind. Filed Feb. 13, 1926. Serial No. 88,099. 1 Claim. (Cl. 240—45.6.)



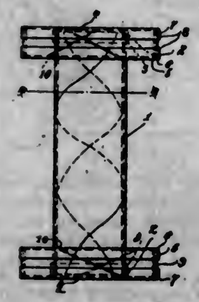
In a dimming device of the class described, for automobile headlights, an oscillatory shaft supported transversely across the front of an automobile radiator above the headlights, a pair of dimmers secured upon the respective ends of the shaft above the headlights, an arm extending rearwardly from said shaft adjacent one end thereof, a rod pivotally secured at its upper end to the inner end of siad arm, a rocker arm pivotally supported intermediate its ends beneath the radiator supporting bar, the forward end of said rocker arm being pivotally secured to the lower end of the last mentioned rod, a horizontal shaft arranged rearwardly of the aforementioned transverse shaft, the forward end thereof terminating in a crank, a connection between the rear end of the rocker arm and said crank portion, and an actuating handle secured on the inner end of the horizontal shaft for rotating the same in order that said dimmers may be moved into or out of position in front of the headlights.

1,628,037. POWER MECHANISM. FARNUM F. DORSEY, Rochester, N. Y., assignor to North East Appliances Inc. Rochester, N. Y., a Corporation of New York. Filed July 31, 1925. Serial No. 47,379. 3 Claims. (Cl. 197—73.)



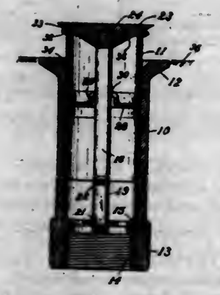
2. In a typewriter or the like, the combination, with a part to be moved and a manually operable key, of power mechanism, for moving said part, comprising: a constantly moving power-member; a driven member cooperable with said power-member, normally disengaged therefrom, but operable, under control of said key, to engage and be moved by the power-member; and mechanism, interposed between said driven member and said part to be moved, constructed and arranged to cause successive similar movements of the driven member to produce successive opposite movements of said part.

1,628,038. TRACTOR PUSH DRIVE FOR MOWING MACHINES, BINDERS, HEADERS, HARVESTERS, OR THE LIKE. LAWRENCE P. DRAPER, Mesa, Ariz. Filed Sept. 7, 1926. Serial No. 133,856. 20 Claims. (Cl. 280—33.18.)



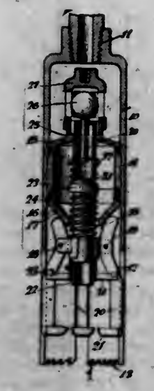
1. A tractor push drive for implements comprising in combination a pusher attachment, means to pivotally connect same to an implement having supporting wheels, the pivotal connection having horizontal pivots to the implement, and a fixed vertical pivot to the tractor.

1,628,039. MUSICAL APPLIANCE. CARLO FANELLA, Rome, Italy. Filed Mar. 24, 1925, Serial No. 17,887, and in Italy Mar. 27, 1924. 6 Claims. (Cl. 84—470.)



1. In a musical synoptical table and indicator serving to point clef, tonics, major or minor, for assisting in the performance of exercises, the combination of a plurality of independently rotatable discs having legends thereon pertaining to tones, intervals of all the scales, inversions of arpeggios, and spaced superimposed casing members embracing the discs and provided with openings through which the legends on the discs may be seen, the face of the casing having a series of musical staffs indicating the sharps and flats with the notes of the corresponding tonics.

1,628,040. PAPER SPOOL. BERNARD E. FRANKE, Catonsville, Md. Filed Aug. 21, 1926. Serial No. 130,589. 8 Claims. (Cl. 242—119.)

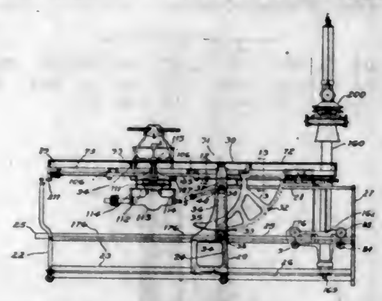


1. A spool including a barrel and heads, the latter being formed with inner and outer spaced walls, said barrel extending through the inner walls and being affixed to the outer walls, said inner walls being constructed to yield under endwise pressure of the material wound upon said spool, relieving the joints between said barrel and outer heads of excessive strain.

1,628,041. AUTOMATIC LAWN SPRINKLER. RAY F. FRYE, Cleveland, Ohio. Filed May 28, 1924. Serial No. 716,364. 9 Claims. (Cl. 299—61.)

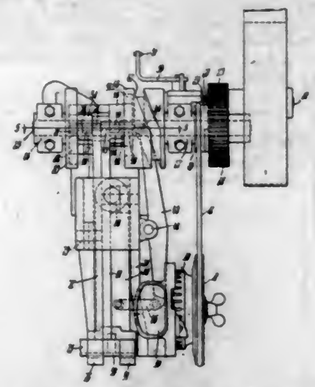
1. A lawn sprinkler comprising a body portion, a spraying device mounted for reciprocation in said body portion, means for automatically raising the spraying device above the body portion, said means operating to automatically adjust the volume of water emitted from said spraying device.

1,628,042. FISHING TOOL. PAUL G. GATES, Long Beach, Calif. Filed Mar. 4, 1926. Serial No. 92,210. 9 Claims. (Cl. 294—116.)



1. A fishing tool comprising a body, fish engaging members pivotally mounted upon said body, and hydraulically operated means for causing the fish engaging members to swing into fish engaging position.

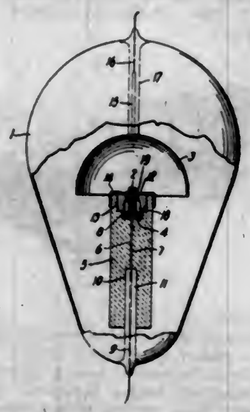
1,628,043. X-RAY OPERATING TABLE. JULIUS J. GROSS, Chicago, Ill. Filed Sept. 11, 1922. Serial No. 587,426. 30 Claims. (Cl. 250—84.)



1. In an X-ray operating table, the combination of a support, a table top pivotally mounted on said support, an X-ray tube element support, a counterweight whose weight in unequal to that of said X-ray tube element

support movably supported on said table top, and connections between said counterweight and tube support adapted to move said counterweight and tube support for

increments of distance substantially in inverse ratio relative to the respective weights of the said X-ray tube element support and said counterweight.

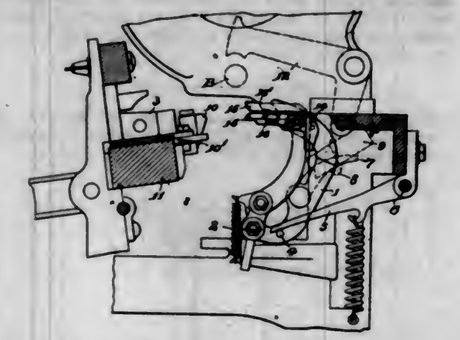


1,628,044. RIVETING MACHINE. ARTHUR R. HAVENER, Wayland, Mass., assignor to Judson L. Thomson Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 12, 1924. Serial No. 706,103. 23 Claims. (Cl. 218—2.)

18. A machine for punching and riveting sheet material comprising, in combination, a main frame, an auxiliary frame pivotally mounted upon said main frame, punching instrumentalities embodying therein a punch, said punch being mounted in said auxiliary frame, a stripper slide mounted in said auxiliary frame and operatively connected to said punching instrumentalities, a pawl to hold said stripper slide in engagement with said sheet material, means to engage said pawl to disengage the latter from said stripper slide whereby the latter is released from engagement with said sheet material, rivet setting instrumentalities embodying therein a driver slide and driver mounted in said auxiliary slide, a rivet carrier mounted upon said driver slide, and means to rock said auxiliary frame to alternately move said punching instrumentalities and said rivet setting instrumentalities into the same operative position relatively to said sheet material.

1,628,045. ELECTRONIC DISCHARGE DEVICE. WILLIAM F. HENDRY, Ossining, N. Y., assignor to Manhattan Electrical Supply Company, Inc., a Corporation of Massachusetts. Filed Oct. 8, 1926. Serial No. 140,809. 11 Claims. (Cl. 250—27.5.)

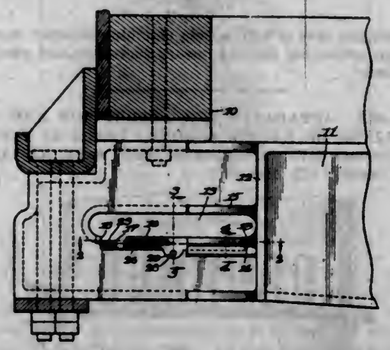
6. In an electric discharge device, an electrode mounting comprising an electrode, an insulating support and an annular cylinder of insulating material surrounding said electrode and spaced a small distance therefrom, the ratio of the width of the said small distance to the



length of the annular cylinder being approximately one-eighth, whereby electrical breakdown of the insulating support is prevented.

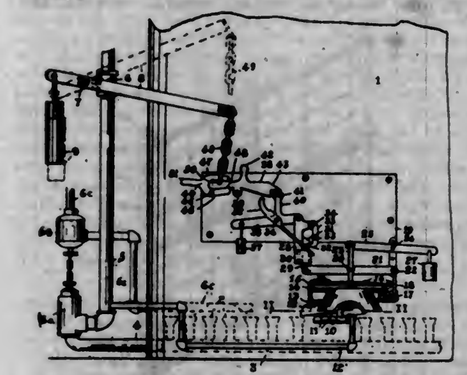
1,628,046. ORE FLOTATION PROCESS. JOHN HERMAN, Los Angeles, ARTHUR W. ALLEN, Berkeley, and HARRY R. NEWITT, Los Angeles, Calif. Filed Nov. 25, 1925. Serial No. 71,430. 3 Claims. (Cl. 209—166.)

1. A process of flotation in the treatment of oxidized metalliferous ores comprising subjecting finely ground oxidized ore pulp to a gaseous reducing agent at a temperature where said agent is chemically inert to the ore pulp under treatment, said agent adhering to the oxidized metalliferous ore particles in small bubbles and causing them to rise to the top of the ore pulp.



1,628,047. AUTOMATIC WEFT-REPLENISHING LOOM. DENIS MACHELL HOLLINS, Blackburn, England, assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 26, 1926, Serial No. 90,774, and in Great Britain Apr. 14, 1925. 1 Claim. (Cl. 139—264.)

In an automatic weft replenishing loom the combination with a shuttle feeler movable toward and from the lay, the shuttle feeler operating as described, and a thread cutter carried by said shuttle feeler and operating to cut the weft end extending from the selvage when a transfer has been effected, of clamping means carried by the shuttle feeler comprising a lateral extension from the shuttle feeler in the direction of the selvage upturned at its inner end to form a fixed clamping member having an extended vertical clamping face, a movable clamping member in the form of a plate secured to the movable

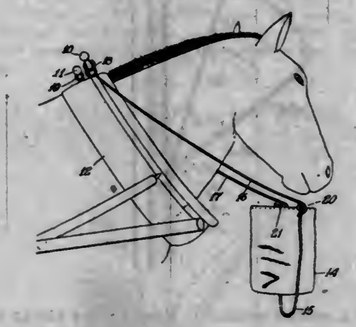


cutting blade on the shuttle feeler and offset at its rear end to present an extended vertical clamping face cooperating with and adjacent and parallel to the clamping face of the upturned portion of the fixed clamping member, the under edge of said rear end and the upper edge of the fixed clamping member forming jaws between which the weft can pass as the shuttle feeler moves rearwardly with the movable cutting blade open to ascertain the position of the shuttle, and an upward projection from the rear of the top edge of the upturned portion of the fixed clamping member whereby, when the clamping members close upon the weft end and are carried forward with the shuttle feeler, the weft end after severance will be held clamped although pulled a long distance through the clamp and will be prevented from sliding rearwardly by the said projection.

1,628,048. DRAFT SILL. CHARLES MELVEN HOUSE, Bloomington, Ill. Filed July 3, 1926. Serial No. 120,494. 7 Claims. (Cl. 213—50.)

1. In draft rigging, a draft member provided with a draft key slot adapted to receive a draft key, a wear shoe engaging the lower marginal wall forming said slot, said lower marginal wall and shoe being provided with interengaging portions for preventing endwise and lateral movement of said shoe on said sill, but permitting the removal of said shoe by a vertical movement whereby said shoe will be held from removal by said key when the latter is in position in said slot.

1,628,049. AUTOMATIC CUT-OFF FOR GAS BURNERS. ELIAS KAUFFELD, Pittsburgh, Pa. Filed Feb. 18, 1926. Serial No. 89,236. 10 Claims. (Cl. 67—116.)

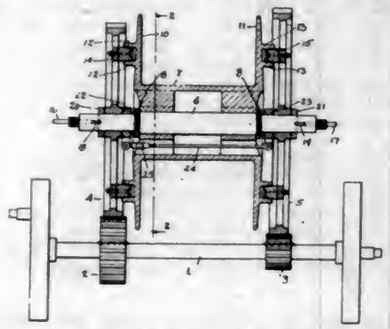


1. In an automatic gas cut-off, a gas-supply pipe, a cut-off valve therefor, means biasing the valve when open to move to closing position, a main burner connected to receive gas through the said pipe and valve, a thermostatic diaphragm, an auxiliary burner arranged to ignite the main burner and heat the diaphragm, and means fastened to the diaphragm and operatively connecting the intermediate portions of the diaphragm and the biasing means and controlled by the transverse distortion of the diaphragm, when heated by the auxiliary burner, so as to prevent the biasing means from closing the valve, and controlled by the reduction of said distortion, due to the cooling of the diaphragm when the auxiliary burner becomes extinguished, so as to release the biasing means, the said connecting means including a catch connecting portions of the connecting means together in combination with means for disconnecting the catch upon the release of the biasing means, the catch being biased to reconnect the said portions together when the latter are in predetermined relative positions, one of the portions being connected to the diaphragm and moved thereby, when heated, to its said predetermined position.

1,628,050. ALLOY. CHARLES A. KRAUS and CONRAD C. CALLIS, Worcester, Mass., assignors to Standard Development Company, a Corporation of Delaware. Filed Mar. 30, 1923. Serial No. 628,734. 7 Claims. (Cl. 204—2.)

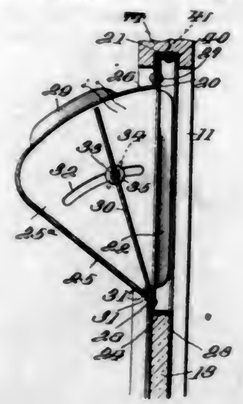
1. The process of making an alloy of lead and sodium, which comprises electrolyzing sodium chloride to produce molten sodium and combining the sodium with lead in the electrolytic bath, while preventing access of oxygen.

1,628,051. FEED-BAG HOLDER. MATTHEW C. LOWDEN, Brooklyn, N. Y. Filed Mar. 3, 1924. Serial No. 696,486. 5 Claims. (Cl. 119—67.)



1. A feed-bag holder adapted to be suspended from the harness of a horse and consisting solely of a pair of rigid and independent rods each having integral means at the inner end for supporting the said rods on the respective horns of the hame upon opposite sides of the neck of a horse, contacting with the horns to determine the position of the rods in a vertical plane and said rods being provided at their outer ends with integral retaining means for suspending therefrom a feed bag.

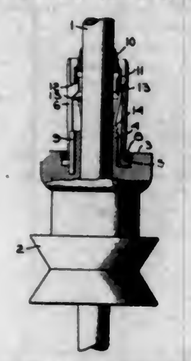
1,628,052. ENGINE. JOHN R. MCGIFFERT, Duluth, Minn., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Apr. 24, 1923. Serial No. 634,284. 5 Claims. (Cl. 254—187.)



1. In mechanism of the character described, the combination of a drive shaft, a second shaft, pairs of intermeshing gears of different ratios, one member of each such pair of gears being fixed on said drive shaft and the other being rotatably and longitudinally movable on said second shaft, a winding drum rotatably mounted on

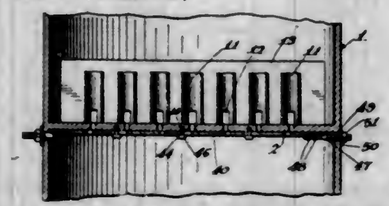
said second shaft between the two gears thereon, said drum being held against longitudinal movement on said shaft, means for moving either of said gears on said

second shaft into engagement with said drum, and a thrust element within the drum for maintaining the said gears in definite spaced relation to each other.



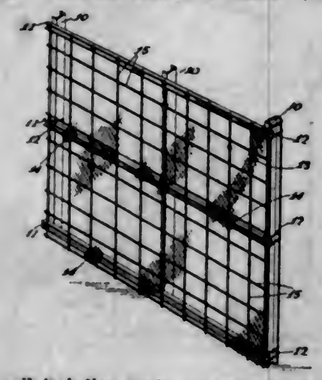
1,628,053. WINDOW VENTILATOR FOR AUTOMOBILES AND THE LIKE. ARTHUR D. MCTIGHE, Trenton Junction, N. J. Filed Apr. 3, 1926. Serial No. 99,582. 4 Claims. (Cl. 98—2.)

1. In a window ventilator, a front panel having louvres formed therein and an upper flange adapted to be received within the window frame, a rear plate having a flange adapted to be fitted upon the window sash and providing an upper arcuate wall, means to connect said plates together, said arcuate upper wall having its center of curvature substantially at the lower juncture of the said plates, a shutter located between said plates and pivoted substantially at the center of curvature of said upper wall, said upper wall having a plurality of louvres therein extending at an angle to the upper flange of the device, said shutter closing selected portions of the areas of said louvres, and means for adjusting and holding said shutter in adjusted position from the exterior of said casing.



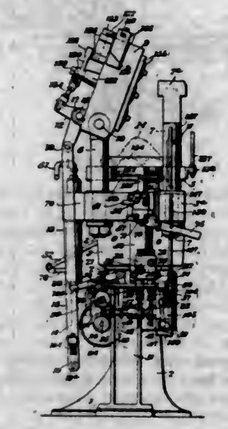
1,628,054. BOBBIN-CLUTCHING MEANS FOR ROTATABLE SPINDLES. JOSEPH A. MILLER, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 5, 1926. Serial No. 146,397. 4 Claims. (Cl. 242—46.6.)

1. A rotatable spindle comprising a blade, a plurality of elongated segmental bobbin clutching members surrounding the blade and rotatable therewith, means for limiting radial outward movement of the ends of the bobbin clutching members, and a spring located inter-



mediate the ends of each bobbin clutching member, secured thereto, projecting radially inward therefrom and abutting the blade.

1,628,055. APPARATUS FOR ABSORPTION AND DISTILLING OF HYDROCARBONS. DANIEL L. NEWTON, Fullerton, Calif. Filed Dec. 9, 1925. Serial No. 74,280. 5 Claims. (Cl. 196—8.)

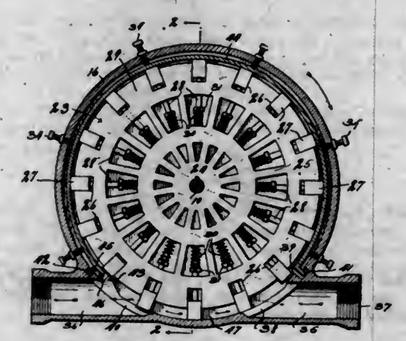


4. A distilling and blending apparatus comprising in combination a series of blending chambers each having a partition adapted to hold an absorbing liquid medium, each of said partitions having perforations adapted to allow passage upward of gas containing vapors from one chamber to another, and means operatively connected to each partition to control the flow of gas into each chamber, independently of the rate of flow into other chambers.

1,628,056. BUILDING WALL CONSTRUCTION AND METHOD OF MAKING THE SAME. FRANK NILES and LESTER NILES, Santa Barbara, Calif. Filed July 21, 1926. Serial No. 123,940. 9 Claims. (Cl. 72—46.)

1. A wall including studs, a layer of relatively fine metal fabric fastened to the studs, reinforcing means positioned against said layer, a layer of self-hardening plastic material applied to the back of said layer and worked therethrough, and a second layer of self-hardening plastic material applied to the front of the layer imbedding the reinforcing means therein.

1,628,057. MOLDING APPARATUS. HUBBARD D. NITCHIE, Cranford, N. J., assignor to The Watson-Stillman Co., New York, N. Y., a Corporation of New Jersey. Filed June 21, 1926. Serial No. 117,379. 41 Claims. (Cl. 18—16.)



3. In an apparatus of the class set forth, the combination of a pivoted press head; a reciprocable press head; fluid-pressure-operated means for swinging the pivoted head into and out of parallelism with the reciprocable head; fluid-pressure-operated means for reciprocating the reciprocable head; means operating automatically, upon movement of the pivoted head into parallelism with the reciprocable head, to first supply pressure fluid to the head-reciprocating means and then exhaust pressure fluid therefrom; control means for said head-swinging means operating automatically by the retraction of the reciprocable head, upon exhaust of pressure fluid from the head-reciprocating means, to cause the head-swinging means to swing the pivoted head out of parallelism with the reciprocable head; and manually operable means for actuating the control means to cause movement of the pivoted head into parallelism with the reciprocable head.

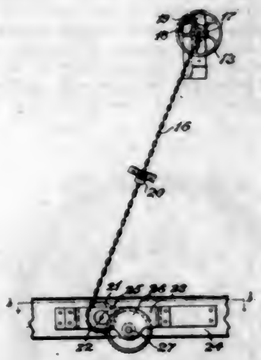
35. In an apparatus of the class set forth, the combination of a pair of co-operating press heads; fluid-pressure-operated means for forcing one of said heads toward the other head; valve means for controlling the supply of pressure fluid to and the exhaust thereof from said fluid-pressure-operated means; means for actuating said valve means to first establish and maintain for a predetermined time a fluid supply and then to establish a fluid exhaust; means for operating the valve actuating means; means adapted to be operated when one of said press heads is in pressing position for establishing an effective operative connection between the valve actuating means and the operating means therefor, and automatically breaking said connection after a single cycle of operation of the valve actuating means; and manually-operable means for putting the apparatus in operation for a single cycle of movements.

1,628,058. METERING PUMP. NEELY NIX, Long Beach, Calif, assignor, by direct and mesne assignments, of two-thirds to M. R. Humpton and one-third to B. A. Stone, Long Beach, Calif. Filed Feb. 5, 1925. Serial No. 7,189. Renewed Oct. 23, 1926. 2 Claims. (Cl. 103—136.)

1. A metering and pumping mechanism of the character described including an outer cylindrical casing having an inlet passage intersecting the casing tangentially and an opposed outlet passage intersecting the casing tangentially to the periphery of the casing, a rotor mounted within the casing, a flexible, arcuate packing member disposed between the casing and the rotor and extending from the beginning of the inlet passage around the rotor to the end of the outlet passage, a plurality of adjusting means mounted upon the periphery of the casing in circumferential series and engaging said packing member whereby it may be shifted toward or from the rotor,

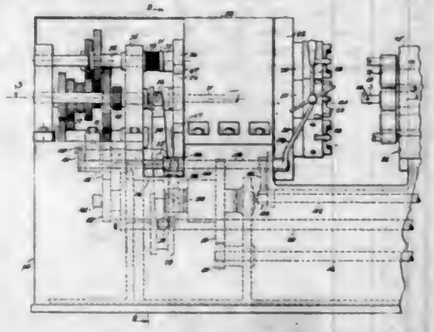
spring-projected blades mounted upon the rotor and engaging the inner face of the packing member as they travel over the packing member and the inner face of the casing between the ends of the packing member, guides extending across the inlet and outlet openings and against which the extremities of the blades bear, and means for guiding the blades over the inner face of the packing member to the inner face of the casing at the inlet opening and from the inner face of the casing to the inner face of the packing member adjacent the outlet opening.

1,628,059. TOBACCO-PIPE ATTACHMENT. JOHN JOSEPH O'TOOLE, Pittsburgh, Pa. Filed Mar. 29, 1924. Serial No. 702,755. 3 Claims. (Cl. 131—12.)



1. An attachment for an ordinary tobacco pipe embodying a bowl having its charge-receiving opening at its upper end, comprising a perforate disk member adapted to rest on the charge and being of sufficiently smaller diameter than the inner diameter of the bowl to permit the disk to move and be moved downwardly as the charge is consumed, said disk having means for frictional engagement with an element in the bowl for preventing its ready accidental displacement.

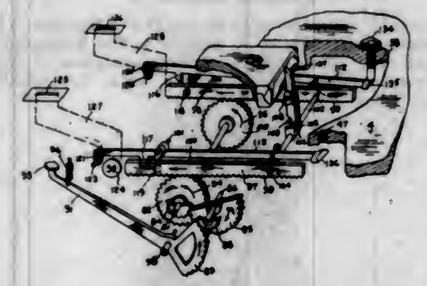
1,628,060. BRAKE-OPERATING MECHANISM. JOHN S. PAYNE, Midland Park, N. J. Filed July 10, 1926. Serial No. 121,602. 2 Claims. (Cl. 74—112.)



1. In a brake operating mechanism, the combination of a brake lever; a shaft; a flexible member connected to the lever and the shaft; and adapted to be wound around

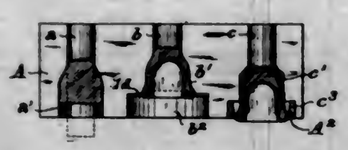
the shaft; a second shaft; a driving connection between the first and second shafts; a drum mounted on the

second shaft; a third shaft; and a flexible member having one end wound around the drum, and the other end attached to the third shaft.



1,628,061. MULTIPLE-SPINDLE METAL-TURNING MACHINE. CARL M. PETERSEN, Bridgeport, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 31, 1924. Serial No. 729,202. 67 Claims. (Cl. 29—38.)

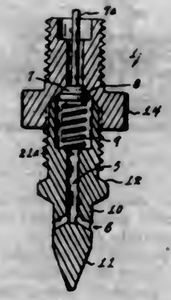
1. In a machine of the class described, a plurality of working stations, a tool for each station, a feeding means for each tool including a revolving feed member, and means for controlling said feeding means comprising a rotatable and longitudinally movable driving member for each feed member adapted for individual adjustment so that they may be arranged so the individual feed members will start to revolve at different times and will cease to revolve at the same time.



36. In a machine of the class described, a tool carrier, feeding means for said carrier, driving means for the feeding means including a forwardly driving clutch and a reversing clutch, a slidable shaft, means carried by said shaft for operating the clutches, means for rotating said shaft including a clutch, means operated by turning movement of said shaft for reciprocating the shaft, a screw, a lever for controlling the latter clutch secured to said screw, a gear having threaded engagement with said screw, spaced means on the said screw adapted for operative engagement with said gear to swing said lever, and driving means between said gear and the driving means for the feed.

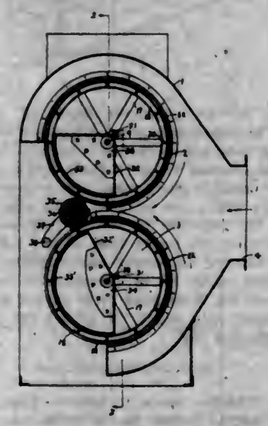
1,628,062. COIN-SLOT MECHANISM FOR VENDING MACHINES. NELS P. PETERSEN, Los Angeles, Calif. Filed Apr. 13, 1925. Serial No. 22,745. 22 Claims. (Cl. 194—58.)

1. A coin controlled machine having two coin controlled mechanisms each adapted to be controlled by the insertion of the proper coin, means controlled by the insertion of a coin in one of the coin control mechanisms in cooperation with means controlled by the operation of the machine to eject a certain priced article, means controlled by the insertion of a coin in the other coin controlled mechanism in cooperation with means controlled by the operation of the machine to eject another article of a different price and means controlled by the insertion of coins in both coin controlled mechanisms simultaneously to eject still another article of different price.



1,628,063. MANUFACTURE OF STEAM-BOILER STAY BOLTS. ARTHUR F. PITKIN, Schenectady, N. Y. Filed July 19, 1922. Serial No. 576,027. 1 Claim. (Cl. 10—27.)

The method of forming stay bolts, having a socket at one end for the reception of the rounded head of a companion member, which comprises the following steps: heating a rod to forging temperature; confining the rod in a die cavity, having a constricted portion and an enlarged portion; expanding one end of the rod in the enlarged portion by the pressure of a plunger; confining the rod in a second die cavity; applying pressure to the expanded end of the rod to form a socket therein, with the mouth of said socket thicker than the rest of the wall and curved in cross section; confining the rod in a third die cavity, and cutting off any fin formed around the thickened mouth of the socket.

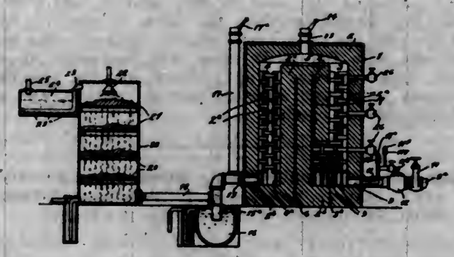


1,628,064. TIRE VALVE. CLARENCE S. PRESTON, San Diego, Calif. Filed May 8, 1926. Serial No. 107,691. 1 Claim. (Cl. 152—12.)

In an attachment for tire valve bodies, a two piece elongated core body member providing an internal valve receiving space, a non-return valve in said space, an intermediate externally threaded portion to said core body surrounding said space, a head above said externally threaded portion, an integral annular enlargement to said core body below said externally threaded portion; said body provided with an air course continuing downwardly from said valve space and opening outwardly of the core body below said annular enlargement; and further provided with an outer seating end beyond the opening of said air course; said core body being composed of two pieces non-revolubly joined to each other intermediate of said head and said intermediate externally threaded portion, respectively, and a cap-like casing having an open lower end providing a downwardly opening cavity, an upper closure wall to said cap provided with an internally threaded bore of smaller diameter than said cavity; said cap-like casing fitted to said core body by inter-engagement of the threads of the externally threaded portion of

the core body with the threads of the internally threaded bore of the cap-like casing; the lower portion of said core body extending outwardly through the open end of the cap-like casing with said annular enlargement disposed in said cavity; said annular enlargement to said core body and the said closure wall of said casing providing corresponding seating surfaces for the purpose set forth; said cap-like casing provided with means for attachment to a tire valve body.

1,628,065. LINT CONDENSER. FRANK W. PROVOST and GEORGE B. HAYWOOD, Houston, Tex. Filed May 11, 1925. Serial No. 29,432. 2 Claims. (Cl. 19—156.)

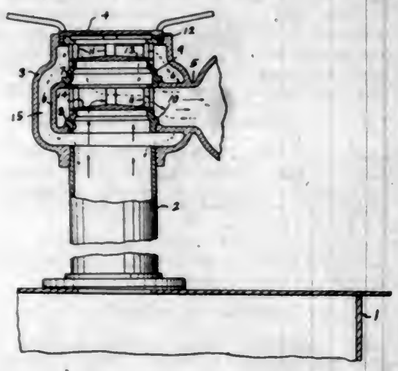


1. In a cotton condenser, a housing having a cotton receiving opening at one side thereof, spaced parallel shafts fixed against rotation in said housing, foraminated cylinders rotatable in contact with each other on said shafts, brackets on said shafts within said cylinders, baffles on said brackets extending along said cylinders on their sides away from said opening, a wiper roll contacting with the lower of said cylinders adjacent said baffles spaced slightly from said upper cylinder and rotating in the same direction as one of said cylinders, suction means at the ends of said cylinders, said baffles being positioned to extend on one cylinder in advance of the line of contact and in the other to the rear of said line, to allow said suction to be exerted upon a portion of the surface of the second named cylinder adjacent an obscured surface of the other in the manner described, said wiper roll being held resiliently in contact with and receiving the cotton from said second named cylinder.

1,628,066. GAS FOR CUTTING AND WELDING PURPOSES. JAMES R. ROSE, Edgeworth, Pa., assignor to Carbo-Hydrogen Company of America, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 3, 1918. Serial No. 248,135. 1 Claim. (Cl. 48—19.)

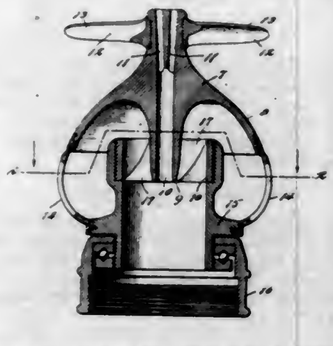
A gas for cutting and welding with oxygen, comprising essentially a mixture of hydrogen with substantially 20 per cent by volume of methane.

1,628,067. GASEOUS FUEL. JAMES R. ROSE, Edgeworth, Pa., assignor to Carbo-Hydrogen Company of America, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 31, 1919. Serial No. 348,679. 2 Claims. (Cl. 48—199.)



1. A combustible welding and cutting gas especially useful with oxygen in metal cutting, welding and the like, consisting essentially of from 80% to 98% of hydrogen and from 20% to 2% of other gases, such other gases consisting principally of methane and including a small proportion of propane and butane.

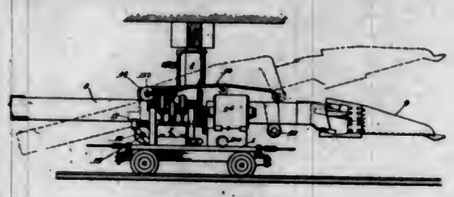
1,628,068. GUN MOUNTING FOR USE ON AIRCRAFT. FREDERICK WILLIAM SCARFF, London County, England, assignor to Vickers Limited, London, England, a British Company. Filed Nov. 7, 1924, Serial No. 748,375, and in Great Britain Nov. 27, 1923. 11 Claims. (Cl. 89—40.)



7. In a gun mounting of the ring type for use on aircraft, the combination with a rotatable ring and the elevating arm, of a plurality of metallic springs of the helical compression type for balancing the elevating arm against the weight of the guns carried by said arm and means whereby certain of said springs can readily be removed when only one gun is to be carried by said arm and can readily be replaced when more than one gun is to be carried.

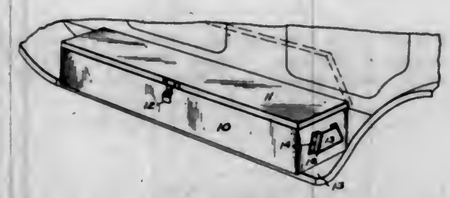
1,628,069. TANK VENT. GEORGE C. SCHMIDT and FRANK G. D. MULLER, Houston, Tex. Filed Aug. 21, 1926. Serial No. 130,579. 1 Claim. (Cl. 277—61.)

An apparatus of the character described formed with a passageway, valve seats disposed one above the other therein, valves controlling said seats, a cage-like structure anchoring said seats in fixed relation, said structure also serving to retain the valves in operative relation with the seats, said cage-like structure being removable with the valves from said passageway as a unit, said apparatus being provided with an opening through which said structure may be removed, and a closure for said opening.



1,628,070. SELF-PROPELLED HOSE NOZZLE. SIDNEY C. SLADDEN, Freeport, N. Y. Filed May 12, 1926. Serial No. 108,480. 1 Claim. (Cl. 15—104.12.)

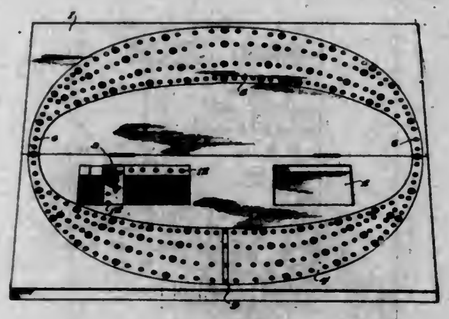
A nozzle as characterized embodying a power driven rotary member, and a plurality of spirally twisted propeller blades, the forward and upper edges thereof being sharpened to form cutting members, said blades being disposed in spaced relation to the power driven member; and a plurality of bowed blades radially extended from said rotary member beyond the perimeter thereof for completing the removal inaugurated by said cutting blades.



1,628,071. POWER SHOVEL. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 18, 1922. Serial No. 607,692. Renewed June 30, 1926. 39 Claims. (Cl. 214—135.)

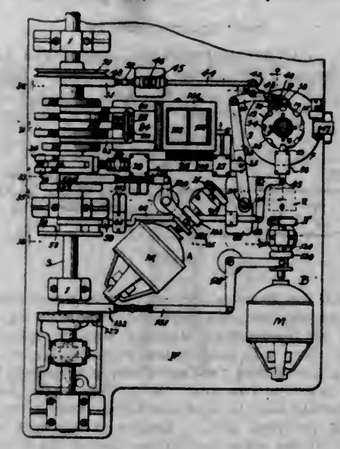
10. In a power shovel, the combination of a base, a vertically adjustable holding jack mounted on said base and extending upwardly therefrom to engage a fixed support above the machine, a movable scoop on said base having suitable power actuating devices and control mechanism therefor, and power connections between said power actuating devices and said holding jack for applying a holding pressure on the latter, varying with the power utilized in actuating said scoop.

15. In a power shovel, the combination of a base, a vertically adjustable holding jack mounted on said base and extending upwardly therefrom to engage a fixed support above the machine, a movable scoop on said base having suitable hydraulic actuating devices and control mechanism therefor, means associated with said hydraulic devices for automatically applying to and maintaining on said holding jack the maximum hydraulic pressure utilized in actuating said scoop, and manually controlled means for releasing the power on said jack at will.



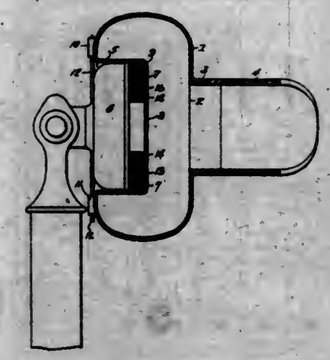
1,628,072. COMBINED CAMP BOX AND BENCH. JOSEPH I. SMITH, Ogden, Utah. Filed Mar. 24, 1926. Serial No. 97,107. 1 Claim. (Cl. 190—12.)

A device of the character described, comprising a member to be supported, a handle-socket secured to the member and tapering upwardly, a pair of upwardly converging legs adapted to have their upper ends inserted within the handle-socket, such upper ends having contacting edges which are adapted to be substantially vertical when the legs are in the upright position, and a hinge connecting the upper ends of the legs and having its axis of turning movement substantially parallel with the contacting edges, the arrangement of the hinge being such that one leg is adapted to be turned generally upon its longitudinal axis and to be folded flat upon the side of the companion leg.



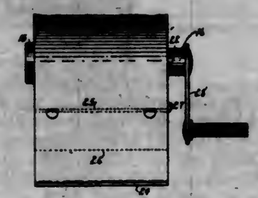
1,628,073. GAME. JOHN B. SOUSA, Reno, Nev. Filed Apr. 21, 1926. Serial No. 103,536. 2 Claims. (Cl. 273—134.)

2. A game comprising a base including similar hinged sections having an elliptical race course delineated thereon and comprising a plurality of tracks which gradually and symmetrically merge into single tracks at opposite ends in line with the major axis, there being a starting line at one side coinciding with the minor axis, one of the sections having recesses forming pockets within the course, stripes of contrasting color intersecting one of the pockets and having the portions at one side of the pocket numbered, game pieces of contrasting color and numbered to agree with the said stripes, score pegs of contrasting color to match the stripes and game pieces



and dice, certain dice bearing numbers on their faces and another dice bearing arithmetical signs, a numeral and a character to indicate that the play is backward.

1,628,074. APPARATUS FOR MAKING RECEPTACLES. IRVING STANLEY, New York, N. Y., assignor, by mesne assignments, to Sealed Containers Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 8, 1925. Serial No. 61,174. 42 Claims. (Cl. 93—39.)

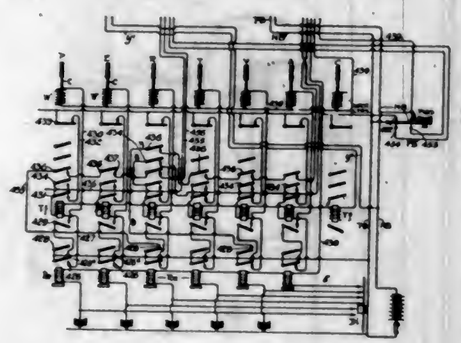


1. In apparatus for applying a closure to a receptacle body, a holder for a receptacle body, a rotatable carrier for the holder, and means to intermittently advance the holder carrier to position the holder relative to means to form and apply a closure to one end of the body in the holder, to means to break down and upset the material of the closure and receptacle body to secure the closure therein, and to position to eject the receptacle from the holder, comprising a drive shaft, a disk having notches in the periphery thereof rotatable with the holder carrier, a feeding pawl to co-operate with certain of said disk notches to advance the carrier, a dog movable with the feeding pawl to co-operate with other of said disk notches to prevent overthrow of the carrier, a cam on the shaft, and an operative connection between said cam and the pawl and dog to actuate the same.

1,628,075. MUFFLER ATTACHMENT FOR TELEPHONES. FRANCIS J. STROBEL, Philadelphia, Pa. Filed Apr. 6, 1925. Serial No. 21,113. 2 Claims. (Cl. 179—188.)

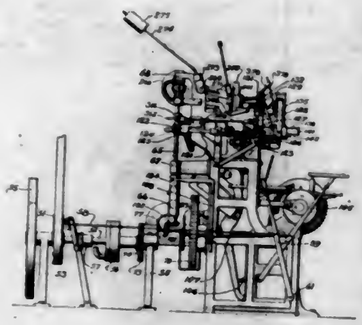
1. A telephone attachment comprising a casing adapted for reception of the transmitting head of a standard telephone instrument, said casing having a rear wall contiguous with the rear wall of said transmitting head and extending in a plane common to both, and front and side walls spaced apart from the respective walls of said head, whereby a sound chamber is formed completely around the periphery of said head and to the front thereof; and a mouth piece on said front wall adapted to entirely embrace the mouth of a person using said instrument.

1,628,076. PENCIL SHARPENER. CECIL M. SYKES, Milford, Conn., assignor to The Hayes Meserole Mfg. Co., Milford, Conn., a Corporation. Filed June 8, 1926. Serial No. 114,381. 2 Claims. (Cl. 120—96.)



1. A pencil sharpener, comprising a cutter, a frame in which the cutter is mounted, said cutter provided with a crank-handle, and a housing formed with a transverse floor, the central portion of the floor outwardly bowed and the forward edge of the floor formed with lips against which the cutter-frame bears.

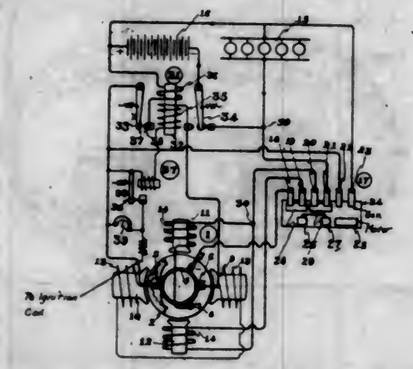
1,628,077. METHOD AND SYSTEM OF VIBRATORY SIGNAL CONTROL. JOHN P. TARBOX, Garden City, N. Y. Original application filed Apr. 10, 1917, Serial No. 161,016. Renewed Nov. 12, 1921. Serial No. 564,621. Divided and this application filed Oct. 22, 1923. Serial No. 669,888. 23 Claims. (Cl. 178—31.)



1. A system of vibratory signal control comprising a primary vibration receiving device, a translating device associated with said receiving device during both its vibratory energization and deenergization and in the

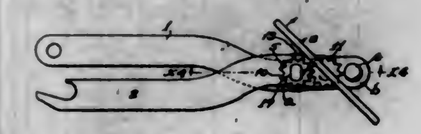
one case itself energized and in the other case deenergized and by its state of energization differentiating between the conditions of energization and deenergization

of the receiving device, and an electromagnetic actuating element of a signal recording machine the operation of which is controlled by said translating device.



1,628,078. PRINTING MECHANISM. HOLGER THIELGAARD, Chicago, Ill., assignor to Electrograph Advertising Service, Chicago, Ill., a Corporation of Illinois. Filed Feb. 2, 1922. Serial No. 533,538. 29 Claims. (Cl. 101—57.)

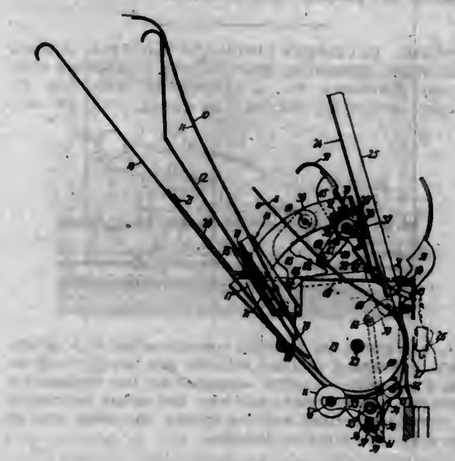
1. In a printing press, the combination of a bed, a printing chase mounted thereon, means locking said chase to said bed, means unlocking the chase and moving it to a position off the bed, and means substituting a slug group in said chase when so moved.



1,628,079. DOUBLE-CIRCUIT STARTING AND GENERATING SYSTEM. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Feb. 3, 1921. Serial No. 442,055. 12 Claims. (Cl. 290—31.)

7. In a system, in combination, a storage battery, translating devices, a dynamo-electric machine having a pair of circuits of different voltages, switch means for connecting said devices and said battery in one of said circuits and for changing the connection of said battery from one circuit to the other circuit.

12. In a starting and generating system, a dynamo-electric machine, a pair of outside circuits supplied by said machine at different voltages, said machine being provided with modifying means for modifying the field flux to produce a quadrature relation between the resultant field flux and the armature cross flux under motoring conditions, said modifying means being provided with windings for modifying the field flux under generating conditions for regulating purposes.



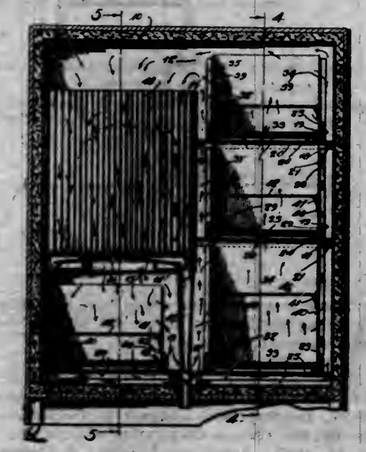
1,628,080. CAN-TOP REMOVER. EDGAR VAN LEUNEN, Long Beach, Calif. Filed Apr. 5, 1926. Serial No. 99,965. 9 Claims. (Cl. 30—3.)

1. A can top remover comprising two levers fulcrumed together at one end and each provided with an oblique slot and an intermediate opening between the fulcrum and such slot; said slots being arranged to cross each other and one of said openings forming a journal bearing and the other a clearance; a driving shaft journaled in the journal bearing and extending through the clearance, and provided with a handle at one end, a driving wheel at the other end on one side of the levers, and a spur gear on the other side of the levers; a circular cutter having a stub shaft extending through the oblique slots; and a gear on the stub shaft to drive the cutter.

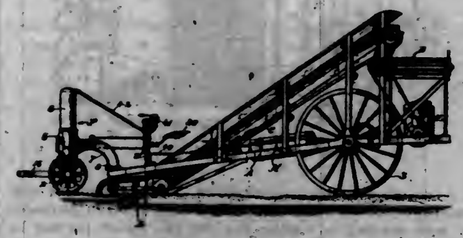
1,628,081. TYPEWRITING MACHINE. HARRY H. VICKERS, Corona, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 6, 1925. Serial No. 7,243. 21 Claims. (Cl. 197—128.)

1. In a typewriting machine, including a revoluble platen and feed-rolls therefor, the combination of a rear table, a guide-plate for guiding a record-sheet at the introductory side of said platen, said rear table forming a chute for conducting a statement-sheet between the table and the guide-plate, a front table at the delivery side of said platen for laterally positioning the statement-sheet, a cross-bar for mounting the front table, a rock-shaft rockably supported on said cross-bar, clamps operatively mounted on said rock-shaft co-operating with

the platen to hold the record-sheet thereabound, and means for simultaneously releasing the feed-rolls and rendering the clamps effective.



1,628,082. COMPOSITE CORK DISK. ENRIQUE VINCKE, Barcelona, Spain, assignor to Manufacturas de Corcho, S. A., Barcelona, Spain. Filed Feb. 8, 1923. Serial No. 617,881. 4 Claims. (Cl. 154—45.5.)

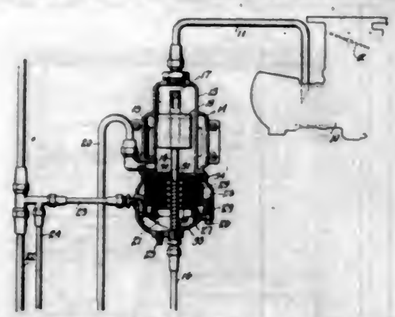


1. As a new article of manufacture, a composite cork disk for a crown cap comprising outer disks of natural cork of high quality secured to a cork disk of poor quality and means for bonding said disks to one another disposed circularly outwardly of the region of engagement of said outer disk with the contents of the bottle to which the crown cap is applied.

1,628,083. REFRIGERATOR. BENEDICT F. VOGT, Louisville, Ky. Filed Mar. 30, 1926. Serial No. 98,482. 10 Claims. (Cl. 62—51.)

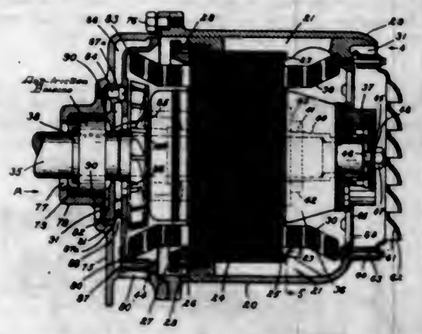
1. In a refrigerator, a walled compartment, a drawer slidable into and out of said compartment and spaced from the sides, top and bottom of the compartment to permit free circulation of air about the drawer, said drawer having a bottom and side walls provided with openings to permit free circulation of air through the drawer from the bottom and sides thereof, and a reticulated shelf supported in said drawer in spaced relation to the bottom, certain of the openings in the side walls of the drawer being above the level of the shelf.

1,628,084. LIFTING DEVICE. JACOB S. WALCH, Oakland, Calif. Filed July 30, 1925. Serial No. 47,050. 3 Claims. (Cl. 37—102.)



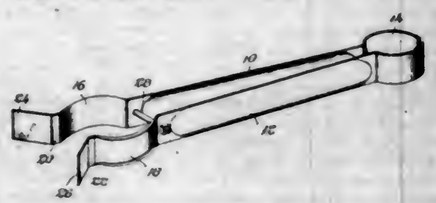
1. The combination with a frame supported by front and rear wheels and a digging implement carried by the frame, of a fluid actuated lifting mechanism interposed between the frame and the front wheels, said mechanism comprising a cylinder secured to the frame, a piston within the cylinder, a rod forming a connection between the piston and the front wheels, means for admitting a fluid, under pressure, to the cylinder and on top of the piston to raise the cylinder and the frame with relation to the piston and the wheels, said means also capable of exhausting said fluid to permit the cylinder and frame to be lowered with relation to the piston and wheels, locking teeth carried by the piston rod, a rack bar carried by the cylinder and having teeth adapted to engage the locking teeth on the piston rod to form a positive lock between the piston and the cylinder, and means for moving the rack bar into or out of engagement with the teeth on the piston rod.

1,628,085. OIL RECTIFIER. WILLIAM G. WALL, Indianapolis, Ind., assignor to Rectifier Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 26, 1925. Serial No. 58,950. 12 Claims. (Cl. 128—196.)



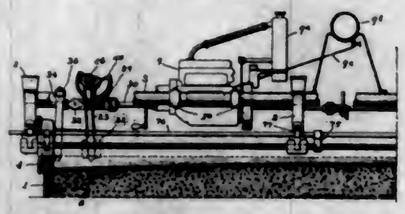
1. An oil rectifier comprising a casing, a sediment chamber at the bottom of the casing, a partition between

the sediment chamber and the upper part of the casing, an oil inlet into said casing, an oil outlet from said



casing, and a strainer between said inlet and outlet comprising a bag and having means for holding the same collapsed, substantially as set forth.

1,628,086. EECTRICAL APPARATUS. CLARENCE WARNER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 15, 1923. Serial No. 675,003. 5 Claims. (Cl. 172—36.)



3. An electric motor comprising in combination, a supporting frame, a bearing in said frame, a shaft journaled in said bearing, a cooling fan for the motor carried by said shaft, and means for securing the bearing in position including an air directing baffle.

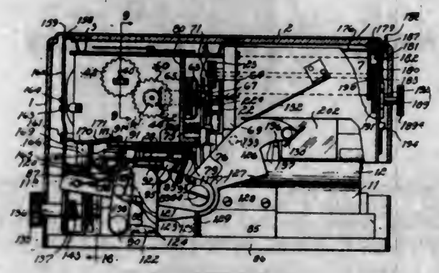
1,628,087. CANE STRIPPER. JOHN S. WARREN, Sun, Miss. Filed May 18, 1926. Serial No. 109,836. 1 Claim. (Cl. 130—31.)

A cane stripper comprising a pair of arms each including a handle portion, a knife or cutter portion and a finger for directing the stripper into operative engagement with a stalk to be stripped, yieldable means connecting said arms together, said means permitting said arms to move towards and away from one another and also to move in a direction at right angles to their direction of movement towards and away from one another, and a pin or bolt secured rigidly to one of said arms and engaged loosely through an opening in the other of said arms, to hold said arms against movement in a direction at right angles to their direction of movement towards and away from one another, said pin being located adjacent to the knife or cutter portions of said arms whereby it serves as a stop to limit engaging movement of the stripper upon a stalk.

1,628,088. PAVEMENT-FINISHING MACHINE. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Apr. 17, 1922. Serial No. 553,990. 58 Claims. (Cl. 94—45.)

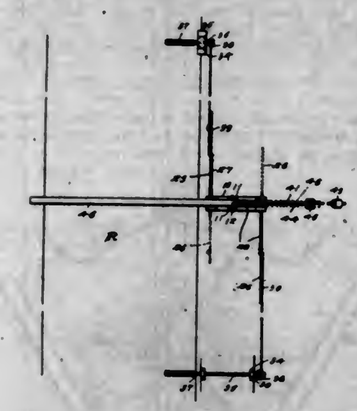
1. A machine for finishing concrete while in a plastic state, including a carriage with its own means of traveling, a plurality of rollers supported by the carriage for operating on the plastic concrete, and means for raising or lowering together and for raising one roller and at the same time lowering another.

1,628,089. PENCIL SHARPENER. GEORGE G. WEIB, Brooklyn, N. Y., assignor to Blaisdell Pencil Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1924. Serial No. 707,804. 1 Claim. (Cl. 120—93.)



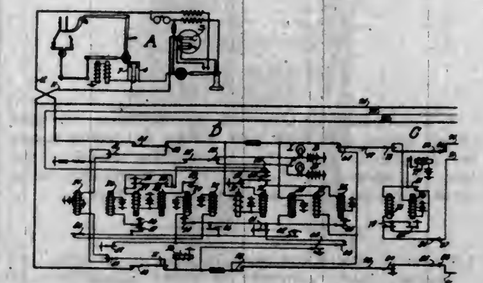
A sharpener for paper pencils of the kind described composed of a cylindrical portion and a tapered portion slotted from end to end, and having a cut-out portion between the cylindrical and tapered portions with one edge of the latter adjacent the cut-out portion sharpened and turned inwardly and so spaced with relation to the cylidrical portion and the tapered portion as to form a means for cutting the cover and stripping a single ribbon of the spirally wound paper.

1,628,090. SOUND-INSULATING PLATE, SHEET, OR SLAB. JOHANNES WEISS, Leipzig, Germany. Filed Sept. 26, 1924. Serial No. 740,148. 1 Claim. (Cl. 20—6.)



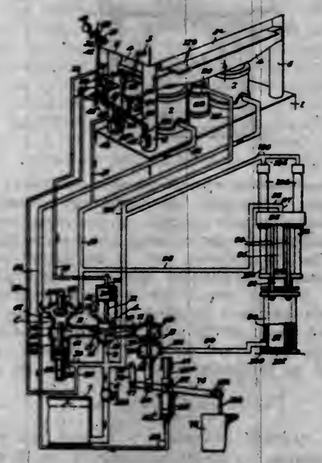
A slab or plate for the purpose set forth comprising a sheet of elastic material and elastic members joined to said sheet, spaced horizontally apart and each making on one side an acute angle with the plane of said slab or plate and on the opposite side an obtuse angle with said plane.

1,628,091. RETAIL AND WHOLESALE FABRIC-MEASURING MACHINE. JOHN L. WHEELER, St. Louis, EDWIN A. REED, Maplewood, and GREENE CARLTON HOSCH, St. Louis, Mo., assignors to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Dec. 19, 1921. Serial No. 523,364. 26 Claims. (Cl. 33—133.)



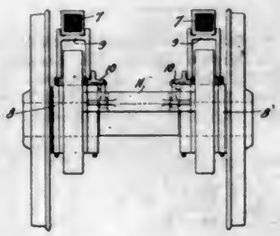
2. In a fabric measuring and cost computing machine, the combination of a measuring roller, length indicating mechanism for indicating a quantity measured, cost indicating mechanism for indicating the cost of the quantity indicated, totalizing mechanism, driving mechanism actuated by said measuring roller for driving the length indicator and the cost indicating mechanism including a clutch connecting the cost indicating mechanism with the totalizing mechanism, means operated at will to effect the opening of the said clutch and to effect the resetting of the length indicating mechanism to zero, and means for resetting the cost indicating mechanism when the clutch is open.

1,628,092. GATE-OPERATING MECHANISM. CARLOS M. WHITAKER, Ghent, Ky. Filed May 28, 1926. Serial No. 112,384. 4 Claims. (Cl. 39—60.)



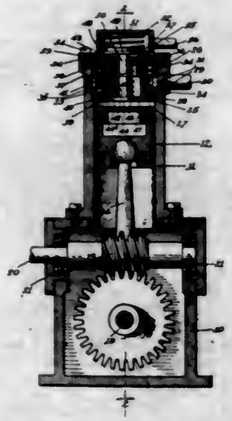
1. In combination with a gate pivoted to swing from a closed position where it is horizontal to an open position where it is vertical, a pair of parallel bars spaced longitudinally of the gate and extending transversely thereof, said bars being arranged at opposite sides of the pivot of the gate, a web secured to the gate at opposite sides of the pivot thereof and passing about guides arranged at opposite sides of the pivot of the gate in a direction longitudinal of the gate and a connection between the bars whereby movement of either the bars causes a corresponding movement of the other bar in the reverse direction, including a member paralleling the web and shifting longitudinally at that portion thereof paralleling the web as the bars are shifted and a connection between the web and member.

1,628,093. MEASURED-SERVICE TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 3, 1922. Serial No. 572,658. 24 Claims. (Cl. 179—6.3.)



1. In a telephone system, an automatic switch, a called line, means for operating said switch to connect with said line, means for releasing said switch, pay-station mechanism on said line, a magnet in said pay-station mechanism for controlling deposited coins, and means individual to said line operative when said automatic switch is released for closing a circuit for energizing said magnet.

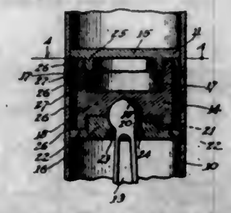
1,628,094. HYDRAULIC PRESSING APPARATUS. CARL WIGTEL, Brooklyn, N. Y., assignor to The Watson-Stillman Co., New York, N. Y., a Corporation of New Jersey. Filed June 2, 1926. Serial No. 113,197. 28 Claims. (Cl. 188—17.)



1. In an apparatus of the class set forth, the combination of opposed relatively shiftable pressing members, means operable by liquid under pressure for automatically imparting a relative approaching movement between said members first under the influence of liquid under one stage of pressure and then under the influence of liquid under higher pressure, and finally automatically effecting a relative separating movement between said members.

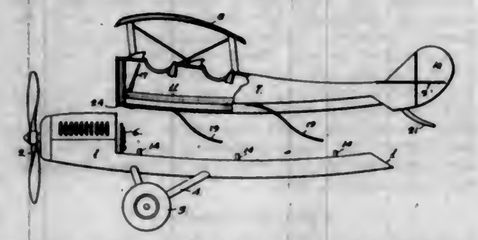
1,628,095. LOCOMOTIVE. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Apr. 22, 1924. Serial No. 708,131. 2 Claims. (Cl. 105—80.)

1. A locomotive wheel base having three or more closely spaced axles with their wheels, and having means for distributing among the intermediate wheels of the base the inward force due to the rail elevation on a curve which is unbalanced by centrifugal force.



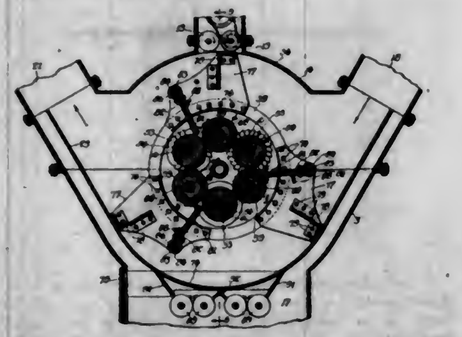
1,628,096. COMPRESSOR. CLEMENS S. WORTH, Los Angeles, Calif., assignor, by mesne assignments, to Edward G. Burghard. Filed Dec. 1, 1924. Serial No. 753,009. 16 Claims. (Cl. 230—34.)

1. The combination with a cylinder and piston of an exhaust valve mechanism comprising two chambers; a passage connecting said chamber; a port connecting one of said chambers with the cylinder and a normally closed valve therefor; an exhaust port in the other chamber; a valve normally closing the passage intermediate said chambers; yielding means for normally holding said valves closed, arranged to cause the cylinder port valve to be opened ahead of the passage valve on the exhaust stroke of the piston and to cause the passage valve to close ahead of the cylinder port valve on its suction stroke.



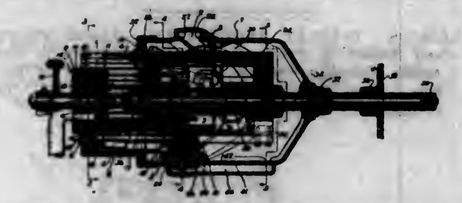
1,628,097. PISTON. CLEMENS S. WORTH, Los Angeles, Calif., assignor, by mesne assignments, to Edward G. Burghard. Filed Dec. 1, 1924. Serial No. 753,012. 1 Claim. (Cl. 74—108.)

A piston comprising a body portion, consisting of cylindrical walls and an intermediate transverse partition, a semi-spherical recess in the bottom face of the partition to form a seat for the ball end of a connecting rod, a bottom removably engaging the body portion and overhanging the periphery thereof to form a peripheral flange thereon, said bottom also having a central aperture therein through which the connecting rod extends, the perimiter of which is adapted to engage the ball thereon to hold it in said seat, a disk-like top for the body portion, removably secured thereto, and overhanging the



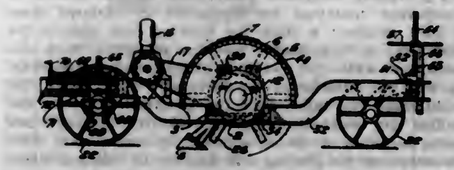
periphery thereof to form a peripheral flange therearound, and a plurality of sealing and spacing rings removably retained around the body portion comprising the major portion of the cylinder engaging portion of the piston.

1,628,098. AEROPLANE. JOAQUIN S. ARREU, San Francisco, Calif. Filed Feb. 11, 1926. Serial No. 87,591. 18 Claims. (Cl. 244—2.)



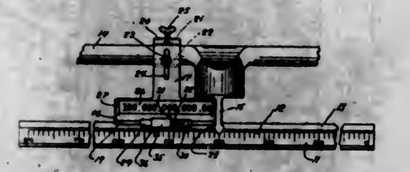
18. In an aeroplane, the combination with a body equipped with propelling mechanism, of a fuselage arranged to carry an operator and passengers or freight, said fuselage being detachably secured to the body whereby said fuselage may be applied upon any of a plurality of bodies and whereby said fuselage may be released when in flight for independent operation as a glider.

1,628,099. COAL-GRINDING MILL. MILTON W. ARROWOOD, Wilmette, Ill. Filed Jan. 20, 1923. Serial No. 613,867. 24 Claims. (Cl. 83—12.)



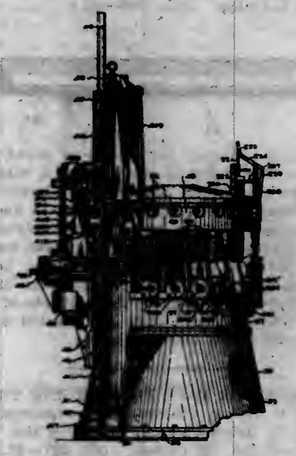
3. In a grinding mill the combination of a stationary housing, a plurality of grinding rolls mounted within said housing, means for rotating said rolls, alternate rolls being rotated in opposite directions, means for revolving all of said rolls as a unit about a common axis, and pneumatic means for removing the ground material from the housing.

1,628,100. INTERNAL-COMBUSTION ENGINE. BYRON R. BACON, New York, N. Y., assignor of two-fifths to Wilber N. Bacon, New York, N. Y. Filed Jan. 31, 1924. Serial No. 689,641. 10 Claims. (Cl. 123—58.)



2. In a four-cycle internal combustion engine of the class described the combination of a cylinder, a piston reciprocating in the cylinder, a housing provided with a continuous internal undulatory groove lying in a cylindrical surface, said engine cylinder being mounted to be rotatable about the axis of the cylindrical surface and relatively to it, a member engaging the groove, a rod operatively connecting the member and the piston, said groove being so shaped that at the end of the exhaust stroke the piston has travelled substantially to the end of the cylinder, while at the end of the compression stroke it is still at a material distance from the end of the cylinder.

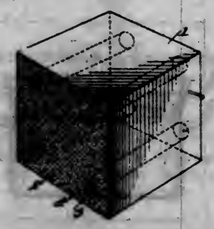
1,628,101. PINEAPPLE-STUMP SHREDDER AND HARROW. WILLIAM A. BALDWIN, Haiku, Territory of Hawaii. Filed Mar. 29, 1923. Serial No. 628,612. 5 Claims. (Cl. 55—118.)



1. In a device of the class described, a vehicle, a shaft carried thereby, spaced disks keyed to said shaft, a plurality of rods arranged through registering apertures in said disks, vegetable-matter shredding and harrowing elements pivotally carried by alternate rods and movable between said disks, said elements being freely suspended in unbalanced relation to engage the soil by centrifugal force when operating, the other alternate rods functioning as stops to limit the deflection of said elements through contact with the soil.

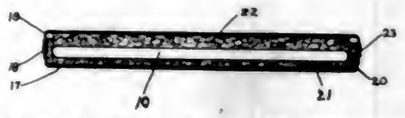
1,628,102. TYPEWRITING-MACHINE ATTACHMENT. JOHN LAWRENCE BALLARD, Denver, Colo. Filed Aug. 22, 1925. Serial No. 51,829. 6 Claims. (Cl. 197—191.)

1. In typewriting machine attachments of the character disclosed, embodying an adapter with a scale thereon graduated to conform with the scale of the typewriting machine, and an adjustably mounted indicator member carrying a plurality of indicator means, one of which said indicator means is associated with said adapter scale, while another of which is adapted for association with said machine scale in separately adjustable relation therewith and with said adapter scale indicator means.



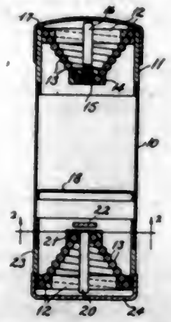
1,628,103. MULTIPLE-STATION AUTOMATIC MACHINE. FRANK ELLISON BEST, Seattle, Wash. Filed Jan. 10, 1924. Serial No. 685,382. 31 Claims. (Cl. 29—38.)

1. In an automatic machine, a rotatably mounted work table arranged for indexing movement, a plurality of work holding devices carried in the peripheral portion of said work table, a plurality of tools arranged at intervals in normally spaced relation from said work table and in substantial alignment with said work holding devices, a gear housing located centrally of said tools and coaxially of said work table, driving gears in said housing a plurality of tool driving shafts projecting radially from said housing for driving said tools and a plurality of cam shafts extending radially from said housing for moving said tools toward and away from said work holding devices.



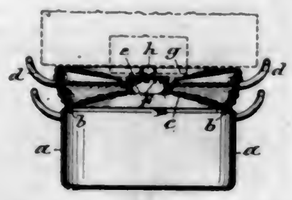
20. In a multiple station automatic machine an upright upper frame embodying a circular base ring, spaced apart radial webs extending upwardly from said base ring and affording openings therebetween, a fluted portion above said webs the indentations of said fluted portion registering with the spaces between said webs, an overhanging ring-like portion above said fluted portion and having vertical openings that register with the indentations in said fluted portion, a rotatable work table operatively disposed in said overhanging ring-like portion and tool units operatively disposed in the indentations formed by said fluted portion and said webs.

1,628,104. PROCESS OF MAKING SEPARATORS AND SEPARATOR STOCK. RAYMOND C. BENNER, Bayside, N. Y., assignor to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1923. Serial No. 628,375. 5 Claims. (Cl. 136—145.)



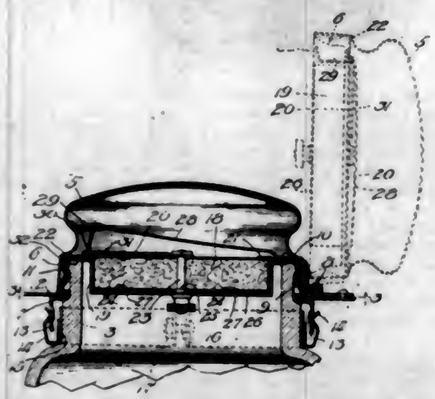
1. Process of making separator stock, comprising mixing fibrous material and a binder, molding the resulting mixture into a mass of suitable form for severing into separators, making openings in the mass, and securing a wear-resisting material in the openings.

1,628,105. SHIPPING CONTAINER FOR SOUND-REPRODUCING RECORDS. ROBERT S. BLAIR, Stamford, and BURLING D. WELLS, Danbury, Conn.; said Wells assignor to said Blair. Filed Oct. 3, 1921. Serial No. 504,977. 3 Claims. (Cl. 206—62.)



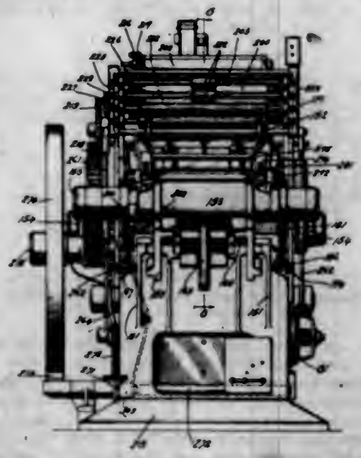
2. A shipping container for records of sound-reproducing machines comprising in combination a substantially flat imperforate receptacle comprising a plurality of separable members shaped to stiffen their walls and provide a surface on one of them suitable for receiving an address, means adapted to hold said members together at their outer portions, said means comprising interfitting flanges on said members, and yielding means in said receptacle interposed between the flat surfaces of a record and the adjacent stiffened walls and adapted to prevent abrasion of the record surface thereby.

1,628,106. BOX FOR FACE POWDER AND THE LIKE. PHILIP C. P. BOOTY, Chicago, Ill., assignor of one-half to Michael T. Daley, Chicago, Ill. Filed Mar. 25, 1926. Serial No. 97,253. 9 Claims. (Cl. 221—61.)



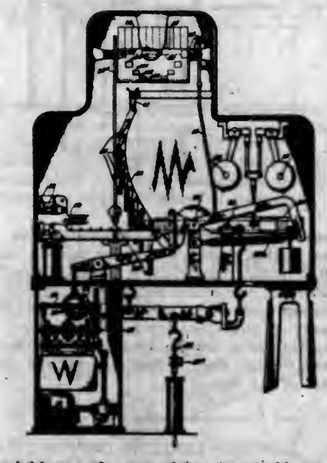
1. In a container, the combination of a casing having an opening thereto, and means comprising a coil mounted in said opening and having a plurality of plies overlying each other in progressively extended position along the axis of the coil and serving by contact with each other in such progressively extended position to close said opening.

1,628,107. SAUCEPAN AND THE LIKE. PAUL BRAACH, Siegen, Germany, assignor of one-half to Hermann Rosenberger, Augsburg, Germany. Filed Sept. 3, 1926, Serial No. 133,461, and in Germany Sept. 12, 1925. 8 Claims. (Cl. 53—1.)



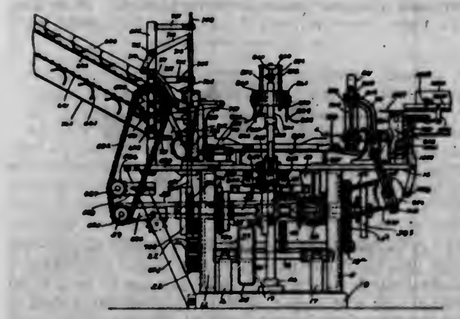
1. An intermediate cover for saucepans arranged one over the other comprising in combination a bottom container for collecting the condensed steam and having steam outlet openings in its bottom permitting steam to pass from the lower sauce-pan against the bottom of the upper saucepan and an upper plate supporting the saucepans and covering the water of condensation collected in said bottom container and directing the condensed steam into the bottom of the container.

1,628,108. DISPLAY RECEPTACLE. ALBERT BROWN and ROBERT G. PECK, Chicago, Ill., assignors to The Aridor Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1924. Serial No. 685,535. 19 Claims. (Cl. 215—48.)



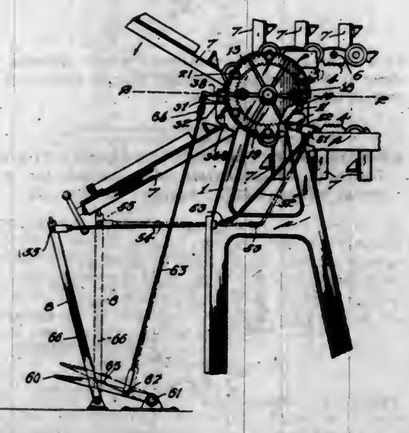
1. A display receptacle comprising, in combination, a transparent container for displaying an enclosed mass of hard candies; a door for opening and closing the receptacle; a hygroscopic medium protected from the atmosphere while the receptacle is open and communicating with the interior of the receptacle when closed, for conditioning the interior of the receptacle to keep the candies dry and glistening for effective display; and means including a device actuated by engagement with the receptacle for placing said medium in communication with the interior of the receptacle when the same is closed.

1,628,109. PRINTING PRESS. GEORGE F. BRYANT, Chicago, Ill., assignor to Electrograph Advertising Service, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1923. Serial No. 673,434. 26 Claims. (Cl. 101—57.)



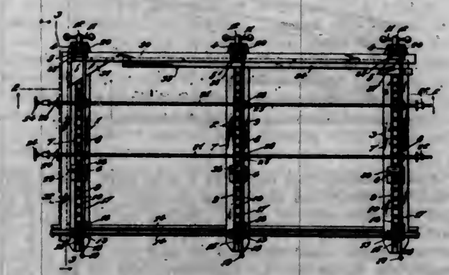
2. In a printing press, the combination of a bed, a slug carrier, means for moving the slug carrier into printing position as an incident to each operation of the press, and means independent of said moving means for locking said slug carrier in printing position and against the printing pressure.

1,628,110. SCALE. JAMES W. BAYCE, Bloomfield, N. J., assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Mar. 13, 1923. Serial No. 624,708. 10 Claims. (Cl. 265—48.)



1. A weighing scale comprising in combination, beam weighing mechanism for offsetting a portion of the applied load, automatic weighing mechanism for offsetting the remainder of the applied load, a plurality of capacity weights, means called into action by applied loads in excess of predetermined amounts for applying capacity weights to said beam, a chart having successive series of graduations, means for selecting a series of graduations according to the portion of the applied load offset by said beam weighing mechanism, and means controlled by said automatic weighing mechanism for distinctively disclosing a portion of a selected series in accordance with the applied load.

1,628,111. WRAPPING MACHINE. CARL H. BUNKER, Arlington, Mass., assignor to Mellins Food Company of North America, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 15, 1924. Serial No. 699,547. 76 Claims. (Cl. 93—5.)

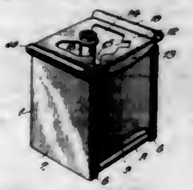


1. A package wrapping machine having a rotary table, means for rotating the table, a supporting cradle mounted upon the table, means for supplying wrapping material to the cradle, mechanism disposed adjacent to the table for depositing spaced daubs of adhesive upon wrapping material carried by the cradle as the latter is brought into operative relation to said mechanism by the rotation of the table means for depositing an article to be wrapped upon the wrapper carried by the cradle, means for folding the wrapper cylindrically about the article, and means for folding in the ends of the wrapper.

1,628,112. CLAMP MACHINE. RAYMOND W. BURNS, Poughkeepsie, N. Y. Filed July 15, 1925. Serial No. 43,790. 41 Claims. (Cl. 144—280.)

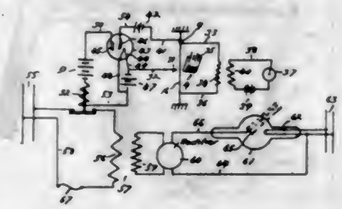
1. A clamp machine comprising a frame, a plurality of clamps, means for mounting said clamps on said frame to successively move to and from a predetermined position including a rotatable shaft, a driving member, an operative connection between said shaft and said driving member including a revoluble element, means for holding and releasing said revoluble element, and means to cause rotation of said shaft when said revoluble element is held against turning and to stop rotation of said shaft when said revoluble element is released.

1,628,113. END-CLAMPING DEVICE. RAYMOND W. BURNS, Poughkeepsie, N. Y. Filed July 1, 1926. Serial No. 119,844. 28 Claims. (Cl. 144—291.)



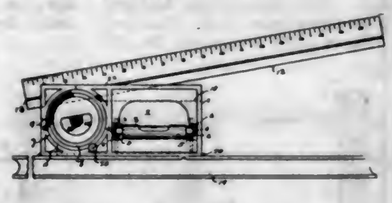
1. The combination with a plurality of main clamps adapted to engage the side edges of a piece of work, and rods on said main clamps adapted to swing each toward and away from the work-receiving surface of its clamp, of an end-clamp mounted on said rods.

1,628,114. SMOKER'S ARTICLE. EDWIN CALDWELL, New York, N. Y. Filed Mar. 11, 1924. Serial No. 698,379. 16 Claims. (Cl. 131—51.)



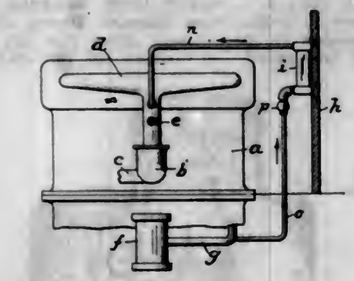
1. A cigar and cigarette support comprising an ash receptacle with an aperture in a wall through which ashes

may be inserted into the receptacle and opposing walls in the aperture of a width slightly less than the diameter



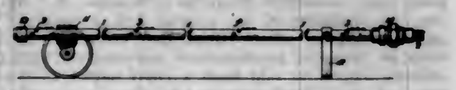
of a cigar or cigarette between which opposing walls a cigar or cigarette when wedged may be supported so as to extend into the receptacle.

1,628,115. ELECTRIC-CIRCUIT CLOSER FOR RELAYS. LLOYD L. CALL, Detroit, Mich. Filed Apr. 17, 1922. Serial No. 554,055. 2 Claims. Cl. 250—34.)



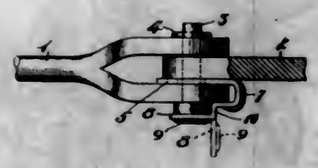
1. The combination with a cricuit and a microphone controlling said circuit, of an auxiliary circuit means for reproducing and amplifying current conditions of the microphone circuit in the auxiliary circuit, an X-ray tube, a control circuit therefor, and a means for reproducing current conditions of the auxiliary circuit in the X-ray tube circuit.

1,628,116. COMBINATION TOOL. LEWIS J. CHERRY, Houston, Tex. Filed July 5, 1922. Serial No. 573,025. 1 Claim. (Cl. 33—88.)



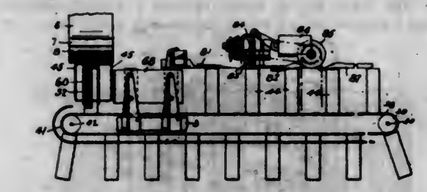
A combination tool including a level base, a protractor head, said head and base being provided, one with a rib and the other with a groove adapted to recive said rib, said head having a cut away portion at one end, a detachable spirit level mounted in said cut away portion, means for adjusting the respective ends of said spirit level, the other end of said head having a circular opening, a graduated disc rotatably mounted in said opening, one side of said head having a long narrow groove and the end of said head adjacent the disc having a transverse groove, a graduated blade seated in said first mentioned groove, said blade having a lengthwise groove in one side, said disc having a central cut away portion and a radial bearing, a thumb nut located in the cut-away portion of said disc, a clamp rod working through said radial bearing in said disc into one end of which said thumb nut is threaded and whose outer end has a catch which is received by the groove of said blade.

1,628,117. APPARATUS FOR LUBRICATING INTERNAL-COMBUSTION ENGINES. ARTHUR LUDLOW CLAYDEN, Ridley Park, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Jan. 5, 1925. Serial No. 556. 15 Claims. (Cl. 123—196.)



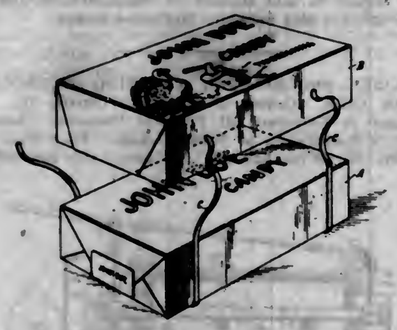
1. Means for preliminarily lubricating an internal combustion engine having a cylinder and an intake passage leading thereto, comprising a lubricant supply, a conduit affording a connection between the supply and said intake passage and means in said conduit adapted under the influence of atmospheric pressure to permit the flow to said passage of a definite amount of lubricant and to prevent the further flow of lubricant to said passage by the suction of the engine.

1,628,118. LAWN-SPRINKLING DEVICE. WALTER H. COLES, Troy, Ohio. Filed Feb. 19, 1924. Serial No. 693,805. 9 Claims. (Cl. 299—19.)



1. An irrigating apparatus comprising: a non-oscillating substantially horizontal distributing member having an upper surface sloping from the vertical, and a plurality, greater than two, of nozzles in the surface of said member at one side of and inclined at different angles from the vertical and so disposed that the space between adjacent nozzles increases as the nozzles are progressively inclined away from the vertical.

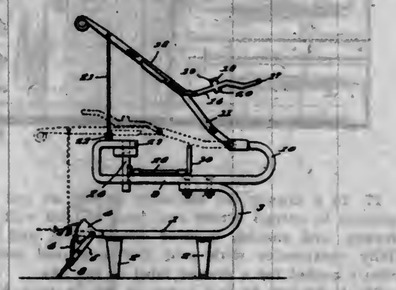
1,628,119. SAFETY LOCK FOR BRAKE-ROD PINS. GEORGE THOMAS COOKE, New York, N. Y. Filed Mar. 12, 1926. Serial No. 94,116. 2 Claims. (Cl. 287—100.)



1. As an article of manufacture, a safety retainer for pivot pins and the like for brake rods, comprising a bendable metal strip perforated at one end to form a pin passage, and a U-shaped bend intermediate the length of said strip for fitting snugly over the brake rod, the other end of said strip being bent outwardly to form an offset shoulder, the outer portion of said offset shoulder being bendable to form a retainer for the outer end of the pin.

1,628,120. PACKAGING MACHINE. SIMON COOPER, Brooklyn, N. Y. Filed Mar. 22, 1921, Serial No. 454,429. Renewed Oct. 9, 1926. 29 Claims. (Cl. 93—44.)

1. In a machine of the character described, a traveling mandrel, means for advancing a web of material into position at the side of said mandrel, means for clamping said material against the mandrel, means for severing the material while thus held and means for folding the severed length of material about the mandrel.



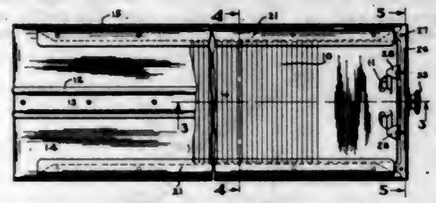
1,628,121. PACKAGE. NATHAN EDWIN COVEL, Newtonville, Mass. Filed July 9, 1925. Serial No. 42,537. 2 Claims. (Cl. 229—8.)

2. As an element of a mercantile package, a box designed to be filled with gift articles, and having an outer covering, displaying suitable information to indicate the nature of said gift articles, and an auxiliary cover displaying information relative to some special occasion, and adapted to be placed over said outer covering whereby the box may be used in forming a package adapted to be sold as a gift package with reference to the special occasion when said auxiliary cover is in place, and as a standard, staple package when the auxiliary cover is removed.

1,628,122. TIRE-PATCHING MACHINE. JULIUS P. CURLS, Coffeyville, Kans. Filed June 18, 1926. Serial No. 116,937. 1 Claim. (Cl. 78—48.)

In a device for the purpose set forth, a leg supported base having one of its ends rounded, a table on said end, said table having an upset end merging into an inwardly directed part which provides a bed, the second end of the table being rounded upwardly and inwardly, an arm pivotally secured to the last mentioned end of the table, said arm having an opening therethrough designed to be arranged over the bed when the arm is swung thereagainst, a washer, a supporting member carried by the lever and arranged transversely with respect to the opening therethrough and having its upper face depressed and its under face grooved around said depression and said grooves designed to receive a washer therein, a lever pivotally secured to the arm, a head on the lever having rightangle cutting surfaces, a boss on the lever opposite the head, a plunger movable through the table and the bed and designed to have seated thereon a rivet, said bed adapted to provide a rest for a tire casing and a patch to be riveted thereto, means for moving the plunger to force rivet through the casing and through the patch, after the arm has been swung to hold the patch and casing on the bed, an eye carrying rod swingably supported on the arm, a segmental rack on one end of the base, a lever pivotally secured on the rack, a swingable dog carried by the lever, a hook on the dog to engage with the eye of the rod, and said first mentioned lever designed to be swung on the arm to bring its head against the projecting end of the rivet to spread said end of the washer, as and for the purpose set forth.

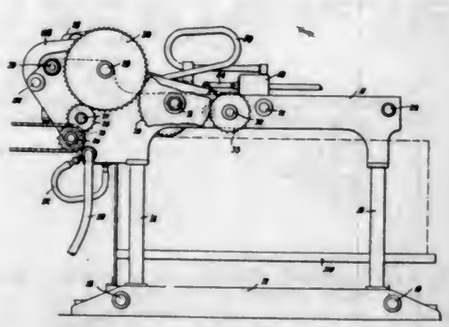
1,628,123. DRAFT APPLIANCE. CLAUDE DAUGHERTY, Butler, Mo., assignor of one-fourth to Lee A. Woods and one-fourth to Elmer D. Cutler, Smithville, Mo. Filed Aug. 10, 1925. Serial No. 49,371. 1 Claim. (Cl. 278—43.)



In a draft appliance wherein there is provided a pair of hounds rigidly mounted on the axle of a vehicle, a queen bolt passing transversely through the hounds forwardly of the axle, a frame pivoted on said queen bolt between the hounds forwardly of the axle, a stop on said frame engageable with the hounds adjacent the axle, and a stub tongue rigidly attached to the frame between the hounds; said appliance including a second frame mounted on the outside of one of said hounds, said queen bolt passing through the second frame and therebeyond, a main tongue hinged to the queen bolt adjacent the second frame so as to swing in a plane in parallelism with the plane in which the stub tongue swings, and a curved brace fixed at one end to the main tongue forwardly of the queen bolt and pivotally engaged at its outer end with the queen bolt adjacent the hound which is farthest from the main tongue.

1,628,124. INDEX OR FILE. WILLIAM H. DAY, East Haven, and CLIFFORD R. THOMAS, West Haven, Conn., assignors, by mesne assignments, to Rand Kardex Bureau, Inc., Tonawanda, N. Y., a Corporation of Delaware. Filed Oct. 5, 1921. Serial No. 505,658. 36 Claims. (Cl. 129—16.)

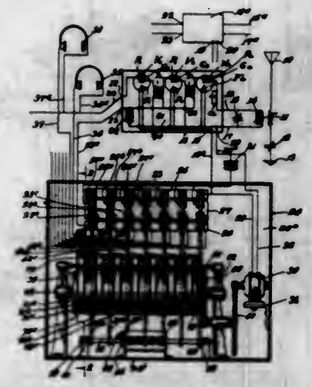
19. A drawer having a front facing member thereon, said member being spaced from the front face of said



drawer to provide a recess, and a knob secured to said member having securing means passing therethrough and disposed in said recess.

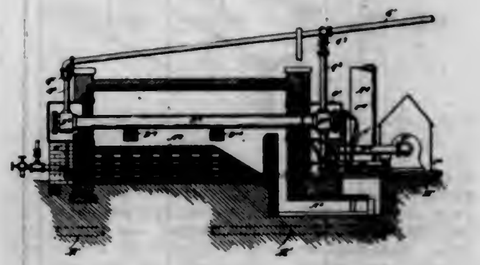
27. In a drawer for an index or file, an end member adapted to extend across and form an end wall on said drawer, and another member spaced from and substantially coextensive with said first-mentioned member to form a pocket for a drawer label or the like.

35. A drawer for an index or file, having a bottom with a substantially flat portion, said bottom being curved upwardly along its side edges, means to secure a plurality of reference members thereon, and means comprising an inwardly projecting part extending longitudinally of the side edges of said drawer and overlying the edges of said reference members.



1,628,125. PAPER-FEEDING MACHINE. TALBOT C. DEXTER, Pearl River, N. Y. Filed July 29, 1925. Serial No. 46,700. 30 Claims. (Cl. 271—38.)

1. A paper feeding device comprising a reciprocatory head having a suction chamber and ports for causing paper to adhere thereto, means for reciprocating said head to advance adhering paper, a comb wheel for feeding a sheet of paper toward said reciprocatory head, and means for automatically discontinuing the feeding operation of said comb wheel when a sheet of paper is caused to adhere to said reciprocatory head.

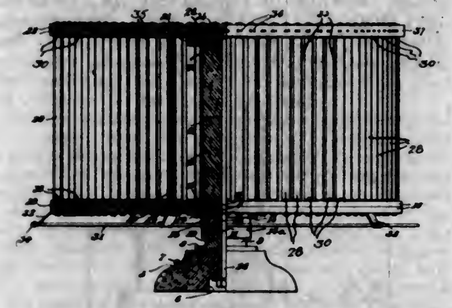


1,628,126. SYSTEM OF DISTRIBUTION OF INTELLIGENCE. LUDWIG M. DIETERICH, New Brunswick, N. J., assignor of sixteen per cent to Robert S. Blair, Stamford, Conn., and twenty-four per cent to William T. Kniesner, New York, N. Y. Filed June 3, 1922. Serial No. 565,641. 23 Claims. (Cl. 179—6.3.)

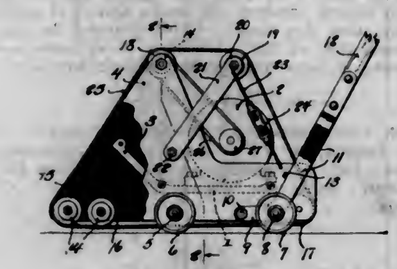
1. In apparatus of the general nature of that herein described, in combination, a main receiving circuit adapted to be connected to a channel of communication, a receiving translating device, means for connecting said translating device to said main receiving circuit, normally ineffective means for effecting a disconnection of said translating device from said main receiving circuit after the lapse of a predetermined time interval, and means effective upon the making of said connection

adapted to make operative said main receiving circuit with respect to said channel of communication and to make effective said normally ineffective means.

1,628,127. PROCESS FOR TREATING HYDROCARBON OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 17, 1921. Serial No. 523,113. 2 Claims. (Cl. 196—132.)



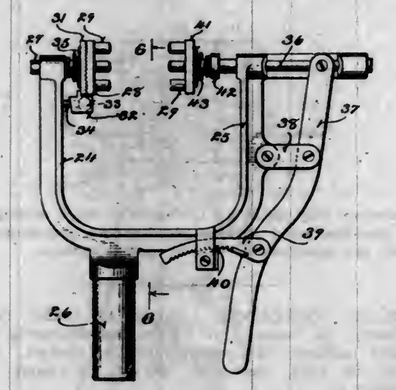
1. The process for cracking hydrocarbon oil, which consists in supplying oil under pressure to a heating zone, in pasing heated oil from the heating zone to a distilling zone, in taking off vapors from the distilling zone, in controlling the quantity of oil supplied to the heating zone by the liquid level of the oil maintained in the distilling zone and in continuously maintaining a local cyclic circulation of the oil undergoing treatment in the heating zone.



1,628,128. FILING CABINET. FRANK J. DUNN, Elmira, N. Y. Filed Sept. 29, 1925. Serial No. 59,272. 1 Claim. (Cl. 45—3.)

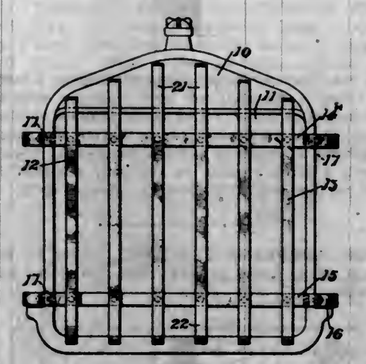
In a rotatable filing cabinet, a central supporting structure comprising a base stand, a bearing block secured to the stand, an inverted cup shaped block rotatable on the bearing block and having a depending annular flange inclosing the upper end of the bearing block, a relatively large disk member axially secured to the upper side of the rotatable block with a central depression therein, a vertical post having a lower end extension seated in the disk depression, a head plate having a depression in its lower face, an end extension on the upper end of the post

received in the head plate depression, a relatively large disk member axially secured to the upper side of the head plate, circumferentially spaced guide rods connecting the outer edges of the disk members, said upper disk member having a central socket in the lower side thereof, there being registering bores in the central supporting structure, a vertical rod extending through said bores with the lower end anchored in the base stand and the upper end extending into the upper disk member socket and means carried by opposite ends of the rod cooperating with the base stand and head plate to retain the superstructure on the base stand.



1,628,129. FLOOR SANDER. LOUIS DURR, Milwaukee, Wis. Filed Apr. 16, 1923. Serial No. 632,503. 2 Claims. (Cl. 51—174.)

1. A sanding machine comprising a body portion having belt receiving pulleys, a belt passing over said pulleys and following substantially the exterior outline of said machine, a motor carried by said frame work and driving said belt, a guiding handle having a forked lower end provided with a bell crank lever pivoted to said frame work at its outer end, a pair of supporting rollers pivoted to said lever at its point of union with said handle, and a second pair of rollers pivoted to said machine at a point spaced from said handle, whereby said guiding handle functions in the capacity of a guiding handle and also as means for tilting the frame work to cause said belt to engage or move away from the floor.

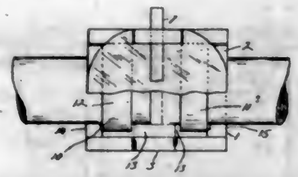


1,628,130. SHOE-REPAIR STAND. EUGENE F. EICHENBERGER, Plymouth, Wis. Filed July 13, 1925. Serial No. 43,311. 1 Claim. (Cl. 12—123.)

A shoe repair device comprising a head having a pair of spaced arms, a pair of aligned shafts carried by said arms and projecting towards each other, clamping heads carried by said shaft and universally mounted upon the ends of said shafts, one of said clamping heads having a rear face contacting with a disc carried by its shaft, a spring urging said disc into frictional engagement with

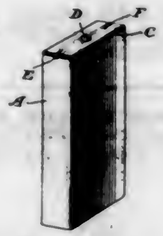
the associated head, and a stationary member engaging such disc and preventing rotation of the disc while permitting rocking motion thereof.

1,628,131. RESILIENT RADIATOR SHIELD. ROLLIE B. FAGEOL, Oakland, Calif. Filed Oct. 15, 1923. Serial No. 668,600. 4 Claims. (Cl. 293—54.)



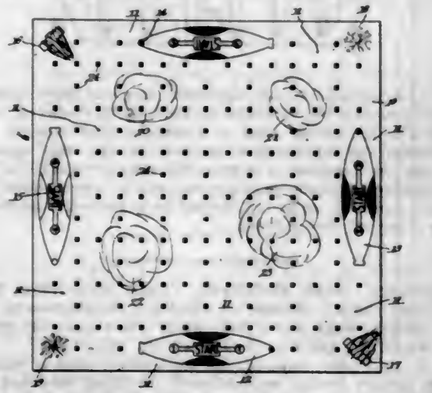
1. A radiator shield comprising loop end bars, means for securing the terminating ends of the loops of the bars to the opposite sides of a radiator shell whereby to dispose the intermediate portions of the bars spaced from the radiator to render the same resilient, and a plurality of shield members disposed at right angles to said bars and supported thereby in a protective position in front of the radiator.

1,628,132. PIPE COUPLING. ALBIN FARNSTROM, Detroit, Mich., assignor of forty-five one-hundredths to Stanley Fons, Royal Oak, Mich. Filed Sept. 24, 1924. Serial No. 739,671. 9 Claims. (Cl. 285—194.)



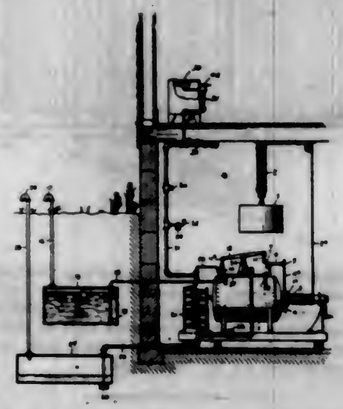
1. In a pipe coupling, the combination with a clamping section having longitudinally extending shoulders at its opposite sides, of a cooperating clamping section having longitudinally extending shoulders at its opposite sides, said sections surrounding adjacent ends of a pair of pipes and means for sealing the gap between the adjacent ends of the pipes including a unitary packing

member surrounding the end of one of the pipes and a separately formed unitary packing member surrounding the end of the other of the pipes and provided with



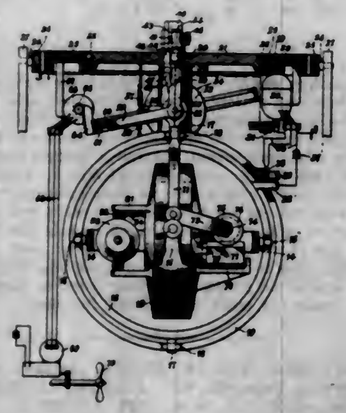
transverse projections at its opposite sides overlapping the first-mentioned packing member and engageable between the shoulders of said clamping sections.

1,628,133. CONTAINER. MONIE A. FERST, Dekalb County, Ga., assignor to Scripto Manufacturing Company, Atlanta, Ga., a Corporation of Georgia. Filed Feb. 12, 1924. Serial No. 692,218. 2 Claims. (Cl. 206—1.)



1. A container for pencil leads comprising a body portion having a plurality of lead receiving openings, a flexible swivelled unperforated cover adapted to close the openings and a stationary pin to swivel the cover, the cover having a depressed portion adapted to frictionally lock with a latch opening in the body portion, the depressed portion being unlocked by rotation of the cover.

1,628,134. AIRPLANE CHECKER. DAVID B. FINLAY, Fresno, Calif. Filed Aug. 24, 1926. Serial No. 131,256. 4 Claims. (Cl. 273—131.)

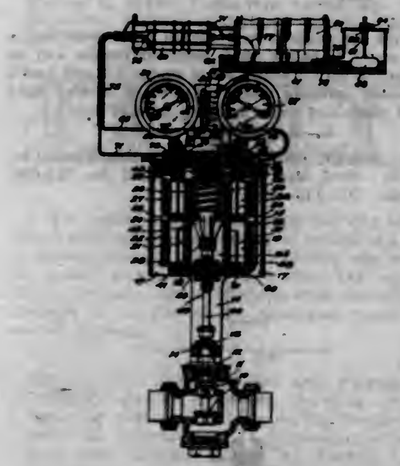


1. A game apparatus comprising a board having one face divided into a series of spaces by dot-like markings, the markings designating the boundaries of the several spaces forming lines extending in a plurality of directions from each of the spaces, certain of the spaces bearing indications of obstacles or dangers incident to aviation, and a plurality of games pieces, individually representing airplanes, adapted to be moved over said spaces on the aforesaid lines provided by the dot-like boundaries of the spaces.

1,628,135. METHOD OF PRODUCING AIR GAS FROM INFLAMMABLE LIQUIDS. HANS FORRSTERLING, Jamesburg, N. J. Filed Mar. 5, 1925. Serial No. 13,069. 7 Claims. (Cl. 48—219.)

6. The method of converting a volatile inflammable liquid into an air gas suitable for heterogeneous combustion without further addition of air, comprising vaporizing the liquid with air in such a proportion that an air gas is directly obtained, the oxygen content of which is slightly above that required theoretically for the complete combustion of the combustible constituents and which ceases to burn upon further dilution with air.

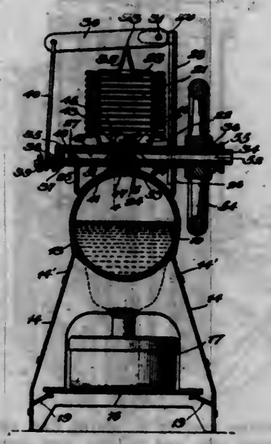
1,628,136. GYROSCOPIC COMPASS. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., a Corporation of New York. Filed Feb. 12, 1921. Serial No. 444,417. 39 Claims. (Cl. 33—204.)



1. The method of preventing deviations of a gyroscopic compass having a gyroscopic element mounted upon a supporting structure to turn about mutually perpendicular axes, due to the effect on the element of the movement over the surface of the earth of the craft on which the compass is mounted, which method consists in applying about the axis of the gyroscopic element about which such deviations occur a torque of such value as to cause the element to precess about the other axis at a rate equal to the meridional component of the angular velocity of the craft over the surface of the earth.

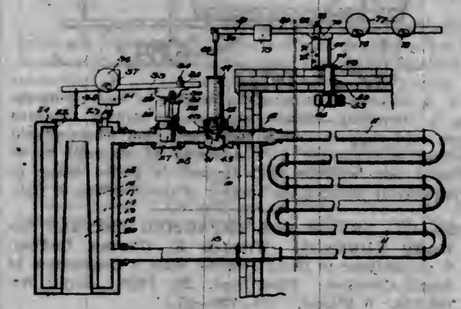
12. In a gyroscopic compass for use on a moving craft and provided with a gyroscope mounted upon mutually perpendicular axes, the combination of means for applying to the gyroscope about one of the axes a torque which varies as the cosine of the heading of the craft and a function of the speed of the craft.

22. In a meridian seeking gyroscopic compass for use on a moving craft and including a gyroscope having means for orientation normally responsive to north-south movement of the craft and to the earth's rotation, the combination of a cam member adapted to be displaced in accordance with changes in course or speed of the craft, an arm coacting with the cam member, a mass movably mounted with respect to the gyroscope and normally ineffective thereon, and a viscous fluid device having a part connected to the arm and a part connected to the mass for displacing the mass while the cam member is undergoing changes in position to compensate for the effect upon the gyroscope of changes in speed of the craft.



1,628,137. REGULATING DEVICE. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Aug. 30, 1922. Serial No. 585,328. 46 Claims. (Cl. 236—44.)

1. In a humidity controlling device, the combination of means for regulating the supply of moisture and means for operating said regulating means responsive to the wet and dry bulb temperatures of the air, said operating means including juxtaposed and axially aligned expansible and collapsible vessels the interiors of which are annular in cross section so as to provide aligned chambers extending throughout the length of said vessels.

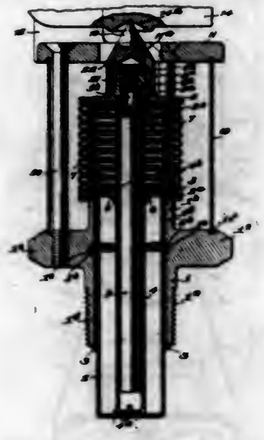


1,628,138. STEAM ENGINE. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Feb. 14, 1924. Serial No. 692,805. 12 Claims. (Cl. 121—48.)

9. A toy steam engine including an expansible and collapsible vessel having a stationary end wall mounted on a container for a motive fluid and a movable end wall, a rotatable tubular shaft interposed between said stationary end wall and said container and adapted to alternately open communication between said container

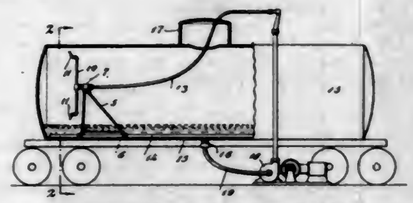
and said vessel and to exhaust said vessel through said shaft to the air, and means cooperating with said movable end wall for rotating said tubular shaft.

1,628,139. THERMOSTATICALLY-REGULATED INCUBATOR. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed June 16, 1924. Serial No. 720,484. 8 Claims. (Cl. 236—4.)



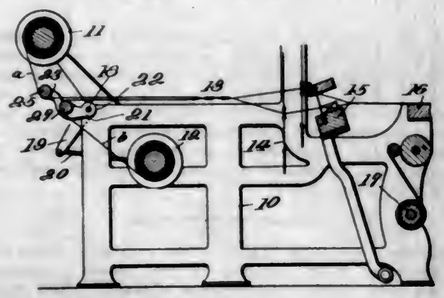
1. In an incubator, in combination with the incubator casing, means for regulating the temperature within said casing including a valve and a lever for operating the same, a sleeve projecting through the casing wall, an adjustable fulcrum plate for said lever clamped in position by said sleeve, a thermostat adjustably mounted on the inner end of said sleeve, and a rod projecting freely through said sleeve and contacting the movable wall of said thermostat and said lever.

1,628,140. DAMPER REGULATOR. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Aug. 7, 1925. Serial No. 48,895. 18 Claims. (Cl. 297—8.)



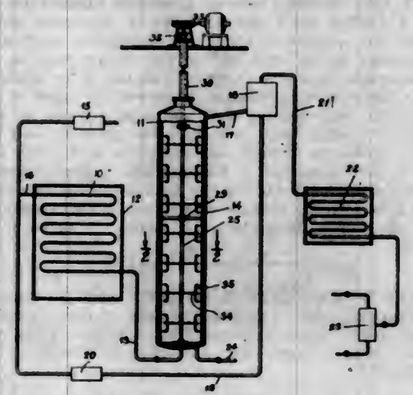
1. A regulator comprising, in combination, a frame, a thermosensitive bulb and an expansible and collapsible

bellows secured to said frame, a guide tube and guide rod associated with the ends of said bellows, said rod



having a passage whereby a volatile fluid may be introduced into said bulb and bellows, and means actuated by the expansion and contraction of said bellows.

1,628,141. CLEANING DEVICE. HIRAM LIGGETT GRAY, Scarsdale, N. Y., assignor to Oakite Products, Inc., New York, N. Y., a Corporation of New York. Filed May 20, 1925. Serial No. 31,584. 7 Claims. (Cl. 141—1.)

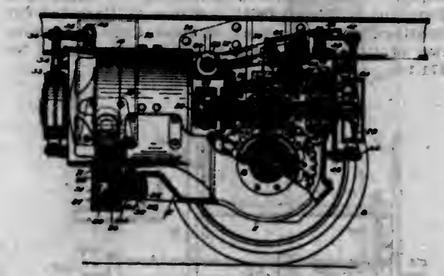


1. A device for cleaning the interior of tanks comprising a travelling foldable support, a sprayer mounted upon said support and a hose connection whereby said sprayer is connected with a source of material to be sprayed and whereby said support is pulled along to progressively advance the sprayer in the direction of pull.

1,628,142. DEVICE FOR IMPARTING CRINKLE TO WARP THREADS. WILLIAM K. GUNTER, Gaffney, S. C., assignor to Derry Damask Mills, a Corporation of South Carolina. Filed Sept. 28, 1926. Serial No. 138,264. 6 Claims. (Cl. 139—97.)

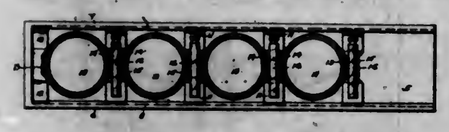
1. A device for imparting crinkle to warp threads comprising an oscillatory whip roll arm adapted to be located intermediate between the upper and lower warp beams, said arm having means for supporting a plurality of whip rolls in spaced relation with respect to each other but out of alignment with respect to the axis of oscillation of said arm, so that the thread of one whip roll will be under less tension than the thread of the other whip roll when the arm is oscillated whereby a crinkle will be produced in the first mentioned thread.

1,628,143. TREATING HYDROCARBONS. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Sept. 15, 1923. Serial No. 662,820. 1 Claim. (Cl. 196—135.)



Apparatus for cracking hydrocarbon oils, comprising a cracking vessel, a hollow shaft mounted therein and in communication with a source of oil supply for said vessel and rotatable spraying means adapted to receive fluid from said shaft and to be actuated by said fluid.

1,628,144. SCREW DRIVER. WILLIAM HERRMANN, Chicago, Ill. Filed May 16, 1924. Serial No. 713,696. 3 Claims. (Cl. 145—52.)

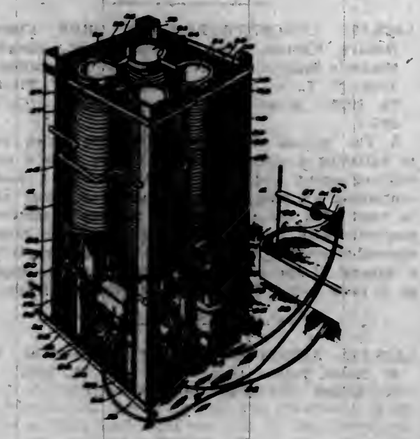


1. In a screw driver of the class described, the combination of a shank, a pair of springs, one of which abuts against a flange on said shank, a collar slidable on said shank between said springs, gripping fingers connected to said collar, and an operating sleeve engaging the other spring slidable over said collar and said gripping fingers for rocking said fingers relative to said collar.

1,628,145. VEHICLE. JOHN H. HERTNER and EDWARD H. REMDE, Cleveland, Ohio, assignors to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 30, 1920. Serial No. 420,630. 38 Claims. (Cl. 180—62.)

1. In apparatus of the class described, the combination of a frame, an axle mechanism having wheels for supporting said frame, and a suspension mechanism comprising a pair of compensating members, each mounted on said frame to swing in a direction longitudinally thereof only, and having spaced pivotal connections with said axle mechanism in a longitudinal plane substantially midway between said wheels.

1,628,146. DISPLAY RACK FOR FACE POWDERS. TARVIN A. HOOPS, Cody, Wyo. Filed Apr. 13, 1926. Serial No. 101,643. 5 Claims. (Cl. 211—28.)

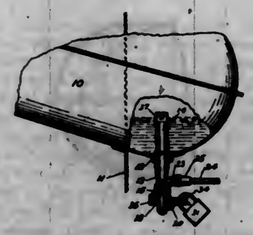


1. The combination with a supporting tray adapted to receive packages of substances to be vended, of a plurality of spacing elements associated therewith and separating the several packages from each other and sample containing elements carried by the spacing elements for the reception of samples of the substances carried in the several packages.

1,628,147. PAD FOR IRONING AND PRESSING MACHINES. GEORGE C. HOUCK, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Feb. 14, 1923. Serial No. 618,999. 1 Claim. (Cl. 68—9.)

A pad for ironing and pressing machines, comprising a base plate, padding mounted on the base plate, having a covering for the padding, the base plate being formed with depressions at its lower face, and prongs extending across the depressions and inwardly toward the center of the plate, the prongs being located substantially in the plane of the base plate, and the covering having its margin folded under the base plate and caught on said prongs.

1,628,148. ARC-WELDING MACHINE. GROVER CLEVELAND HUBBLE, Bonners Ferry, Idaho. Filed Mar. 20, 1926. Serial No. 96,324. 49 Claims. (Cl. 171—119.)



1. In an alternating current electric arc forming circuit including a source of alternating current supply, a reactance disposed between each terminal of the arc and the poles of the alternating current supply, and means adapted to be controlled at will and remotely from the coils for regulating the voltage and amperage across the arc.

1,628,149. MANUFACTURE OF MALLEABLE NICKEL. NOAK VICTOR HYBINETTE, Ottawa, Ontario, Canada. Filed Jan. 17, 1921. Serial No. 437,996. 5 Claims. (Cl. 204—14.)

1. The process of producing malleable nickel by electrodeposition, which comprises maintaining the electrolyte in condition by withdrawing it from the electrolytic tank, subjecting it to a boiling operation, and returning it for further use.

1,628,150. FUEL-RESERVE-SUPPLY SYSTEM FOR MOTOR VEHICLES. FRANCIS JEADONE, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 31, 1923. Serial No. 683,683. 2 Claims. (Cl. 158—46.5.)

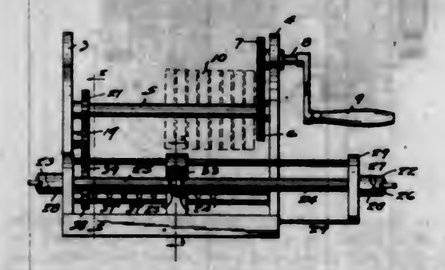
1. In combination with a liquid tank, a rotary valve comprising a casing secured to the bottom of said tank, a stem within said casing having a shoulder thereon coacting with a portion of said casing to prevent downward withdrawal of said stem, a packing nut engaging said casing and the lower part of said stem for preventing leakage, a downwardly removable handle on said stem below said packing nut, an extension upon said

casing, and means for locking the handle to said extension whereby downward movement of said handle on said stem is restricted and said valve component parts are locked together as a unit.

1,628,151. CONCENTRATION OF ORES. CORNELIUS HORACE KELLER, San Francisco, Calif., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Nov. 24, 1925. Serial No. 71,226. 9 Claims. (Cl. 209—167.)

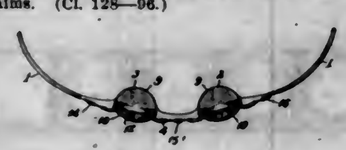
1. The process of concentrating ores which consists in agitating a suitable pulp of an ore with a mineral-frothing agent and with a xanthate and a substance containing an anion group including a metal adapted to react with the xanthate and produce a substance to cooperate with the mineral-frothing agent to produce a mineral-bearing froth containing a large proportion of a mineral of the ore, said agitation being so conducted as to form such a froth, and separating the froth.

1,628,152. AUTOMOBILE LIGHT DEFLECTOR. MASON H. KERN, Toledo, Ohio. Filed July 15, 1925. Serial No. 43,664. 3 Claims. (Cl. 240—41.)



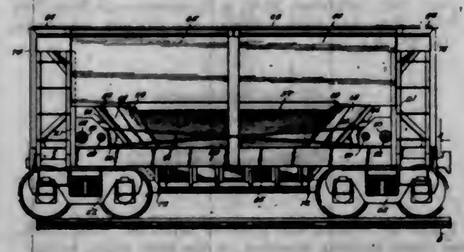
1. In an automobile lamp, a lens, a plano-convex area located on the lower portion of the glass, the convex area being formed in the outer surface of the glass and substantially elliptical in outline, the major axis of the ellipse being in a substantially horizontal plane, the upper portion of the glass having a plurality of semi-circular prismatic ridges formed on the inner surface, two sources of light and means for tilting the lamp to direct the rays from one source through one of the said portions to the road and for tilting the lamp to direct the rays from the other of the said sources through the other of said portions to the road.

1,628,153. AUTOMOBILE HEADLIGHT. MASON H. KERN, Toledo, Ohio. Filed Sept. 19, 1925. Serial No. 57,402. 1 Claim. (Cl. 240—41.)



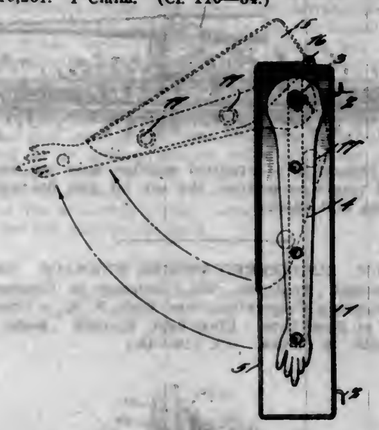
In an automobile lamp, a shell, means for turning the shell for moving its upper edge portion towards and away from the road, a main reflector located in the shell and having its axis coincident to the axis of the sell, a main electric bulb located substantially in the axis of the main reflector, a thin convex lens of uniform thickness located substantially at right angles to the axis of the shell, an auxiliary reflector located so that its axis is located substantially in the plane of the edge of the lamps, and a secondary bulb located in front of the auxiliary reflector and below the axis of the shell, a source of current and means whereby the circuit is switched from the main bulb to the secondary bulb upon tilting the shell.

1,628,154. CALCULATING MACHINE. CLARENCE L. JOHNSTON, Oakland, Calif., assignor to Marchant Calculating Machine Company, Oakland, Calif., a Corporation of California. Filed May 20, 1921. Serial No. 471,180. 1 Claim. (Cl. 235—130.)



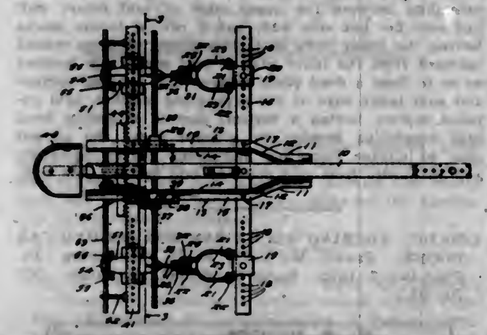
In a machine having alinged shafts, and an organized mechanism associated therewith; means for axially relatively moving the shafts, and means operative by and upon said axial movement of either shaft to lock the said mechanism.

1,628,155. ABDOMINAL TRUSS. JAMES O. KING, Cleveland, Ohio. Filed Feb. 27, 1924. Serial No. 695,561. 9 Claims. (Cl. 128—96.)



2. In an all metal abdominal truss, a hollow pad having a wire receiving aperture and a helical wire spring band having the convolutions of one free end screwed into said aperture and its other end secured to a swivel connector included in said band.

1,628,156. HOPPER CAR. PAUL KLEMOFF, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Mar. 26, 1926. Serial No. 97,658. 32 Claims. (Cl. 105—250.)



8. A hopper, the walls of which are disposed in a general rectangular arrangement, the inner surfaces of certain of said walls at the corners of the hopper extending progressively from their upper to their lower end-portions at an increasing angle to the median line of the car.

1,628,157. HOLLOW-ARM SIGNAL. KURT KOENIGSBERG, Seattle, Wash. Filed May 19, 1926. Serial No. 110,261. 1 Claim. (Cl. 116—54.)

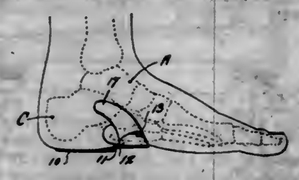
In a signal, a housing, a signal arm movable within the housing and capable of being projected beyond the housing, and a protecting cover pivoted on the housing and movable with the arm, means for illuminating the arm, said cover being formed with openings to register with the arm illuminating means when the arm is in operative position.

1,628,158. AGRICULTURAL IMPLEMENT. CHARLES H. KRENGEL, Twin Falls, Idaho. Filed May 18, 1926. Serial No. 109,971. 8 Claims. (Cl. 97—55.)

1. In a corrugating machine, a frame including longitudinally extending members, longitudinally spaced transversely extending bars secured to the longitudinally extending members and having their ends projecting therebeyond, a shovel beam pivotally connected with each end of the foremost transverse bar by a connection adjustable longitudinally along the bar, a packer wheel mounted in bearings secured to the rearmost bar, the bearings being adjustable along the bar to permit the packer wheels to align with the shovels, a transverse shaft rotatably mounted in bearings supported from the longitudinally extending members, arms adjustable longitudinally of said shafts and connections between said arms and the associated shovel beams.

1,628,159. TEMPORARY BINDER. JOHN S. LACEY, Columbus, Ohio. Filed Feb. 13, 1924. Serial No. 692,608. 10 Claims. (Cl. 129—1.)

1. A temporary binder for an assemblage of record leaves which have been removed, with their supporting posts, from a loose-leaf binder, comprising relatively separable cover-supporting members, having opposed channeled sides to freely accommodate the ends of the said posts, covers supported thereby, and means operable to relatively adjust the said members to position clamping the assemblage and to position spaced from the opposite

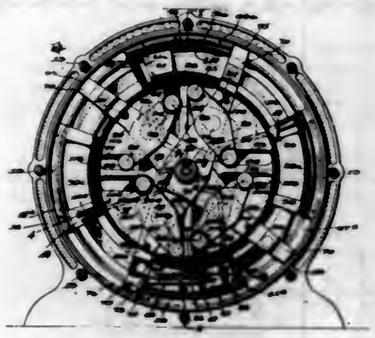


sides of the assemblage and clearing the ends of the posts, whereby, in the latter instance, to permit of removal of a blank leaf from one side of the assemblage and the placement of a written leaf at the other side of the assemblage.

1,628,160. PREPARATION AND DYEING OF LEATHER. MORRIS CHARLES LAMB, Bermondsey, London, England. Filed June 9, 1925, Serial No. 36,052, and in Great Britain Apr. 27, 1925. 5 Claims. (Cl. 8—5.)

1. In the dyeing of leather, treating the leather with an emulsion of hydrogenated naphthalene and with a dyeing agent.

1,628,161. ARCH SUPPORTER. OSCAR J. LE BOEUF, Gary, Ind. Filed Mar. 13, 1926. Serial No. 94,502. 5 Claims. (Cl. 36—71.)



1. An arch support of the character described consisting of a heel plate having a forward portion adapted to extend beneath the instep of the foot, and having attached to its forward end a transversely curved member extending upward and outward on each end, the inner end of the curved member being higher than the outer end thereof, the curved member being thereby adapted to extend beneath the astragalus and at its inner end extend upward and rearward opposite the astragalus, the heel plate being so formed as to cause said curved plate to be disposed beneath the ankle bone.

1,628,162. ROTARY ENGINE. JOHN A. LEHNERT, Howard, S. Dak. Filed Mar. 26, 1925. Serial No. 18,603. 30 Claims. (Cl. 123—11.)

2. In a rotary internal combustion engine, a housing, a shaft, a pair of spaced cooperating rotor plates keyed to the shaft, said plates adjacent their peripheries being provided with circular grooves, cylinders mounted in a fixed spaced relation in the grooves and adapted to move

with the rotor plates, pistons mounted in each cylinder, oscillating bars loosely mounted on the shaft, means on the oscillating bars and means in the plates and housing

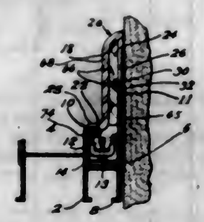
and cooperating with the means on the bars for causing oscillation of the bars and pistons independently of the rotary movement of the rotor plates.

1,628,163. PURIFYING COMPOSITION FOR COUNTERACTING THE FORMATION OF SCALE IN BOILERS. HANS LILLEJORD, Trondhjem, Norway, assignor to A/S Norsk Kjelerensningsmiddel Ideal, Kirkegaten, Oslo, Norway. Filed Apr. 10, 1926. Serial No. 101,205. 2 Claims. (Cl. 87—27.)

1. A purifying composition for counteracting the formation of scale in boilers which consists of caustic soda, sodium carbonate, and quebracho in a water solution.

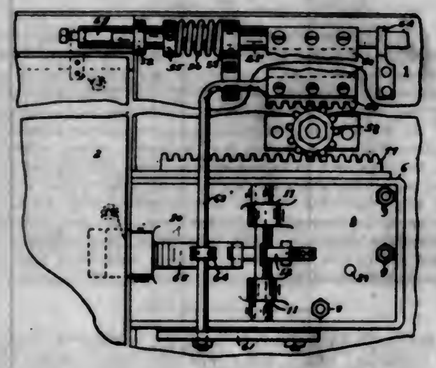
1,628,164. AUTOMATIC RIBBON-REVERSING MECHANISM FOR CASH REGISTERS. WALTER E. LIPPERT, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Jan. 31, 1924. Serial No. 689,760. 16 Claims. (Cl. 197—162.)

1. In a machine of the class described ribbon mechanism comprising a pair of rotatable spools adapted to be rotated in either direction, friction means tending to turn one of said spools in a constant direction on each operation of the machine, means for rotating the other of said spools in either direction, and a pair of detents for said last mentioned spool adapted to be alternatively rendered effective under control of said rotating means.



1,628,165. SYSTEM OF MOBILE ARMAMENT. LAWRENCE W. LUELLEN, Mountain Lakes, N. J. Filed May 26, 1917. Serial No. 171,158. 33 Claims. (Cl. 89—40.)

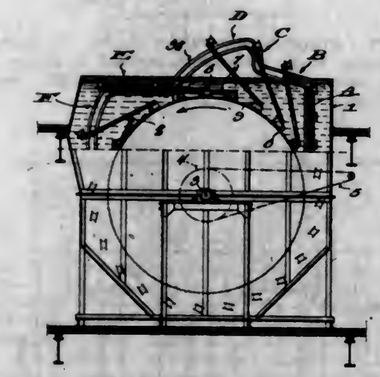
1. The combination of a railroad track, including a main track, a car body, wheeled trucks therefor, a gun mounted thereon, supplemental track supports adjacent the main track, adapted to withstand recoil shocks incident to gun fire and means on the car body adapted



to be brought into supported position upon the supplemental tracks to position the car for gun fire and to transmit said shocks.

1,628,166. UNDERFEED STOKER FURNACE. EDWIN LUNDGREN, Frederick, Md., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1922. Serial No. 587,050. 8 Claims. (Cl. 110—44.)

6. An underfeed stoker furnace having, in combination, a fuel retort having its outer wall spaced from the side wall of the fire box of the furnace, a supporting member extending between the upper edge of said retort wall and said fire box side wall, and a row of tuyère blocks having the lower ends of their exposed surfaces spaced outward from the inner edge of said supporting member so as to form a dead plate between said exposed surface and said inner edge of the supporting member, said exposed surface having a vertical portion extending from said supporting member to a point above the normal zone of clinker formation and being curved upwardly and outwardly from said point to said fire box side wall.

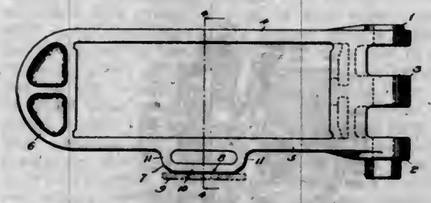


1,628,167. LOCKING MECHANISM FOR SLIDING CAR DOORS. FRANK MACHAVA, South Greensburg, Pa. Filed Oct. 7, 1925. Serial No. 60,988. 2 Claims. (Cl. 70—31.)

1. In a locking mechanism for a railroad car sliding door, the combination of a casing being adapted to be secured to the wall of the car and provided with a cover,

a latching bar pivotally connected at its rear end in said casing, a yoke pivotally connected in said casing and engaging the inner side of said latching bar, said cover having a hinged forward portion shiftable inwardly to the open position to permit of the inward lateral movement of the forward end of said latching bar to the locking position, means carried by said car door and engaging said hinged cover portion for releasing the latter when said car door is shifted to the closed position, a spring mounted in said casing and engaging the outer side of said latching bar for shifting the latter laterally inward to the locking position when said cover portion is released, and key bolt mounted in said casing and operable to actuate said yoke for shifting said locking bar to the unlocking position, substantially as described and for the purpose set forth.

1,628,168. TESTING AND DEFLATING MACHINE. SVEN MALKE, Milwaukee, Wis. Filed June 30, 1926. Serial No. 119,780. 11 Claims. (Cl. 73—51.)

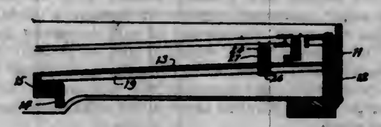


1. In a machine for operating upon inflated inner tubes provided with filling valves, the combination of means for receiving the tubes and holding the valves open, and means for deflating the tubes by the application of hydrostatic pressure.

1,628,169. COMPOUND GAUGE. BERT MCCLELLAND, Perkasie, Pa., assignor to United States Gauge Company, Sellersville, Pa., a Corporation of Pennsylvania. Filed Nov. 6, 1924. Serial No. 748,080. 6 Claims. (Cl. 73—109.)

3. In a compound gauge the combination with a pointer pinion and spindle, and a pointer mounted thereon, of two arms loosely mounted on the pinion shaft and spring impelled in opposite directions, a fixed stop towards which said arms are impelled, and means extending from the pinion into the path of the said arms and on opposite sides of the same for holding the pointer at zero when the arms are in contact with the stop.

1,628,170. DRAFT YOKE. WILLIAM MCCONWAY, Jr., Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 9, 1925. Serial No. 35,933. 2 Claims. (Cl. 213—72.)

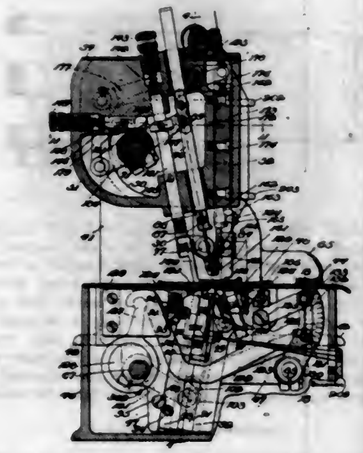


1. A draft yoke closed at its rear end and formed at its forward end for connection with a car coupler, said yoke being provided with spaced arms adapted to receive a cushioning device between them, and being provided with a lug offset outwardly from the outer face of the adjacent yoke arm, said lug comprising a bearing portion and a plurality of spaced columns, said bearing portion being adapted to contact a draft gear carry iron and being spaced outwardly from the adjacent yoke arm and being integrally united to the later by said columns.

1,628,171. FIREPROOF COMPOSITION. ABE MCINTYRE, Billings, Mont. Filed Feb. 15, 1926. Serial No. 88,461. 6 Claims. (Cl. 134—44.)

2. A fire-proof composition comprising a reaction product formed from a mixture of asbestos, flour, lye, and salt the flour being affected by the chemical action of the lye.

1,628,172. PIANO CONSTRUCTION. CHARLES MEHLIN, Fort Lee, N. J. Filed Aug. 3, 1923. Serial No. 655,421. 7 Claims. (Cl. 84—192.)

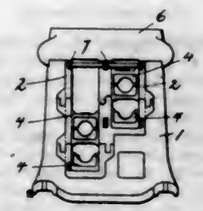


4. In a piano, the combination of a rim, a sound board secured at three sides to said rim, a rail supporting said sound board at the fourth side, and ribs reinforcing said sound board and engaged in said rail and said rim and of full thickness throughout their length, said sound board being cut away to provide a free edge at right angles to the grain thereof.

1,628,173. SEWING MACHINE. ARTHUR A. MERRITT, Edgewood, R. I., assignor to Willcox & Gibbs Sewing Machine Co., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1918, Serial No. 209,987. Renewed Oct. 4, 1926. 55 Claims. (Cl. 112—197.)

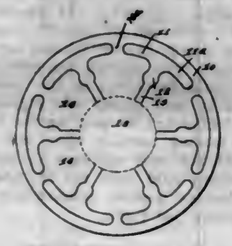
36. In a sewing machine, the combination of a first looper and a second looper operating one above the other on opposite sides of the work respectively with means reciprocating said loopers across the path of seam formation, a first set of thread carrying needles and means reciprocating them in an inclined path passing to the rear of the first looper and in front of the second looper, and a second set of thread carrying needles and means reciprocating them in an inclined path passing to the rear of the second looper and in front of the first looper, one of said loopers operating to engage loops of thread projected through the work by the first set of needles

and to extend loops of thread across the seam into position for the second set of needles to pass therethrough, and the other looper operating to engage loops of thread



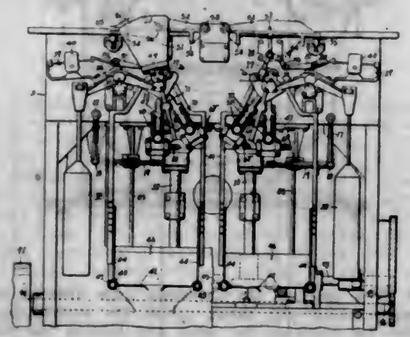
projected through the work by the second set of needles and to extend loops of thread across the seam into position for the first set of needles to pass therethrough.

1,628,174. METHOD OF TREATING ALUNITE. THOMAS AUSTIN MITCHELL, Denver, Colo., assignor to Lafayette M. Hughes, Denver, Colo. Filed Aug. 9, 1922. Serial No. 580,689. 14 Claims. (Cl. 23—52.)



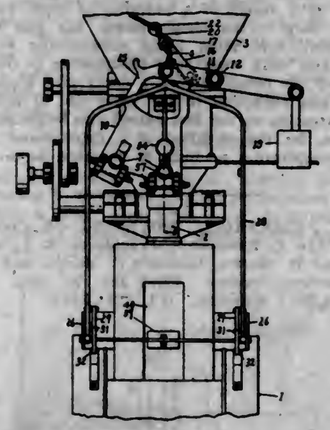
1. The method of treating alunite comprising the steps of mixing raw crushed alunite with an alkaline earth metal compound capable of forming a sulfate by reaction therewith, the amount of said compound present being in excess of that which is the equivalent of the aluminium in the alunite for forming an alkaline earth metal aluminate, and calcining the mixture to form an aluminate having alkaline earth metal sulfate interspersed therethrough.

1,628,175. ROLLING MILL. FRITZ MÖLLER, Dusseldorf, Germany, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany, a Corporation of Germany. Filed Mar. 11, 1926. Serial No. 93,832, and in Germany Mar. 13, 1925. 2 Claims. (Cl. 80—55.)



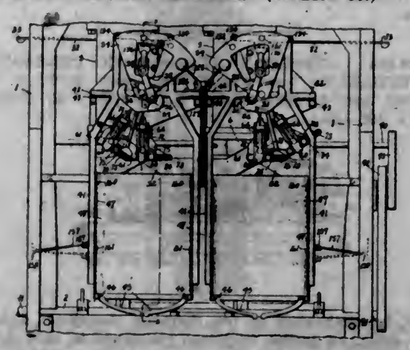
1. In a double two high mill, the combination with the housing, of a single exchangeable frame, a plurality of sets of rolls rotatably journalled in said frame, and a central partition provided between said sets of rolls and forming a portion of said frame.

1,628,176. BASKET. CHARLES R. MOAT, New York, N. Y. Filed Oct. 28, 1925. Serial No. 65,488. 12 Claims. (Cl. 220—83.)



1. A sheet metal basket consisting of a horizontal base, a container made of lattice work integrally formed upon said base, and a pedestal beneath said base also made of lattice-work formed integrally upon said base.

1,628,177. FILLING MACHINE. LEWIS D. NELSON, Coldwater, Mich., assignor of one-half to Robert M. Neale, Union City, Mich. Filed June 18, 1925. Serial No. 37,955. 38 Claims. (Cl. 249—60.)

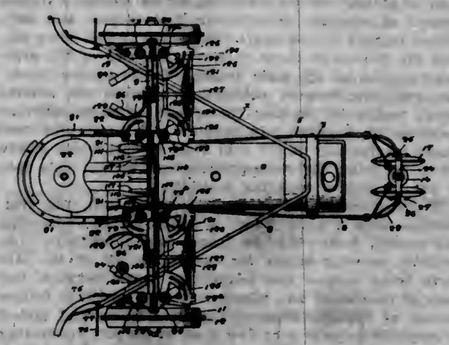


1. In a structure of the class described, the combination of a feed means including a feed valve, a cam for actuating said valve, a weighing mechanism including a scale beam, a platform operatively associated with said scale beam, a carrier pivotally mounted on said scale beam for vertical and oscillating movement, a yoke on the upper end of said carrier having seats on opposite sides of the carrier pivot, a pivotally mounted actuating lever coacting with said yoke to actuate said carrier as the lever is actuated and to hold it in its actuated position when said scale beam is in its initial position, an actuating cam for said lever, a rock shaft provided with an arm operatively connected to said actuating lever, a pitman operatively associated with said control cam, said rock shaft having a second arm to which said pitman is connected, a pair of driving ratchets, driven members operatively connected to said valve and lever actuating cams and provided with pawls coacting with said driving ratchets, a pivotally mounted trip lever operatively connected to said platform and provided with tripping tappets coacting with said pawls, a cam operatively associated with one of said driven members coacting with said trip lever to insure complete actuation of the mechanism, a counterweight on said actuating lever, a pivotally mounted stop member provided with a central stop recess and a pair of spaced stops, stop pins on said counterweight adapted to alternately engage with said stop recess and with said stops on said stop member, said stop member being provided with a support for its swinging end and whereby the stop pins remain in engagement with the stop recess during the initial downward movement of the scale beam, and spouts pivotally mounted on said carrier to be alternately brought into operative relation with said feed means.

1,628,178. WEIGHING AND FILLING MACHINE. LEWIS D. NELSON, Coldwater, Mich., assignor of one-half to Robert M. Neale, Union City, Mich. Original application filed Mar. 20, 1924, Serial No. 700,567. Divided and this application filed Aug. 17, 1925. Serial No. 50,722. 10 Claims. (Cl. 249—60.)

1. In a structure of the class described, the combination of feed means having a feed opening, a weighing mechanism comprising a scale beam, a combined carrier and valve member mounted on said scale beam for oscillating and vertical movement, spouts pivotally mounted on said member to be alternately brought into operative relation to said feed opening, a keeper with which said spouts engage when in operative position, means for releasing said spouts from said keeper on the downward movement of said member, a tilting platform carried by said scale beam, a latch for holding said platform in erected position, and a trip with which said latch is engaged on the downward movement of said platform.

1,628,179. BAG-FILLING MACHINE. LEWIS D. NELSON, Coldwater, Mich., assignor of one-half to Robert M. Neale, Union City, Mich. Filed May 12, 1926. Serial No. 108,504. 22 Claims. (Cl. 249—60.)



1. In a structure of the class described, the combination of a feed means including a valve, means for actuating said valve including a cam, a rockshaft provided with an arm coacting with said cam and a second arm connected to said valve by a link, a weighing mechanism including a scale beam, a scale frame carried by said scale beam, a carrier pivotally mounted on said frame for oscillating movement, spouts mounted on said carrier to be alternately brought into operative relation with said feed means, a yoke on said carrier having seats on opposite sides of the carrier pivot, a pivotally mounted actuating lever coacting with said yoke to actuate said carrier as the lever is actuated, an actuating cam for said lever, a rockshaft carrying said lever, said rockshaft being provided with an arm, a pitman connected to said arm and operatively associated with said lever actuating cam, a driving ratchet, a driven member operatively connected to said valve and lever actuating cams and provided with a pawl coacting with said driving ratchet, a trip member for said pawl operatively associated with said scale beam for releasing the pawl when the scale beam is in its initial position, a friction brake means operatively associated with said driven member, and a positioning means for said driven member adapted to act after its said pawl is disengaged.

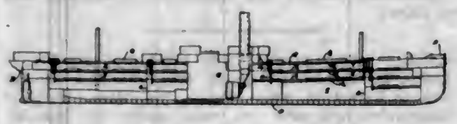
1,628,180. FIRE-ARCH CONSTRUCTION. JOHN L. NICHOLSON, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed June 25, 1923. Serial No. 647,422. 4 Claims. (Cl. 110—87.)

1. The combination with a fire box and an internal waterleg therein of a refractory arch across the fire box comprising fire brick resting on said waterleg and recessed adjacent the same to afford passage for gases through the arch in contact with the water leg.

1,628,181. CULTIVATOR. J. HARTLEY NIXON, Woodstown, N. J. Filed Feb. 26, 1925. Serial No. 11,810. 29 Claims. (Cl. 97—47.)

1. In a cultivator of the class described, the combination with a main frame, a power driven supporting and driving means for the frame, and a manually controllable steering means for the frame in advance of the steering means, all of the said parts being narrow and adapted to travel between two rows of plants; of a wheel supported auxiliary frame located adjacent the rear of the main frame at one side thereof and arched to pass over a row of plants; two sets of ground engaging cultivating

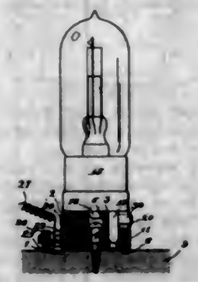
tools carried respectively by the main frame and the auxiliary frame; means for adjusting the tools carried by the main frame vertically in parallelism; and other means supported in part on the auxiliary frame and operable from the main frame for adjusting the tools carried by the auxiliary frame vertically in parallelism.



7. In a cultivator of the class described, the combination with a main frame, a power driven supporting and driving means for the frame, and a manually controllable steering means for the frame, all of the said parts being narrow and adapted to travel between two rows of plants; of a wheel supported auxiliary frame located adjacent the rear of the main frame at one side thereof and arched to pass over a row of plants; two closely adjacent angularly adjustable vertical bars carried by the auxiliary frame adjacent the outer side of the last said row; arms connected respectively to the said bars near the lower ends thereof and adapted for carrying cultivating tools; and means for vertically adjusting both of the bars simultaneously together with the arms connected thereto.

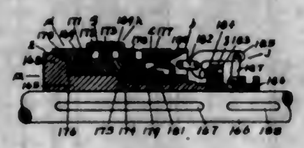
14. In a cultivator of the class described, the combination with a main frame, a power driven supporting and driving means for the frame, and a manually controllable steering means for the frame, all of the said parts being narrow and adapted to travel between two rows of plants; of a wheel supported auxiliary frame located adjacent the rear of the main frame at one side thereof and arched to pass over a row of plants; two closely adjacent angularly adjustable vertical bars carried by the auxiliary frame adjacent the outer side of the last said row; arms connected respectively to the said bars near the lower ends thereof and adapted for carrying cultivating tools; two other closely adjacent angularly adjustable vertical bars carried by the main frame adjacent the inner side of the last said row; arms connected respectively to the last said bars near the lower ends thereof and adapted for carrying cultivating tools; two pairs of arms adjacent the upper ends of the bars of the respective pairs; means for holding one arm of each pair in adjusted position; a transverse link connecting the other arm of one pair with the other arm of the other pair; and means comprising a rack and pinion for moving the said link endwise to adjust the last said arms simultaneously.

21. In a cultivator of the class described, the combination with a main frame, a power driven supporting and driving means for the frame, and a manually controllable steering means for the frame, all of the said parts being narrow and adapted to travel between two rows of plants; of two wheel supported auxiliary frames located at opposite sides of the main frame and each arched to pass over a row of plants; four tool arms pivoted for movement about vertical axes, two of the arms being carried by the main frame and two by the respective auxiliary frames; cultivating tools on the several arms; means for locking the several arms in different positions of angular adjustment; and means for vertically moving any of the said arms independently of the others to bring the corresponding cultivating tools into or out of ground engaging position.



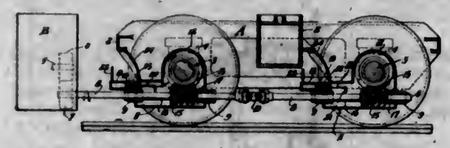
29. In a cultivator of the class described, the combination with a main frame, a power driven supporting and driving means for the frame, and a manually controllable steering means for the frame, all of the said parts being narrow and adapted to travel between two rows of plants; of two wheel supported auxiliary frames located at opposite sides of the main frame and arched to respectively pass over two rows of plants; cultivating tools carried by the main and auxiliary frames respectively and arranged to travel along the opposite sides of the said rows of plants, some of the said tools being normally fixed against lateral movement and others being freely movable laterally; two separate means independently operable from the main frame for laterally adjusting the last said tools on opposite sides of the respective rows simultaneously and in the same directions and means whereby the said normally fixed tools can be laterally adjusted and held in adjusted positions.

1,628,182. APPARATUS FOR DETECTING AND EXTINGUISHING FIRES IN THE CARGO SPACES OF VESSELS. HARRY S. ORR, Alameda, Calif. Filed Sept. 22, 1926. Serial No. 136,952. 2 Claims. (Cl. 169—16.)



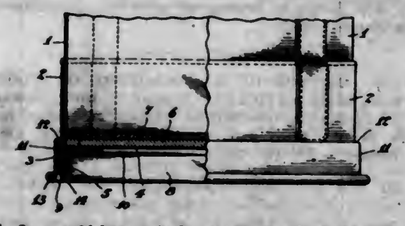
1. The combination with the cargo compartments and the deck of a vessel, of a plurality of pipes extending from the deck to the compartments, one pipe to each compartment, said pipes being substantially vertically disposed and their lower ends terminating in the upper portions of the compartments, a spray pipe horizontally disposed and connected to the lower end of each pipe, and an extension on the first named pipe below the spray connection, for the reception of a thermometer to permit the temperature readings to be taken in each compartment.

1,628,183. ELECTRICAL MOUNTING OR CONNECTER. PYAM L. PENDLETON, Providence, R. I., assignor to Edgar W. Martin, Laurence C. Martin, and George W. Bleecker, trustees. Filed Jan. 24, 1923. Serial No. 614,559. 4 Claims. (Cl. 173—328.)



1. An electrical receptacle comprising a block of insulating material provided with parallel holes for receiving the terminals of a vacuum tube, said block having slits leading from its outer surface into the holes and extending longitudinally thereof, and strips of conducting material fastened to the outside of the block and provided with spring fingers having their ends projecting through the slits and radially into the holes in the block.

1,628,184. OVERLOAD AND STRAIN RELEASING MECHANISM. ARTHUR PESTEL, New York, N. Y. Filed Apr. 5, 1921. Serial No. 458,787. 25 Claims. (Cl. 192—56.)



25. In mechanism of the character described, a friction drive, an initial frictional resistance in said drive and means to automatically create an additional frictional resistance on two sets of friction surfaces through said initial resistance in said drive.

1,628,185. DRIVING APPARATUS FOR LOCOMOTIVE BOOSTER MOTORS. FRANK RICHARD PETERS, New York, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed June 10, 1924. Serial No. 719,149. 8 Claims. (Cl. 105—119.)

1. In combination with a locomotive booster motor and a plurality of axles to be driven thereby, a shaft driven by the booster motor extending transversely of the axles for interconnecting them, and means for effecting a driving connection between said axles and said shaft which connection is immediately broken when the booster power is cut off.

1,628,186. GOLF-BAG BOTTOM. GEORGE L. PIERCE and HENRY V. RAU, Brooklyn, N. Y., assignors to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Jan. 22, 1926. Serial No. 82,893. 4 Claims. (Cl. 150—1.5.)

1. In a golf bag, a body, a bottom piece, an attaching ring secured to said body, and a bottom ring having an inwardly extending supporting portion engaging said bottom piece, said bottom ring being attached to the bag solely by being rolled with the attaching ring to form a bead.

1,628,187. WINDOW CONSTRUCTION. FRANCIS J. PLYM, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a Corporation of Michigan. Filed Aug. 21, 1922. Serial No. 583,081. 4 Claims. (Cl. 20—42.)
